- The Legal Language and Legal Writing course aims to build proficiency in the specialized language used in the legal profession, along with developing practical skills for drafting legal documents and writing persuasive legal arguments.
- Students will gain a strong foundation in legal research, drafting, analytical reasoning, and professional communication, all of which are essential for success in legal practice.
- By the end of the course, students will be prepared to write effectively and ethically in a wide range of legal contexts, and they will have the tools necessary for successful legal practice, whether in litigation, contract law, corporate law, or public policy.
- Engage students in simulated legal scenarios, where they apply their legal writing and research skills to draft documents or provide advice based on a hypothetical case.

### Unit I: Meaning and uses of legal terms

#### Commonly used Latin terms in courts

Ab initio', Res judicata, Res– subjudice, Adhoc, Ad infinitum, Ad interim, Adjourn sine die, Ad litem, Ad valorem, Alibi, Aliter, Almamater, Amicus Curiae, Animus, Animus possidendi, Alumni, Anti-meridiem, Bonafide, Bona Vacantia, Causeausans, Coram non judice, Corpus Possessionis, Custodia Legis, Composmentis, Cypress, Defacto, De Jure, Denovo, Donati on mortis cause, Enventresamere, Enroute, Ex officio, Ex gratia, Ex parte, Ex post facto, Factum valet, Femesole, Filius nullius, In forma pauperis, Ibid, In limine, In memoriam, In parimaterial, Intelligible differentia, Interalia, Interse, Ipso jure, Intoto, Ipsofacto, In invitum, In locoparentis, In pais, In pari delicto, potio rest condition possidentis (or defendentis), In rem, Intervivos, Intra-vires, Justertii, Juscivile, Jusdivinum, Lex Fori, Lex Loci delicti, Lispendens, Locus standi, Malafide, Mens Rea, Modus operandi, Modus Vivendi, Non compos mentis, Nonfeasance, Nudum Pactum, Onus probandi, Pacta Sunt Servanda, Pari Passu, Pendente lite, Per annum, Per capita, Per diem, Per mensem, Per stripes, Persona non grata, Postmeridiem, Postmortem, Prima facie, Pro bono publica, Prorata, Protanto, Protem, Quasi-judicial, Quid pro quo, Rati decidendi, Raison d'etre, Res Gestae, Res integra, Res nullius, Sine qua non, Sine die, Solatium, Stare decisis, Status quo, Sub-judice, Suppressionary, Scienter, Trespasser ab initio, Ultra-vires, Vice Versa, Vis-à-vis, Vis major

#### Unit II: Legal maxims

1. Absoluta sententia expositore non-indiget
2. A bundanscautela non nocet.
3. Actio-personalismi moritur-cum persona
4. Actori incumbit onus probandi
5. Actus curiae neminem gravabit
6. Actus de nemine facit injuriam
7. Actus reus
8. Actus legis nemini est damnosus

9. Actus non-facit reum nisi mens sit rea
10. Eiusdem Generis
11. Exturpi causa non oritur actione
12. Noscitur a sociis
13. Novus actus interveniens
14. Respondent superior
15. Falsus in uno falsus in omnibus
16. Acquitus sequitur legem
17. Allegans contraria non est audiendus
18. Audi alteram partem
19. Caveat emptor
20. Damnum sine injuria
21. De minimis non curat lex
22. Dolus malus pactum se non servabit
23. Delegates non potest delegare
24. Fiat Justitia ruat caelum
25. Ignorantia legis neminem excusat
26. Injuria sine damno
27. Interest reipublicae ut sit finis litium
28. Lex non cogit ad impossibilia
29. Nemo dat quod non habet
30. Nemo debet esse iudex in propria causa
31. Quantum meruit
32. Qui approbat non reprobat
33. Qui facit per alium per se
34. Res ipsa loquitur
35. Salus populi est Suprema Lex
36. Ubi ius ibi remedium
37. Vigilantibus non dormientibus iura subveniunt

### **Unit III: Paragraph & Precise Writing of Legal Texts**

### **Unit IV: Writing of Moot Memorials**

#### **Suggested Reading:**

1. Myneni S.R., Legal language and Legal Writing, Central Law Agency, Allahabad.
2. Jain R.L., Legal Language, Central Law Agency, Allahabad.
3. Prasad Anirudh, Legal Language, Central Law Publications, Allahabad.

## PUBLIC INTERNATIONAL LAW

Sub. Code: BL 308

L – 4, C – 4.

### Course objectives

- The Public International Law course aims to provide students with a thorough understanding of the legal rules that govern the relations between states and other international actors.
- By the end of the course, students will be familiar with the sources, subjects, and principles of international law, as well as its application in areas such as human rights, international humanitarian law, trade, investment, and conflict resolution.
- The course prepares students to critically engage with global legal challenges and equips them with the tools to understand and navigate the complexities of international law in contemporary global affairs.
- Analyze the role of international law in global development and the protection of economic, social, and cultural rights, particularly in the context of poverty, disaster relief, and humanitarian assistance.

### Unit-I:

Definition, Nature, Scope and Importance of International Law — Relation of International Law to Municipal Law — Sources of International Law — Codification.

### Unit-II:

State Recognition — State Succession — Responsibility of States for International delinquencies — State Territory — Modes of acquiring State Territory

### Unit-III:

Position of Individual in International Law — Nationality — Extradition — Asylum — Privileges and Immunities of Diplomatic Envoys — Treaties – Formation of Treaties - Modes of Consent, Reservation and termination.

### Unit-IV:

The Legal Regime of the Seas – Evolution of the Law of the Sea – Freedoms of the High Seas – Common Heritage of Mankind – United Nations Convention on the Law of the Sea – Legal Regime of Airspace – Important Conventions relating to Airspace – Paris, Havana, Warsaw and Chicago Conventions – Five Freedoms of Air – Legal Regime of Outer space – Important Conventions such as Outer space Treaty, Agreement on Rescue and Return of Astronauts, Liability Convention, Agreement on Registration of Space objects, Moon Treaty - Unispace.

### Suggested Readings:

1. S.K. Kapoor, Public International Law, Central Law Agencies, Allahabad.
2. H.O. Agarwal, International Law and Human Rights, Central Law Publications, Allahabad.
3. S.K. Verma, An Introduction to Public International Law, Prentice Hall of India.

# MACRO ECONOMICS II

Sub. Code: BL – 310

L-4, C-4

## Course objectives

- The Macroeconomics II course aims to deepen students' understanding of the complex dynamics that govern national and global economies.
- It combines advanced theoretical analysis with practical policy applications, preparing students to understand and evaluate the impact of economic policies, global trends, and crises.
- By the end of the course, students should be able to critically assess macroeconomic phenomena, formulate policy recommendations, and utilize econometric tools to analyze real-world economic problems.
- Debates in Macroeconomics: Engage students in contemporary policy debates in macroeconomics, such as austerity vs. stimulus, central bank independence, and the role of fiscal policy in economic stabilization.

## Unit I: Classical Theory/ Long Run Analysis

Foundation & features of Classical Theory, Introduction to Says Law.

## Unit II: Principles of Aggregate Demand & Aggregate Supply

Theory of Aggregate Demand, Theory of Aggregate Supply

## Unit III: New Keynesian/Post Keynesian Economics

Importance & Scope, Different Theories of Post Keynesian Economics (RET Business Cycle theory etc.)

## Unit IV: Growth & Development

Concept of Economic Growth & Economic Development, Neo-Classical Growth Theory, Types of Growth & Development, Factors of Growth & Development, Measures of Growth & Development

## Suggested Readings:

1. Jhingan M.L., Development Economic, Vrinda Pub.
2. Dwivedi D.N., Macroeconomic Theory & Policy, Tata Mac Graw Hill
3. Samuelson & Nordhaus, Economics, Tata Mac Graw Hill
4. Shapiro, Macroeconomic Analysis, Galgotia

\*\*\*\*\*

## **Anthropology-II (BL – 310 A)**

**Sub. Code: BL – 310 A**

**L-4, C-4**

### **Course Objectives:**

- To deepen the understanding of economic behaviors, institutions, and practices from an anthropological perspective.
- To explore the interplay between culture, economy, and society, focusing on contemporary issues.
- To analyze economic systems and their evolution, emphasizing globalization, development, and inequality.
- To examine the roles of exchange, property, labor, and consumption in different societies, using anthropological theories and empirical studies.

### **Unit I: Theoretical Perspectives in Economic Anthropology**

- Classical Approaches: Marxian, Weberian, and Durkheimian Perspectives on Economic Life
- Cultural Economics: The Role of Culture in Economic Decision-Making
- Neoliberalism, Globalization, and Economic Anthropology
- Post-Colonial Critiques of Economic Anthropology
- Political Economy and Economic Anthropology: Key Concepts and Debates

### **Unit II: Modes of Production and Economic Systems**

- Subsistence Economies: Foraging, Horticulture, Pastoralism, and Agriculture
- The Role of Kinship and Social Structures in Economic Systems
- The Rise of Industrial Capitalism and Its Anthropological Impact
- State-Controlled Economies: Socialism, State Capitalism, and Nationalism
- Transition from Traditional to Modern Economic Systems in Developing Societies

### **Unit III: Exchange, Trade, and Markets**

- Theories of Exchange: Reciprocity, Redistribution, and Market Exchange (Mauss, Sahlins, Polanyi)
- The Role of Barter Systems, Gift Economies, and Money in Different Cultures
- Market Systems: Local, National, and Global Markets
- The Anthropology of Global Trade: Commodities, Global Supply Chains, and Fair Trade
- The Informal Economy: Informal Work, Microenterprises, and the Shadow Economy

### **Unit IV: Labor, Property, and Economic Inequality**

- The Anthropology of Labor: Division of Labor, Gender, and Work Relations

- Property Rights: Land Ownership, Intellectual Property, and Cultural Property
- Social and Economic Inequality: Caste, Class, Race, and Gender Dimensions
- Economic Exploitation and Worker's Rights: Case Studies from the Global South
- Anthropology of Development and Underdevelopment: Economic Anthropology's Role in Policy

### **Unit V: Consumption, Development, and Globalization**

- The Anthropology of Consumption: Material Culture, Consumerism, and Identity
- Development Theories and Practices: From Modernization to Post-Development
- Globalization and Its Impact on Local Economies: Culture, Labor, and Power
- The Role of NGOs and International Organizations in Economic Development
- Environmental Anthropology: Sustainability, Resources, and Development

### **Suggested Books:**

1. "Economic Anthropology: A Systematic Approach" by Stephen Gudeman
2. "The Anthropology of Economy: A Reader" edited by Brian Moeran and Richard Wilk
3. "The Gift: The Form and Reason for Exchange in Archaic Societies" by Marcel Mauss
4. "Markets and Money: A Critical Introduction" by Keith Hart and John Sharp
5. "The Anthropology of Development and Globalization" by Richard H. Robbins
6. "Globalization and Its Discontents" by Joseph E. Stiglitz

## **Political Economy-II BL – 310B**

**Sub. Code: BL – 310 B**

**L-4, C-4**

### **Course Objectives:**

- To analyze the relationship between politics and economics in the context of contemporary global capitalism.
- To examine the historical and theoretical foundations of political economy, including critical perspectives on capitalist systems.
- To understand economic policy choices, their implications for governance, and the role of the state in economic management.
- To explore key issues such as economic globalization, economic inequality, neoliberalism, and sustainable development within a political economy framework.

### **Unit I: Theories of Political Economy**

- Classical Political Economy: Adam Smith, David Ricardo, and John Stuart Mill
- Marxist Political Economy: Karl Marx's Theory of Value, Surplus Value, and Historical Materialism
- Neoclassical Political Economy: Marginalism, Utility, and the Role of Markets
- Keynesian Political Economy: Theories of Aggregate Demand, Government Intervention, and Economic Stability
- The Chicago School and Neoliberalism: Market Fundamentalism and Its Critics

### **Unit II: State and the Economy**

- The Role of the State in Economic Systems: Intervention vs. Laissez-Faire
- State Capitalism: Characteristics, Examples, and Contemporary Relevance
- Theories of State and Market Relations: Marxist, Liberal, and Institutionalist Approaches
- The Political Economy of Welfare States: Social Safety Nets, Redistribution, and Fiscal Policy
- Economic Crises and State Responses: The Role of Government in Economic Recovery

### **Unit III: Globalization and Political Economy**

- Globalization and Its Impacts: Economic, Political, and Cultural Dimensions
- Theories of Global Capitalism: World Systems Theory (Wallerstein) and Globalization of Capital
- Global Trade and Finance: WTO, IMF, World Bank, and Global Financial Institutions
- The Politics of Global Economic Governance: Regionalism, Bilateral Agreements, and Trade Wars
- Global Inequality and the South-North Divide: The Political Economy of Development

#### **Unit IV: Neoliberalism and Its Discontents**

- Neoliberalism: Theory, Policies, and Practices
- Privatization, Deregulation, and Austerity: Global Impact of Neoliberal Policies
- The Rise of Multinational Corporations and Financialization
- The Global Financial Crisis of 2008: Causes, Consequences, and Policy Responses
- Resistance to Neoliberalism: Anti-Globalization Movements and Alternative Economic Models

#### **Unit V: Political Economy of Development and Sustainability**

- Theories of Economic Development: Modernization, Dependency Theory, and Post-Colonial Critiques
- The Political Economy of Sustainable Development: Growth vs. Environmental Sustainability
- Green Political Economy: Environmental Economics, Green New Deal, and Eco-Socialism
- The Role of International Organizations in Development: The UN, World Bank, and Regional Development Banks
- Economic Planning in Developing Countries: Challenges and Policy Alternatives

#### **Suggested Books:**

1. **"The Political Economy of Development and Underdevelopment"** by Charles K. Wilber
2. **"Capitalism and Modern Social Theory"** by Anthony Giddens
3. **"Political Economy: A Marxist Introduction"** by Ben Fine
4. **"Global Political Economy"** by John Ravenhill
5. **"The Political Economy of Neoliberalism"** by David Coates
6. **"Globalization and Its Discontents"** by Joseph E. Stiglitz
7. **"Theories of Political Economy"** by James A. Caporaso and David P. Levine

# **SEMESTER VII**

## LABOUR LAW –I

Sub. Code: BL 401

L – 4, C – 4.

### Course Objectives

- Students should have a solid understanding of the legal framework that governs the workplace.
- They will be equipped to critically assess the interplay between labour laws and socio-economic policies, the role of trade unions and employer organizations, and the various protections afforded to workers in different sectors and jurisdictions.
- Students will also develop the skills to address labour law issues both in domestic and international contexts, contributing to discussions on labour market regulation, worker protection, and social justice in a rapidly changing world.
- Understand the obligations of employers in complying with labor laws, including the importance of record-keeping, compliance audits, and training programs for workplace rights and safety.

### Unit-I

Trade Unions: History of Trade Union Movement - The Trade Union Act 1926 – Definitions - Registration – Rights and Liabilities of Registered Trade Unions – Immunities – Amalgamation and dissolution of Unions – **Reorganization of Trade Unions.**

### Unit-II

Prevention and Settlement of Industrial Disputes in India - The role of State in Industrial Relations – The Industrial Disputes Act 1947 - Definition of industry - Industrial Dispute – Individual Dispute - workman- Lay off – **Retrenchment - Closure -Award - Strike – Lockout**

### Unit-III

Authorities under the IDAct – Works committee – Conciliation - Court of inquiry - Labour Courts- Tribunal – Powers and functions of authorities - Voluntary Arbitration - Provisions under Chapter V-A & V- B of the Act- Alteration of conditions of service – Management rights of action during pendency of proceedings – **Recovery of money due from employer – Unfair labour practices - miscellaneous provisions of the Act.**

### Unit-IV

Standing Orders -Concept and Nature of Standing Orders – scope and coverage- Certification process – its operation and binding effect – Modification and Temporary application of Model **Standing Orders – Interpretation and enforcement of Standing Orders and provisions contained in the Industrial Employment ( Standing Orders ) Act 1946.**

**Suggested Readings:**

1. Srivastava: Law of Trade Unions , Eastern Book Company, Lucknow
2. .Goswami : Labour and Industrial Law, Central Law Agency.
3. R.F. Rustomji: Law of Industrial Disputes : Asia Publishing House, Mumbai
4. S.N. Misra : Labour and Industrial Law
5. J.N. Malik : Trade Union Law
6. Khan& Khan : Labour Law , Asia Law House, Hyderabad
7. S.C. Srivastava : Industrial Relations and Labour Law, Vikas Publishing House.

## **Jurisprudence**

**Sub. Code: BL 403**

**L – 4, C – 4.**

### **Course Objectives**

- The Jurisprudence course, often referred to as the philosophy of law, aims to introduce students to the fundamental principles and theories underlying the concept of law and legal systems.
- The course explores the nature, function, and purpose of law, providing students with the tools to critically examine how laws are created, interpreted, and enforced. Students will engage with a variety of legal philosophies, schools of thought, and historical perspectives, gaining insight into the relationship between law, morality, justice, and society.
- By the end of the course, students will be able to analyze and evaluate the different schools of jurisprudence, understand the key concepts that shape legal theory, and apply these insights to the practical functioning of legal systems.
- Explore key theories about the nature of law, including natural law, positive law, and legal realism, and understand the distinction between law and morality.

### **Unit-I:**

Meaning and Definition of Jurisprudence — General and Particular Jurisprudence - Elements of Ancient Indian Jurisprudence — Schools of Jurisprudence — Analytical, Historical, Philosophical and Sociological Schools of Jurisprudence. Theories of Law — Meaning and Definition of Law — **The Nature and Function of Law — The Purpose of Law — The Classification of Law — Equity, Law and Justice — Theory of Sovereignty.**

### **Unit-II :**

Sources of Law — Legal and Historical Sources — Legislation - Definition of legislation - Classification of legislation- Supreme and Subordinate Legislation - Direct and Indirect Legislation - Principles of Statutory Interpretation. Precedent — Definition of Precedent — Kinds of Precedent — Stare Decisis — Original and Declaratory Precedents — Authoritative and Persuasive Precedents. Custom – Definition of Custom – Kinds of Custom – General and Local Custom – Custom and Prescription - Requisites of a valid custom - Relative merits and demerits of Legislation , Precedent and Custom as a source of Law . **Codification — Advantages and disadvantages of codification.**

### **Unit-III:**

Persons — Nature of personality — Legal Status of Lower Animals, Dead Persons and Unborn persons — Legal Persons — Corporations — Purpose of Incorporation — Nature of Corporate Personality - Rights and Duties — Definition of Right — Classification of Rights and Duties — **Absolute and Relative Rights and Duties — Rights and Cognate concepts like Liberty, Power, Immunity, Privilege etc.**

**Unit-IV :**

Obligation — Nature of Obligation — Obligation arising out of Contract, Quasi Contract, trust and breach of obligation etc. — Liability — Nature and kinds of liability — Acts — Mens Rea — Intention and Motive — Relevance of Motive — Negligence — Strict Liability — Accident — Vicarious Liability — Measure of Civil and Criminal Liability.

**Unit-V:**

Ownership — Definition and kinds of Ownership - Possession — Elements of Possession - Relation between Ownership and Possession — Possessory Remedies — Property — Meaning —

**Suggested Readings:**

1. Salmond: Jurisprudence, Universal Publishers 12th Edn. 1966.
2. Rama Jois, Legal and Constitutional History of India, Universal Law Publications, Delhi.
3. N.V. Pranjape – Jurisprudence
4. S.R. Dhyeni – Jurisprudence

\*\*\*

## Company Law

Sub. Code: BL 405

L – 4, C – 4.

### Course Objectives

- Students will have gained a thorough understanding of the **legal frameworks** that govern the operation of companies, from their incorporation to their dissolution.
- They will be equipped to critically assess corporate governance issues, company finance, shareholder rights, and the protection of stakeholders in business law.
- Additionally, students will be able to analyze the challenges and opportunities posed by evolving corporate regulations, and the role of company law in the modern global economy.
- Study the different types of shares (e.g., ordinary shares, preference shares), the issue of shares, and the rules regarding share capital. Discuss the legal requirements for subscription, allotment, and transfer of shares.

### Unit-I:

Definition and attributes of Company — Distinction between Partnership Firm and Company — Kinds of Companies including Multinational Companies — Advantages and Disadvantages of Incorporation — Consequences of non-compliance of the provisions of the Companies Act in matters of incorporation.

### Unit-II:

Promoters and Registration — Pre-incorporation contracts — Memorandum of Association — Articles of Association.

### Unit-III:

Prospectus — Members — Shareholders — Share Capital — Shares and Dividends — Debentures — Directors — Powers and Liabilities of Directors.

### Unit-IV:

Director, Manager and Secretary — Meetings — Majority powers and minority rights — Prevention of Oppression and Mismanagement

### Unit-V:

Modes of winding up of companies.

### Suggested Readings:

1. Shah : Lectures on Company Law, N.M.Tripathi, Bombay.
2. Avtar Sing : Company Law, Eastern Book Company, 13th Edn. 2001.
3. Charlesworth: Company Law, Sweet and Maxwell, 1996.
4. Ramaiah: Company Law, Wadhwa& Co. 15th Edn. 2001.
5. Dutta: Company Law, Eastern Law House, Calcutta

## ADMINISTRATIVE LAW

Sub. Code: BL 407

L – 4, C – 4.

### Course Objectives

- Definition and Nature: Understand the basic principles of administrative law, its relationship to constitutional law, and how it regulates the exercise of executive powers by governmental agencies.
- Scope of Administrative Law: Study the scope of administrative law in various contexts, including rule-making, enforcement, and decision-making.
- Examine the role of administrative agencies in the legislative, executive, and judicial functions of government.
- Sources of Administrative Law: Analyze the sources of administrative law, including statutes, regulations, judicial decisions, government orders, and administrative directives.

### Unit-I:

Nature and scope of Administrative Law — Meaning, Definition and Evolution of Administrative Law—Reasons for the growth of Administrative Law — Relationship between Administrative Law and Constitutional Law.

### Unit-II:

Basic concepts of Administrative Law — Rule of Law — Interpretation of Dicey's Principle of Rule of Law — Modern trends - Theory of Separation of Powers — Position in India, UK and USA

### Unit-III:

Classification of Administrative functions — Legislative, Quasi-judicial, Administrative and Ministerial functions — Delegated Legislation — Meaning, Reasons for the growth and Classification of delegated legislation— Judicial and Legislative Control of Delegated litigation.

### Unit-IV:

Judicial Control of Administrative Action - Grounds of Judicial Control — Principles of Natural Justice — Administrative discretion and its control.

### Unit-V:

Remedies available against the State — Writs — Lokpal and Lok Ayukta — Liability of the State in Torts and Contracts.

### Suggested Readings:

1. Griffith and Street: Principles of Administrative Law.
2. H.W.R.Wade: Administrative Law, Oxford Publications, 8th Edn. 2000, London.
3. De Smith: Judicial Review of Administrative Action, Sweet and Maxwell, 1998.
4. S.P. Sathe: Administrative Law, Butterworths, 6th Edn. 1998.
5. I.P.Massey: Administrative Law, Eastern Book Company, 5th Edn. 2001.

## ALTERNATE DISPUTE RESOLUTION

Sub. Code: BL 409

L -4, C -4

### Course Objectives

- The Alternative Dispute Resolution (ADR) course is designed to introduce students to methods of resolving disputes outside the traditional court system.
- ADR techniques, such as mediation, arbitration, negotiation, and conciliation, offer parties an opportunity to resolve conflicts more efficiently, cost-effectively, and with greater control over the outcome than formal litigation.
- The course aims to equip students with the knowledge and skills necessary to understand, apply, and analyze different ADR mechanisms.
- Students will explore the principles, processes, advantages, and challenges of ADR, along with the legal frameworks that govern these alternative methods of dispute resolution. By the end of the course, students will be able to assess the suitability of ADR in various contexts and understand how these methods contribute to access to justice and the reduction of the burden on courts.

This is a first clinical paper of which written examination will be for 60 marks and the remaining 40 marks for record and viva voce. There shall be classroom instruction on the following topics:

### Unit-I:

Alternate Dispute Resolution — Characteristics — Advantages and Disadvantages—Unilateral — Bilateral — Triadic (Third Party) Intervention — Techniques and processes -- Negotiation — Conciliation — Arbitration — Distinction between Arbitration, Conciliation and Negotiation.

### Unit-II:

The Arbitration and Conciliation Act, 1996 — Historical Background and Objectives of the Act — Definitions of Arbitration, Arbitrator, Arbitration Agreement -- Appointment of Arbitrator — Termination of Arbitrator -- Proceedings in Arbitral Tribunal -- Termination of Proceedings — Arbitral Award -- Setting aside of Arbitral Award — Finality and Enforcement of Award — Appeals – Enforcement of Foreign Awards. Conciliation – Appointment of Conciliators – Powers and Functions of Conciliator -- Procedure – Settlement of disputes through conciliation.

### Unit-III:

Other Alternative Dispute Resolution Systems —Tribunals .

### Practical Exercises (30 marks)

- (a) The students are required to participate in 5 (five) simulation proceedings relating to Arbitration, Conciliation, Mediation and Negotiation. Participation in each such simulation proceeding shall be evaluated for a maximum of 4 (four) marks (Total 5x4=20marks).
- (b) Students are required to attend and observe the proceedings of Lok Adalats, Family Courts, Tribunals and other ADR Systems. Each student shall record the above observations in the diary which will be assessed. Record submitted by the student shall be evaluated for 10 marks by the

teacher concerned. The Records of the students duly certified by the University Representative appointed by the Controller of Examinations in consultation with the Chairman, BOS in Law shall be submitted to the University before the commencement of the theory examinations

**Viva- voce (10marks):** There shall be viva-voce examination on the above components. The Viva-voce Board consisting of (i) Principal of the College/the teacher concerned (ii) University Representative appointed by the Controller of Examinations in consultation with the Chairman, BOS in Law, and (iii) an advocate with 10 years experience at the Bar shall evaluate the student in the Viva. The proceedings of the viva-voce shall be recorded.

**Note: Attendance of the students in all the four components of the paper (written examination, participation in simulation proceedings, submission of record and attendance in viva) shall be compulsory.**

**Suggested Readings:**

1. O.P. Tiwari : The Arbitration and Conciliation Act (2nd Edition): Allahabad Law Agency.
2. Johar's : Commentary on Arbitration and Conciliation Act, 1996: Kamal Law House.
3. Acharya N.K.: Law relating to Arbitration and ADR, Asia Law House, Hyderabad
4. Tripathi S.C.: Arbitration, Conciliation and ADR, Central Law Agency, Allahabad.
5. Avatar Singh: Arbitration and Conciliation, Eastern Law Book House, Lucknow.

\*\*\*\*\*

## Data Analysis-1/ (BL-409A)

Sub. Code: BL 409 A

L -4, C -4

### Course Objectives:

- To develop practical skills that complement academic learning.
- To enhance problem-solving abilities and critical thinking.
- To foster creativity and innovation through practical work.
- To improve communication, teamwork, and leadership skills.
- To make students job-ready by providing exposure to real-world scenarios.
- To ensure students gain competence in tools, software, and techniques that are relevant to their field of study.

### Unit 1: Introduction to Practical Skills and Work Ethics

#### 1. Understanding Practical Skills:

- Importance of practical skills in academic and professional success.
- Distinction between theoretical knowledge and practical application.
- Identifying core skills relevant to students' academic fields.

#### 2. Work Ethics and Professionalism:

- Understanding the concept of work ethics: Punctuality, responsibility, and accountability.
- Teamwork and collaboration in professional settings.
- Ethical decision-making and handling conflicts in the workplace.

#### 3. Time Management:

- Techniques for effective time management: Prioritizing tasks, deadlines, and multitasking.
- Tools for personal and professional time management.
- Stress management and maintaining a healthy work-life balance.

### Unit 2: Communication Skills and Presentation

#### 1. Verbal Communication:

- Mastering effective speaking: Clarity, tone, and expression.
- Public speaking and presentation techniques.
- Interview skills: Preparing for and succeeding in job interviews.

#### 2. Written Communication:

- Writing professional emails, reports, and memos.
- Academic writing: Essays, research papers, and citations.
- Resume writing and crafting a cover letter.

### **3. Non-Verbal Communication:**

- The role of body language in communication.
- Understanding and using visual aids effectively in presentations.
- Active listening skills and empathetic communication.

## **Unit 3: Problem-Solving and Critical Thinking**

### **1. Problem-Solving Techniques:**

- Approaches to problem-solving: Identifying problems, generating solutions, and evaluating outcomes.
- Creative problem-solving techniques: Brainstorming, lateral thinking, and mind mapping.
- Case studies and real-world problems: Analyzing and providing solutions.

### **2. Critical Thinking Skills:**

- Understanding the concept of critical thinking: Analyzing, evaluating, and interpreting information.
- Logical reasoning and decision-making frameworks.
- Identifying biases and fallacies in problem-solving and decision-making.

### **3. Decision-Making and Risk Management:**

- Making informed decisions under uncertainty.
- Understanding risk and how to mitigate it.
- Case studies on decision-making in professional environments.

## **Unit 4: Computer Literacy and Technology Tools**

### **1. Basic Computer Skills:**

- Operating systems: Introduction to Windows, macOS, and Linux.
- File management and software installation.
- Internet navigation and online security.

### **2. Microsoft Office Suite:**

- MS Word: Document formatting, tables, and references.
- MS Excel: Data entry, formulas, and data analysis tools.
- MS PowerPoint: Creating and designing presentations.

### **3. Other Relevant Software Tools:**

- Introduction to design tools like Adobe Photoshop and Illustrator (depending on the course).
- Introduction to statistical tools like SPSS, R, or Python (depending on the course).
- Project management software: Using tools like Trello or Asana for task management.

## **Unit 5: Leadership and Teamwork**

### **1. Understanding Leadership Styles:**

- Theories of leadership: Transformational, transactional, and servant leadership.
- The role of a leader in guiding teams and achieving goals.
- Conflict resolution and leadership during crises.

### **2. Teamwork and Collaboration:**

- The importance of teamwork in professional and academic settings.
- Building and managing effective teams.
- Communication and coordination within teams: Achieving shared goals.

### **3. Project Management Skills:**

- The basics of project management: Planning, organizing, and execution.
- Understanding project management tools and methodologies (e.g., Agile, Waterfall).
- Evaluating project success: Time, cost, and quality management.

## **Unit 6: Practical Training or Project Work**

### **1. Internship/Practical Exposure:**

- Hands-on experience in the chosen field (e.g., internship, industry visits, or fieldwork).
- Application of theoretical knowledge in real-world settings.
- Reflection on learning outcomes from the practical exposure.

### **2. Project Work:**

- Undertaking a group or individual project related to the academic discipline.
- Research, data collection, analysis, and presentation of results.
- Collaborative problem-solving and practical application of skills.

### **3. Evaluation and Reporting:**

- Writing a project report or internship report.
- Preparing a presentation on the practical work undertaken.
- Peer and instructor evaluations of performance.

## **Suggested Books:**

- *The Lean Startup: How Today's Entrepreneurs Use Continuous Innovation to Create Radically Successful Businesses* by Eric Ries
- *The Art of Project Management* by Scott Berkun
  
- *The 7 Habits of Highly Effective People* by Stephen R. Covey
- *How to Win Friends and Influence People* by Dale Carnegie
- *Microsoft Office 365 All-in-One For Dummies* by Peter Weverka
- *Leaders Eat Last* by Simon Sinek
- *Microsoft Office 365 All-in-One For Dummies* by Peter Weverka

# Computer Programming-1 (BL-409B)

Sub. Code: BL 409B

L -4, C -4

## Course Objectives:

- To provide students with a foundational understanding of data analysis techniques.
- To teach students how to organize, clean, and interpret data.
- To introduce students to basic statistical methods and data visualization techniques.
- To familiarize students with data analysis software and tools (Excel, SPSS, or R).
- To develop the ability to apply data analysis techniques to real-world problems.

## Unit 1: Introduction to Data Analysis

### 1. Understanding Data:

- Types of data: Qualitative vs. Quantitative, Continuous vs. Discrete.
- Levels of measurement: Nominal, Ordinal, Interval, and Ratio.
- Data collection methods: Surveys, experiments, observational studies, etc.
- Introduction to data sets and variables.

### 2. The Data Analysis Process:

- Steps in the data analysis process: Data collection, cleaning, analysis, and interpretation.
- Overview of data analysis software tools (Excel, SPSS, and R).
- Understanding the importance of data quality: Accuracy, completeness, and consistency.

### 3. Ethics in Data Analysis:

- Ethical considerations in data collection and analysis.
- Data privacy, confidentiality, and informed consent.
- Avoiding data manipulation and bias.

## Unit 2: Descriptive Statistics

### 1. Measures of Central Tendency:

- Mean, Median, Mode: Definitions, calculations, and applications.
- Understanding the use of each measure in different contexts.
- Interpreting and comparing measures of central tendency.

### 2. Measures of Dispersion:

- Range, Variance, Standard Deviation, Interquartile Range.
- Interpreting measures of variability.
- Importance of dispersion in understanding data distribution.

### 3. Data Distribution and Visualization:

- Introduction to histograms, bar charts, and pie charts.
- Introduction to box plots and frequency distributions.
- Introduction to skewness and kurtosis.

### **Unit 3: Probability and Probability Distributions**

#### **1. Introduction to Probability:**

- Basic probability concepts: Events, sample space, and probability rules.
- Conditional probability and Bayes' theorem.
- The law of large numbers and central limit theorem.

#### **2. Probability Distributions:**

- Discrete probability distributions: Binomial and Poisson distributions.
- Continuous probability distributions: Normal and Exponential distributions.
- Applications of probability distributions in real-world scenarios.

#### **3. Sampling and Sampling Distributions:**

- Introduction to sampling methods: Simple random sampling, stratified sampling, and cluster sampling.
- Sampling distribution of the sample mean and central limit theorem.
- The relationship between sample size and estimation accuracy.

### **Unit 4: Inferential Statistics**

#### **1. Estimation:**

- Point estimates and confidence intervals.
- Confidence intervals for population mean, proportion, and variance.
- Margin of error and its interpretation.

#### **2. Hypothesis Testing:**

- Formulation of null and alternative hypotheses.
- Types of errors: Type I and Type II errors.
- Performing hypothesis tests: Z-test, t-test, chi-square test, and ANOVA.
- p-values and their interpretation in decision-making.

#### **3. Chi-Square Tests and Goodness of Fit:**

- Chi-square test for independence and goodness of fit.
- Applications of chi-square tests in categorical data analysis.
- Interpreting chi-square test results and conclusions.

### **Unit 5: Data Visualization and Presentation**

#### **1. Data Visualization Techniques:**

- Importance of data visualization in communicating results.
- Advanced visualization techniques: Scatter plots, line charts, heatmaps.
- Use of color, size, and shapes in enhancing visualizations.

#### **2. Data Visualization Tools:**

- Introduction to Excel for creating visual representations of data.
- Using SPSS and R for generating statistical graphs and plots.
- Visualization of multiple variables: Bubble charts, 3D plots, and correlation matrices.

#### **3. Creating Reports and Presentations:**

- Best practices for presenting data analysis results.

- Structuring reports: Introduction, methodology, findings, and recommendations.
- Using PowerPoint and other tools to present findings to stakeholders.

## **Unit 6: Introduction to Software for Data Analysis**

### **1. Excel for Data Analysis:**

- Using Excel for basic data analysis: Functions, formulas, and pivot tables.
- Creating charts and graphs in Excel.
- Data manipulation and cleaning techniques in Excel.

### **2. Introduction to SPSS:**

- Overview of SPSS: Data entry, coding, and cleaning.
- Conducting descriptive and inferential statistical analysis in SPSS.
- Visualizing data in SPSS: Graphs, charts, and tables.

### **3. Introduction to R:**

- Introduction to R programming language: Basic syntax, data structures, and functions.
- Data manipulation and analysis in R.
- Visualization using R libraries: ggplot2 and other popular packages.

## **Suggested Books:**

- Excel 2021 For Dummies by Greg Harvey.
- Discovering Statistics Using SPSS by Andy Field.
- R for Data Science by Hadley Wickham and Garrett Golemund.
  
- Statistics for Business and Economics by Paul Newbold, William L. Karlin, and Betty Thorne.
- Data Science for Business by Foster Provost and Tom Fawcett.
- R for Data Science by Hadley Wickham and Garrett Golemund.
- The Visual Display of Quantitative Information by Edward R. Tufte.
- Data Visualization: A Practical Introduction by Kieran Healy.

# Python Programming-I (BL-409C)

Sub. Code: BL 409C

L -4, C -4

## Course Objectives

- Learn Python syntax and basic programming concepts.
- Develop skills in using control structures and loops.
- Understand and implement functions and data structures.
- Perform file handling and exception management.
- Gain an introduction to object-oriented programming in Python.

## Unit 1: Introduction to Python

- Overview of Python: History, Features, and Applications
- Setting Up the Python Environment (IDE, Jupyter Notebook, etc.)
- Writing and Executing Python Programs
- Understanding Variables, Data Types, and Basic Syntax

## Unit 2: Control Flow and Loops

- Conditional Statements: if, elif, else
- Looping Structures: for and while loops
- Nested Loops and Conditional Expressions
- Introduction to Iterators and Generators

## Unit 3: Functions

- Defining and Calling Functions
- Parameters and Return Values
- Scope of Variables: Local and Global Scope
- Lambda Functions and Recursion

## Unit 4: Data Structures

- Lists, Tuples, and Dictionaries
- Sets and Strings Manipulation
- List Comprehension and Dictionary Comprehension
- Basic Operations and Iteration on Data Structures

## Unit 5: File Handling

- Reading and Writing Files
- Working with Text and Binary Files
- Exception Handling in File Operations
- File Manipulation Techniques

## Suggested Readings

- **"Python Crash Course"** by Eric Matthes
- A hands-on introduction to Python, ideal for beginners.
- **"Automate the Boring Stuff with Python"** by Al Sweigart
- Focuses on practical Python applications for everyday tasks.
- **"Think Python: How to Think Like a Computer Scientist"** by Allen B. Downey
- Explores Python programming with an emphasis on problem-solving.
- **"Python Programming: An Introduction to Computer Science"** by John M. Zelle
- A beginner-friendly introduction to Python and computer science concepts.
- **"Learning Python"** by Mark Lutz
- A comprehensive guide to mastering Python programming.

## **Leadership and Management I (BL-409D)**

**Sub. Code: BL 409D**

**L -4, C -4**

### **Course Objectives**

- Understand key theories and concepts of leadership and management.
- Develop personal leadership skills and management strategies.
- Analyze organizational structures and dynamics.
- Apply leadership and management principles in real-world scenarios.

### **Unit 1: Change Management**

- Theories of organizational change
- Strategies for effective change implementation

### **Unit 2: Ethical Leadership and Corporate Social Responsibility**

- Ethical decision-making frameworks
- The role of leaders in promoting ethical behavior

### **Unit 3: Conflict Resolution and Negotiation**

- Types of conflicts in organizations
- Techniques for effective negotiation and conflict resolution

### **Unit 4: Leadership in a Global Context**

- Cultural influences on leadership and management practices

### **Suggested Readings:**

1. "The Five Dysfunctions of a Team: A Leadership Fable" by Patrick Lencioni
2. A practical guide on building effective teams and addressing common team challenges.
3. "Leaders Eat Last: Why Some Teams Pull Together and Others Don't" by Simon Sinek
4. Discusses the importance of trust and cooperation in effective leadership.
5. "Leadership and Self-Deception: Getting Out of the Box" by The Arbinger Institute

# **SEMESTER VIII**

## LABOUR LAW-II

Sub. Code: BL402

L – 4, C –4.

### Course Objectives

- Constitutional and Understand the constitutional provisions relating to labour rights and the key labour statutes governing industrial relations, such as the Industrial Disputes Act, 1947, Trade Unions Act, 1926, Factories Act, 1948, and Shops and Establishments Act.
- International Labour Explore the role of International Labour Organization (ILO) and its conventions in shaping domestic labour laws, focusing on the fundamental principles of labour rights, such as freedom of association, non-discrimination, and the right to equal pay for equal work.
- Industrial Relations System: Study the structure and importance of industrial relations systems in maintaining harmonious employer-employee relationships. Understand the role of trade unions in representing workers and advocating for their rights.
- Formation and Registration of Trade Unions: Explore the legal provisions governing the formation, registration, and functions of trade unions under the Trade Unions Act, 1926.

### Unit-I

The Remunerative Aspects – Wages – Concepts of wages - Minimum, Fair, Living Wages - Wage and Industrial Policies - Whitley Commission Recommendations - Provisions of Payment of Wages Act 1936 - Timely payment of wages - Authorised deductions – Claims - Minimum Wages Act 1948 - Definitions - Types of wages - Minimum rates of wages - Procedure for fixing and revising Minimum Wages – Claims -Remedy.

### Unit-II

Bonus – concept - Right to claim Bonus – Full Bench formula - Bonus Commission - Payment of Bonus Act 1965 - Application – Computation of gross profit, available, allocable surplus - Eligibility of Bonus - Disqualification of Bonus - set on – set off of allocable surplus- Minimum and Maximum Bonus-Recovery of Bonus.

### Unit-III

Employees Security and Welfare aspect - Social Security - Concept and meaning - Social Insurance - Social Assistance Schemes. Social Security Legislations - Law relating to workmen's compensation - The Workmen's Compensation Act 1923 – Definitions - Employer's liability for compensation - Nexus between injury and employment - payment of

compensation - penalty for default - Employees State Insurance Act 1948 – Application - Benefits under the Act - Adjudication of disputes and claims – ESI Corporation.

#### **Unit-IV**

Employees Provident Fund and Miscellaneous Provisions Act 1952 – Contributions - Schemes under the Act - Benefits. The Maternity Benefit Act 1961 - Definitions- Application - Benefits. The Payment of Gratuity Act 1972 – Definitions – application - Payment of gratuity - eligibility – forfeiture – Nomination - Controlling authorities.

#### **Suggested Readings**

1. S.N.Misra, Labour and Industrial Laws, Central law publication-22<sup>nd</sup> edition. 2006.
2. N.G. Goswami, Labour and Industrial Laws, Central Law Agency.
3. Khan & Kahan, Labour Law-Asia Law house, Hyderabad
4. K.D. Srivastava, Payment of Bonus Act, Eastern Book Company
5. K.D. Srivastava, Payment of Wages Act
6. K.D. Srivastava, Industrial Employment (Standing Orders) Act 1947
7. S.C.Srivastava, Treatise on Social Security
8. Jidwitesukumar Singh, Labour Economics, Deep & Deep, New Delhi
9. V.J.Rao, Factories Law

\*\*\*

# UTTAR PRADESH LAND LAWS

Sub. Code: BL 404

L-4, C-4

## Course Objectives

- Students will have gained a comprehensive understanding of land-related legal principles, including ownership rights, land acquisition, tenancy laws, land reforms, and the legalities surrounding land use and distribution.
- Students will also be able to critically analyze land disputes, propose legal solutions, and understand the broader social, economic, and environmental issues related to land management.
- Examine the challenges posed by rapid urbanization and land scarcity in urban areas, and how legal mechanisms are being adapted to address the needs of growing cities.
- Study the legal measures to prevent land grabbing and illegal encroachments on both public and private land.

## Unit I: Introduction

Interpretation Clause, Objects and Clause of UP Zamindari Abolition and **Land Reforms Act 1950, Characteristics of Act.**

## Unit II: Classes and Rights of Tenure Holder

Bhumidhar with Transferable Rights, Bhumidhar with Non-Transferable Rights, **Asami, Government Lease.**

## Unit III: Succession

General Order of Succession, Succession as per strips, Critical Approach to Law of Succession, **Succession for Females.**

## Unit IV: Ejectment

Ejectment of Tenure Holder from the Land of Public Utility, Ejectment of Trespasser, Ejectment of Bhumidhar, Ejectment of Asami, Abandonment and Surrender.

### **Leading Cases For Detail Study**

\*Abdul Saeed And Another Vs State Of Uttar Pradesh & Others

\*Smt. Mainia Vs Dy. Director Consolidation

\*Satyendra Singh Vs State Of Up

\*Lalsa Vs State Of Up

\*InduBhushan Vs State Of Up

### **Suggested Reading:**

1. Maurya R.R., Uttar Pradesh Land Laws, Central Law Publications, Allahabad.

2. Singh C.P., Uttar Pradesh Land Laws, Central Law Agency, Allahabad.

---

## Intellectual property law

Sub.Code:BL406

L -4, C -4

### Course Objectives

- Students will have a comprehensive understanding of IPR laws and their application in various sectors.
- They will be equipped with the tools necessary to analyze, protect, and enforce intellectual property rights in a globalized digital economy.
- Students will also be able to navigate legal challenges related to IPR and understand the interplay between innovation, regulation, and public interest in the evolving world of intellectual property.
- Examine the debate over IPR and access to medicines, particularly in the context of generic drugs and compulsory licensing.

### Unit-I:

Meaning, Nature, Classification and protection of Intellectual Property — The main forms of Intellectual Property — Copyright, Trademarks, Patents, Designs (Industrial and Layout) -- Geographical Indications - Plant Varieties Protection and Biotechnology.

### Unit-II:

Introduction to the leading International instruments concerning Intellectual Property Rights — The Berne Convention — Universal Copyright Convention — The Paris Union — Patent Co-operation Treaty -- The World Intellectual Property Organization (WIPO) and the UNEESCO, International Trade Agreements concerning IPR — WTO — TRIPS.

### Unit-III :

Select aspects of the Law of Copyright in India — The Copy Right Act, 1957 - Historical evolution — Meaning of copyright — Copyright in literary, dramatic and musical works, computer programmes and cinematograph films — Neighbouring rights — Rights of performers and broadcasters, etc. — Ownership and Assignment of copyright — Author's special rights — Notion of infringement — Criteria of infringement — Infringement of copyright in films, literary and dramatic works — Authorities under the Act — Remedies for infringement of copyright.

**Unit-IV:**

Intellectual Property in Trademarks and the rationale of their protection - The Trade Marks Act, 1999 — Definition of Trademarks — Distinction between Trademark and Property Mark - Registration — Passing off — Infringement of Trademark — Criteria of Infringement — Remedies. The Designs Act, 2000 — Definition and characteristics of Design — Law in India — Protection and rights of design holders — Copyright in design — Registration — Remedies for infringement.

**Unit-V:**

Patents — Concept of Patent — Historical overview of the Patents Law in India — Patentable Inventions — Kinds of Patents — Procedure for obtaining patent — The Patents Act, 1970 — Rights and obligations of a patentee —

**Suggested Readings:**

1. P. Narayanan: Patent Law, Eastern Law House, 1995.
2. Roy Chowdhary, S.K. & Other: Law of Trademark, Copyrights, Patents and Designs, Kamal Law House, 1999.
3. Dr. G.B. Reddy, Intellectual Property Rights and the Law 5th Ed. 2005 GogiaLaw Agency.
4. John Holyoak and Paul Torremans: Intellectual Property Law.
- 5 B.L. Wadhera: Intellectual Property

## Research Methodology (BL406A)

Sub. Code: BL406A

L -4, C -4

### Course Objectives:

- To introduce students to the principles and techniques of conducting academic research.
- To provide the necessary tools and methods for designing, executing, and analysing research projects.
- To develop skills in critical thinking, data collection, analysis, and interpretation.
- To understand ethical considerations and the role of research in advancing knowledge.

### Unit I: Introduction to Research and its Types

- **Definition and Importance of Research:** Understanding research, its scope, and significance in various fields.
- **Types of Research:** Basic vs. Applied Research, Quantitative vs. Qualitative Research, Exploratory, Descriptive, and Analytical Research.
- **Research Process:** Stages in Research – Problem Identification, Literature Review, Hypothesis Formulation, Data Collection, Analysis, and Report Writing.
- **Research Paradigms:** Positivism, Interpretivism, and Pragmatism.

### Unit II: Research Design

- **Meaning and Importance of Research Design:** Types of Research Design – Experimental, Correlational, Cross-Sectional, and Longitudinal Studies.
- **Sampling Techniques:** Probability and Non-Probability Sampling, Sampling Methods (Random, Stratified, Systematic, Cluster, etc.).
- **Sampling Error and Sample Size Determination:** Understanding sample size, margin of error, and confidence levels.
- **Variables in Research:** Independent, Dependent, Control, and Confounding Variables.

### Unit III: Data Collection Methods

- **Primary Data Collection:** Surveys, Interviews, Focus Groups, and Observations.
- **Secondary Data Collection:** Using Existing Data Sources like Databases, Reports, and Published Research.
- **Questionnaire Design:** Types of questions (Closed, Open, Likert Scale, etc.), reliability, and validity of instruments.
- **Fieldwork Techniques:** Participant Observation, Case Studies, Ethnography.
- **Ethical Issues in Data Collection:** Informed Consent, Privacy, Confidentiality, and Ethical Approval.

#### **Unit IV: Data Analysis**

- **Quantitative Data Analysis:** Descriptive and Inferential Statistics, Measures of Central Tendency (Mean, Median, Mode), Variability (Range, Standard Deviation), and Hypothesis Testing (t-tests, chi-square tests, ANOVA).
- **Qualitative Data Analysis:** Thematic Analysis, Content Analysis, Narrative Analysis.
- **Use of Software in Data Analysis:** Introduction to SPSS, Excel, and NVivo for quantitative and qualitative data analysis.
- **Interpreting Research Results:** Drawing Conclusions, Identifying Patterns, and Making Recommendations.

#### **Unit V: Research Report Writing and Presentation**

- **Structure of a Research Report:** Introduction, Literature Review, Methodology, Results, Discussion, Conclusion, and References.
- **Writing the Research Proposal:** Objectives, Scope, Methodology, Timeline, and Budgeting for Research.
- **Academic Writing and Citation Styles:** APA, MLA, Chicago, and Harvard referencing styles.
- **Presenting Research Findings:** Writing and presenting research papers, posters, and oral presentations at academic conferences.
- **Avoiding Plagiarism:** Importance of Originality, Citation Practices, and Ethical Use of Sources.

#### **Unit VI: Ethical Issues in Research**

- **Ethics in Research:** Ethical Principles, Institutional Review Boards (IRB), Research Integrity.
- **Conflict of Interest and Bias:** Recognizing and addressing biases in data collection, analysis, and reporting.
- **Data Integrity and Misuse:** Issues related to falsification, fabrication, and manipulation of data.
- **Research Misconduct:** Types of misconduct and how to avoid them.

#### **Suggested Books:**

1. **"Research Methodology: A Step-by-Step Guide for Beginners"** by Ranjit Kumar
2. **"Research Methodology: Methods and Techniques"** by C.R. Kothari
3. **"Qualitative Research Methods for the Social Sciences"** by Bruce L. Berg
4. **"The Craft of Research"** by Wayne C. Booth, Gregory G. Colomb, and Joseph M. Williams
5. **"Research Methods in Education"** by Louis Cohen, Lawrence Manion, and Keith Morrison
6. **"Practical Research: Planning and Design"** by Paul D. Leedy and Jeanne Ellis Ormrod

## **Publication Ethics and Emerging Trends in Research (BL406B)**

**Sub. Code: BL406B**

**L -4, C -4**

### **Course Objectives:**

- To provide students with a comprehensive understanding of ethical issues in research and publication.
- To explore emerging trends in research methodologies, technology, and publication processes.
- To develop skills in ethical decision-making, responsible conduct of research, and academic writing.
- To prepare students to navigate the complex landscape of modern academic publishing, including open access, peer review, and copyright issues.

### **Unit I: Introduction to Research Ethics**

- **Overview of Research Ethics:** Importance of ethics in research and its role in ensuring integrity, trust, and quality.
- **Ethical Guidelines for Research:** Overview of key ethical principles like respect for persons, beneficence, and justice.
- **Ethical Approval:** Institutional Review Boards (IRB) and ethics committees.
- **Plagiarism:** Definition, types, consequences, and how to avoid it.
- **Authorship and Acknowledgments:** Determining authorship, responsibilities of authors, and proper acknowledgment of contributions.

### **Unit II: Ethical Challenges in Research**

- **Fabrication and Falsification of Data:** Distinguishing between ethical and unethical research practices.
- **Conflicts of Interest:** Identifying and managing conflicts in research and publishing.
- **Data Management and Privacy:** Ethical handling of sensitive data, participant confidentiality, and consent.
- **Research Misconduct:** Types of misconduct (plagiarism, data falsification, authorship disputes), and the process of investigation and reporting.
- **Reproducibility and Transparency:** Ensuring research findings can be replicated and are reported transparently.

### **Unit III: Publication Ethics**

- **Principles of Ethical Publishing:** Fairness, transparency, and accountability in publishing.
- **Peer Review Process:** The role of peer review in ensuring quality and integrity in scientific publishing.
- **Publishing Guidelines:** How to select journals, manuscript preparation, and submission processes.
- **Open Access Publishing:** Definition, advantages, disadvantages, and open-access policies.
- **Copyright and Intellectual Property:** Ownership of research, copyright laws, and licensing (Creative Commons, etc.).

### **Unit IV: Emerging Trends in Research**

- **Digital Transformation in Research:** The impact of technology on research methodologies, data collection, and analysis (e.g., big data, AI, machine learning).
- **Interdisciplinary Research:** Growing importance of interdisciplinary approaches and collaborative research.
- **Citizen Science and Crowdsourcing:** Involving the public in research through citizen science platforms and online collaboration.
- **Preprint Repositories:** Role of preprints in accelerating research dissemination and their ethical implications.
- **Research Integrity in the Digital Age:** Addressing issues related to online publication, social media, and open-source tools.

### **Unit V: Ethical Issues in Emerging Research Areas**

- **Ethics of Artificial Intelligence and Machine Learning in Research:** Ethical concerns in AI-driven research, algorithmic bias, and transparency.
- **Ethics of Genetic and Biomedical Research:** Ethical challenges in genomics, biotechnology, and biomedical research, including gene editing (CRISPR).
- **Environmental Sustainability and Research:** Ethical issues related to climate change, environmental studies, and sustainable development.
- **Ethics of Social Media and Networking in Research:** Ethical use of social media platforms for data collection, research dissemination, and networking.

### **Unit VI: Responsible Conduct of Research**

- **Promoting Research Integrity:** Best practices for ensuring ethical conduct in research.
- **Training and Education in Research Ethics:** Importance of ethics training for researchers at all levels.
- **Role of Institutions in Promoting Ethical Research:** Policies, guidelines, and resources provided by academic and research institutions.

- **Research Ethics in Global Context:** Ethical challenges in international collaborations, including differences in cultural, legal, and institutional contexts.
- **Case Studies and Ethical Dilemmas:** Analyzing real-world cases of ethical dilemmas in research and publication.

#### **Suggested Books:**

1. **"Publication Ethics: A Primer for Researchers" by Philip M. Davis**
2. **"Ethics in Research & Publication" by R. S. Dhillon and S. G. R. Murthy**
3. **"Research Ethics: A Psychological Approach" by S. R. Behnke**
4. **"Responsible Conduct of Research" by Adil E. Shamoo and David B. Resnik**
5. **"Research Ethics in the Digital Age" by Jeannette Pols and Sophia de Boer**
6. **"Ethics in Science and Engineering" by L. R. Andrew**
7. **"Handbook of Research Ethics and Scientific Integrity" edited by Barbara Koenig, Sandra Soo-Jin Lee, and Philip K. Robb**

---

## Interpretation of Statutes

Sub. Code: BL408

L – 4, C – 4.

### Course Objectives

- The Interpretation of Statutes course aims to provide students with a comprehensive understanding of the methods, principles, and tools used to interpret and apply statutes (laws made by a legislative body).
- The course focuses on equipping students with the skills needed to interpret legal texts, identify legislative intent, and resolve ambiguities or conflicts in statutes. Students will study the various canons of statutory interpretation and rules of construction used by courts to ascertain the meaning of statutes. The course will also delve into legislative history, judicial precedents, and the interaction between statutory law and constitutional principles.
- The Students will explore the role of judges in interpreting statutes, the importance of context in legal texts, and the balance between the literal and purposive approaches to interpretation.
- The Students will be able to confidently apply these interpretative techniques to real-world legal issues and understand how judicial interpretation can shape the application of law in various contexts.

### Unit-I:

Meaning and Definition of Statutes — Classification of Statutes — Meaning and Definition of Interpretation — General Principles of Interpretation — Rules of Construction under the General Clauses Act, 1897.

### Unit-II:

Grammatical Rule of Interpretation — Golden Rule of Interpretation – Rule of Interpretation to avoid mischief.

### Unit-III:

Interpretation of Penal Statutes and Statutes of Taxation — Beneficial Construction — Construction to avoid conflict with other provisions — Doctrine of Harmonious Construction.

### Unit-IV:

External Aids to Interpretation — Statement of objects of legislation, Legislative debates, identification of purpose sought to be achieved through legislation — Internal Aids to Interpretation — Preamble, title, interpretation clause, marginal notes, explanations etc. — Presumptions.

**Suggested Readings:**

1. Vepa P. Sarathi: Interpretation of Statutes, Eastern Book Co, 4th Edition, 1976.
2. Chatterjee: Interpretation of Statutes.
3. G.P. Singh: Principles of Statutory Interpretation, Wadhwa and Company, 8th Ed., 2001.

\*\*\*

## PROFESSIONAL ETHICS AND PROFESSIONAL ACCOUNTING SYSTEM

Sub.Code:BL410

L -4, C-4

### Course Objectives

- Students will be able to critically analyze ethical dilemmas and apply ethical principles real-world situations in various professional settings.
- They will be equipped with the knowledge to make ethically sound decisions, ensure compliance with professional codes of conduct, and contribute to the overall integrity and trustworthiness of their chosen profession.
- The course will prepare students to act responsibly, maintain high moral standards, and uphold the values of fairness, honesty, and social responsibility in their professional lives.
- Learn how to build a career based on ethical principles and professional integrity.

The written examination of this second clinical paper will be for 60 marks and the remaining 40 marks for record and viva voce. There shall be classroom instruction on the following topics:

**Unit-I:** Development of Legal Profession in India — The Advocates Act, 1961 — Right to Practice — a right or privilege? - Constitutional guarantee under Article 19(1) (g) and its scope — Enrolment and Practice — Regulation governing enrolment and practice — **Practice of Law — Solicitors firm — Elements of Advocacy.**

**Unit-II:** Seven lamps of advocacy — Advocates duties towards public, clients, court, and other advocates and legal aid ; **Bar Council Code of Ethics.**

**Unit-III:** Disciplinary proceedings — Professional misconduct — Disqualifications — Functions of Bar Council of India/State Bar Councils in dealing with the disciplinary proceedings — **Disciplinary Committees -- Powers and functions - Disqualification and removal from rolls.**

**Unit-IV:** Accountancy for Lawyers — Nature and functions of accounting —

**Record (30 marks):** Each student shall write 50 selected opinions of the Disciplinary Committees of Bar Councils and 10 major judgments of the Supreme Court of India in the Record. The Record shall be evaluated for 30marks by the teacher concerned. The Records of the students duly certified by the University Representative appointed by the Controller of Examinations in consultation with the Chairman, BOS in Law shall be submitted to the University before the commencement of the theory examinations.

**Viva- voce (10marks):** There shall be viva-voce examination on the above components. The Viva-voce Board consisting of (i) Principal of the College/the teacher concerned (ii) University Representative appointed by the Controller of Examinations in consultation with the Chairman, BOS in Law, and (iii) an advocate with 10 years experience at the Bar shall evaluate the student in the Viva. The proceedings of the viva-voce shall be recorded.

**Note: All the three components of the paper (written examination, submission of record and attendance in viva) shall be compulsory.**

#### **Suggested Reading**

- **"Professional Ethics in Accounting"** by Steven M. Mintz
- A comprehensive guide to the ethical principles and standards governing the accounting profession, with case studies and examples.
- **"Ethics in Accounting: A Decision-Making Approach"** by Gordon Klein
- Focuses on decision-making in accounting ethics, discussing real-world dilemmas and ethical frameworks.
- **"Ethical Obligations and Decision Making in Accounting"** by Steven M. Mintz and Roselyn E. Morris
- Explores ethical obligations for accountants, with an emphasis on ethical decision-making processes.
- **"Accounting Ethics"** by Rick B. M. G. (Gerrit) Gouwenberg
- A study of ethical issues in accounting, examining key moral theories and the role of ethics in accounting practices.
- **"The Ethics of Accounting and Finance: A Guide for Managers and Investors"** by J. Edward Ketz
- Discusses the role of ethics in financial decision-making, including the impact of accounting systems on corporate governance.

# Data Analysis-II BL 410A

**Sub. Code: BL410A**

**L -4, C-4**

## Course Objectives

- Learn advanced data cleaning and preprocessing techniques.
- Perform exploratory and statistical data analysis.
- Apply machine learning methods for data interpretation.
- Develop skills in Python for data manipulation and visualization.
- Analyze real-world data for informed decision-making.

## Unit 1: Data Pre-processing and Cleaning

- Handling Missing Data
- Outliers Detection and Treatment
- Data Transformation: Scaling, Normalization, and Encoding
- Data Integration and Reduction Techniques

## Unit 2: Advanced Data Visualization

- Exploratory Data Analysis (EDA) Techniques
- Visualization Tools: Matplotlib, Seaborn, Plotly
- Multidimensional Data Visualization
- Dashboards and Interactive Visualizations

## Unit 3: Statistical Analysis

- Inferential Statistics: Hypothesis Testing and Confidence Intervals
- Correlation and Regression Analysis
- Analysis of Variance (ANOVA)
- Non-parametric Statistical Methods

## Unit 4: Machine Learning Basics

- Introduction to Supervised and Unsupervised Learning
- Linear and Logistic Regression
- Clustering Techniques: K-Means, Hierarchical Clustering
- Decision Trees and Random Forests

## Unit 5: Data Analysis with Python

- Working with Pandas for Data Manipulation
- NumPy for Numerical Computation
- Introduction to Scikit-Learn for Machine Learning
- Case Studies: Applying Python to Real-World Data

## Suggested Readings

- **"Python for Data Analysis"** by Wes McKinney
- A comprehensive guide to using Python's Pandas library for data analysis.
- **"Practical Statistics for Data Scientists"** by Peter Bruce and Andrew Bruce
- Covers statistical methods and their application in data science.
- **"An Introduction to Statistical Learning"** by Gareth James, Daniela Witten, Trevor Hastie, and Robert Tibshirani
- A beginner-friendly introduction to statistical and machine learning techniques.
- **"Data Science from Scratch"** by Joel Grus
- Introduces fundamental concepts of data science with Python.
- **"Hands-On Machine Learning with Scikit-Learn, Keras, and TensorFlow"** by Aurélien Géron
- Focuses on machine learning techniques with practical Python implementation.

## **Computer Programming-II BL410B**

**Sub.Code:BL410B**

**L -4, C-4**

### **Course Objectives**

- Learn advanced programming techniques and concepts.
- Implement and analyse data structures and algorithms.
- Apply object-oriented programming principles.
- Work with file handling and database integration.
- Develop problem-solving skills through practical projects.

### **Unit 1: Advanced Programming Concepts**

- Recursion: Principles, Examples, and Applications
- Pointers and Memory Management (For C/C++)
- Dynamic Memory Allocation
- Error Handling and Debugging Techniques

### **Unit 2: Data Structures**

- Arrays, Linked Lists, Stacks, and Queues
- Trees and Graphs: Basics and Traversals
- Hashing Techniques
- Searching and Sorting Algorithms

### **Unit 3: Object-Oriented Programming (OOP)**

- Principles of OOP: Encapsulation, Inheritance, Polymorphism, and Abstraction
- Class and Object Concepts
- Constructors, Destructors, and Method Overloading
- Advanced Concepts: Interfaces and Abstract Classes

### **Unit 4: File Handling and Data Storage**

- File Operations: Reading, Writing, and Updating Files
- Binary and Text Files
- Random Access File Processing
- Serialization and Deserialization

### **Unit 5: Introduction to Databases and SQL**

- Basics of Database Management Systems (DBMS)
- SQL Syntax: Create, Read, Update, and Delete Operations
- Integrating SQL with Programming Languages
- Practical Case Studies

# Python Programming-II

Sub.Code: BL410C

L -4, C-4

## Course Objectives

- Master advanced Python programming concepts and techniques.
- Work with complex data structures and file handling.
- Apply object-oriented programming for real-world applications.
- Integrate Python with databases and APIs.
- Develop, debug, and test robust Python applications.

## Unit 1: Advanced Python Concepts

- Iterators, Generators, and Decorators
- Context Managers (`with` Statement)
- Working with Dates and Times (`date` `time` module)
- Regular Expressions (`re` module)

## Unit 2: Advanced Data Structures

- Nested Data Structures: Lists of Lists, Dictionaries of Dictionaries
- Collections Module: `namedtuple`, `deque`, `Counter`, and `defaultdict`
- Advanced Operations with Sets and Dictionaries
- Working with JSON and XML Data

## Unit 3: Object-Oriented Programming in Python

- Advanced OOP Features: Method Overloading, Operator Overloading
- Class Methods and Static Methods
- Multiple Inheritance and MRO (Method Resolution Order)
- Abstract Classes and Interfaces (`abc` module)

## Unit 4: Exception Handling and Debugging

- Advanced Exception Handling: Custom Exceptions
- Debugging Techniques and Tools (`pdb` module)
- Logging for Application Debugging (`logging` module)
- Writing Robust Python Code

## Unit 5: Working with Files and Data

- Advanced File Handling: File Modes, Working with Binary Files
- CSV, Excel, and Other File Formats (`csv`, `openpyxl`)
- Data Persistence with SQLite (`sqlite3` module)
- Introduction to Data Analysis with Pandas

## Suggested Readings

- **"Fluent Python"** by Luciano Ramalho
- A comprehensive guide to advanced Python programming techniques and best practices.
- **"Python Cookbook"** by David Beazley and Brian K. Jones
- Provides practical solutions to common Python programming challenges, with a focus on advanced topics.
- **"Python 3 Object-Oriented Programming"** by Dusty Phillips
- Focuses on object-oriented design and advanced OOP concepts in Python.
- **"Effective Python: 59 Specific Ways to Write Better Python"** by Brett Slatkin
- Offers actionable insights and best practices for writing efficient and maintainable Python code.
- **"Automate the Boring Stuff with Python"** by Al Sweigart
- While it's an introductory text, it provides useful real-world examples for automating tasks with Python.
- **"Python for Data Analysis"** by Wes McKinney
- A great resource for learning data analysis with Python, focusing on libraries like Pandas and NumPy.

## **Leadership and Management II(BL 410D)**

**Sub.Code:BL410D**

**L -4, C-4**

### **Course Objectives**

- Understand key theories and concepts of leadership and management.
- Develop personal leadership skills and management strategies.
- Analyze organizational structures and dynamics.
- Apply leadership and management principles in real-world scenarios.

### **Unit 1: Regional Development and Disparities**

- Factors influencing regional economic development
- Economic disparities between regions
- Policies for regional development and economic equity

### **Unit 2: Industry and Manufacturing Geography**

- The spatial distribution of industries
- Industrial clusters and agglomeration economies
- The role of technology in reshaping industrial landscapes

### **Unit 3: Agriculture and Food Systems**

- The geography of agriculture: factors influencing agricultural production
- Food systems and global supply chains
- Sustainable agriculture and food security

### **Unit 4: Services and the Knowledge Economy**

- The growth of the service sector in the economy

**Suggested Readings:**

1. "The Five Dysfunctions of a Team: A Leadership Fable" by Patrick Lencioni
2. A practical guide on building effective teams and addressing common team challenges.
3. "Leaders Eat Last: Why Some Teams Pull Together and Others Don't" by Simon Sinek
4. Discusses the importance of trust and cooperation in effective leadership.
5. "Leadership and Self-Deception: Getting Out of the Box" by The Arbinger Institute

# **SEMESTERIX**

**Law of Taxation**

**Sub. Code: BL 501**

**L4, C4**

**Course Objectives**

- The Law of Taxation course aims to provide students with a comprehensive understanding of the fundamental principles, concepts, and laws governing taxation. The course explores various types of taxes, the legal framework for tax administration, and the rights and obligations of taxpayers and the state.
- Students will gain the knowledge necessary to analyze, interpret, and apply tax laws, understand tax compliance, and engage in the practical application of tax law in various legal contexts.
- The course is designed to help students develop critical thinking skills regarding the tax system, enhance their understanding of tax policy, and prepare them for careers in taxation law, corporate tax advisory, or public finance.
- Familiarize students with the structure and types of taxes in different jurisdictions, including direct taxes (e.g., income tax, corporate tax) and indirect taxes (e.g., sales tax, VAT).

**Unit – I: Introduction**

a. Definitions

b. Basis of Income

- Charge of Income Tax
- Scope of total Income
- Residential status of an assessee
- Dividend Income
- Income deemed to accrue or arise in India
- Foreign income and its taxability

**Unit – II: Incomes which do not form part of total Income**

a. Incomes not included in total income

b. Special provision in respect of newly established industrial undertaking in free trade zones

c. Special provision in respect of newly established hundred per cent export oriented undertaking

d. Income from property held for charitable or religious purpose

e. Income of trusts or institutions from contributions

f. Conditions as to registration of trusts, etc.

g. Section 11 not to apply in certain cases

h. Special provision relating to incomes of political parties

## B.A. – LL.B. (5 YEARS INTEGRATED COURSE) SYLLABUS

---

### Unit – III: Heads of Income

- a. Salaries
- b. Income from house property
- c. Profits and gains of business or profession
- d. Capital gains
- e. Income from other sources

### Unit – IV: Tax Authorities

#### Suggested Readings

##### Text books:

1. Dinesh Ahuja and Ravi Gupta, Systematic approach to Income Tax, (Latest Edition)
2. Singhania, Student Guide to Income Tax, Taxmann (Latest Edition).

##### References:

1. N.A. Palkwllah's Income Tax Act (Two Volume)
2. Iyer's Income Tax Act
3. Chaturvedi's Direct Tax Act (Three Volume)

\*\*\*\*\*

**LAW OF PROPERTY**

**Sub. Code: BL 503**

**L – 4, C – 4.**

**Course Objectives**

- I. The students will have a solid understanding of the legal principles surrounding property rights, ownership, transfer, and dispute resolution.
- II. They will be equipped to navigate the legal complexities of property transactions, including real estate deals, leasing arrangements, inheritance issues, and intellectual property.
- III. The students will be able to critically analyze property laws in the context of social justice, economic development, and legal protections for individuals and communities.
- IV. This knowledge will prepare them for careers in property law, real estate law, and related fields, enabling them to address both individual and societal property issues effectively.

**Unit-I:**

**Meaning** and concept of property — Kinds of property — Transfer of property — Transferable and non-transferable property — Who can transfer — Operation of transfer — Mode of transfer — Conditional transfer — Void and unlawful conditions — Condition precedent and condition subsequent — **Vested and contingent interest — Transfer to unborn person**

**Unit-II:**

Doctrine of Election — Covenants — Transfer by ostensible owner — Doctrine of Feeding the Grant by Estoppel — Doctrine of Lis Pendens — **Fraudulent Transfer — Doctrine of Part-performance.**

**Unit-III:**

Sale - Essential features — Mode of Sale — Rights and liabilities of parties. Mortgage - Kinds of Mortgages - Rights and liabilities of mortgagor and mortgagee — **Marshalling and Contribution — Charges.**

**Unit-IV:**

Lease — Essential features — Kinds of leases — Rights and liabilities of lessor and lessee — Termination of lease — forfeiture — Exchange — Gifts — **Different types of gifts — Registration of Gifts — Transfer of Actionable Claims.**

## B.A. – LL.B. (5 YEARS INTEGRATED COURSE) SYLLABUS

---

### **Suggested Readings:**

1. Mulla: Transfer of Property, Butterworths Publications.
2. Subba Rao GCV: Commentaries on the Transfer of Property Act.
3. KrishnaMenon: Law of Property.
4. UpadhyasCommon Matrix of Transfer of Property.

**ENVIRONMENTAL LAWS**

**Sub. Code: BL 505**

**L – 4, C – 4.**

**Course Objectives**

- The Environmental Law course aims to provide students with a thorough understanding of the legal frameworks, principles, and policies designed to protect the environment and regulate human impact on natural resources.
- The course covers both domestic and international environmental law, with a focus on the role of law in promoting sustainable development and addressing key issues such as pollution control, biodiversity conservation, climate change, natural resource management, and environmental justice.
- The objective is to equip students with the legal knowledge and analytical skills needed to navigate the complexities of environmental governance, as well as to promote awareness of the challenges of balancing economic development with environmental protection.
- Students will learn to interpret and apply environmental laws and policies and to critically assess their effectiveness in addressing contemporary environmental issues.

**Unit-I**

The meaning and definition of environment – Ecology - Ecosystems-Biosphere - Biomes - Ozone depletion - Global Warming - Climatic changes - Need for the preservation, conservation and protection of environment - Ancient Indian approach to environment- Environmental degradation and pollution - Kinds, causes and effects of pollution.

**Unit-II**

Common Law remedies against pollution - trespass, negligence, and theories of Strict Liability & Absolute Liability - Relevant provisions of I.P.C. and Cr.P.C. and C.P.C., for the abatement of public nuisance in pollution cases - Remedies under Specific Relief Act - Reliefs against smoke and noise - Noise Pollution.

**Unit-III**

The law relating to the preservation, conservation and protection of forests, wild life and endangered species, marine life, coastal ecosystems and lakes etc. - Prevention of cruelty towards animals - The law relating to prevention and control of water pollution - Air Pollution - Environment pollution control mechanism - Law relating to environment protection – National Environmental Tribunal and National Environmental Appellate Authority.

## B.A. – LL.B. (5 YEARS INTEGRATED COURSE) SYLLABUS

---

### Unit-IV:

Art. 48A and Art. 51A(g) of the Constitution of India - Right to wholesome environment - Right to development - Restriction on freedom of trade, profession, occupation for the protection of environment - Immunity of Environment legislation from judicial scrutiny(Art.31C) - Legislative powers of the Centre and State Government - Writ jurisdiction - Role of Indian Judiciary in the evolution of environmental jurisprudence.

### Unit-V

International Environmental Regime - Transactional Pollution - State Liability - Customary International Law - Liability of Multinational Corporations/Companies - Stockholm Declaration on Human Environment, 1972 .

### Suggested Readings:

1. Paras Diwan: Studies on Environmental Cases.
  2. S.N. Jain (ed.): Pollution Control and the Law.
  3. Armin Rosencranz and Shyam Divan: Environmental Law and Policy in India.
  4. A. Agarwal (ed.): Legal Control of Environmental Pollution
  5. Chetan Singh Mehta: Environmental Protection and Law
  6. V.K. Krishna Iyer: Environment Pollution and Law
  7. Shah : Environmental Law
  8. Paras Diwan : Environmental Law and Policy in India, 1991
  9. Dr. N. Maheshwara Swamy, Environmental Law, Asia Law House, Hyderabad.

**Public Relations BL 505A**

**Sub. Code: BL 505A**

**L – 4, C – 4.**

**Course Objectives:**

- To provide students with an understanding of the theory and practice of public relations.
- To develop skills in strategic communication, media relations, and crisis management.
- To introduce students to PR tools and techniques used in crafting messages for different audiences.
- To enable students to understand and apply PR ethics and professional standards.
- To examine how PR integrates with marketing, advertising, and other aspects of communication within organizations.

**Unit 1: Introduction to Public Relations**

**1. Understanding Public Relations:**

- Definition of PR and its importance in organizational communication.
- The evolution and history of public relations.
- Key functions of PR: Media relations, event planning, crisis management, and community outreach.

**2. The Role of PR in Modern Organizations:**

- PR as a tool for brand building and reputation management.
- The relationship between PR and other communication fields like advertising and marketing.
- PR in non-profit, government, and corporate sectors.

**3. Key PR Theories and Models:**

- Press Agency/Publicity Model, Public Information Model, Two-Way Asymmetrical Model, and Two-Way Symmetrical Model.
- Models of communication in PR: Shannon-Weaver, Berlo's SMCR Model, etc.

**Unit 2: Media Relations and Communication Channels**

**1. Working with the Media:**

- The role of media in PR: Print, broadcast, and digital media.
- Building and maintaining relationships with journalists and media outlets.
- Writing press releases, media kits, and pitch letters.
- Conducting interviews and handling media inquiries.

**2. Communication Channels in PR:**

- Owned, earned, and paid media.
- Digital PR: Social media, blogs, podcasts, and websites.

## B.A. – LL.B. (5 YEARS INTEGRATED COURSE) SYLLABUS

---

- Importance of storytelling in PR: Crafting compelling narratives for various audiences.

### 3. **Media Ethics and Laws:**

- Ethical issues in media relations: Transparency, truth, and accuracy.
- Legal aspects of PR: Copyright, defamation, privacy laws.
- The role of public relations professionals in upholding ethical media practices.

## **Unit 3: PR Campaigns and Strategic Communication**

### 1. **Planning and Implementing PR Campaigns:**

- The process of developing a PR campaign: Research, planning, execution, and evaluation.
- Setting objectives and defining target audiences.
- Creating PR materials: Newsletters, speeches, brochures, and websites.

### 2. **Tactics and Tools in PR:**

- Press conferences, media interviews, and special events.
- Social media and digital tools: Content creation, blogging, and influencer partnerships.
- Using measurement and analytics to track campaign success.

### 3. **Evaluating PR Campaign Effectiveness:**

- Techniques for evaluating PR efforts: Media coverage, public perception, surveys.
- ROI in public relations: Quantifying impact and success.
- Case studies of successful and failed PR campaigns.

## **Unit 4: Crisis Communication and Reputation Management**

### 1. **Understanding Crisis Communication:**

- Definition and types of crises: Natural disasters, scandals, product failures, etc.
- The role of PR in crisis management: Anticipation, response, and recovery.
- The crisis communication process: Message creation, media management, and stakeholder engagement.

### 2. **Developing Crisis Communication Plans:**

- Importance of a crisis communication strategy and a crisis communication team.
- Key principles in handling crises: Honesty, timeliness, transparency, and consistency.
- Using media and social media effectively during a crisis.

### 3. **Reputation Management and Brand Protection:**

- The significance of reputation in public relations.
- Strategies for managing and maintaining a positive public image.
- Case studies of organizations that effectively managed their reputation.

## Unit 5: PR in the Digital Age

### 1. Digital PR and Social Media:

- The rise of digital PR: The impact of blogs, social media, and podcasts.
- Creating content for digital platforms: Best practices for blogs, Twitter, Instagram, and Facebook.
- Social media engagement: Building online communities and responding to online criticism.

### 2. Online Reputation and Influencer Marketing:

- The role of influencers and bloggers in modern PR.
- Managing online reviews and user-generated content.
- The importance of SEO and content marketing in PR efforts.

### 3. Ethics and Legal Considerations in Digital PR:

- Ethical issues in social media communication: Transparency, privacy, and disclosure.
- Legal aspects: Copyright, defamation, and social media laws.

## Suggested Books:

- *Public Relations: Strategies and Tactics* by Dennis L. Wilcox and Glen T. Cameron.

- *Public Relations Ethics: Theory and Practice* by M. J. Bowen.
- *Public Relations Campaigns: An Integrated Approach* by J. K. Grunig.
- *Effective Public Relations* by Scott M. Cutlip and Allen H. Center
-

**Global Politics BL 505B**

**Sub. Code: BL 505**

**L – 4, C – 4.**

**Course Objectives:**

- To introduce students to the fundamental concepts and theories in global politics.
- To examine global political structures, power dynamics, and governance mechanisms.
- To provide an understanding of contemporary issues such as conflict, security, development, and human rights.
- To analyze the role of international institutions, states, and non-state actors in shaping global politics.
- To foster critical thinking about the impact of globalization and international political change.

**Unit 1: Introduction to Global Politics**

**1. Understanding Global Politics:**

- Definition and scope of global politics.
- Theories and approaches in international relations: Realism, Liberalism, Constructivism, Marxism.
- The concept of the state and the role of sovereignty in global politics.

**2. Key Actors in Global Politics:**

- The state as a central actor in international relations.
- Non-state actors: International organizations, multinational corporations, civil society, NGOs, and individuals.
- Transnational issues and the role of non-state actors in addressing them.

**3. Globalization:**

- Definition and key features of globalization.
- The impact of globalization on politics, economics, and culture.
- Debates about the benefits and drawbacks of globalization.

**Unit 2: Theories and Approaches in International Relations**

**1. Realism and Liberalism:**

- Key principles of Realism: Power, national interest, and anarchy.
- Key principles of Liberalism: Cooperation, institutions, and interdependence.
- Comparing Realism and Liberalism in understanding state behavior.

**2. Constructivism and Marxism:**

- Constructivism: The role of ideas, identities, and norms in shaping global politics.

## B.A. – LL.B. (5 YEARS INTEGRATED COURSE) SYLLABUS

---

- Marxism and Critical Theory: Understanding global politics through economic structures and class struggle.
- Feminist and postcolonial approaches to global politics.
- 3. **Post-Colonialism and Global Governance:**
  - The legacy of colonialism in shaping global politics.
  - Global governance and the role of institutions in maintaining order.

### Unit 3: Global Governance and International Institutions

1. **The United Nations and Global Governance:**
  - History and structure of the United Nations.
  - The role of the UN in peacekeeping, human rights, and development.
  - The Security Council and its decision-making process.
2. **Regional Organizations and International Law:**
  - The European Union, African Union, ASEAN, and other regional organizations.
  - International law and its role in global politics: Human rights law, international humanitarian law, and the International Criminal Court.
3. **International Financial Institutions:**
  - The International Monetary Fund (IMF), World Bank, and World Trade Organization (WTO).
  - The role of these institutions in global economic governance.
  - Criticisms and challenges facing these institutions.

### Unit 4: Security and Conflict in Global Politics

1. **Theories of Security:**
  - Traditional security vs. human security.
  - The role of military power in global politics.
  - The security dilemma and arms races.
2. **Global Conflict and War:**
  - Causes of conflict: Ideology, resources, territorial disputes, and ethnic tensions.
  - The role of international institutions in conflict resolution.
  - Case studies of recent conflicts (e.g., Syria, Ukraine, Afghanistan).
3. **Terrorism and Non-Traditional Security Threats:**
  - The rise of global terrorism and its impact on international politics.
  - Non-state actors in global conflict.
  - Cybersecurity and environmental threats as emerging security challenges.

# B.A. – LL.B. (5 YEARS INTEGRATED COURSE) SYLLABUS

---

## Unit 5: Global Political Economy

1. **Theories of International Political Economy (IPE):**
  - Liberalism, Mercantilism, and Structuralism in understanding the global economy.
  - The role of multinational corporations in global economic politics.
  - The relationship between politics and economics in a globalized world.
2. **Global Trade and Development:**
  - The World Trade Organization (WTO) and global trade agreements.
  - Global poverty, inequality, and the role of development aid.
  - Sustainable development and the United Nations' SDGs (Sustainable Development Goals).
3. **Global Financial Crises and the Role of Global Institutions:**
  - The 2008 financial crisis and its global impacts.
  - The role of international financial institutions (IMF, World Bank) in global economic stability.
  - Issues of debt, austerity, and development in the global South.

## Unit 6: Human Rights and Global Justice

1. **The Concept of Human Rights:**
  - Universalism vs. relativism in human rights.
  - The role of international organizations in human rights protection (e.g., UN, NGOs).
  - Case studies: Human rights violations in different regions (e.g., Myanmar, China, Africa).
2. **Global Justice and Ethics:**
  - Theories of global justice: Cosmopolitanism, communitarianism, and global citizenship.
  - Ethical challenges in global politics: Intervention, sovereignty, and the "responsibility to protect."
  - Debates on global inequality and justice.
3. **Humanitarian Intervention and Peacekeeping:**
  - The ethical and legal dimensions of humanitarian intervention.
  - The role of international organizations in peacekeeping and post-conflict reconstruction.
  - Case studies: Rwanda, Bosnia, Libya.

## Suggested Books:

**Introduction to Sociology BL 505C**

**Sub. Code: BL 505C**

**L – 4, C – 4.**

**Course Objectives:**

- To provide students with an understanding of the key concepts, theories, and perspectives in sociology.
- To explore the structure and functions of social institutions and their impact on individual behavior.
- To examine how socialization, culture, and identity shape social interactions.
- To develop critical thinking and analytical skills regarding contemporary social issues.
- To familiarize students with basic research methods in sociology.

**Unit 1: Introduction to Sociology and Sociological Imagination**

**1. Sociology**

- Definition and scope of sociology.
- The significance of sociology in understanding human behavior and society.
- Sociology as a discipline: Interdisciplinary connections with anthropology, psychology, economics, and political science.

**2. The Sociological Imagination:**

- C. Wright Mills' concept of the sociological imagination.
- Understanding the relationship between individual experiences and larger social forces.
- The personal troubles vs. public issues framework.

**3. Sociological Perspectives:**

- Structural Functionalism: Key ideas and major theorists (e.g., Emile Durkheim, Talcott Parsons).
- Conflict Theory: Key ideas and major theorists (e.g., Karl Marx, Max Weber).
- Symbolic Interactionism: Key ideas and major theorists (e.g., George Herbert Mead, Erving Goffman).

# B.A. – LL.B. (5 YEARS INTEGRATED COURSE) SYLLABUS

---

## Unit 2: Social Structure and Socialization

1. **The Structure of Society:**
  - Social structure: Role, status, norms, and values.
  - Social institutions: Family, education, religion, economy, and government.
  - Social stratification and inequality: Class, caste, race, and gender.
2. **Socialization:**
  - Definition and importance of socialization.
  - The process of socialization: Agents of socialization (family, peers, schools, media).
  - Socialization across the life course: Childhood, adolescence, adulthood, and old age.
  - Theories of socialization: Freud, Piaget, Cooley, Mead.
3. **Culture and Society:**
  - Culture and its components: Material and non-material culture.
  - Cultural norms, values, and symbols.
  - Cultural diversity and multiculturalism.
  - Ethnocentrism and cultural relativism.

## Unit 3: Social Institutions

1. **Family:**
  - Definition and functions of the family as a social institution.
  - Types of family structures: Nuclear, extended, single-parent, etc.
  - Changes in family patterns: Marriage, divorce, parenting.
  - Family and socialization.
2. **Education:**
  - The role of education in society: Socialization, cultural transmission, social control.
  - Education and inequality: Class, gender, race, and educational outcomes.
  - Theories of education: Functionalism, Conflict Theory, and Symbolic Interactionism.
3. **Religion:**
  - The role of religion in society.
  - Different types of religion: Monotheism, polytheism, animism, etc.
  - Theories of religion: Durkheim, Marx, Weber.
  - Secularization and the role of religion in modern society.

## Unit 4: Social Change and Social Movements

## B.A. – LL.B. (5 YEARS INTEGRATED COURSE) SYLLABUS

---

### 1. **Social Change:**

- Definition and types of social change: Evolution, revolution, reform.
- Causes of social change: Technological advancements, social movements, economic and political factors.
- Theories of social change: Evolutionary, cyclical, and conflict theories.

### 2. **Social Movements:**

- Definition and characteristics of social movements.
- Types of social movements: Reform movements, revolutionary movements, resistance movements, and expressive movements.
- Major social movements in history: Civil rights movement, feminist movement, environmental movement.

### 3. **Globalization and Social Change:**

- The impact of globalization on society: Economic, political, and cultural changes.
- Social consequences of globalization: Global inequality, migration, cultural homogenization.
- Technology, the internet, and social media as agents of social change.

## **Unit 5: Social Problems and Issues**

### 1. **Defining Social Problems:**

- Characteristics of social problems: Social deviance, crime, inequality, poverty.
- The role of sociological perspective in understanding social problems.
- The social construction of social problems.

### 2. **Contemporary Social Issues:**

- Poverty, unemployment, and economic inequality.
- Crime and deviance: Theories of crime (strain theory, differential association theory, labeling theory).
- Gender inequality: Women's rights, sexual harassment, gender roles.
- Racism, ethnic conflict, and discrimination.
- Environmental degradation and climate change.

### 3. **Addressing Social Problems:**

- Social policy and the role of the state in addressing social issues.
- The role of non-governmental organizations (NGOs) and civil society in addressing social problems.
- Social reforms and the role of social movements in effecting change.

## Unit 6: Research Methods in Sociology

### 1. Introduction to Sociological Research:

- The importance of research in sociology.
- Types of research methods: Quantitative and qualitative research.
- Research process: Problem formulation, hypothesis testing, data collection, and analysis.

### 2. Quantitative and Qualitative Research:

- Surveys, experiments, and statistical analysis.
- Participant observation, ethnography, and case studies.
- Strengths and limitations of different research methods.

### 3. Ethics in Sociological Research:

- Ethical considerations in sociological research: Consent, confidentiality, and researcher bias.
- The role of ethics committees and institutional review boards (IRBs).

## Suggested Books:

---

Advocate with 10 years' experience at the Bar. The same committee will also conduct viva-voce on the above concepts. The proceedings of the viva-voce shall be recorded.

### **Note:**

- 1. Attendance of the students for viva-voce shall be compulsory.**
- 2. The above records certified by the University Representative appointed by the Controller of Examinations in consultation with the Chairman, BOS in Law shall be submitted to the University for Further Verification**

### **Suggested Readings:**

1. R.N. Chaturvedi : Pleadings and Conveyancing, Central Law Publications.
2. De Souza : Conveyancing, Eastern Law House.
3. Tiwari : Drafting, Pleading and Conveyancing, Central Law Agency.
4. Mogha: Indian Conveyancer, Eastern Law House.
5. Mogha: Law of Pleadings in India, Eastern Law House.
6. Shiv Gopal: Conveyancing, Precedents and Forms, Eastern Book Company

**Body Language-I BL 509A**

**Sub. Code: BL 509A**

**L -1,P-6, C -4**

**Course Objectives:**

- To introduce students to the concept and importance of body language.
- To understand the different types of non-verbal communication, including gestures, facial expressions, posture, and eye contact.
- To learn how body language affects interpersonal communication and how to use it effectively in various social and professional situations.
- To develop skills for interpreting body language in diverse settings.
- To enhance personal and professional communication through better understanding of non-verbal cues.

**Unit 1: Introduction to Body Language**

- 1. What is Body Language?**
  - Definition and significance of body language.
  - The role of non-verbal communication in human interactions.
  - Differences between verbal and non-verbal communication.
  - History and development of body language studies.
- 2. Types of Non-Verbal Communication:**
  - Kinesics (gestures, posture, facial expressions).
  - Proxemics (use of space).
  - Haptics (touch).
  - Chronemics (use of time).
  - Paralanguage (tone, pitch, pace of speech).
  - Eye contact and its significance.
- 3. Understanding the Impact of Body Language:**
  - The relationship between body language and emotions.
  - How body language influences perceptions, trust, and relationships.
  - The role of body language in different cultures.
  - Misinterpretations of body language.

## Unit 2: Understanding Facial Expressions and Gestures

### 1. Facial Expressions:

- The six basic facial expressions (happiness, sadness, fear, anger, surprise, and disgust).
- Microexpressions: Understanding fleeting facial expressions.
- The role of facial expressions in emotional communication.
- How to recognize and respond to facial cues.

### 2. Gestures and Posture:

- Types of gestures: Emblems, illustrators, affect displays, regulators, and adaptors.
- Understanding the meaning of common gestures.
- The significance of posture in body language.
- How posture conveys confidence, openness, or defensiveness.

### 3. Cultural Variations in Facial Expressions and Gestures:

- Differences in body language across cultures.
- How to avoid cultural misunderstandings in cross-cultural communication.
- The universality and variability of facial expressions and gestures.

## Unit 3: Eye Contact and Proxemics

### 1. The Power of Eye Contact:

- The importance of eye contact in communication.
- Eye contact and its relationship with confidence, interest, and trust.
- How to interpret eye movement and gaze.
- Cross-cultural differences in the use of eye contact.

### 2. Proxemics:

- Understanding personal space: Intimate, personal, social, and public distances.
- How to use space effectively in social and professional contexts.
- The impact of crowding and proximity in communication.
- Territoriality and how body language signals ownership of space.

### 3. Body Language and Relationship Building:

- How body language affects relationships and emotional connections.
- Using non-verbal communication to enhance personal relationships.
- The role of body language in conflict resolution and negotiation.

## Unit 4: Interpreting and Using Body Language Effectively

### 1. Reading Body Language:

- Identifying congruence between verbal and non-verbal communication.
- Techniques for interpreting body language in others.
- How to detect lies or deception through body language.
- The role of intuition in reading body language.

### 2. Using Body Language to Enhance Communication:

- How to use body language to convey authority, confidence, and openness.
- Non-verbal techniques for effective public speaking and presentations.
- How to use body language in interviews and professional settings.
- The role of mirroring and matching in building rapport.

### 3. Body Language in Social Situations:

- Understanding body language in social interactions (e.g., dating, friendships, networking).
- Reading body language cues in group dynamics.
- Strategies for adjusting your body language in response to others.

## Unit 5: Body Language in Professional Settings

### 1. Body Language in the Workplace:

- How body language affects professional relationships.
- Using body language in job interviews and meetings.
- Understanding body language cues in leadership and team interactions.
- How to convey professionalism and confidence non-verbally.

### 2. Non-Verbal Communication in Negotiations:

- The role of body language in negotiations and conflict resolution.
- How to recognize power dynamics through body language.
- Understanding gestures, facial expressions, and posture during negotiations.

### 3. Public Speaking and Body Language:

- The importance of non-verbal communication in public speaking.
- Techniques for improving posture, gesture, and facial expression during speeches.
- Handling nervousness and projecting confidence through body language.

## B.A. – LL.B. (5 YEARS INTEGRATED COURSE) SYLLABUS

---

### **Suggested Books:**

- *The Definitive Book of Body Language* by Allan and Barbara Pease.
- *Body Language: How to Read Others' Thoughts by Their Gestures* by Allan Pease.
- *The Power of Body Language* by Tonya Reiman.
- *What Every BODY is Saying* by Joe Navarro.
- *The Body Language of Leadership* by Carol Kinsey Goman.
- *Body Language at Work* by Peter Clayton.
- *What Every BODY is Saying* by Joe Navarro.
- *The Body Language of Love* by Allan Pease.
- *Emotions Revealed: Recognizing Faces and Feelings to Improve Communication and Emotional Life* by Paul Ekman.
- *Body Language for Dummies* by Elizabeth Kuhnke.

**Presentation Skills-I BL 509B**

**Sub. Code: BL 509B**

**L -1,P-6, C -4**

**Course Objectives:**

- To equip students with the necessary skills to plan and deliver effective presentations.
- To develop students' ability to engage, inform, and persuade audiences.
- To improve public speaking and presentation techniques through practical exercises.
- To teach students how to use visual aids and other presentation tools effectively.
- To enhance students' confidence in delivering presentations in various professional and academic contexts.

**Unit 1: Introduction to Presentation Skills**

**1. What is a Presentation?**

- Definition and importance of presentations in academic, professional, and social settings.
- Types of presentations: Informative, persuasive, and entertaining.
- Characteristics of an effective presentation.

**2. Understanding Your Audience:**

- The importance of audience analysis.
- Identifying audience expectations and tailoring presentations accordingly.
- Adapting your presentation style for different audience types (e.g., formal, informal, mixed).

**3. Planning and Organizing a Presentation:**

- The steps in planning a presentation.
- Setting objectives and outcomes.
- Structuring the presentation: Introduction, body, conclusion.
- Creating a compelling opening and closing.
- Managing time effectively during a presentation.

**Unit 2: Effective Communication Techniques**

**1. Verbal Communication:**

- Voice modulation: Tone, pitch, speed, and clarity.
- Speaking with confidence and authority.
- Avoiding filler words ("um," "ah," "like").
- Using pauses for emphasis and effect.

**2. Non-Verbal Communication:**

- The importance of body language in presentations.

## B.A. – LL.B. (5 YEARS INTEGRATED COURSE) SYLLABUS

---

- Eye contact: Building trust and engagement.
  - Posture and gesture: How to convey confidence.
  - Facial expressions and their role in communication.
3. **Building Confidence and Reducing Anxiety:**
- Techniques for overcoming stage fright and nervousness.
  - Relaxation exercises before and during the presentation.
  - Power poses and breathing techniques to boost confidence.

### Unit 3: Designing Visual Aids and Supporting Materials

1. **Using Visual Aids:**
- Types of visual aids: Slides, charts, videos, and physical props.
  - Principles of effective slide design: Simplicity, readability, and visual appeal.
  - Do's and don'ts of PowerPoint presentations.
2. **Creating Engaging and Informative Slides:**
- Organizing content visually.
  - Choosing the right visuals: Graphics, images, and diagrams.
  - The role of text in slides: Keeping it brief and clear.
  - Avoiding information overload.
3. **Using Technology in Presentations:**
- Introduction to presentation software (e.g., Microsoft PowerPoint, Google Slides).
  - Using multimedia elements (audio, video) effectively.
  - Incorporating interactive elements (polls, questions, audience participation).

### Unit 4: Delivering a Presentation

1. **Effective Delivery Techniques:**
- The importance of storytelling and structure in maintaining audience engagement.
  - How to present with energy and enthusiasm.
  - Maintaining control of the room: Use of voice, pacing, and movement.
2. **Engaging the Audience:**
- Creating audience rapport: Humor, anecdotes, and questions.
  - Techniques for keeping the audience's attention.
  - Encouraging participation and interaction.
3. **Handling Questions and Feedback:**
- Dealing with questions during and after the presentation.
  - Managing difficult or challenging questions.
  - Techniques for staying calm and composed when answering questions.
  - How to incorporate audience feedback into future presentations.

### Unit 5: Practicing and Refining Your Presentation

#### 1. Rehearsal Techniques:

- The importance of practice: Timing, fluency, and confidence.
- How to rehearse effectively: Alone, with peers, or in front of a mirror.
- Practicing with visual aids and technology.
- Recording your presentation and evaluating it.

#### 2. Self-Evaluation and Peer Feedback:

- Using self-assessment to identify strengths and areas for improvement.
- Giving and receiving constructive feedback.
- Continuous improvement and learning from experience.

#### 3. Final Presentation:

- Students will prepare and deliver a final presentation, demonstrating the skills they have learned throughout the course.
- Emphasis on content, delivery, visual aids, and audience engagement.

### Suggested Books:

- *Presentation Skills 201: How to Take It to the Next Level as a Speaker* by William R. Steele.
- *The Art of Public Speaking* by Stephen E. Lucas.
- *Slide:ology: The Art and Science of Creating Great Presentations* by Nancy Duarte.
- *TED Talks: The Official TED Guide to Public Speaking* by Chris Anderson.
- *Confessions of a Public Speaker* by Scott Berkun.
- *The Art of Public Speaking* by Dale Carnegie.
- *TED Talks: The Official TED Guide to Public Speaking* by Chris Anderson.
- *Resonate: Present Visual Stories that Transform Audiences* by Nancy Duarte.

**Effective Writing Skills-I BL 509C**

**Sub. Code: BL 509C**

**L -1,P-6, C -4**

**Course Objectives:**

- To enhance students' writing skills for academic and professional purposes.
- To improve students' ability to organize their thoughts and present them in a structured manner.
- To develop a strong understanding of the rules of grammar, punctuation, and sentence structure.
- To introduce students to various types of writing, such as essays, reports, and reflective writing.
- To help students develop effective writing strategies, including revision and proofreading techniques.

**Unit 1: Introduction to Writing Skills**

**1. The Importance of Writing:**

- Role of writing in academic and professional life.
- Writing as a tool for communication, expression, and persuasion.
- Overview of different types of writing: Informative, persuasive, descriptive, and narrative.

**2. Basic Writing Concepts:**

- The writing process: Prewriting, drafting, revising, editing, and publishing.
- Elements of good writing: Clarity, coherence, consistency, and conciseness.
- Identifying your audience and purpose in writing.

**3. Fundamentals of Grammar and Style:**

- Parts of speech: Nouns, verbs, adjectives, and adverbs.
- Sentence structure: Simple, compound, and complex sentences.
- Common grammar mistakes to avoid: Subject-verb agreement, punctuation, and articles.
- Developing an effective writing style.

**Unit 2: Paragraph Writing and Structure**

**1. The Structure of a Paragraph:**

- Introduction, body, and conclusion in a paragraph.
- Unity and coherence in paragraphs.
- Topic sentences, supporting details, and concluding sentences.

### 2. **Writing Effective Paragraphs:**

- Organizing ideas logically and cohesively.
- Using transitions between sentences and paragraphs.
- Avoiding run-on sentences and fragments.

### 3. **Paragraph Types:**

- Descriptive, narrative, expository, and persuasive paragraphs.
- Writing introductory and concluding paragraphs effectively.

## **Unit 3: Essay Writing Techniques**

### 1. **Essay Structure and Organization:**

- Introduction, thesis statement, body paragraphs, and conclusion.
- Writing effective thesis statements and topic sentences.
- Developing body paragraphs with clear arguments and evidence.

### 2. **Types of Essays:**

- Descriptive Essays: Writing about a person, place, event, or idea.
- Narrative Essays: Telling a story with a clear beginning, middle, and end.
- Expository Essays: Explaining a topic or process clearly.
- Persuasive Essays: Arguing a position with evidence and reasoning.

### 3. **Essay Revision and Editing:**

- Common pitfalls in essay writing.
- Revising for clarity, coherence, and logical flow.
- Proofreading for grammatical and typographical errors.

## **Unit 4: Writing for Different Purposes**

### 1. **Writing Reports:**

- Structure of a report: Title, introduction, methodology, findings, and conclusion.
- Writing clear, concise, and objective reports.
- Using headings, subheadings, and bullet points for clarity.

### 2. **Business and Professional Writing:**

- Writing emails, memos, and letters in a professional tone.
- Formatting and structuring business correspondence.
- Writing resumes and cover letters effectively.

### 3. **Creative Writing:**

- Elements of creative writing: Character, setting, plot, and theme.
- Writing short stories, poems, and descriptive passages.
- Exploring narrative voice and point of view in creative writing.

## Unit 5: Advanced Writing Techniques

### 1. Improving Vocabulary and Sentence Variety:

- Expanding vocabulary for precise and expressive writing.
- Using synonyms and antonyms effectively.
- Writing with sentence variety to maintain interest and flow.

### 2. Writing with Clarity and Conciseness:

- Eliminating redundancy and wordiness.
- Writing clearly and directly without over-explaining.
- Using active voice over passive voice to enhance clarity.

### 3. Critical Thinking and Argumentation:

- Developing arguments and counterarguments.
- Supporting arguments with credible evidence and examples.
- Writing persuasive arguments with logical reasoning and proper structure.

## Suggested Books:

- *The Elements of Style* by William Strunk Jr. and E.B. White.
- *Writing Academic English* by Alice Oshima and Ann Hogue.
- *On Writing Well* by William Zinsser.
- *The Bedford Handbook* by Diana Hacker.
- *The Little, Brown Handbook* by H. Ramsey Fowler and Jane E. Aaron.
- *On Writing Well: The Classic Guide to Writing Nonfiction* by William Zinsser.
- *Business Writing Essentials* by Gregory L. S. Minter.
- *Creative Writing: A Workbook with Readings* by Julia Bell

**SEMESTER X**

**MOOT COURTS, OBSERVATION OF TRIAL, PRE-TRIAL  
PREPARATIONS AND INTERNSHIP**

**Sub. Code: BALLB 502**

**L-2,P-8, C -6**

**Course Objectives**

- The Moot Court course aims to provide law students with practical experience in oral advocacy, legal research, and drafting of pleadings through simulated court proceedings.
- It is designed to help students develop the skills necessary for real-world legal practice by participating in mock trials, arguing cases before a judge or panel, and presenting legal arguments on behalf of hypothetical clients.
- The course helps students bridge the gap between theory and practice by providing a platform to apply their knowledge of substantive law and procedural rules in a courtroom setting.
- Students will be prepared to represent clients in court, effectively communicate legal arguments, and contribute to legal research and writing, making them ready for future careers in litigation, legal practice, and dispute resolution.

This paper has three components of 30 marks each and viva-voce for 10 marks.

**(A) Moot Court (30 marks):** Every student is required to participate in at least three moot courts in the VI Semester with 10 marks for each. The moot court work will be on an assigned problem and it will be evaluated for 5 marks for written submissions and 5 marks for oral advocacy.

Marks will be given on the basis of written submission and oral advocacy. Written submissions shall include brief summary of facts, issues involved, provisions of laws and arguments, citation, prayer, etc. Marks for oral advocacy may be awarded for communication skills, presentations, language, provisions of law; authorities quoted, court manners, etc. Written Memorials submitted by the students shall be kept by the College for Further Verification.

The performance of student in the moot court shall be evaluated by a committee consisting of (i) Principal of the College (ii) an Advocate with 10 years experience at the Bar; and (iii) the teacher concerned.

## B.A. – LL.B. (5 YEARS INTEGRATED COURSE) SYLLABUS

---

### **(B) Observance of Trial in two cases, one Civil and one Criminal (30 marks):**

Students are required to attend courts to observe at least one civil and one criminal case. They shall maintain a record and enter the various steps observed during their attendance on different days in the court assignment. The Court Observation Record submitted by the students should be evaluated by a committee consisting of (i) Principal of the College/the concerned teacher (ii) University Representative appointed by the Controller of Examinations in consultation with the Chairman, Board of Studies in Law, and (iii) an Advocate with 10 years experience at the Bar and average be taken. Court attendance shall be compulsory and attendance has to be recorded in a register kept therefor. This may be carried under the supervision of a teacher of the college. This scheme will carry 30 marks.

### **(C) Interviewing Techniques and Pre-Trial Preparations and Internship Diary (30 marks):**

Each student should observe two 'interview sessions' of clients either in the Lawyer's Office or in the Legal Aid Office and record the proceedings in a diary, which will carry 15 marks.

Each student has to further observe the preparation of documents and court papers by the Advocate and the procedure for the filing of the suit / petition. This shall be recorded in the diary which will carry 15 marks.

The diary shall clearly indicate the dates on which the above observations are made and they shall be authenticated by the advocate concerned.

Evaluation of the above diary shall be made by the committee consisting of (i) Principal of the College/the concerned teacher (ii) University Representative appointed by the Controller of Examinations in consultation with the Chairman, Board of Studies in Law, O.U.; and (iii) an Advocate with 10 years experience at the Bar and average be taken.

### **Note:**

- 1. Attendance of the students in all the four components of the paper shall be compulsory.**
- 2. The above records, diary certified by the University Representative appointed by the Controller of Examinations in consultation with the Chairman, BOS in Law shall be submitted to the University for Further Verification.**

### **Suggested Readings:**

1. Dr. Kailash Rai: Moot Court Pre-Trial Preparation and Participation in Trial Proceedings, Central Law Publication.
2. Amita Danda: Moot Court for Interactive Legal Education, Gogia Law Agency, Hyderabad.
3. Blackstone's: Books of Moots, Oxford University Press.
4. Mishra: Moot Court Pre-Trial Preparation and Participation in Trial Proceedings, Central Law, Allahabad.

**Body Language-II (BL-502A)**

**Sub. Code: BALLB 502A**

**L-2,P-8, C -4**

**Course Objectives:**

- To introduce students to the phases of trial and pre-trial procedures.
- To enhance understanding of legal terms, courtroom etiquette, and trial strategies.
- To develop skills for preparing cases for trial, including investigation, evidence collection, and witness preparation.
- To expose students to real-world courtroom scenarios through observation of trials.
- To provide opportunities for critical analysis of trial proceedings and the formulation of case strategies.

**Unit 1: Introduction to Trial Procedures**

**1. Overview of the Trial Process:**

- Definition and stages of a trial.
- Key phases: Pre-trial, trial, and post-trial.
- Differences between civil, criminal, and administrative trials.

**2. Participants in a Trial:**

- Roles and responsibilities of judges, attorneys, witnesses, jurors, and court staff.
- Understanding the functions of prosecution and defense counsel.
- Interaction between the judge and counsel during the trial.

**3. Courtroom Etiquette:**

- Formalities and procedures in a courtroom.
- Behavior expectations for lawyers, clients, witnesses, and observers.
- Rules of evidence and courtroom conduct.

**Unit 2: Pre-Trial Preparation and Case Management**

**1. Pre-Trial Motions and Hearings:**

- Understanding pre-trial motions: Motion to dismiss, motion for summary judgment, and motion in limine.
- The role of pre-trial hearings in shaping the trial strategy.
- The discovery process: Gathering evidence and deposing witnesses.
- Developing a pre-trial checklist.

**2. Case Theory Development:**

## B.A. – LL.B. (5 YEARS INTEGRATED COURSE) SYLLABUS

---

- Creating a theory of the case: Crafting a compelling narrative for the court.
  - Identifying key issues in the case and preparing arguments.
  - Legal research and how to use it to develop trial strategy.
  - Preparing exhibits and evidence for presentation in court.
3. **Witness Preparation:**
- Role of witnesses in the trial.
  - Techniques for preparing witnesses for direct and cross-examination.
  - Ethical considerations in witness handling.
  - Mock examination practice for students.

### Unit 3: Observing Trials and Analyzing Courtroom Behavior

1. **The Observation Process:**
- Preparing for trial observation: What to look for in each phase of the trial.
  - Key elements of trial procedure: Opening statements, direct and cross-examination, closing arguments, and jury instructions.
  - Identifying trial tactics: How lawyers build their case and respond to opposing counsel.
2. **Trial Analysis and Case Review:**
- Observing and analyzing the effectiveness of various trial strategies.
  - Understanding the role of the judge and jury during the trial.
  - Ethical considerations for lawyers in trial proceedings.
3. **Courtroom Dynamics:**
- Managing stress and emotion in a courtroom.
  - The role of non-verbal communication (body language, tone) in a trial.
  - The influence of media and public opinion on trial proceedings.

### Unit 4: Trial Strategies and Techniques

1. **Opening Statements and Closing Arguments:**
- Crafting a persuasive opening statement.
  - Closing arguments: Summarizing the case and making a compelling appeal to the jury.
  - Techniques for emphasizing key evidence and witness testimony.
2. **Direct and Cross-Examination:**
- Developing effective questioning strategies.
  - Techniques for managing difficult witnesses.
  - Cross-examination strategies: Impeaching the credibility of witnesses.
  - The role of objections during examination.
3. **Handling Objections and Courtroom Challenges:**

## B.A. – LL.B. (5 YEARS INTEGRATED COURSE) SYLLABUS

---

- Common objections in trial and how to respond.
- Understanding the rules of evidence.
- The importance of timing and courtroom decorum when making objections.

### Unit 5: Post-Trial and Case Reflection

#### 1. Post-Trial Procedures:

- Understanding the judgment phase and what happens after the trial.
- Filing appeals and the appellate process.
- The importance of post-trial motions and the possibility of retrials.

#### 2. Reflection on Trial Observation:

- Discussing observations with instructors and peers.
- Analyzing courtroom strategies used by both parties in observed trials.
- Identifying areas of improvement in trial presentation and strategy.

#### 3. Career Preparation and Legal Practice:

- How trial experience informs legal practice.
- Career paths for lawyers: Litigators, trial consultants, and corporate counsel.
- Professional development through continuous learning and trial experience.

### Suggested Reading:

- *The Anatomy of a Trial* by John M. Conley.
- *Trial Preparation* by William A. Hall.
- *Winning at Trial* by D. Shane Read.
- *The Trial Lawyer's Art* by McElhaney James W.
- *After the Verdict* by Steven M. H. Wallen.
- *The Complete Idiot's Guide to Jury Trials* by David A. Moran.
- *The Anatomy of a Trial* by John M. Conley.
- *The Trial Lawyer: What It Takes to Win* by David Berg.

**Presentation Skills-II BL-502B**

**Sub. Code: BALLB 502B**

**L-2,P-8, C -4**

**Course Objectives:**

- To develop advanced presentation techniques for delivering high-impact presentations.
- To enhance the use of multimedia tools and visual aids in presentations.
- To improve audience engagement strategies and handle diverse audience dynamics.
- To practice dealing with difficult questions and objections during presentations.
- To gain confidence in presenting complex ideas clearly and persuasively.
- To develop personal presentation style and authenticity in delivery.

**Unit 1: Advanced Presentation Structures**

**1. Crafting a Compelling Narrative:**

- Creating a clear and coherent storyline for presentations.
- Using storytelling techniques to engage the audience.
- The structure of persuasive presentations: Introduction, Body, Conclusion.
- Balancing facts with emotional appeal for greater impact.

**2. The 3-Point Rule:**

- Simplifying complex ideas: Focusing on three key takeaways.
- The importance of repetition and emphasis in presenting main ideas.
- Using logical progression to help the audience follow the message.

**3. Developing Powerful Introductions and Conclusions:**

- Crafting powerful openings that grab attention.
- Ending with impact: The importance of strong closing statements.
- Leaving the audience with a memorable call to action.

**Unit 2: Advanced Audience Engagement Techniques**

**1. Understanding Your Audience:**

- Identifying audience needs, interests, and expectations.
- Tailoring your presentation to suit different audience types (e.g., corporate executives, academic audiences, general public).
- Building rapport and establishing credibility with the audience.

**2. Interactive Presentation Techniques:**

## B.A. – LL.B. (5 YEARS INTEGRATED COURSE) SYLLABUS

---

- Using questions, polls, and live feedback to maintain engagement.
  - The art of audience interaction: How to read non-verbal cues from the audience.
  - Techniques for creating a participatory atmosphere in virtual and in-person settings.
- 3. Dealing with Diverse Audiences:**
- Strategies for addressing different types of personalities and communication styles.
  - Techniques for managing difficult or disengaged audiences.
  - Adjusting presentation tone, pace, and language to connect with various groups.

### **Unit 3: Mastering the Use of Visual Aids and Multimedia**

- 1. Designing Effective Visual Aids:**
- Principles of good design: Simplicity, clarity, and consistency.
  - How to use PowerPoint, Prezi, and other tools to create visually appealing slides.
  - Using infographics, charts, and graphs to enhance understanding.
- 2. Integrating Video, Sound, and Interactive Elements:**
- When and how to incorporate multimedia into your presentation.
  - Using video clips and sound effectively to support your message.
  - Avoiding over-reliance on technology and balancing visual aids with your spoken words.
- 3. Non-Verbal Communication and Body Language:**
- Using gestures, posture, and eye contact to enhance your message.
  - Managing stage presence: How to move with purpose and confidence.
  - The impact of facial expressions and tone of voice on audience perception.

### **Unit 4: Handling Questions, Objections, and Difficult Situations**

- 1. Managing Q&A Sessions:**
- How to prepare for and anticipate questions.
  - Techniques for handling difficult or hostile questions.
  - Maintaining composure and confidence during Q&A.
  - Answering questions clearly and concisely.
- 2. Dealing with Objections and Pushback:**
- Techniques for addressing objections with respect and persuasion.
  - Turning challenges into opportunities for engagement.
  - Using body language to handle tension during difficult discussions.
- 3. Handling Unexpected Situations:**
- Staying calm when technology fails or when unexpected disruptions occur.

## B.A. – LL.B. (5 YEARS INTEGRATED COURSE) SYLLABUS

---

- Recovering from mistakes or missteps during a presentation.
- How to maintain control over the presentation in high-pressure situations.

### **Unit 5: Virtual and Hybrid Presentations**

#### **1. Delivering Presentations in Virtual Settings:**

- Best practices for presenting through video conferencing tools (Zoom, MS Teams, etc.).
- Managing virtual audience engagement through chat, polls, and Q&A.
- Adjusting presentation style for virtual environments.

#### **2. Hybrid Presentations:**

- Balancing in-person and online audiences.
- Technical considerations for hybrid presentations (audio, video, screen-sharing).
- Keeping both groups engaged and ensuring equal participation.

#### **3. Overcoming Virtual Presentation Challenges:**

- Handling technical glitches and troubleshooting.
- Managing distractions and ensuring smooth communication in virtual settings.
- Building presence and maintaining confidence on camera.

### **Unit 6: Personal Style and Authenticity in Presentations**

#### **1. Finding Your Unique Presentation Style:**

- Understanding the importance of authenticity in presentation delivery.
- How to develop your natural speaking style and avoid "performing."
- Finding balance between professionalism and personality.

#### **2. Building Confidence and Overcoming Stage Fright:**

- Techniques to boost self-confidence before and during a presentation.
- Overcoming fear of public speaking and managing nerves.
- The role of positive body language in building confidence.

#### **3. Feedback and Continuous Improvement:**

- Techniques for soliciting and incorporating feedback after a presentation.
- Using video recordings of your presentations for self-assessment.
- The role of practice in mastering presentation skills.

### **Suggested Books:**

- *Talk Like TED* by Carmine Gallo.
- *Made to Stick* by Chip Heath & Dan Heath.
- *Presentation Zen* by Garr Reynolds.
- *The Art of Public Speaking* by Dale Carnegie.
- *Virtual Presentations: Best Practices and Strategies for Successful Online Speaking* by Andy Lopata.
- *The Virtual Presenter's Handbook* by Carole Gaskell.
- *The Quick and Easy Way to Effective Speaking* by Dale Carnegie.
- *Crucial Conversations: Tools for Talking When Stakes Are High* by Kerry Patterson, Joseph Grenny, Ron McMillan, Al Switzler

**Effective Writing Skills II (BL-502C)**

**Sub. Code: BALLB 502C**

**L-2,P-8, C -4**

**Course Objectives:**

By the end of this course, students will be able to:

1. Analyze and apply the principles of effective writing.
2. Organize ideas clearly and logically in various writing formats.
3. Revise and edit their work to enhance clarity and coherence.
4. Adapt writing styles to different audiences and purposes.
5. Utilize research and evidence to support arguments and claims.

**UNIT 1: Introduction to Effective Writing**

- Overview of the writing process: prewriting, drafting, revising, editing, and publishing
- The importance of audience and purpose in writing

**UNIT 2: Writing Fundamentals**

- Grammar and punctuation essentials
- Sentence structure and variety

**UNIT 3: Organizing Ideas**

- Outlining techniques for clarity and coherence
- The structure of essays: introduction, body, and conclusion

**UNIT 4: Academic Writing**

- Writing thesis statements and arguments

### **Suggested Readings:**

1. "On Writing: A Memoir of the Craft" by Stephen King  
A blend of memoir and writing advice, King shares insights on the writing process and his personal journey.
2. "The Elements of Style" by William Strunk Jr. and E.B. White  
A classic guide that emphasizes clarity, brevity, and the fundamental principles of English style.
3. "Writing Down the Bones: Freeing the Writer Within" by Natalie Goldberg  
Encourages writers to find their voice and express themselves freely, blending writing exercises with personal reflections.
4. "Bird by Bird: Some Instructions on Writing and Life" by Anne Lamott  
Offers practical advice and encouragement, emphasizing the importance of perseverance in the writing process.

### **Programme Educational Objectives (PEO's)**

- **PEO 1** Legal Expertise: Provide foundational knowledge of law and social sciences.
- **PEO 2** Professional Skills: Develop competence for diverse legal careers.
- **PEO 3** Ethics and Leadership: Cultivate ethical values and leadership in advocacy.
- **PEO 4** Lifelong Learning: Promote research and continuous education in law.
- **PEO 5** Social Responsibility: Encourage contributions to justice and societal welfare.

## **PSOs**

### • **Programme Specific Objectives (PSO's)**

- **PSO 1** Develop a comprehensive understanding of substantive and procedural laws, constitutional principles, and their application to address complex legal issues in diverse contexts.
- **PSO 2** Integrate knowledge of humanities, social sciences, and law to analyze societal problems, foster critical thinking, and promote social justice.
- **PSO 3** Prepare for diverse legal careers by fostering skills in legal research, drafting, advocacy, and negotiation, while adhering to ethical and professional standards.
- **PSO 4** Cultivate an understanding of law as an instrument of social change, promoting equality, human rights, and sustainability in legal practices and policymaking.
- **PSO 5** Equip students to navigate the global legal environment, adapt to evolving legal challenges, and pursue continuous professional development to meet emerging societal needs.

## **POOs**

### **Programme Outcome Objectives (POO's)**

- **POO 1** To acquire and apply legal knowledge to the complex socio-legal problems.
- **POO 2** To make students eligible to practice law in courts and industry.
- **POO 3** To engender professional skills required for legal practice such as argument, pleading, drafting, conveyancing etc.
- **POO 4** To conduct themselves with the highest professional ethics standards in legal profession
- **POO 5** To develop skills in legal research, legal reasoning and aptitude, and apply it during the Programme and profession.

## TEACHING SCHEME

### BA,LL.B First Year (First Semester)

<b>Paper Code</b>	<b>SUBJECTS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>CREDIT</b>
BL – 101 BL-101A BL-101B	English – I Communication Skills in English-I Personality Development-I	4	0	0	4

# **SEMESTER I**

## ENGLISH- I

**Subject code: BL -101**

**L-4, C-4**

### **Course Objective**

- I. Develop Proficiency in English Language Skills
- II. Enhance students' abilities in reading, writing, speaking, and listening in English.
- III. Improve vocabulary and grammar to support effective communication and comprehension.
- IV. Foster an understanding of both formal and informal language usage.

### **Unit I:**

**Functional Grammar:** Grammar and Vocabulary (as contained in the first two sections of “Better your English – I) \*

### **Unit II:**

**Communication:** Meaning, Nature and Importance of Communication, Barriers to Effective

Communication, Channels of Communication, Flow of Communication –Downward, Upward, Lateral or Horizontal, Diagonal or Cross-wise.

**Requisites of Sentence writing:** Essentials of good sentence construction, sentence structure, kinds of sentence.

### **Unit IV:**

**Reading cultural texts:**

**Short- Stories:**

1. Eyes are not here – Ruskin Bond (Non- detailed study)
2. Renunciation – Rabindra Nath Tagore (Non- detailed study)

**ORAL:** Discussion in detail, Critical appreciation, grammatical exercises and making student read the stories and essay so that they develop the reading habits with proper stress, intonation, pronunciation & rhythm.

## Suggested Readings

- **Wren and Martin's High School English Grammar and Composition"** by P.C. Wren & H. Martin
- A comprehensive guide for understanding grammar rules and improving language skills.
- **"A Practical English Grammar"** by A.J. Thomson & A.V. Martinet
- Offers in-depth explanations of English grammar, with exercises for practice.
- **"The Elements of Style"** by William Strunk Jr. and E.B. White
- A concise book on the principles of clear, concise, and effective writing.
- **"English Vocabulary in Use"** by Michael McCarthy and Felicity O'Dell
- A practical guide for improving vocabulary, especially useful for non-native speakers.
- **"The Norton Anthology of English Literature"** by Stephen Greenblatt

# Communication Skills in English

**Subject Code: BL- 101 A**

**L-4, C-4**

## **Course Objectives:**

- To develop proficiency in English communication for academic and professional purposes.
- To enhance listening, speaking, reading, and writing skills.
- To foster confidence in public speaking and group communication.
- To enable effective use of English in diverse social and professional contexts.

## **Unit I: Fundamentals of Communication**

Definition, Process, and Types of Communication  
Barriers to Communication and Overcoming Them  
Essentials of Effective Communication  
Verbal vs. Non-Verbal Communication

## **Unit II: Listening and Speaking Skills**

Listening: Active vs. Passive Listening, Note-Taking Techniques  
Speaking: Pronunciation, Accent, Intonation, and Fluency  
Conversational Skills: Formal and Informal Interactions  
Public Speaking: Speech Preparation, Delivery, and Presentation Skills

## **Unit III: Reading Skills**

Types of Reading: Skimming, Scanning, and Intensive Reading  
Comprehension Strategies  
Critical Reading: Identifying Main Ideas, Arguments, and Logical Flow  
Reading for Professional Purposes: Reports, Articles, and Official Documents

## **Unit IV: Writing Skills**

Basic Grammar and Sentence Structure  
Paragraph Writing: Unity, Coherence, and Cohesion  
Formal Writing: Letters, Emails, and Memos  
Creative Writing: Essays, Stories, and Articles  
Academic Writing: Reports and Research Papers

## **Unit V: Professional Communication**

Resume Writing and Cover Letters  
Group Discussions and Interviews  
Business Communication: Reports, Proposals, and Minutes of Meetings  
Etiquette in Digital Communication: Emails and Social Media

**Suggested Books:**

1. "Communication Skills" by Sanjay Kumar and Pushp Lata
2. "Developing Communication Skills" by Krishna Mohan and Meera Banerji
3. "Business Communication" by Meenakshi Raman and Prakash Singh
4. "Effective Communication Skills" by Dale Carnegie
5. "English Grammar in Use" by Raymond Murphy (for grammar support)

# Personality Development I

**Subject Code: BL- 101B**

**L-4, C-4**

## **Course Objectives:**

- Understand the key components of personality and self-concept.
- Develop effective communication and interpersonal skills.
- Enhance emotional intelligence and self-regulation.
- Foster goal-setting and time management skills.
- Promote self-reflection and personal growth strategies.

## **UNIT 1: Introduction to Personality Development**

Definition and importance of personality development

Components of personality: traits, values, and beliefs

Self-assessment: Understanding your personality type

## **UNIT 2: Self-Awareness**

Identifying strengths and weaknesses

Understanding personal values and beliefs

Practice: Journaling for self-reflection

## **UNIT 3: Effective Communication**

Verbal and non-verbal communication skills

Active listening and feedback

Practice: Communication exercises and role-plays

## **UNIT4: Emotional Intelligence**

Components of emotional intelligence: self-awareness, self-regulation, empathy, social skills

Practice: Emotional awareness activities

## **Suggested Readings:**

- "How to Win Friends and Influence People" by Dale Carnegie  
A classic on interpersonal skills, focusing on building relationships and effective communication.
- "The 7 Habits of Highly Effective People" by Stephen R. Covey  
This book offers principles for personal effectiveness and holistic development.
- "Mindset: The New Psychology of Success" by Carol S. Dweck  
Explores the concept of fixed vs. growth mindsets and how they influence personal development.

## History I

Subject Code: BL -103

L 4, C 4

### Course Objective

- Familiarize students with key historical events: Gain an understanding of important events, figures, and movements in history from various time periods and regions.
- Explore historical themes: Analyse themes such as political systems, economic structures, social movements, wars, ideologies, and cultural developments.
- Study different historical periods and contexts: Understand the causes, consequences, and significance of historical events in different cultural, geographical, and temporal contexts.

### Unit 1

1. Indus Valley Civilization:- Sources of Information Social life, Religious life, Town planning.
2. Vedic Period:- Social, Religious Condition,
- 3:- Varna Ashram System.

### Unit 2

1. Jainism:- Causes for the Religious Upheaval,
- 2:- Teaching of Mahavira & Principal of Jainism.
- 3:- Buddhism:- Rise and Growth,

### Unit 3

- 1:- Mauryan Period:- Art and Architecture Gandhar Art,
- 2:- Mathura Art

### Unit 4

- 1:- Post Gupta Temple Architecture.
- 2:- Sculpture and Painting.

### Unit 5

- 1:- Concept of State and Government in Ancient India.

# Sociology-I

**Subject Code: BL- 103 A**

**L-4, C-4**

## **Course Objectives:**

- To introduce students to the foundational concepts and theories of sociology.
- To develop an understanding of the relationship between society, individuals, and institutions.
- To examine social phenomena through sociological perspectives.
- To foster critical thinking about social issues and their relevance to law and society.

## **Unit I: Introduction to Sociology**

Definition, Nature, and Scope of Sociology

Importance and Application of Sociology in Legal Studies

Sociology as a Science: Positivism and its Critique

Relationship with Other Social Sciences

## **Unit II: Basic Concepts**

Society: Characteristics and Types (Tribal, Rural, Urban)

Community, Association, and Institution

Social Structure and Social System

Social Groups: Primary, Secondary, and Reference Groups

## **Unit III: Socialization and Culture**

Socialization: Process, Agents, and Importance

Culture: Meaning, Elements, and Characteristics

Cultural Relativism and Ethnocentrism

Social Norms, Values, and Beliefs

## **Unit IV: Social Stratification**

Definition and Features of Social Stratification

Theories of Social Stratification: Functionalist, Conflict, and Interactionist Perspectives

Forms of Stratification: Caste, Class, Gender, and Race

Social Mobility: Types and Factors Affecting Mobility

## **Unit V: Social Change and Social Control**

Social Change: Meaning, Characteristics, and Factors

Theories of Social Change: Evolutionary, Functionalist, and Conflict

Social Control: Meaning, Types, and Agencies (Formal and Informal)

Law as an Instrument of Social Control and Social Change

## **Suggested Books:**

1. "Sociology" by Anthony Giddens
2. "Introduction to Sociology" by Haralambos and Holborn

3. "Sociology: Principles of Sociology with an Introduction to Social Thought" by C.N. Shankar Rao
4. "An Introduction to Sociology" by Vidya Bhushan and D.R. Sachdeva
5. "Society: An Introductory Analysis" by MacIver and Page

# Understanding Contemporary Social Issues-I

**Subject Code: BL- 103 B**

**L-4, C-4**

## **Course Objectives:**

- To provide insights into contemporary social issues and their impact on individuals and society.
- To analyse the causes, consequences, and possible solutions to current societal challenges.
- To develop a sociological understanding of global and local issues through critical perspectives.
- To explore the role of law, policy, and governance in addressing these issues.

## **Unit I: Understanding Social Issues**

Definition, Nature, and Characteristics of Social Issues

Approaches to Study Social Issues: Sociological, Political, and Economic

Interconnection of Social Issues with Culture, Politics, and Economy

Role of Media in Shaping Perceptions of Social Issues

## **Unit II: Poverty and Inequality**

Concept of Poverty: Absolute and Relative Poverty

Causes and Consequences of Poverty

Dimensions of Inequality: Economic, Social, and Political

Government Policies and Programs to Address Poverty and Inequality

## **Unit III: Gender Issues**

Gender Disparities: Patriarchy, Gender Roles, and Stereotypes

Violence Against Women: Domestic Violence, Harassment, and Trafficking

LGBTQ+ Rights and Inclusion

Legal Frameworks and Movements for Gender Equality

## **Unit IV: Unemployment and Education**

Unemployment: Types, Causes, and Impact on Society

Education and its Role in Social Development

Issues in Education: Inequality, Dropouts, and Access to Quality Education

## **Unit V: Health and Environment**

Public Health Issues: Malnutrition, Epidemics, and Mental Health

Environmental Degradation: Deforestation, Pollution, and Climate Change

Sustainable Development Goals (SDGs) and Global Environmental Efforts

Role of Law and Policy in Addressing Health and Environmental Challenges

**Suggested Books:**

1. "Social Problems in India" by Ram Ahuja
2. "Contemporary Social Problems and Issues" by R.M. MacIver and Charles Page
3. "Modernization of Indian Tradition" by Yogendra Singh
4. "Poverty and Famines" by Amartya Sen
5. "Gender Trouble" by Judith Butler

# Social Institutions in India-I

Subject Code: BL- 103 C

L-4, C-4

## Course Objectives:

- To understand the concept, structure, and significance of social institutions in India.
- To analyse the traditional and contemporary roles of various social institutions.
- To examine the changing dynamics of these institutions in the context of modernization and globalization.
- To explore the interrelation of social institutions with law and governance.

## Unit I: Introduction to Social Institutions

Definition, Features, and Functions of Social Institutions

Types of Social Institutions: Family, Religion, Education, Economy, and Polity

Interdependence of Social Institutions

Role of Social Institutions in Indian Society

## Unit II: Family and Kinship

Types of Family: Joint, Nuclear, and Extended Families

Functions and Changing Patterns of Family in India

Kinship: Meaning, Types, and Kinship System in India

Challenges to Family and Kinship: Urbanization, Industrialization, and Migration

## Unit III: Marriage in India

Marriage as a Social Institution: Definitions and Functions

Forms of Marriage: Monogamy, Polygamy, Endogamy, and Exogamy

Customs and Practices Related to Marriage in India

Contemporary Issues: Dowry, Inter-caste and Interfaith Marriages, and Live-in Relationships

## Unit IV: Religion and Caste

Role of Religion in Indian Society: Unity and Diversity in Practices

Major Religious Traditions in India: Hinduism, Islam, Christianity, Sikhism, and Others

Caste System: Origin, Features, and Functions

Caste and Social Mobility: Sanskritization, Westernization, and Reservation Policies

## Unit V: Political and Economic Institutions

Traditional vs. Modern Political Systems in India

Role of Panchayat Raj and Local Governance

Economic Institutions: Land Tenure Systems, Joint Stock Companies, and Cooperatives

Impact of Liberalization, Privatization, and Globalization on Social Institutions

**Suggested Books:**

1. "Indian Society: Institutions and Change" by N. Jayaram
2. "Social Change in Modern India" by M.N. Srinivas
3. "Caste in Modern India and Other Essays" by M.N. Srinivas
4. "Family and Kinship in India" by Patricia Uberoi
5. "Religion and Society Among the Coorgs of South India" by M.N. Srinivas

## POLITICAL SCIENCE-I

**Sub. Code: BL -105**

**L-4, C-4**

### **Course Objective**

- Compare political systems across different countries: Understand and compare the political institutions, processes, and cultures in different nations, analysing how context influences the functioning of political systems.
- Study political regimes and transitions: Examine different types of political regimes, such as democratic and authoritarian systems, and analyse how regimes change over time through processes like revolutions, coups, or democratic reforms.
- Investigate political development: Understand the challenges and opportunities faced by countries in the process of political development, democratization, and governance.
- Promote understanding of citizenship: Develop an understanding of the rights and responsibilities of citizens within political systems and how they engage with and influence the political process.

### **Unit I: Basic Concepts**

Concepts: Politics and Political Science, Nature and scope, Political Thought,

### **Unit II: Approaches to the study of Political Science**

Normative, Historical, Behavioural Relation of Political Science with other Social Sciences

### **Unit III: Concept of State**

State: Meaning, Elements,

### **Unit IV: Concepts and types of**

Sovereignty, Liberty, Equality

### **Unit V: Concepts and types of:**

Justice,

### **Suggested Readings:**

1. Political Theory, Asirvatham, S.Chand.
2. O.P. Gauba, An Introduction to Political Theory, Macmillan
3. J.C. Johari, Principle of Modern Political Science, Sterling, Delhi.
4. Andrew Heywood, Politics, Palgrave Foundation, New York.
5. S. P. Varma, Modern Political Theory, New Delhi, Vikas .
6. C.E.M Joad, Political Theory, Oxford: Clarendon Press

## **Society and Gender-I**

**Subject Code: BL- 105 A**

**L-4, C-4**

### **Course Objectives:**

- To understand the concept of gender and its social construction.
- To explore the relationship between gender and various social institutions.
- To analyse the impact of patriarchy, gender roles, and stereotypes on individuals and society.
- To examine the intersectionality of gender with caste, class, and other social categories.
- To introduce students to feminist theories and movements.

### **Unit I: Understanding Gender**

Concept of Gender: Difference between Sex and Gender

Gender as a Social Construct

Masculinity and Femininity: Characteristics and Expectations

Intersectionality: Gender, Caste, Class, and Ethnicity

### **Unit II: Theories of Gender**

Feminist Theories: Liberal, Radical, Marxist, and Socialist Feminism

Postmodern Feminism and Queer Theory

Patriarchy: Meaning, Characteristics, and Impact on Society

Critique of Gender Binaries

### **Unit III: Gender and Social Institutions**

Family: Gender Roles and Division of Labor

Education: Gender Disparities and Access to Opportunities

Workplace: Gender Discrimination, Glass Ceiling, and Pay Gap

Media: Representation of Gender in Films, Advertisements, and Social Media

### **Unit IV: Gender and Violence**

Understanding Gender-Based Violence: Types and Forms (Domestic Violence, Sexual Harassment, and Honor Crimes)

Laws and Policies Addressing Gender-Based Violence in India

Role of Civil Society and NGOs in Combating Gender Violence

Cultural Practices and Their Impact on Gender (Dowry, Female Infanticide, and Child Marriage)

### **Unit V: Gender and Social Change**

Role of Feminist Movements in India and Abroad

Legal and Policy Frameworks for Gender Equality in India (Reservations, Maternity Benefits, and Workplace Policies) Role of Education, Technology, and Social Media in Challenging Gender Stereotypes ,Case Studies of Inspirational Women Leaders and Gender Activists

**Suggested Books:**

1. "Gender and Society in India" by T.K. Oommen and C.N. Venugopal
2. "Gender: The Basics" by Hilary M. Lips
3. "Patriarchy and the Subordination of Women" by Kamla Bhasin
4. "The Second Sex" by Simone de Beauvoir
5. "Gender Trouble" by Judith Butler
6. "Feminism in India" by Maitrayee Chaudhuri

# Comparative Politics-I

**Subject Code: BL- 105 A**

**L-4, C-4**

## **COURSE OBJECTIVES**

- Analyse global political systems.
- Compare democratic and authoritarian regimes.
- Study political institutions globally.
- Understand political culture and behaviour.
- Develop comparative analytical skills

### **Unit 1: Introduction to Comparative Politics**

Definition and Scope of Comparative Politics

Understanding Comparative Politics as a Subfield of Political Science

Evolution of Comparative Politics as a Discipline

Importance of Comparative Analysis

Significance of Studying Different Political Systems

Approaches to Comparative Politics (Institutionalism, Behaviourism, Structuralism)

### **Unit 2: Approaches and Methods in Comparative Politics**

Traditional vs. Modern Approaches

Institutional and Legal Approaches

Behaviourism and Post-Behaviourism

Contemporary Approaches

Structural-Functional Approach

Political Economy Approach

Dependency and World Systems Theory

Methods of Comparative Analysis

Case Study Method

Comparative Historical Analysis

Quantitative and Qualitative Methods

### **Unit 3: Political Systems and Typologies**

Types of Political Systems

Democratic Systems

Authoritarian and Totalitarian Regimes

Classification of Political Systems

Presidential vs. Parliamentary Systems

Federal vs. Unitary Systems

Hybrid Regimes

Semi-Presidential Systems

#### **Unit 4: Political Culture and Political Socialization**

Political Culture

Definition and Components of Political Culture

Types of Political Culture (Parochial, Subject, Participant)

Political Culture in Different Regimes (Democratic, Authoritarian)

Political Socialization

Agents of Socialization (Family, Education, Media, Political Parties)

Impact of Political Socialization on Political Behavior

#### **Unit 5: Module 5: Political Parties and Party Systems**

Political Parties

Definition and Functions of Political Parties

Evolution of Party Systems

Party Systems

One-Party, Two-Party, and Multi-Party Systems

Cleavages and Party Formation

The Role of Ideology in Party Politics

#### **Suggested Readings:**

- **"Comparative Politics: An Introduction"** by Rod Hague and Martin Harrop
- **"Essentials of Comparative Politics"** by Patrick H. O'Neil
- **"Comparative Government and Politics"** by Rod Hague and Martin Harrop
- **"The Political System"** by David Easton
- **"Patterns of Democracy"** by Arend Lijphart
- **"Democracy and Its Critics"** by Robert Dahl

## **Law of Torts Including M.V. Act and Consumer Protection laws**

**Sub. Code: BL – 107**

**L – 4, C – 4.**

### **Course Objectives**

- Introduce the fundamentals of tort law, provide students with an overview of what torts are and their role in civil law.
- This includes understanding the difference between torts and crimes, as well as the purpose of tort law in compensating victims and deterring harmful conduct.
- Examine different types of torts: Explore various categories of torts, including intentional torts (e.g., battery, assault, false imprisonment), negligence (e.g., duty of care, breach, causation), and strict liability torts (e.g., product liability).
- Study tort elements: Understand the elements that must be proven to establish a tort claim, such as the existence of a duty, breach of duty, causation, and damages.

### **Unit-I:**

Nature of Law of Torts - Definition of Tort - Elements of Tort - Development of Law of Torts in England and India - Wrongful Act and Legal Damage - Damnum Sine Injuria and Injuria Sine Damnum - Tort distinguished from Crime and Breach of Contract - General Principles of Liability in Torts - Fault

### **Unit-II**

General Defenses to an action in Torts – Vicarious Liability - Liability of the State for Torts – Defense of Sovereign Immunity – Joint Liability – Liability of Joint Tortfeasors – Rule of Strict Liability (Rylands V Fletcher) – Rule of Absolute Liability (MC Mehta vs. Union of India) –

### **Unit-III**

Specific Torts - Torts affecting the person - Assault - Battery - False Imprisonment - Malicious Prosecution - Nervous Shock - Torts affecting Immovable Property - Trespass to land - Nuisance - Public Nuisance and Private Nuisance -

### **Unit-IV**

Defamation - Negligence - Torts against Business Relations - Injurious falsehood - Negligent Misstatement - Passing off - Conspiracy - Torts affecting family relations - Remedies - Judicial and Extra-Judicial Remedies – Damages – Kinds of Damages – Assessment of Damages –

### **Unit-V Consumer Laws:**

Common Law and the Consumer - Duty to take care and liability for negligence - Product Liability - Consumerism –

**Suggested Readings:**

1. Winfield & Jolowicz: Law of Tort, XII edition, Sweet and Maxwell, London, 1984.
2. Salmond and Heuston: Law of Torts, XX edition, 2nd Indian reprint, Universal Book traders, New Delhi, 1994.
3. RamaswamyIyer: The Law of Torts, VII edition (Bombay, 1995).
4. Achutan Pillai: Law of Tort, VIII edition, Eastern Book Company, Lucknow, 1987.
5. Durga Das Basu: The Law of Torts, X edition, Prentice Hall of India, New Delhi, 1998.
6. RatanLal& Dhirajlal: The Law of Torts, 22nd edition, Wadhwa& Company Nagpur, 1992.

## LAW OF CONTRACT-I

Sub. Code: BL--109

L – 4, C – 4.

### Course Objectives

- To provide students with a foundational understanding of contract law, including the principles, rules, and regulations that govern the formation, performance, and enforcement of contracts.
- To equip students with the skills to analyze the essential elements of a contract, such as offer, acceptance, consideration, intention to create legal relations, and capacity to contract.
- To enable students to understand the rights and obligations of parties involved in a contract, including performance, breach, and the remedies available under contract law, such as damages, specific performance, and rescission. Exploring Special Types of Contracts:
- To introduce students to various types of contracts governed by the Contract Act, such as contracts of sale, contracts of agency, contracts of partnership, contracts for services, and contracts involving negotiable instruments.

### Unit I:

Definition and essentials of a valid Contract - Definition and essentials of a valid Offer - Definition and essentials of valid Acceptance - Communication of Offer and Acceptance - Revocation of Offer and Acceptance through various modes including electronic medium - Consideration - salient features - Exception to consideration

### Unit-II:

Capacity of the parties - Effect of Minor's Agreement - Contracts with insane persons and persons disqualified by law - Concepts of Free Consent - Coercion - Undue influence - Misrepresentation - Fraud - Mistake - Lawful Object - Immoral agreements and various heads of public policy - illegal agreements -

### Unit-III:

Discharge of Contracts - By performance - Appropriation of payments - Performance by joint promisors - Discharge by Novation - Remission - Accord and Satisfaction - Discharge by impossibility of performance (Doctrine of Frustration) -

### Unit-IV:

Quasi Contract - Necessaries supplied to a person who is incapable of entering into a contract - Payment by an interested person - Liability to pay for non-gratuitous acts - Rights of finder of lost goods - Things delivered by mistake or coercion - Quantum meruit -

### Unit-V:

Specific Relief - Recovering possession of property - Specific performance of the contract - Rectification of instruments -

**Suggested Readings:**

1. Anson: Law of Contract, Clarendon Press, Oxford, 1998.
2. Krishnan Nair: Law of Contract, S.Gogia& Co., Hyderabad 1995.
3. G.C.V. Subba Rao: Law of Contract, S.Gogia& Co., Hyderabad 1995.
4. T.S.VenkatesaIyer: Law of Contract, revised by Dr. Krishnama Chary,
5. S. Gogia& Co.
6. Avtar Singh: Law of Contract, Eastern Book Company, Lucknow, 1998.

## ECONOMICS – I

**Subject Code: BL – 111**

**L 4, C 4**

### Course Objective

- Introduce fundamental economic concepts: Understand the basic principles of economics, such as scarcity, opportunity cost, supply and demand, and the role of incentives in decision-making.
- Distinguish between microeconomics and macroeconomics:
- Learn the difference between microeconomic analysis (which focuses on individual markets, firms, and consumer behavior) and macroeconomic analysis (which focuses on broader economic phenomena like inflation, unemployment, and national economic growth).
- Examine economic systems: Explore the characteristics of different economic systems (market economies, command economies, mixed economies) and how they allocate resources.

**UNIT – I** Economics as a science and its relevance to law, Economics as a basis of Social Welfare and Social Justice, Free Enterprises,

**UNIT – II** General principles of Economics: Demand and Supply, Business Organizations, Labour and Wages,.

**UNIT – III** Markets – Determination of Prices, International comparisons of development strategies and experiences, **UNIT – IV** Control of Monopolies and prevention of economic concentration, Monopolies, **UNIT – V** Banking and Fiscal Policy: Resource mobilization and fiscal resources –

### Suggested Reading:

1. **Alfred W. Stonier and Douglas C. Hague:** The Essentials of Economics (London, 1955).
2. Economics – An Introductory Analysis (International Students Edition) 1961.
3. **Fredrlute Lewis:** Theory of Economic Growth, India Publishing House, 1970.
4. **C.T. Kurien:** Planning, Poverty and Social Transformation, 1926.
5. **M. Dipton:** Why Poor People stay poor Urban Bias in World Development, 1980.
6. **Myrdal, Gunnar:** The Challenges of World Poverty, 1971.
7. **Mahbub Ul Haq:** The Poverty: Certain Choices for the third World, 1976.
8. **Council, Campbell:** Economics (New York: Mc. Graw Hill Mark CB).

# **Indian Economy-I**

**Subject Code: BL – 111A**

**L 4, C 4**

## **Course Objectives:**

- To understand the structure and characteristics of the Indian economy.
- To analyze the economic development of India since independence.
- To explore the key sectors of the Indian economy and their contributions.
- To critically examine government policies and their impact on economic growth.

## **Unit I: Introduction to the Indian Economy**

- Characteristics of the Indian Economy: A Developing Economy
- Demographic Features and Their Impact on Economic Development
- Natural Resources and Their Utilization in Economic Growth
- Economic Systems: Capitalism, Socialism, and Mixed Economy

## **Unit II: Economic Planning and Development**

- Evolution of Economic Planning in India: Five-Year Plans
- Objectives, Achievements, and Failures of Planning in India
- NITI Aayog: Structure and Role in Policy Formulation
- Sustainable Development Goals (SDGs) and India's Progress

## **Unit III: Agriculture in the Indian Economy**

- Role and Importance of Agriculture in India's Economic Development
- Land Reforms and Green Revolution: Achievements and Challenges
- Agricultural Marketing and Policies
- Current Issues: MSP, Farm Laws, and Food Security

## **Unit IV: Industry and Service Sector**

- Industrial Development in India: Public vs. Private Sector
- Role of MSMEs in Economic Growth
- Make in India and Industrial Policy Reforms
- Growth and Challenges of the Service Sector: IT, Tourism, and Healthcare

## **Unit V: Poverty, Unemployment, and Inequality**

- Poverty: Causes, Measurement, and Government Schemes
- Unemployment: Types, Causes, and Measures to Reduce Unemployment
- Economic Inequality in India: Regional and Income Disparities
- Role of Government and NGOs in Alleviating Poverty and Inequality

**Suggested Books:**

1. **"Indian Economy" by Ramesh Singh**
2. **"Indian Economy: Performance and Policies" by Uma Kapila**
3. **"The Indian Economy: Problems and Prospects" by Bimal Jalan**
4. **"India's Economy in the 21st Century" by Raj Kapila and Uma Kapila**
5. **"Indian Economy Since Independence" by A. Vaidyanathan**

## **Economics of Money and Banking (BL-111B)**

**Subject Code: BL – 111B**

**L 4, C 4**

### **Course Objectives:**

- To understand the fundamental concepts of money, banking, and monetary systems.
- To analyse the role of money in the economy and its impact on economic activities.
- To examine the structure, functions, and role of banks and financial institutions.
- To explore the interplay between monetary policy and the banking system in economic development.

### **Unit I: Introduction to Money**

- Evolution of Money: Barter System to Digital Money
- Definition, Functions, and Characteristics of Money
- Types of Money: Commodity Money, Fiat Money, and Cryptocurrency
- The Role of Money in the Economy: Classical and Keynesian Perspectives

### **Unit II: Money Supply and Demand**

- Measurement of Money Supply: M1, M2, M3, and M4
- Determinants of Money Demand: Transaction, Precautionary, and Speculative Motives
- Theories of Money: Quantity Theory of Money, Fisher and Cambridge Equations
- Factors Influencing Money Supply: Role of Central Bank and Commercial Banks

### **Unit III: Banking System in India**

- Structure of the Indian Banking System: Public, Private, and Cooperative Banks
- Functions and Roles of Commercial Banks
- Banking Regulations in India: Role of the Reserve Bank of India (RBI)
- Non-Banking Financial Institutions (NBFIs): Types and Functions

### **Unit IV: Central Banking and Monetary Policy**

- Role and Functions of a Central Bank
- Objectives and Instruments of Monetary Policy: Repo Rate, Reverse Repo Rate, CRR, and SLR
- Inflation Targeting and Monetary Policy Framework in India
- Relationship between Monetary Policy and Economic Stability

## **Unit V: Money Market and Financial System**

- Money Market: Features, Instruments, and Functions
- Capital Market vs. Money Market: Differences and Importance
- Financial Intermediaries: Role and Impact on Economic Growth
- Global Financial Systems and Emerging Trends: Cryptocurrencies and Digital Banking

### **Suggested Books:**

1. **"Economics of Money, Banking, and Financial Markets" by Frederic S. Mishkin**
2. **"Monetary Economics" by Suraj B. Gupta**
3. **"Money and Banking" by R.S. Sayers**
4. **"Indian Financial System" by M.Y. Khan**
5. **"Modern Banking Theory and Practice" by K.C. Shekhar and Lekshmy Shekhar**

# **Principle of Sustainable Finance-I (BL-111C)**

**Subject Code: BL – 111C**

**L 4, C 4**

## **Course Objectives:**

- To understand the fundamental principles of sustainable finance and its relevance in the modern economy.
- To explore the role of finance in promoting environmental, social, and governance (ESG) objectives.
- To analyse frameworks, strategies, and instruments used in sustainable finance.
- To assess the impact of sustainable finance on corporate performance and societal well-being.

## **Unit I: Introduction to Sustainable Finance**

- Definition, Scope, and Importance of Sustainable Finance
- Principles of Sustainability: Environmental, Social, and Governance (ESG) Factors
- Evolution of Sustainable Finance: Global Trends and Drivers
- The Role of Finance in Achieving the Sustainable Development Goals (SDGs)

## **Unit II: Environmental Finance**

- Green Finance: Concepts and Instruments (Green Bonds, Climate Funds, etc.)
- Financing Renewable Energy Projects and Low-Carbon Technologies
- Impact of Climate Change on Financial Markets
- Regulatory Frameworks and Standards for Environmental Finance

## **Unit III: Social and Governance Aspects of Finance**

- Socially Responsible Investing (SRI): Principles and Practices
- Corporate Social Responsibility (CSR) and its Financial Implications
- Governance in Financial Institutions: Transparency, Accountability, and Ethics
- Diversity, Equity, and Inclusion in Financial Decision-Making

## **Unit IV: Sustainable Investment Strategies**

- ESG Integration in Investment Decision-Making
- Risk Assessment in Sustainable Investments: Climate and Social Risks
- Measuring ESG Performance: Metrics and Reporting Standards (GRI, SASB, TCFD)
- The Role of Technology in Advancing Sustainable Finance (FinTech and GreenTech)

## **Unit V: Challenges and Opportunities in Sustainable Finance**

- **Barriers to Sustainable Financing: Market, Policy, and Institutional Challenges**
- **Financing Circular Economy and Sustainable Infrastructure**
- **Innovations in Sustainable Finance: Impact Investing and Social Bonds**
- **Case Studies of Successful Sustainable Finance Projects**

### **Suggested Books:**

1. **"Principles of Sustainable Finance" by Dirk Schoemaker and Willem Schramade**
2. **"Sustainable Investing: Revolutions in Theory and Practice" by Cary Krosinsky and Nick Robins**
3. **"Green Finance and Sustainability" by Magdalena Ziolo and Beata Ziolkowska**
4. **"Environmental Finance: A Guide to Environmental Risk Assessment and Financial Products" by Sonia Labatt and Rodney R. White**
5. **"Sustainable Finance: The Risks and Opportunities That (Some) Banks Ignore" by Molly Scott Cato**

# **SEMESTER II**

## ENGLISH II

Sub. Code: BL 102

L-4, C-4

### Course Objectives

- I. Borrowing from Other Languages: Over its history, English has borrowed words and influences from many languages, including Latin, Old Norse, French, Dutch, and others. This has contributed to its rich vocabulary.
- II. Simplification of Grammar: Over time, English grammar has become simpler. For example, Old English had more cases, gendered nouns, and verb conjugations, many of which have disappeared in Modern English.
- III. Influence of Literature: Writers like Shakespeare, Chaucer, and Milton not only helped shape the language with their creative use of vocabulary and grammar, but they also preserved it for future generations.
- IV. Colonialism and Globalization: British colonialism spread English across the world, and today, English is a global lingua franca, spoken by millions of people as a first or second language.

**Unit-I: Foundation Grammar:** Reading and Writing (as contained in the last two sections of “Better your English – I”) \*.

**Unit II: Technical Communication:** Nature, Origin and Development, Scope and Significance, Forms of Technical Communication, Differences Between Technical Communication and General Communication.

**Unit III: The Structure of sentence:** Sentences: Simple, Compound and Complex, Transformation of Sentence: Simple to Complex and vice-versa, Simple to Compound and vice – versa, Interrogative to Assertive and to Negative and vice – versa.

### Unit IV:

#### Reading Cultural Texts:

**Short – Story:** (Non detailed study).

1. The Lament – Anton Chekov.
2. Barbers’ Trade Union – R. K. Narayan.

**ORAL:** Discussion in detail, critical appreciation, grammatical exercises and making students read the stories and essays so that they may develop the reading habits with proper stress, intonation, pronunciation & rhythm.

**Text Books:**

1. Better your English – I, A Workbook for student, Macmillan India, New Delhi.
2. Singh R. P, An Anthology of English Short Stories –O.U.P., N. Delhi.
3. Singh R.P, An Anthology of English Essay –. O.U.P., N. Delhi.

**Reference Books:**

1. Raman Meenakshi & Sharma Sangeeta, Technical Communication Principle & Practice - O.U.P., N. Delhi.
2. Mohan Krishna & Banerji Meera – Developing Communication Skill – Macmillan India Ltd: N. Delhi.

## **Communication Skills in English II (BL-102 A)**

**Subject Code: BL – 102A**

**L 4, C 4**

### **Course Objectives:**

- To enhance advanced communication skills in English for academic, professional, and social contexts.
- To develop proficiency in written and spoken English with a focus on clarity and coherence.
- To foster critical thinking and analytical skills through effective reading and writing practices.
- To build confidence in delivering presentations, debates, and group discussions.

### **Unit I: Advanced Writing Skills**

- Essay Writing: Structure, Types, and Techniques
- Business Writing: Emails, Reports, and Proposals
- Writing Summaries and Abstracts
- Note-Making and Note-Taking Techniques

### **Unit II: Reading and Comprehension**

- Advanced Reading Strategies: Skimming, Scanning, and Critical Reading
- Analysing Literary and Non-Literary Texts
- Reading for Inference and Interpretation
- Vocabulary Building: Idioms, Phrasal Verbs, and Collocations

### **Unit III: Speaking Skills**

- Public Speaking: Structure and Delivery
- Debates and Group Discussions: Techniques and Practice
- Impromptu Speaking and Extempore
- Pronunciation and Accent Neutralization

### **Unit IV: Listening Skills**

- Listening for Specific Information and Gist
- Understanding Tone, Context, and Speaker's Intent
- Active Listening in Academic and Professional Settings
- Audio-Visual Aids for Listening Practice

### **Unit V: Professional Communication and Soft Skills**

- Preparing for Interviews: Techniques and Mock Practice

- **Presentation Skills: Using Visual Aids Effectively**
- **Workplace Communication: Meetings, Negotiations, and Feedback**
- **Non-Verbal Communication: Body Language and Etiquette**

**Suggested Books:**

1. **"Effective Communication Skills" by MTD Training**
2. **"English for Academic Purposes" by R.R. Jordan**
3. **"Business Communication: Process and Product" by Mary Ellen Guffey and Dana Loewy**
4. **"Cambridge English Skills: Real Listening and Speaking (Levels 3 and 4)" by Sally Logan and Craig Thaine**
5. **"Word Power Made Easy" by Norman Lewis**

## **Personality Development II (BL-102 B)**

**Subject Code: BL – 102B**

**L 4, C 4**

### **Course Objectives:**

- Understand the key components of personality and self-concept.
- Develop effective communication and interpersonal skills.
- Enhance emotional intelligence and self-regulation.
- Foster goal-setting and time management skills.

### **UNIT 1: Building Confidence and Self-Esteem**

- Understanding the impact of self-esteem on personality
- Techniques for boosting confidence
- Practice: Positive affirmations and visualization

### **UNIT 2: Goal Setting and Motivation**

- Smart goals: setting achievable objectives
- Motivation techniques and maintaining focus
- Practice: Goal-setting workshop

### **UNIT 3: Time Management and Organization**

- Importance of time management in personal development
- Techniques for prioritizing tasks
- Practice: Creating a personal time management plan

### **UNIT 4: Interpersonal Skills and Relationship Building**

- Understanding interpersonal dynamics
- Strategies for effective networking and relationship management

## **Suggested Readings**

1. "How to Win Friends and Influence People" by Dale Carnegie  
A classic on interpersonal skills, focusing on building relationships and effective communication.
2. "The 7 Habits of Highly Effective People" by Stephen R. Covey  
This book offers principles for personal effectiveness and holistic development.
3. "Mindset: The New Psychology of Success" by Carol S. Dweck  
Explores the concept of fixed vs. growth mindsets and how they influence personal development.
4. "Emotional Intelligence: Why It Can Matter More Than IQ" by Daniel Goleman  
Discusses the importance of emotional intelligence in personal and professional success.

## History-II

Sub. Code: BL 104

L 4, C 4

### Course Objectives

- I. Engage in historical analysis: Develop the ability to interpret primary and secondary sources, assess historical evidence, and identify bias or limitations in sources.
- II. Conduct historical research: Learn to find, evaluate, and interpret historical sources, including documents, artifacts, and secondary literature.
- III. Write coherent historical essays: Develop skills in writing clear, evidence-based arguments, using proper historical methodology and citation.
- IV. Present historical arguments: Organize research findings effectively and present them in both written and oral formats, including formal essays, presentations, and reports.

### UNIT -1:

- Babur: Invasion, Conquests, Personality.
- Humayun: Struggle, Exile, Restoration.
- Shershah suri: Civil, Military and Revenue Administration Achievements.

### UNIT -2

- Jahangir: Deccan Policy, Influence of Nurjahan, Character of Nurjahan
- Shahjahan & Aurangzeb: Early Career, Religious Policy, Rajput policy.
- William Bentink and his policies.

### UNIT -3

- Economic charges: Land Revenue Settlements, Permanent Settlements, Ryotware, Mahalwari System.
- Revolt of 1857: Causes, Nature, Ideology, Programme, Leadership, Peoples

### UNIT-4

- Policies of Lord Canning, Lytton, Ripon and Curzan.
- The acts- 1858, 1892, 1919 and 1935.
- Emergence of organized Nationalism formation of Indian National Congress and its programme.

## UNIT-5

- Gandhian: Movements, Non-Co-operation, Civil Disobedience, Quit India

### Suggested Readings

- **"A History of Modern Europe"** by John Merriman
- Overview of European history from the Renaissance to modern times.
- **"The History of the World"** by J.M. Roberts
- A global perspective on world history and key events.
- **"Modern World History: 1750 to the Present"** by Duiker & Spielvogel
- Focuses on political, economic, and social developments since 1750.
- **"The Origins of the First World War"** by James Joll
- Analyzes the causes of World War I.
- **"History of the French Revolution"** by Georges Lefebvre
- In-depth study of the French Revolution and its effects.

## Sociology-II BL 104 A

**Subject Code: BL – 104A**

**L 4, C 4**

### **Course Objectives:**

- To understand advanced concepts in sociological theory and research.
- To analyse social institutions, structures, and systems.
- To explore contemporary issues related to social change, inequality, and globalization.
- To develop critical thinking skills through the study of social problems and the role of sociology in addressing them.

### **Unit 1: Sociological Theories and Perspectives**

- **1.1 Classical Sociological Theories:**
  - Auguste Comte, Karl Marx, Max Weber, Émile Durkheim, and Herbert Spencer.
  - Key concepts: Social order, social change, materialism, rationalization, the division of labor.
- **1.2 Modern Sociological Theories:**
  - Structural Functionalism (Talcott Parsons, Robert K. Merton).
  - Conflict Theory (Karl Marx, C. Wright Mills).
  - Symbolic Interactionism (George Herbert Mead, Erving Goffman).
  - Feminist Theory (Simone de Beauvoir, Judith Butler, bell hooks).
- **1.3 Post-Modern and Post-Structuralist Approaches:**
  - Michel Foucault, Pierre Bourdieu, Jacques Derrida.

### **Unit 2: Social Institutions**

- **2.1 Family and Kinship Systems:**
  - Types of families (nuclear, extended, single-parent).
  - Kinship: Functions, descent systems, marriage norms.
  - Changing roles of family in modern societies.
- **2.2 Education and Socialization:**
  - The role of education in socializing individuals.
  - Theories of education: Functionalist, conflict, and symbolic interactionist perspectives.

- Education inequalities: Class, caste, and gender disparities.
- **2.3 Religion and Society:**
  - Theories of religion: Functionalism (Durkheim), Conflict Theory (Marx), and Weber's interpretation.
  - Secularization and religious pluralism in contemporary societies.
  - Religion's role in social cohesion, conflict, and change.
- **2.4 Political Systems:**
  - Theories of power, authority, and the state (Weber, Marx).
  - Social movements: Causes, types, and impacts.
  - Democracy, citizenship, and political participation.

### **Unit 3: Social Stratification and Inequality**

- **3.1 Theories of Social Stratification:**
  - Karl Marx: Class and conflict.
  - Max Weber: Class, status, and party.
  - Functionalist theories of stratification (Davis and Moore).
- **3.2 Social Class and Caste Systems:**
  - Social mobility and class stratification.
  - Caste system in India: Traditional and contemporary perspectives.
  - Class in capitalist societies.
- **3.3 Gender, Race, and Ethnicity:**
  - Gender roles and inequality.
  - Feminist theories: Liberal, Marxist, and Radical feminism.
  - Race and ethnicity: Social construction of race and racial inequality.
- **3.4 Poverty and Marginalization:**
  - Theories of poverty: Structural and cultural explanations.
  - Poverty in the global south.
  - Social exclusion and its consequences.

## **Unit 4: Social Change and Development**

- **4.1 Theories of Social Change:**
  - Evolutionary theories of social change.
  - Conflict theories: Marxist perspectives on change.
  - Theories of modernization and dependency.
- **4.2 Development and Underdevelopment:**
  - Theories of development: Modernization vs. dependency theory.
  - The role of colonialism and globalization in shaping development.
  - Sustainable development and the Global South.
- **4.3 Urbanization and Industrialization:**
  - The process of urbanization: Causes and consequences.
  - Industrialization and its social impacts.
  - Urban social problems: Housing, unemployment, and inequality.

## **Unit 5: Contemporary Social Issues**

- **5.1 Crime, Deviance, and Social Control:**
  - Theories of crime: Functionalist, Conflict, and Symbolic Interactionist approaches.
  - Crime and deviance in contemporary societies.
  - The role of institutions in controlling deviance.
- **5.2 Health, Medicine, and Society:**
  - Sociology of health and illness.
  - Health disparities and their social causes.
  - The medicalization of society.
- **5.3 Globalization and Its Social Impacts:**
  - Theories of globalization: Cultural, economic, and political dimensions.
  - Impact of globalization on local cultures and economies.
  - Global social inequalities and transnational issues.

**Suggested Books:**

- Weber, M. (1978). *Economy and Society: An Outline of Interpretive Sociology*. University of California Press.
- Giddens, A. (2013). *Sociology* (8th ed.). Polity Press.
- Haralambos, M., Holborn, M., & Heald, R. (2013). *Sociology: Themes and Perspectives* (8th ed.). HarperCollins.
- Giddens, A., Duneier, M., Appelbaum, R.P., & Carr, D. (2017). *Introduction to Sociology* (10th ed.). W.W. Norton & Company.
- Haralambos, M., & Holborn, M. (2008). *Sociology: Themes and Perspectives* (7th ed.). HarperCollins Publishers.
- Giddens, A., Duneier, M., Appelbaum, R.P., & Carr, D. (2017). *Introduction to Sociology* (10th ed.). W.W. Norton & Company.
- Haralambos, M., Holborn, M., & Heald, R. (2013). *Sociology: Themes and Perspectives* (8th ed.). HarperCollins Publishers.
- Ritzer, G. (2017). *Sociological Theory* (9th ed.). McGraw-Hill Education.

## **Understanding Contemporary Social Issues-II (BL 104B)**

**Subject Code: BL – 104B**

**L 4, C 4**

### **Course Objectives:**

- To understand the social, political, and economic roots of contemporary issues.
- To analyze the impact of social problems on individuals and societies.
- To develop an ability to think critically about social issues and their global implications.
- To explore policy responses and social movements aimed at addressing social challenges.
- To foster an understanding of how global issues, intersect with local contexts.

### **Unit 1: Social Inequality and Discrimination**

#### **1. Theories of Social Inequality:**

- Structural-functionalism vs. conflict theory.
- Marxist analysis of class and power.
- Theories of stratification: Weber, Davis and Moore.

#### **2. Social Inequality:**

- Class, caste, and race-based inequality.
- Gender inequality: Feminist perspectives and the gender pay gap.
- The role of education and occupation in perpetuating inequality.

#### **3. Discrimination and Marginalization:**

- Racial and ethnic discrimination.
- Discrimination based on disability, sexuality, and age.
- Social exclusion and its effects on marginalized communities.

### **Unit 2: Globalization and Its Social Impacts**

#### **1. Understanding Globalization:**

- Definitions and key concepts: Economic, cultural, and political globalization.
- Theories of globalization: Modernization theory, world-systems theory, and dependency theory.

#### **2. Economic Globalization:**

- The global economy: Trade, multinational corporations, and economic policies.
- The impact of global economic practices on inequality and poverty.
- Financial crises and global economic interdependence.

#### **3. Cultural and Social Effects of Globalization:**

- Cultural homogenization and cultural imperialism.
- Global media, technology, and social change.
- Migration, transnational communities, and diasporas.

### **Unit 3: Environmental Issues and Social Change**

#### **1. Environmental Degradation:**

- Climate change: Causes, consequences, and global warming.
- Pollution, deforestation, and loss of biodiversity.
- The role of industrialization and consumer culture in environmental destruction.

#### **2. Sustainable Development:**

- The concept of sustainability: Economic, social, and environmental dimensions.
- Sustainable development goals (SDGs) and global efforts.
- Environmental justice and the unequal distribution of environmental harm.

#### **3. Social Movements and the Environment:**

- Environmental movements: Greenpeace, Fridays for Future, and local activism.
- Global environmental conferences and agreements (e.g., Paris Agreement).
- The role of media, advocacy, and policy in promoting sustainability.

### **Unit 4: Health and Social Issues**

#### **1. Health Inequalities:**

- The social determinants of health: Class, race, and access to care.
- Health disparities between countries (Global North vs. Global South).
- The impact of socio-economic status, education, and occupation on health outcomes.

#### **2. Mental Health:**

- The social construction of mental illness.
- Mental health stigma and the impact on treatment.
- Mental health policies and global mental health initiatives.

#### **3. Public Health and Social Movements:**

- The role of public health campaigns in addressing epidemics (e.g., HIV/AIDS, COVID-19).
- Global health issues: Access to healthcare and the impact of global health organizations (WHO).
- Social responses to pandemics and healthcare system challenges.

### **Unit 5: Crime, Deviance, and Social Control**

#### **1. Theories of Crime and Deviance:**

- Functionalist, conflict, and symbolic interactionist theories.
- Deviance and social norms: Labelling theory, strain theory, and conflict theory of crime.
- The relationship between inequality and criminal behaviour.

#### **2. Criminal Justice Systems:**

- Policing, incarceration, and the role of the state in managing crime.
- Mass incarceration and its socio-economic consequences.

- Juvenile delinquency and restorative justice.
- 3. **Social Control and Surveillance:**
  - The role of surveillance in modern societies (e.g., CCTV, social media).
  - Foucault's concept of panopticism and the state's control over individuals.
  - Privacy, civil liberties, and the ethics of surveillance.

#### Unit 6: Social Movements and Activism

1. **Theories of Social Movements:**
  - Resource mobilization theory.
  - Political opportunity structures.
  - New social movements: Environmental, feminist, and human rights movements.
2. **Activism in the Digital Age:**
  - Social media's role in organizing protests and global movements (e.g., #MeToo, Black Lives Matter).
  - Digital activism and online protests.
  - The role of hashtags, crowdfunding, and viral campaigns.
3. **Global and Local Movements:**
  - The influence of global movements on local politics (e.g., anti-globalization, anti-austerity protests).
  - The role of international organizations and grassroots movements in promoting change.

#### Suggested Books:

- Tarrow, S. (2011). *Power in Movement: Social Movements and Contentious Politics* (3rd ed.). Cambridge University Press.
- Castells, M. (2012). *Networks of Outrage and Hope: Social Movements in the Internet Age*. Polity Press.
- Giddens, A., Duneier, M., Appelbaum, R.P., & Carr, D. (2017). *Introduction to Sociology* (10th ed.). W.W. Norton & Company.
- Merton, R. K. (1968). *Social Theory and Social Structure*. Free Press.

## **Social Institutions in India-II (BL 104C)**

**Subject Code: BL – 104C**

**L 4, C 4**

### **Course Objectives:**

- To understand the historical development and significance of social institutions in India.
- To critically analyse the functioning and transformation of key social institutions in contemporary India.
- To explore the relationship between various social institutions and their impact on societal norms and values.
- To evaluate the impact of modernization, globalization, and policy interventions on social institutions.
- To assess the role of social institutions in shaping issues like inequality, gender, and class in India.

### **Unit 1: The Family and Kinship System in India**

#### **1. Traditional Family Structures:**

- The joint family system in India: History, structure, and significance.
- Kinship networks: Types, roles, and importance in traditional societies.
- Changes in family structure due to urbanization and modernization.

#### **2. Family Roles and Gender:**

- Patriarchy in Indian families: Socialization and division of labour.
- Role of women in the family: Empowerment and challenges.
- Changing roles of men and women in contemporary Indian families.

#### **3. Marriage and Kinship in Modern India:**

- Arranged marriage system and its evolution.
- Inter-caste and inter-religious marriages.
- Impact of globalization and media on marriage norms.

### **Unit 2: The Caste System and Social Stratification**

#### **1. Historical Development of Caste:**

- The origin and evolution of the caste system in India.
- The role of caste in social stratification and its impact on Indian society.
- Caste-based inequalities and the role of religion in sustaining the caste system.

#### **2. Caste in Contemporary India:**

- Caste in the modern Indian economy and politics.
- Affirmative action policies: Reservation system and its impact on caste dynamics.
- Changing role of caste in urban and rural settings.

#### **3. Caste and Social Movements:**

- The role of social reform movements: Brahmi Samaj, Arya Samaj, and Dalit movements.

- Modern Dalit activism and the struggle for caste equality.

### **Unit 3: Religion and Society in India**

#### **1. Religious Diversity and Secularism:**

- India as a land of religious diversity: Major religions and their influence on social life.
- Secularism in India: Theoretical perspectives and practical challenges.
- The role of religion in Indian politics and identity.

#### **2. Religious Institutions and Practices:**

- The role of temples, mosques, churches, and gurdwaras in shaping social behavior.
- Religious rituals and festivals: Their role in community building and social cohesion.
- Modernization and its impact on traditional religious practices.

#### **3. Religious Conflict and Social Change:**

- Communalism, religious intolerance, and inter-religious conflicts in India.
- Role of religion in social movements: Hindu revivalism, Islamic movements, and Christian missionary activities.
- Secularization and its challenges in modern India.

### **Unit 4: The Education System in India**

#### **1. Historical Evolution of Education in India:**

- Traditional education systems: Gurukuls, Madrasas, and indigenous learning.
- Colonial education and its impact on Indian society.
- The rise of modern education: The role of the British and post-independence education reforms.

#### **2. Challenges in the Education System:**

- Access to education: Rural-urban divide, caste, and gender disparities.
- Quality of education: Infrastructure, curriculum, and teacher training.
- Policies for educational reforms: Right to Education Act and skill development programs.

#### **3. Higher Education and Globalization:**

- The growth of higher education institutions: Universities, technical institutes, and research centres.
- Globalization and the rise of private educational institutions.
- Brain drain and the global competition in education.

## **Unit 5: The Political System and Governance in India**

### **1. Constitution and Democracy:**

- The Indian Constitution: Its significance, provisions, and challenges.
- The structure of Indian democracy: Political parties, elections, and the functioning of Parliament.
- Federalism, state vs. central power, and political decentralization.

### **2. Politics of Caste, Class, and Identity:**

- Caste-based politics and the role of affirmative action.
- Role of class and identity politics in shaping electoral outcomes.
- The rise of regional political parties and their impact on national politics.

### **3. Challenges in Indian Governance:**

- Corruption, governance deficits, and policy paralysis.
- Political dynasties and their impact on democracy.
- Social movements and their influence on political change.

### **Suggested Books:**

## Political Science-II

**Sub. Code: BL 106**

**L 4, C 4**

### Course Objectives

- Build on foundational knowledge by exploring more complex political ideologies and theories, including liberalism, conservatism, socialism, feminism, nationalism, and post-colonialism.
- Examine political institutions in-depth: Analyse the structure, functions, and interactions of political institutions such as legislatures, executives, judiciaries, political parties, and interest groups.
- Explore comparative politics: Compare political systems and regimes across different countries, understanding the factors that shape political stability, democratic governance, and authoritarianism.
- Study political participation: Investigate how individuals and groups participate in political processes through voting, protests, advocacy, and other forms of political action

### Unit-I: Government

Government, Organization of Government: Legislature

### Unit- II: Forms of Government

Dictatorship, Democracy (Features)

### Unit III: Forms of Government

Unitary, Federal (Features)

### Unit IV: Forms of Government

Parliamentary, Presidential (Features)

### Suggested Readings:

1. Asirvatham , Political Theory, S. Chand & Company.
2. A.C. Kapoor, Principles of Political Science, S. Chand & Company.
3. Pennock and Smith, Political Science- An Introduction. Macmillan (New York)
4. Caramani, Daniele, Comparative Politics, Oxford University Press.

## **Society and Gender (BL 106A)**

**Subject Code: BL – 106A**

**L 4, C 4**

### **Course Objectives:**

- To understand the social construction of gender and its impact on various aspects of society.
- To critically analyse gender inequalities in the family, workplace, education, and politics.
- To explore the concept of intersectionality and its application in understanding gender relations.
- To examine global and local feminist movements and their impact on societal change.
- To assess contemporary issues related to gender, such as sexual harassment, gender-based violence, and LGBTQ+ rights.

### **Unit 1: Gender and Socialization**

#### **1. Theories of Gender Socialization:**

- Theories of gender socialization: Freud, Mead, and Parsons.
- Gender roles: How they are learned and perpetuated in society.
- The impact of family, peers, media, and education in shaping gender identities.

#### **2. Gender and Identity Formation:**

- The development of gender identity from childhood to adulthood.
- The role of cultural norms, family structures, and religious teachings in shaping gender roles.
- Gender nonconformity and the fluidity of gender identity.

#### **3. Socialization and Gender Inequality:**

- How gender socialization contributes to inequality: Patriarchy, sexism, and traditional gender roles.
- The influence of gender norms on women's and men's life choices, career paths, and aspirations.

### **Unit 2: Gender and Family**

#### **1. The Family as a Gendered Institution:**

- The role of family in gender socialization: Division of labor and caregiving roles.
- The impact of gender on family structures: Marriage, parenting, and caregiving.
- The changing family dynamics in response to gender equality movements.

#### **2. Reproduction and Gender:**

- The politics of reproduction: Reproductive rights, fertility, and family planning.
- Gendered division of labour in household chores and childcare.
- The concept of motherhood and its social implications.

#### **3. Marriage, Divorce, and Gender Relations:**

- The changing institution of marriage: The impact of feminism and women's rights on marriage norms.
- Gender roles in marital relationships: Power dynamics, decision-making, and economic contributions.
- Divorce and its gendered impact: Economic independence, custody rights, and social stigma.

### **Unit 3: Gender, Work, and Economy**

#### **1. Gender and Labor:**

- Gendered division of labour: Occupational segregation, the wage gap, and vertical and horizontal segregation.
- The role of women in the workforce: History, contributions, and challenges.
- Men and unpaid labour: Changing gender roles in caregiving and household tasks.

#### **2. Feminism and Economic Systems:**

- Feminist perspectives on economic inequality: Marxist, liberal, and socialist feminist views.
- Women in the informal economy: Labour exploitation, domestic work, and global supply chains.
- Gender, globalization, and the impact of transnational corporations on women's labour.

#### **3. Gender and Work-Life Balance:**

- The challenges of work-life balance for women and men.
- The impact of gender on career choices, promotions, and leadership roles.
- Policies and programs for promoting gender equality in the workplace: Affirmative action, maternity leave, and equal pay.

### **Unit 4: Gender and Politics**

#### **1. Gender and Political Representation:**

- The underrepresentation of women in politics: Barriers to political participation and leadership.
- Gender quotas and affirmative action in political offices.
- Women's political activism: Local and global perspectives.

#### **2. Feminist Politics and Social Movements:**

- The history of feminist movements: First, second, and third waves.
- Contemporary feminist activism: Issues such as reproductive rights, violence against women, and LGBTQ+ rights.
- Global feminism: Intersectionality, solidarity, and transnational movements.

#### **3. Gender, Power, and the State:**

- The role of the state in shaping gender relations: Laws, policies, and gender justice.
- Gender and citizenship: Rights, access to services, and social welfare.

- The impact of neoliberalism and globalization on gendered policies.

## Unit 5: Gender, Violence, and Social Change

### 1. **Gender-Based Violence:**

- Forms of gender-based violence: Domestic violence, sexual harassment, trafficking, and femicide.
- Causes and consequences of gender-based violence: Patriarchy, power dynamics, and social structures.
- Legal frameworks and policies addressing gender-based violence.

### 2. **Sexual Harassment and Workplace Violence:**

- The #MeToo movement and its impact on social and legal reforms.
- Gender, power, and sexual harassment in different contexts: Workplace, education, and public spaces.
- The role of media in exposing and addressing gender-based violence.

### 3. **Gender and Social Change:**

- Feminist interventions in law, media, and policy.
- Gender mainstreaming and strategies for social change.
- The role of education and social movements in transforming gender norms.

## **Suggested Books:**

- Crenshaw, K. (1991). *Mapping the Margins: Intersectionality, Identity Politics, and Violence Against Women of Color*. Stanford Law Review.
- Mohanty, C. T. (2003). *Feminism Without Borders: Decolonizing Theory, Practicing Solidarity*. Duke University Press.
- Giddens, A., Duneier, M., Appelbaum, R.P., & Carr, D. (2017). *Introduction to Sociology* (10th ed.). W.W. Norton & Company.
- Walby, S. (1990). *Theorizing Patriarchy*. Blackwell Publishing.
- Nussbaum, M. (1999). *Sex and Social Justice*. Oxford University Press.
- Giddens, A., Duneier, M., Appelbaum, R.P., & Carr, D. (2017). *Introduction to Sociology* (10th ed.). W.W. Norton & Company.
- Acker, J. (2006). *Hierarchies, Jobs, Bodies: A Theory of Gendered Organizations*. *Gender & Society*, 20(4), 441-464.
- England, P. (2010). *The Gender Revolution: Uneven and Stalled*. *Gender & Society*, 24(2), 149-168.
- Giddens, A., Duneier, M., Appelbaum, R.P., & Carr, D. (2017). *Introduction to Sociology* (10th ed.). W.W. Norton & Company.
- Acker, J. (2006). *Hierarchies, Jobs, Bodies: A Theory of Gendered Organizations*. *Gender & Society*, 20(4), 441-464.
- England, P. (2010). *The Gender Revolution: Uneven and Stalled*. *Gender & Society*, 24(2), 149-168.

## **Comparative Politics-II (BL 106B)**

**Subject Code: BL – 106B**

**L 4, C 4**

### **Course Objectives:**

- To deepen the understanding of different political systems and institutions.
- To develop skills for comparative analysis of political structures, processes, and outcomes.
- To critically evaluate the role of political institutions, political parties, and electoral systems in governance.
- To understand the impact of globalization on state sovereignty, democracy, and governance.
- To analyse the evolving nature of political authority, state capacity, and legitimacy in diverse political systems.

### **Unit 1: Political Systems and Political Structures**

#### **1. Types of Political Systems:**

- The concept of political systems: Democracy, authoritarianism, totalitarianism, and hybrid regimes.
- Characteristics and functioning of parliamentary and presidential systems.
- Comparative analysis of democratic and non-democratic political systems.

#### **2. Political Institutions:**

- Role of executive, legislature, and judiciary in different political systems.
- Analysis of constitutional frameworks: Federal vs. unitary systems.
- Political parties and party systems: Party structure, ideologies, and electoral systems.

#### **3. Government Structures:**

- Presidential, parliamentary, and mixed systems: Their evolution, advantages, and challenges.
- Case studies: USA, UK, France, India, and Brazil.

### **Unit 2: Political Culture and Political Socialization**

#### **1. Political Culture:**

- Definition, types, and components of political culture.
- The role of political culture in shaping democratic values and political behavior.
- The influence of national identity, traditions, and religion on political culture.

#### **2. Political Socialization:**

- Socializing agents: Family, education, media, and peer groups.
- The role of political socialization in the formation of public opinion and political participation.
- Comparative study of political socialization in different political systems.

#### **3. Case Studies in Political Culture:**

- Political culture in democratic societies: USA, India, and France.

- Political culture in authoritarian regimes: China, Russia, and North Korea.

### **Unit 3: Comparative Political Economy**

#### **1. State and Market Relations:**

- Theories of political economy: Capitalism, socialism, and welfare states.
- Economic systems and political governance: Free market vs. planned economies.
- Globalization and its impact on national economies: Trade, investment, and financial flows.

#### **2. Development Models and State Capacity:**

- Theories of state development: Modernization theory, dependency theory, and post-colonial critique.
- The role of the state in economic development: Economic planning and policy-making.
- Comparative analysis of development in different countries: Success stories and failures (e.g., South Korea vs. Sub-Saharan Africa).

#### **3. Political Economy of Transition:**

- The transition from command economies to market economies: Case studies of China, Russia, and Eastern Europe.
- The role of political regimes in economic reforms and transitions.

### **Unit 4: Electoral Systems and Political Participation**

#### **1. Electoral Systems and Voting Behavior:**

- Types of electoral systems: Majoritarian, proportional representation, and mixed systems.
- The impact of electoral systems on party systems, voter behavior, and political representation.
- Comparative analysis of electoral systems in the UK, USA, India, and Germany.

#### **2. Political Participation and Public Opinion:**

- Voter turnout and the factors affecting political participation.
- Political participation beyond voting: Protests, strikes, and civil society movements.
- The role of media in shaping public opinion and electoral outcomes.

#### **3. Party Systems and Political Representation:**

- Major political party systems: Single-party, two-party, multi-party systems.
- The role of political parties in democratic and authoritarian regimes.
- Case studies: Political parties in the USA, India, and France.

## **Unit 5: Political Institutions and Governance**

### **1. Legislatures and Lawmaking:**

- The role of legislatures in policy-making and governance.
- Bicameral vs. unicameral systems: Their advantages and challenges.
- Comparative analysis of legislative systems: UK, USA, India, and Brazil.

### **2. Judiciaries and Legal Systems:**

- The role of judicial independence and its relation to democracy.
- Comparative study of judicial systems: Common law vs. civil law traditions.
- The role of the judiciary in protecting human rights and the rule of law.

### **3. Bureaucracy and Governance:**

- The role of the bureaucracy in policy implementation.
- Civil service reform: The challenges of corruption and inefficiency.
- Case studies on governance: Comparative analysis of administrative systems.

## **Suggested Books:**

- Diamond, L. (2008). *The Spirit of Democracy: The Struggle to Build Free Societies Throughout the World*. Times Books.
- Linz, J. J. (2000). *Totalitarian and Authoritarian Regimes*. Lynne Rienner Publishers.
- Huntington, S. P. (1991). *The Third Wave: Democratization in the Late Twentieth Century*. University of Oklahoma Press.
- Bagehot, W. (2001). *The English Constitution*. Blackmask Online.
- Shapiro, I., & Stokes, S. (2008). *Democracy's Edges*. Cambridge University Press.
- Lijphart, A. (2012). *Democracy in Plural Societies: A Comparative Exploration*. Yale University Press.
- Heywood, A. (2013). *Politics* (4th ed.). Palgrave Macmillan.
- Stiglitz, J. E. (2002). *Globalization and its Discontents*. W.W. Norton & Company.
- Rodrik, D. (2011). *The Globalization Paradox: Democracy and the Future of the World Economy*. W.W. Norton & Company.

## Political Theories-II (BL 106C)

Subject Code: BL – 106C

L 4, C 4

### Course Objectives:

- To understand the development of key political ideologies and thinkers.
- To critically analyse political thought in relation to contemporary issues such as human rights, democracy, and governance.
- To examine the evolution of core political concepts such as liberty, equality, justice, and power.
- To explore the intersection of political theory with social, economic, and cultural factors in shaping modern political systems.

### Unit 1: Classical Political Thought

#### 1. Plato and Aristotle:

- Plato's *Republic* and his concept of justice, the philosopher-king, and the ideal state.
- Aristotle's *Politics* and his views on democracy, polity, and the role of the citizen in governance.
- Comparison between Plato's and Aristotle's views on the state and politics.

#### 2. Machiavelli:

- Machiavelli's *The Prince* and his views on power, the role of the ruler, and the use of deceit and force in politics.
- The concept of *virtù* and *fortuna*, and their application to modern political analysis.
- Machiavelli's republicanism in *Discourses on Livy*.

#### 3. Hobbes, Locke, and Rousseau:

- Hobbes's theory of the state of nature, the social contract, and the need for an absolute sovereign (*Leviathan*).
- Locke's theories of natural rights, private property, and the limited government (*Two Treatises of Government*).
- Rousseau's general will, social contract, and critique of inequality (*The Social Contract*).

### Unit 2: Modern Political Thought

#### 1. John Stuart Mill:

- Mill's liberalism: *On Liberty*, utilitarianism, and the principle of harm.
- The concept of individual liberty, freedom of speech, and women's rights (e.g., *The Subjection of Women*).
- The limits of state intervention and the idea of a free market.

## 2. **Karl Marx:**

- Marx's critique of capitalism: Historical materialism, class struggle, and the theory of surplus value (*The Communist Manifesto*).
- Marxist views on the state, revolution, and the dictatorship of the proletariat.
- Influence of Marxist thought on modern political movements.

## 3. **Friedrich Hayek and Milton Friedman:**

- Hayek's critique of central planning and socialism (*The Road to Serfdom*).
- Friedman's advocacy for free markets and minimal state intervention (*Capitalism and Freedom*).

### **Unit 3: Political Ideologies**

#### 1. **Liberalism:**

- The core tenets of liberal thought: Individualism, freedom, equality, and democracy.
- Classical vs. modern liberalism: From Locke and Mill to Rawls and Nozick.
- The liberal critique of state intervention and the role of the market.

#### 2. **Socialism and Communism:**

- Marxist socialism and the critique of capitalism.
- Democratic socialism and the welfare state.
- Communism as an ideology of revolutionary change, from Marx to Lenin.

#### 3. **Conservatism:**

- Key ideas of conservatism: Tradition, authority, gradual change, and skepticism of revolution.
- Edmund Burke's defense of tradition and society.
- Modern conservatism: The role of the state, free market, and cultural values.

#### 4. **Feminism and Gender Theories:**

- Feminist political theory: Equality, justice, and critique of patriarchy.
- Liberal feminism, Marxist feminism, and radical feminism.
- Gender and political power: Theories of sexual politics and intersectionality.

### **Unit 4: Contemporary Political Thought**

#### 1. **Postmodernism and Critical Theory:**

- Michel Foucault's views on power, knowledge, and discipline.
- Postmodern critiques of grand narratives and ideologies.
- Critical Theory and the Frankfurt School: Adorno, Horkheimer, and Habermas.

#### 2. **Globalization and Political Thought:**

- Global justice and the ethics of globalization.
- Cosmopolitanism vs. nationalism: Theories of global governance.
- The role of international organizations, such as the UN and WTO.

#### 3. **Environmental Political Thought:**

- Green political thought: Environmental justice, sustainability, and eco-feminism.
- The critique of industrialism and the quest for eco-socialism.
- The politics of climate change and global environmental movements.

## **Unit 5: Modern Political Issues and Ideas**

### **1. Democracy and Its Challenges:**

- Theories of democracy: Deliberative democracy, participatory democracy, and liberal democracy.
- Challenges to democracy: Populism, authoritarianism, and illiberal democracy.
- Democratic backsliding: Case studies from Eastern Europe and Latin America.

### **2. Nationalism and Multiculturalism:**

- Theories of nationalism: Ethnic vs. civic nationalism.
- Multiculturalism and its political implications.
- Nationalism, citizenship, and global migration.

### **3. Human Rights and Justice:**

- The evolution of human rights theory: Natural rights, civil rights, and social rights.
- Justice theories: Distributive justice, global justice, and reparative justice.
- Human rights in practice: International law and humanitarian interventions.

## **Suggested Books:**

- Dahl, R.A. (1989). *Democracy and Its Critics*. Yale University Press.
- Smith, A.D. (1998). *Nationalism and Modernism*. Routledge.
- Kymlicka, W. (1995). *Multicultural Citizenship: A Liberal Theory of Minority Rights*. Oxford University Press.
- Rawls, J. (1993). *Political Liberalism*. Columbia University Press.

## **Unit 6: Contemporary Political Theory and Applications**

### **1. Global Political Theory:**

- Cosmopolitanism and global ethics.
- Theories of international justice: Global poverty, migration, and conflict.
- Postcolonial political theory: Colonialism, decolonization, and the politics of identity.

### **2. Political Theory and the Environment:**

- Ecological justice: Environmental ethics and political theory.
- The relationship between political economy and environmental sustainability.
- Green political movements and the global climate crisis.

### **Suggested Books:**

- Held, D. (2010). *Global Political Theory*. Polity Press.
- Nussbaum, M.C. (2006). *Frontiers of Justice: Disability, Nationality, Species Membership*. Belknap Press.
- Scruton, R. (2008). \*Green
- Plato. (2003). *The Republic*. Trans. G.M.A. Grube. Hackett Publishing.
- Aristotle. (2009). *Politics*. Trans. C.D.C. Reeve. Hackett Publishing.
- Machiavelli, N. (1998). *The Prince*. Trans. W. K. Marriott. Dover Publications.
- Hobbes, T. (1994). *Leviathan*. Cambridge University Press.
- Locke, J. (1980). *Two Treatises of Government*. Cambridge University Press.
- Rousseau, J.J. (2002). *The Social Contract*. Trans. G.D.H. Cole. Dover Publications
- Dahl, R.A. (1989). *Democracy and Its Critics*. Yale University Press.
- Smith, A.D. (1998). *Nationalism and Modernism*. Routledge.
- Kymlicka, W. (1995). *Multicultural Citizenship: A Liberal Theory of Minority Rights*. Oxford University Press.
- Rawls, J. (1993). *Political Liberalism*. Columbia University Press.

# Constitutional Law - I

**Sub. Code: BL 108**

**L – 4, C – 4.**

## Course Objectives

- Examine federalism and state powers: Explore the relationship between federal and state governments, including the distribution of powers and how conflicts are resolved, with an emphasis on landmark cases in federalism.
- Study separation of powers: Analyse the separation of powers among the three branches of government (executive, legislative, and judiciary) and the checks and balances system designed to prevent any one branch from becoming too powerful.
- Understand the role of the judiciary: Study the judicial power in interpreting and applying the Constitution, including the principle of judicial review, and the role of courts in constitutional interpretation.
- Study fundamental rights and liberties: Delve into the rights protected by the Constitution, particularly those in the Bill of Rights and the Fourteenth Amendment, including freedom of speech, religion, and privacy.

## Unit-I

Constitution-Meaning and Significance - Evolution of Modern Constitutions -Classification of Constitutions-Indian Constitution - Historical Perspectives - Government of India Act, 1919 -

## Unit-II

Nature and Salient Features of Indian Constitution - Preamble to Indian Constitution - Union and its Territories-Citizenship - General Principles relating to Fundamental Rights (Art.13) -

## Unit-III

Right to Equality (Art.14-18) – Freedoms and Restrictions under Art.19 - Protection against Ex-post facto law - Guarantee against Double Jeopardy - Privilege against Self-incrimination - Right to Life and Personal Liberty -

## Unit-IV

Rights against Exploitation - Right to Freedom of Religion - Cultural and Educational Rights - Right to Constitutional Remedies - Limitations on Fundamental Rights (Art.31-A,B and C)

## Unit-V

Directive Principles of State Policy

**Suggested Readings:**

1. M.P.Jain, Indian Constitutional Law, Wadhwa& Co, Nagpur
2. V.N.Shukla, Constitution of India, Eastern Book Company, Lucknow
3. Granville Austin, Indian Constitution-Cornerstone of a Nation, OUP, New Delhi
4. H.M.Seervai, Constitutional Law of India (in 3 Volumes), N.M.Tripathi, Bombay
5. G.C.V.Subba Rao, Indian Constitutional Law, S.Gogia& Co., Hyderabad
6. B.Shiva Rao: Framing of India's Constitution (in 5 Volumes), Indian Institute of Public Administration, New Delhi
7. J.N.Pandey, Constitutional Law of India, Central Law Agency, Allahabad

## Law of Contract - II

Sub. Code: BL 110

L – 4, C – 4.

### Course Objectives

- Study advanced elements of contract formation: Explore the essential components for a valid contract (offer, acceptance, consideration, capacity, and legality) in more depth, including situations involving ambiguous terms, pre-contractual negotiations, and implied contracts.
- Analyze unilateral and bilateral contracts: Understand the differences between unilateral and bilateral contracts, and explore how each is formed, enforced, and discharged.
- Explore contract formation in specialized areas: Examine contracts involving commercial transactions, construction, and complex agreements, and analyze how standard industry practices influence contract formation. Study express and implied terms: Learn to differentiate between express terms (clearly stated in the contract) and implied terms (those inserted by law or custom) and their enforceability.
- Analyze standard form contracts: Investigate the use of standard terms or "boilerplate" clauses, focusing on their fairness, enforceability, and the potential for unconscionability or other defenses.

### Unit-I:

Indemnity and Guarantee - Contract of Indemnity, definition - Rights of Indemnity holder - Liability of the indemnified - Contract of Guarantee - Definition of Guarantee - Essential characteristics of Contract of Guarantee - Distinction between Indemnity and Guarantee - Kinds of Guarantee - Rights and liabilities of Surety - Discharge of surety. Contract of Bailment -

### Unit-II:

Contract of Agency - Definition of Agent - Creation of Agency - Rights and duties of Agent - Delegation of authority - Personal liability of agent - Relations of principal and agent with third parties

### Unit-III:

Contract of Sale of Goods - Formation of contract - Subject matter of sale - Conditions and Warranties -

### Unit-IV:

Property - Possession and Rules relating to passing of property - Sale by non-owner - Nemo dat quod non habet - Delivery of goods - Rights and duties of seller and buyer before and after sale -

### Unit-V:

Contract of Partnership - Definition and nature of partnership - Formation of partnership- Test of partnership - Partnership and other associations.

**Suggested Readings:**

1. Anson's Law of Contract, 25th Ed. 1998, Oxford University Press, London.
2. Venkatesh Iyyer: The Law of Contracts and Tenders, Gogia & Company Hyderabad.
3. Cheshire & Fifoot: Law of Contract, Butterworth, London, 1976.
4. Mulla: The Indian Contract Act, N.M. Tripathi (P) Ltd. Bombay, 1984.
5. G.C.V. Subba Rao: Law of Contracts, S. Gogia & Co., Hyderabad, 1995.
6. Krishnan Nair: Law of Contracts, S. Gogia & Co. Hyderabad, 1995.
7. Avtar Singh: Law of Contracts, Eastern Book Company, Lucknow, 1998.
8. A Ramaiah's Sale of Goods Act, 4th Ed. 1998, The Law Book Co., Allahabad.
9. Benjamin's Sale of Goods, 1st Ed. 1978, Sweet & Maxwell, London.
10. P.S. Atiyah: Sale of Goods Act, 9th Ed. 1997, Universal Book Traders, Delhi.

## **Economics-II**

**Sub. Code: BL 112**

**L 4, C 4**

### **Course Objectives**

- Examine taxation and public finance: Study the theory of taxation, including different types of taxes (income, sales, property), their effects on individuals and businesses, and how they impact economic efficiency and equity.
- Understand government intervention and market failure: Analyze the role of government in correcting market failures, such as through regulation, public goods provision, externality correction, and income redistribution.
- Study social welfare and redistribution policies: Examine policies aimed at reducing inequality, such as progressive taxation, welfare programs, and social insurance. Investigate the efficiency and equity of various redistributive mechanisms.
- Explore fiscal policy and its impact on the economy: Understand how governments use fiscal policy (public spending and taxation) to influence economic activity, manage inflation, and address unemployment.

### **Unit-I: Introduction**

- (a). Structural Changes in Indian Economy in Post 1991 period.
- (b). New Economic policy, Liberalizations and Privatization.

### **Unit-II: Agriculture Sector**

- (a). Features and problems in Indian Agriculture.
- (b). Land Reforms in India

### **Unit-III: Industrial Sector**

- (a). Industrial Policy in India since 1948 and recent Changes in with reference to economic Problems.
- (b). Industrial Sickness, Causes and its remedies.

### **Unit-IV: Economic Institutions in India**

- (a). Single Proprietorship, Partnership.
- (b). Trust and Cooperative Societies.

### **Unit-V: Foreign Trade & Investment**

- (a). Foreign Trade Policy, major problems of Indian Export Sector.

### **Suggested Readings**

1. Aggarwal A.N., Indian Economy, Vikas Publication, New Delhi.
2. Hanumanta Rao C.H. & Joshi F.C., Reflections of Economic Development and Social Changes.
3. Rudder Dutt & KPM Sundaram, Indian Economy, S. Chand & Co.

## **Indian Economy-II (BL-112 A)**

**Subject Code: BL – 112A**

**L 4, C 4**

### **Course Objectives:**

- To deepen understanding of key economic concepts and theories related to the Indian economy.
- To examine India's economic growth trajectory, sectoral transformations, and the policy measures implemented by the government.
- To critically analyse the challenges and opportunities facing the Indian economy.
- To explore the role of India in the global economy and its economic relations with other nations.
- To evaluate the effectiveness of various policy interventions in addressing socio-economic issues in India.

### **Unit 1: Economic Growth and Planning in India**

#### **1. Economic Growth in India:**

- Trends in India's economic growth post-independence.
- Factors influencing India's economic growth: Population, infrastructure, investment, and human capital.
- Growth theories and their application to the Indian context.

#### **2. Planning in India:**

- Evolution of planning in India: From Five-Year Plans to NITI Aayog.
- Role of public sector in planning and industrial development.
- Issues in the planning process: Targets, allocation of resources, and plan implementation.

#### **3. Economic Reforms and Liberalization:**

- The 1991 economic reforms: Structural adjustments, liberalization, privatization, and globalization.
- Impact of reforms on India's industrial, trade, and financial sectors.
- Critiques of economic reforms and the challenges faced in inclusive growth.

### **Unit 2: Sectoral Composition of Indian Economy**

#### **1. Agriculture:**

- Role of agriculture in India's economy: Employment, GDP contribution, and food security.
- Agricultural policies and reforms: Green Revolution, land reforms, and current challenges.

- Issues in rural development, agriculture sustainability, and the impact of climate change on agriculture.
- 2. **Industry and Manufacturing:**
  - Structure of the industrial sector in India: MSMEs, large industries, and the role of technology.
  - Industrial policy and reforms: Post-liberalization changes in the industrial landscape.
  - Make in India initiative and its impact on manufacturing.
- 3. **Services Sector:**
  - Growth and significance of the services sector in India: IT, financial services, tourism, and healthcare.
  - Contribution of the services sector to GDP and employment.
  - Challenges facing the services sector, including skill development, infrastructure, and regulation.

### **Unit 3: Fiscal and Monetary Policy in India**

1. **Fiscal Policy:**
  - Overview of India's fiscal system: Structure of government revenues and expenditure.
  - Fiscal policy tools: Taxation, public debt, and fiscal deficit.
  - Budgetary policy and the role of Finance Commission.
  - The role of fiscal policy in economic stabilization and growth.
2. **Monetary Policy:**
  - Role of Reserve Bank of India (RBI) in monetary policy formulation.
  - Objectives of monetary policy: Inflation targeting, interest rates, and exchange rates.
  - Recent developments in monetary policy: Liquidity management, credit control, and financial inclusion.
  - The impact of demonetization and GST on India's monetary policy.

### **Unit 4: External Sector and India's Foreign Trade**

1. **Trade and Balance of Payments:**
  - India's trade pattern and composition: Major exports and imports.
  - Issues related to India's balance of payments (BoP): Deficits, capital flows, and exchange rates.
  - India's exchange rate policies and its impact on international trade.
2. **Trade Policies and Agreements:**
  - Evolution of India's trade policy: From import substitution to export-led growth.
  - WTO and regional trade agreements: SAFTA, ASEAN, and RCEP.
  - Foreign trade policy and its role in promoting exports and economic growth.
3. **Foreign Direct Investment (FDI) and Capital Flows:**
  - Role of FDI in India's economic development.
  - Government policies to attract FDI: Make in India, Start-Up India.

## Unit 5: Poverty, Unemployment, and Inequality in India

### 1. Poverty in India:

- Measurement of poverty: Poverty lines, multidimensional poverty.
- Causes of poverty: Structural, social, and economic factors.
- Government initiatives for poverty alleviation: MGNREGA, PMAY, and direct benefit transfers (DBT).

### 2. Unemployment and Employment Policies:

- Types of unemployment: Frictional, structural, and disguised unemployment.
- Employment generation policies and programs: Skill development, employment guarantee schemes.
- Challenges in the labor market: Informal sector, wage disparity, and gender inequality.

### 3. Inequality:

- Economic inequality: Income and wealth disparities.
- Social inequality: Caste, class, and gender-based disparities.
- Government policies aimed at reducing inequality: Reservation policies, inclusive growth programs.

## Suggested Books:

- Desai, V. (2022). *Indian Economy: A Comprehensive Overview*. Pearson India.
- S.R. Mehta (2017). *Contemporary Issues in Indian Economy*. Macmillan India.

## **ECONOMY OF MONEY AND BANKING -II (BL-112 B)**

**Subject Code: BL – 112B**

**L 4, C 4**

### **COURSE OBJECTIVES**

- Develop a Strong Understanding of Monetary Theories  
To explore and critically analyse various theories related to the demand and supply of money, including classical, Keynesian, and modern approaches.
- Understand the Conduct of Monetary Policy  
To study the objectives, tools, and mechanisms through which central banks implement monetary policy, and assess how policy decisions impact inflation, growth, and employment.
- analyse the Role of Central Banks

#### **Unit 1: Money**

- Understanding concept and functions of money
- Measurement of money supply
- Analytics and Methodology of computation of money supply
- Theories of money supply determination.

#### **Unit 2: Financial markets:**

- Role of financial markets and institutions
- Problems of Asymmetric information
- Financial Crises; Financial derivatives: Futures, Options and Swaps
- Financial markets and Institutions in India: Organization, Structure and Reforms in India

#### **Unit 3: Determination of interest rates:**

- Sources of interest rates differentials and risk
- Theories of term structure of interest rates
- Interest rates in India.

#### **Unit 4: Banking**

- Theory of Separation of Powers and Checks and Balances
- N.G.O. Civil Society Campaigns and role of Mass Media

### **Unit 5: Historical context: Money and Banking**

- Introduction to banking system
- Types of banks

#### **Suggested Readings:**

1. F J Fabozzi et al: Foundations of Financial Markets and Institutions, Pearson
2. F S Mishkin , S G Eakins, T Jayakumar, R K Pattnaik : Financial Markets and Institutions Pearson
3. N Jadhav: Monetary Policy, Financial stability and Central Banking in India Macmillan

# **SEMESTER III**

## **Constitutional Law – II**

**Sub. Code: BL 201**

**L – 4, C – 4.**

### **Course Objective**

- Examine the scope of individual rights: Study advanced topics related to individual rights guaranteed by the Constitution, focusing on the Due Process Clause, Equal Protection Clause, and First Amendment rights (including freedom of speech, freedom of religion, and freedom of association).
- Analyse the evolving jurisprudence of civil rights: Understand the historical development and contemporary application of civil rights protections, particularly regarding race, gender, and sexual orientation.
- Study substantive due process and privacy rights: Delve into the principles of substantive due process and the development of privacy rights, including landmark cases like *Griswold v. Connecticut*, *Roe v. Wade*, and *Lawrence v. Texas*.
- Explore procedural due process: Understand the constitutional requirements of fair procedures when individuals are deprived of life, liberty, or property, focusing on judicial review and the protections offered by the Fifth and Fourteenth Amendments.

### **Unit-I**

Legislature under Indian Constitution - Union and State Legislatures - Composition, Powers, Functions and Privileges - Anti-Defection Law - Executive under Indian Constitution - President and Union Council of Ministers.

### **Unit-II**

Judiciary under Constitution - Supreme Court - Appointment of Judges, Powers and Jurisdiction - High Courts - Appointment and Transfer of Judges - Powers and Jurisdiction - Subordinate Judiciary.

### **Unit-III**

Centre State Relations - Legislative, Administrative and Financial Relations - Cooperation and Coordination between the Centre and States.

### **Unit-IV**

Liability of State in Torts and Contracts - Freedom of Interstate Trade, Commerce and Inter course.

### **Unit-V**

Emergency – Need of Emergency Powers - Different kinds of Emergency - National, State and

**Suggested Readings:**

1. M.P.Jain, Indian Constitutional Law, Wadhwa& Co, Nagpur
2. V.N.Shukla, Constitution of India, Eastern Book Company, Lucknow
3. Granville Austin, Indian Constitution-Cornerstone of a Nation, OUP, New Delhi
4. H.M.Seervai, Constitutional Law of India (in 3 Volumes), N.M.Tripathi, Bombay
5. G.C.V.Subba Rao, Indian Constitutional Law, S.Gogia& Co., Hyderabad
6. B.Shiva Rao, Framing of India's Constitution (in 5 Volumes), Indian Institute of Public Administration, New Delhi
7. J.N.Pandey, Constitutional Law of India, Central Law Agency, Allahabad

## Legal Methods

Sub. Code: BL – 203

L-4, C-4

### Course Objectives

- Understand the structure of legal systems: Introduce students to the basics of the legal system, including the different types of law (e.g., common law, statutory law, constitutional law), and the role of courts, legislatures, and executive bodies in shaping law.
- Familiarize with sources of law.
- Help students identify and understand the different sources of law, including primary sources (e.g., statutes, case law, constitutions) and secondary sources (e.g., legal commentary, law review articles, legal dictionaries).
- Develop legal research skills: Equip students with the skills to conduct effective legal research using legal databases (e.g., Westlaw, LexisNexis) and traditional research methods (e.g., library research, casebooks, and law reports).

### Unit-I: Introduction

Law as an independent discipline has its own materials and methods. Though related to and reflective of social processes, its development is unique in several respects. The character and content of legal knowledge are explained to the student in a systematic fashion. Familiarity with the sources of law and with legal materials and competence to find the law by the use of the law library are major concerns of this course.

### Unit-II: Introduction to Law

#### I. Meaning and Classification of Laws

- a. What is law?
- b. Meaning and definition
- c. How is law made?
- d. What are the uses and functions of law?
- e. Classification of laws:

### Unit-III : Sources of Law

- a. Custom
- b. Precedent
- c. Legislation

### Unit-IV: Basic Concepts of Indian Legal System

- a. Common Law
- b. Constitution as the Basic Law
- c. Rule of Law

## **Unit-V : Legal Writing and Research**

Legal materials – Case law, b. Statutes, Reports, Journals.

### **Suggested Readings**

- **"Introduction to Legal Research and Methodology"** by S.K. Verma and Kusum Verma
  - A detailed guide on legal research techniques and methodologies, focusing on Indian law.
- **"Legal Research and Writing"** by Nancy L. Schultz and Linda H. Edwards
  - Provides a comprehensive understanding of legal research and writing skills.
- **"Legal Method"** by S.P. Sathe
  - A foundational text on the principles of legal reasoning and methodology.
- **"The Legal System: A Social Science Perspective"** by Lawrence M. Friedman
  - Explores the structure and functioning of legal systems from a sociological viewpoint.
- **"An Introduction to Legal Theory"** by Peter G. Stein
  - Focuses on the philosophical underpinnings of law and its methods.

## POLITICAL SCIENCE-III

Sub. Code: BL – 205

L-4, C-4

### Course Objectives

- Understand the role of the state: Study the state's role in governance, lawmaking, security, and economic management. Analyze how states interact with citizens and non-state actors.
- Examine executive power and leadership: Understand the functions and powers of executive branches, focusing on the head of state/government and their relationship with the legislature and judiciary.
- Analyze the role of legislatures: Study how legislative bodies operate in different political systems, focusing on lawmaking, representation, and the relationship between the legislature and the executive.
- Study the judiciary and judicial review: Examine the role of courts in interpreting laws, ensuring the constitutionality of laws, and protecting individual rights and liberties.

**Unit I: Western Political Thought:** Plato (Ethics), Aristotle (State, Citizenship)

**Unit II: Western Political Thought:** Lock (Rights), Rousseau (Inequality), Marx (State)

**Unit III: Indian Political Thought:** Kautilya(State), Vivekanand (Vedanta, Education)

**Unit IV: Indian Political Thought:** Gandhi (Swaraj), Ambedkar (Social Justice),

### Suggested Readings:

1. Appadorai, Indian Political Thinking through the Ages, Khanna Publishers, Delhi,
2. Urmila Sharma, S K Sharma, Indian Political Thought, Atlantic
3. V. R. Mehta, Foundations of Indian Political Thought, New Delhi, Manohar
4. C.L. Wayper, Political Thought, New Delhi, (English & Hindi).
5. S. Mukherjee and S. Ramaswamy, A History of Political Thought: Plato to Marx, New Delhi, Prentice Hall.

Ian Adams & R.W. Dyson, Fifty Great Political Thinkers, Routledge

## **Society and Gender-III (BL – 205 A)**

**Subject Code: BL – 205A**

**L 4, C 4**

### **Course Objectives:**

- To understand and critically analyse the evolving concepts of gender and their impact on social structures.
- To explore the intersectionality of gender with other social categories like race, caste, class, and sexuality.
- To examine feminist theories, ideologies, and movements, both historical and contemporary.
- To evaluate the role of gender in key social institutions like family, education, politics, and media.
- To explore contemporary gender issues in a global context and discuss policies addressing gender inequality.

### **Unit 1: Foundations of Gender Studies**

#### **1. Introduction to Gender Studies:**

- Definition and conceptualization of gender, sex, and sexuality.
- Historical development of gender studies as an interdisciplinary field.
- The role of gender in social theory: Contributions of key theorists (Simone de Beauvoir, Judith Butler, Michel Foucault).

#### **2. Gender and Socialization:**

- Social construction of gender roles and identities.
- Gender socialization in family, school, and media.
- The impact of patriarchy, heteronormativity, and gender norms on individual lives.

#### **3. Intersectionality in Gender Studies:**

- Concept of intersectionality: Kimberlé Crenshaw's theory.
- The interconnectedness of gender, class, race, caste, and sexuality.
- Case studies exploring intersectional experiences of women and marginalized groups.

### **Unit 2: Feminist Theories and Movements**

#### **1. Classical Feminist Theories:**

- Liberal feminism: Emphasis on individual rights, equality, and legal reforms (e.g., Mary Wollstonecraft, John Stuart Mill).
- Socialist feminism: Connection between gender and class oppression (e.g., Engels, Simone de Beauvoir).

- Radical feminism: Focus on patriarchy and systemic oppression of women (e.g., Shulamith Firestone, Andrea Dworkin).
- 2. **Postmodern and Postcolonial Feminisms:**
  - Postmodern feminism: Critique of universalizing narratives and essentialism (e.g., Judith Butler, bell hooks).
  - Postcolonial feminism: The impact of colonialism on gender and identity, experiences of Third World women (e.g., Gayatri Spivak, Chandra Talpade Mohanty).
- 3. **Contemporary Feminist Movements:**
  - Global feminist movements and the fight for reproductive rights, gender-based violence, and equal pay.
  - #MeToo, Time's Up, and other social media-driven movements.
  - Feminism in India and the Global South: Challenges and perspectives.

### **Unit 3: Gender and Social Institutions**

1. **Gender in the Family:**
  - Family as a site of gender roles and power dynamics.
  - The evolution of family structures and the impact of globalization and migration.
  - Gendered division of labor in the household and caregiving responsibilities.
2. **Gender in Education:**
  - Gender stereotypes in textbooks, curriculum, and teacher-student interactions.
  - Gender disparities in access to education: Global and national perspectives.
  - Gender and academic achievement: Women's access to higher education and barriers faced.
3. **Gender and Work:**
  - Gendered labor markets: The feminization of certain jobs and gender pay gaps.
  - Occupational segregation: The glass ceiling, leadership roles, and the corporate ladder.
  - Feminist perspectives on unpaid work and the value of caregiving roles.
  -

### **Unit 4: Gender, Sexuality, and the Law**

1. **Legal Frameworks for Gender Equality:**
  - International laws and conventions on women's rights (e.g., CEDAW).
  - Indian Constitution and gender equality: Fundamental rights, Directive Principles of State Policy, and laws for women's protection.
  - Gender-based violence and the legal system: Domestic violence, sexual harassment, and trafficking.
2. **Gender and Reproductive Rights:**
  - Feminist perspectives on reproductive justice and autonomy.
  - Laws surrounding reproductive health: Abortion, contraception, and maternal health.
  - The role of the state in regulating and controlling women's bodies.

### 3. **LGBTQ+ Rights and Gender:**

- Gender identity, sexuality, and the law: Legal recognition of transgender rights.
- Decriminalization of homosexuality in India and the global fight for LGBTQ+ rights.
- Intersection of gender and sexuality in the context of marriage, adoption, and family law.

## **Unit 5: Gender, Media, and Culture**

### 1. **Gender Representation in Media:**

- Media as a tool for perpetuating gender stereotypes and roles.
- Representation of women in film, television, advertisements, and social media.
- Feminist media criticism and the portrayal of men and women in the media.

### 2. **Cultural Practices and Gender:**

- Gender and tradition: The role of cultural practices in shaping gender identities and roles.
- Rituals, religion, and gender: How gender roles are embedded in cultural practices and beliefs.
- The politics of gender and culture in the Global South: The debate on cultural relativism vs. universalism.

### 3. **Digital Feminism and Gender Activism:**

- Online gender activism and the impact of social media platforms.
- Cyber feminism and the role of technology in addressing gender inequalities.
- Virtual communities and their influence on gender discourse.

## **Suggested Books:**

- Walby, S. (2011). *The Future of Feminism*. Polity Press.
- Sen, A. (2001). *Development as Freedom*. Oxford University Press.
- Nanda, M. (2017). *Transgender Rights and Politics in India*. University of California Press.

- Reddy, A. (2011). *With Respect to Sex: Negotiating Hijra Identity in South India*. University of Chicago Press.
- Nussbaum, M. C. (2009). *Sexual Justice in a Liberal State*. Oxford University Press.

## **Comparative Politics-III (BL-205 B)**

**Subject Code: BL – 205 B**

**L 4, C 4**

### **COURSE OBJECTIVES**

- To deepen students' knowledge of advanced theories in comparative politics, including structuralism, institutionalism, and rational choice theory.
- To critically examine the methodological approaches used in comparative political analysis.
- To explore and compare different types of political systems, including democracies, authoritarian regimes, and hybrid systems.
- To understand the role of institutions such as legislatures, executives, and judiciaries in shaping political outcomes across different countries.

#### **Unit 1:**

- Introduction to Comparative Politics
- Human Nature and the Ends of Political Life.
- Approaches of the study of Comparative politics.
- Comparative Government and politics

#### **Unit 2:**

- Political Culture and political Socialization.
- Constitution and Constitutionalism.
- Development: Underdevelopment and dependency.
- Political Development, Democracy and Political Decay.

#### **Unit 3:**

- Organization of Government: Institution and Procedures.
- Rule Making Structure- The Legislature
- Rule Application Structure – The Executive
- Rule Adjudication Structure- The Judiciary.

#### **Unit 4:**

- Theory of Separation of Powers and Checks and Balances
- N.G.O. Civil Society Campaigns and role of Mass Media

#### **Unit 5:**

- Importance of the study Informal Institution in Comparative Politics.
- Electoral System and Voting Behavior.

### **Suggested Readings:**

- Bruce J. Dickson, *The Dictator's Dilemma: The Chinese Communist Party's Strategy for Survival* (New York: Oxford University Press, 2016).
- Robert Guest, *Borderless Economics: Chinese Sea Turtles, Indian Fridges and the New Fruits of Global Capitalism* (New York: St. Martin's Griffith, 2013).
- Steven Levitsky and Daniel Ziblatt, *How Democracies Die* (New York: Crown, 2019)
- Dambisa Moyo, *Dead Aid: Why Aid Is Not Working and How There Is a Better Way for Africa* (Farrar, Straus and Giroux, 1st reprint ed., 2010).

## HISTORY-III

Sub. Code: BL 207

L 4, C4

### Course Objectives

- Understand the origins of British imperialism: Study the early stages of British expansion, including the Age of Discovery, the establishment of early colonies, and the economic, political, and military motivations behind imperial ventures.
- Analyze the development of the British Empire: Examine how Britain built its empire through the colonization of the Americas, Africa, India, and the Pacific, and the impact of trade routes, naval power, and colonial administration.
- Investigate the role of British explorers and merchants: Study the contributions of key figures like Francis Drake, Robert Clive, and Cecil Rhodes, and their roles in expanding British influence globally.

### Unit 1

- 1:- Advent of European in India.
- 2:- Governor General of Bengal.
- 3:- William Bentinck and his Policies.

### Unit 2

- 1:- Regulating Act 1773,
- 2:- Act of Settlement 1781,
- 3:- Pits India Act 1784,

### Unit 3

- 1:- Revolt of 1857: Causes, Nature and Programme.
- 2:- Leadership, People Participation.
- 3:- British Repression and Response.

### Unit 4

- 1:- The Act of 1858,
- 2:- The Act of 1892,
- 3:- The Act of 1994,

### Unit 5

- 1:- Emergence of Organized Nationalism: Formation of Indian National Congress.
- 2:- Gandhian Movement: Nature, Programme, Social Composition.

### **Suggested Reading:**

- **"A History of India"** by Romila Thapar
- A comprehensive account of ancient and medieval Indian history, exploring cultural, political, and social aspects.
- **"The Wonder That Was India"** by A.L. Basham
- A classic work on the history, culture, and achievements of ancient India, covering a broad range of topics.
- **"India: A History"** by John Keay
- A concise yet detailed history of India from ancient times to the present, examining key events and figures.
- **"Medieval India: From Sultanat to the Mughals"** by Satish Chandra
- A scholarly work on the political, social, and economic changes in India from the Sultanate period to the Mughal era.
- **"Modern India: 1885-1947"** by Sumit Sarkar
- Focuses on India's modern history, especially the freedom struggle, the role of key figures, and social reforms.
- **"The British in India: A History of the British Empire in India"** by Nicholas B. Dirks
- Explores the British colonial impact on India, examining political, economic, and cultural changes.

## **Sociology-III (BL 207A)**

**Sub. Code: BL 207A**

**L 4, C4**

### **Course Objectives**

- Understand the relationship between law and society.
- Analyze the role of law in social change and justice.
- Examine legal responses to social stratification and inequality.
- Study the sociological aspects of social problems and legal remedies.
- Explore contemporary legal challenges in a globalized society.

### **Unit 1: Introduction to Law and Society**

- Concept and Functions of Law in Society
- Relationship Between Law, Society, and Social Control
- Customary Law and Legal Pluralism
- Sociology of Legal Institutions

### **Unit 2: Law and Social Change**

- Role of Law in Social Change
- Law as an Instrument of Social Transformation
- Resistance to Legal Change
- Case Studies: Social Reforms and Legal Impact

### **Unit 3: Social Stratification and Law**

- Caste, Class, and Gender in Legal Contexts
- Intersectionality and Legal Protection
- Affirmative Action and Reservation Policies
- Human Rights and Social Justice

### **Unit 4: Law and Social Problems**

- Law and Issues of Crime, Violence, and Deviance
- Poverty, Unemployment, and Legal Remedies
- Environmental Degradation and Legal Responses
- Cybercrimes and Modern Legal Challenges

### **Unit 5: Contemporary Issues in Law and Society**

- Globalization and Legal Systems

- Digital Society and Legal Challenges
- Role of NGOs and Civil Society in Legal Advocacy

### **Suggested Readings**

1. Emerging Trends: Artificial Intelligence and Law
2. **"Law and Society in India"** by Upendra Baxi
3. A critical analysis of the interaction between law and society in India.
4. **"On Law and Society"** by Roscoe Pound
5. Explores the relationship between law and societal needs from a jurisprudential perspective.
6. **"Sociology of Law"** by Steven Vago
7. A comprehensive introduction to the sociology of law, covering theory and applications.
8. **"The Spirit of Laws"** by Montesquieu
9. A foundational text discussing how societal factors influence laws and governance.
10. **"Law and Social Change in India"** by Agnes Flavia
11. Examines the impact of law on societal transformations, particularly in gender justice.
12. **"Social Stratification"** by Dipankar Gupta
13. Explores caste, class, and social hierarchies in India and their interaction with the legal system.

# Understanding Contemporary Social Issues-III

Sub. Code: BL 207B

L 4,C 4

## Course Objectives

- Analyse key contemporary social issues.
- Understand the impact of globalization and technology.
- Examine environmental and gender-related challenges.
- Explore legal frameworks for social justice.
- Develop critical thinking on emerging societal problems.

## Unit 1: Introduction to Contemporary Social Issues

- Concept of Social Issues: Definition and Characteristics
- Framework for Understanding Social Problems
- Role of Law in Addressing Social Issues

## Unit 2: Globalization and Its Impact

- Economic and Cultural Globalization
- Impact on Marginalized Communities
- Legal and Policy Responses to Globalization

## Unit 3: Environment and Sustainability

- Climate Change and Environmental Degradation
- Legal Framework for Environmental Protection
- Sustainable Development Goals (SDGs) and Social Justice

## Unit 4: Gender and Society

- Gender Inequality and Violence
- LGBTQIA+ Rights and Legal Recognition
- Role of Law in Promoting Gender Justice

## Unit 5: Technology and Society

- Digital Divide and Social Exclusion
- Cybercrime and Data Privacy Issues
- Legal Challenges in Regulating Technology

## Unit 6: Emerging Social Issues

- Urbanization and Housing Crisis
- Mental Health and Legal Frameworks
- Drug Abuse and
- Decriminalization Policies

### **Suggested Readings**

1. **"Globalization and Its Discontents"** by Joseph E. Stiglitz
2. Explores the impacts of globalization on societies and economies.
3. **"The Gendered Society"** by Michael Kimmel
4. Analyzes gender dynamics and their impact on contemporary social issues.
5. **"Development as Freedom"** by Amartya Sen
6. Examines the relationship between freedom, social issues, and development.
7. **"Silent Spring"** by Rachel Carson
8. A landmark work on environmental issues and their social impact.
9. **"The Net Delusion: The Dark Side of Internet Freedom"** by Evgeny Morozov
10. Discusses the societal challenges posed by technology and digitalization.

## **Social Institutions In India-III**

**Sub. Code: BL 207C**

**L 4, C 4**

### **Course Objectives**

- Understand key social institutions in India.
- Analyze family, caste, and class structures.
- Explore the role of religion and politics in society.
- Study the impact of education on social change.
- Examine legal frameworks shaping social institutions.

### **Unit 1: Introduction to Social Institutions**

- Definition, Nature, and Functions of Social Institutions
- Role of Social Institutions in Indian Society
- Interrelation between Law and Social Institutions

### **Unit 2: Family and Kinship**

- Types of Families in India: Joint and Nuclear
- Changing Dynamics of Family Structures
- Laws Related to Marriage, Divorce, and Succession

### **Unit 3: Caste and Class**

- Caste System in India: Historical and Contemporary Perspectives
- Class Structure and Social Mobility
- Legal Measures against Caste Discrimination

### **Unit 4: Religion and Society**

- Role of Religion in Indian Society
- Secularism and Religious Pluralism in India
- Legal Framework Governing Religious Practices

### **Unit 5: Political and Economic Institutions**

- Panchayati Raj and Local Governance
- Role of Political Parties and Electoral Processes
- Economic Institutions and Their Social Impact

### **Unit 6: Education as a Social Institution**

- Education and Social Change in India
- Right to Education and Related Policies
- Challenges in the Indian Education System

### **Suggested Readings**

1. **"Indian Society: Themes and Social Issues"** by Nadeem Hasnain
2. A comprehensive overview of social institutions and issues in India.
3. **"Caste in Modern India and Other Essays"** by M.N. Srinivas
4. Explores the caste system and its relevance in contemporary India.
5. **"Family and Kinship in India"** by Patricia Uberoi
6. Analyzes family and kinship structures in Indian society.
7. **"Religion and Society among the Coorgs of South India"** by M.N. Srinivas
8. Examines the interplay of religion and social institutions in India.
9. **"Social Background of Indian Nationalism"** by A.R. Desai
10. Discusses the role of social institutions in shaping Indian nationalism.
11. **"Education and Social Change in India"** by Satya Bhushan Verma
12. Studies the transformative role of education in Indian society.

## **Microeconomics-I**

**Sub. Code: BL 209**

**L 4, C 4**

### **Course Objectives**

- The Microeconomics course is designed to provide students with a deep understanding of the decision-making processes of individuals, firms, and markets, and how these decisions shape resource allocation, pricing, and the distribution of goods and services.
- By exploring the concepts of supply and demand, market structures, consumer and producer behaviour, market failures, and government intervention.
- students are equipped with the analytical tools necessary to understand and address a wide range of economic issues.
- This course lays a strong foundation for further studies in economics and prepares students for careers in areas such as business, finance, policy analysis, and economic research.

### **Unit I: Introduction to Microeconomics**

Definition & Scope, Production Possibility Curve, Demand, Quantity Demanded, Law of Demand, Supply, Quantity Supplied, Law of Supply,

### **Unit II: Consumer Theory I**

Consumer Budget Constraint, Elasticity of Demand – its types, Types of Goods

### **Unit III: Consumer Theory II**

Concept of Utility (TU, MU), Law of Diminishing Marginal Utility (LDMU),

### **Unit IV: Consumer Theory III**

Indifference Curves (IC) (Properties, Types), Consumer Equilibrium using IC

### **Unit V: Market Dynamics**

### **Suggested Readings:**

1. Jhinga M.L., Microeconomics Theory, Vrinda Publishing House.
2. Samuelson & Nordhaus, Economics, Tata Mc Graw Hill.
3. Hal.R. Varian, Intermediate Microeconomics, W.W. Norton & Company.
4. Koutsoyiannis A., Modern Microeconomics, Mac Millan Press.

## **Economic Sociology-I (BL 209A)**

**Sub. Code: BL 209A**

**L 4, C 4**

### **Course Objectives:**

- To introduce students to the field of economic sociology and its key concepts.
- To understand how social structures, relationships, and institutions shape economic behaviour and decision-making.
- To explore the role of culture, power, and inequality in economic processes.
- To critically assess economic systems, institutions, and their social implications.
- To examine contemporary economic issues such as globalization, informal economies, and economic inequality from a sociological perspective.

### **Unit 1: Introduction to Economic Sociology**

#### **1. Definition and Scope of Economic Sociology:**

- What is economic sociology? Its historical development and evolution as a field of study.
- Economic sociology vs. economics: Key differences and interdisciplinary nature.
- The role of sociology in understanding economic processes and social structures.

#### **2. Basic Concepts in Economic Sociology:**

- Social structure, social relations, and economic behaviour.
- Markets, institutions, organizations, and networks in economic processes.
- The concept of embeddedness: Economic action as embedded in social networks and institutions.

#### **3. Key Theoretical Approaches:**

- Classical approaches: Max Weber's theory of economic action, Karl Marx's views on capitalism and class.
- Contemporary approaches: Rational choice theory, social network theory, and institutional theory.

### **Unit 2: Social Structure and Economic Behaviour**

#### **1. Social Class and Economic Behavior:**

- Theories of social class: Marxist, Weberian, and functionalist perspectives.
- The relationship between social class and economic behavior: Consumption patterns, labor markets, and mobility.
- The role of class in shaping access to resources, opportunities, and decision-making.

#### **2. Social Networks and Economic Action:**

- Social networks as a form of capital: Networks and economic outcomes.
  - Embeddedness of economic action in social relationships (Granovetter's theory of embeddedness).
  - The role of trust and reciprocity in economic transactions.
- 3. Economic Organizations and Institutions:**
- The structure of economic organizations: Firms, markets, and bureaucracies.
  - The role of institutions in shaping economic behavior: Legal systems, property rights, and labor laws.
  - Institutional theories of the economy: Institutional isomorphism and path dependency.

### **Unit 3: Markets and Economic Systems**

**1. Markets and Social Order:**

- The sociology of markets: How markets emerge, function, and shape economic behavior.
- Market structures: Competitive, oligopolistic, and monopolistic markets.
- The role of social order in market behavior: Norms, regulations, and informal market practices.

**2. Market and State:**

- The role of the state in market regulation and intervention.
- Market failures and the state's role in correcting them: Public goods, externalities, and monopolies.
- The debate between market liberalization and state intervention: Neoliberalism vs. state-led development.

**3. Globalization and Market Dynamics:**

- Globalization and its impact on local and global markets.
- The social dimensions of global markets: Transnational corporations, global labor markets, and economic inequality.
- The role of culture and identity in shaping global markets.

### **Unit 4: Economic Inequality and Power**

**1. Economic Inequality:**

- Theories of economic inequality: Marxist, functionalist, and neo-liberal perspectives.
- The impact of economic inequality on social structures: Class, gender, and race.
- Measuring economic inequality: Income inequality, wealth inequality, and social mobility.

**2. Power and Economic Systems:**

- The concept of power in economic sociology: Economic elites, political power, and decision-making.
- Theories of power: Weberian and Marxist views on economic power.
- Corporate power, labor relations, and the state's role in mediating power relations.

**3. Gender, Race, and Class in Economic Inequality:**

- Intersectionality and economic inequality: How gender, race, and class interact in shaping economic outcomes.
- Discrimination in the labor market: Gender pay gaps, racial discrimination, and the role of social networks.
- The impact of economic policies on marginalized groups.

## **Unit 5: Informal Economies and Globalization**

### **1. Informal Economies:**

- Defining informal economies: Unorganized labor, self-employment, and small enterprises.
- The role of the informal economy in developing countries: Informality as a survival strategy.
- Social networks and the informal economy: How informal work is organized and sustained.

### **2. Globalization and the Informal Economy:**

- Globalization's impact on informal labor markets: Global supply chains, migrant labor, and economic precarity.
- The rise of gig economies and platform-based labor.
- Informality in the context of global capitalism and neoliberal policies.

### **3. Global Capitalism and Its Sociological Impacts:**

- Theories of globalization in economic sociology: The rise of transnational capitalism and its social consequences.
- Cultural dimensions of globalization: The spread of consumerism, media, and global identities.
- The social impact of economic crises: Case studies on financial crises, austerity, and economic inequalities.

## **Unit 6: Sociology of Development and Economic Change**

### **1. Development and Economic Sociology:**

- Theories of economic development: Modernization theory, dependency theory, and world-systems theory.
- The role of social relations and institutions in shaping economic development.
- Social capital and its contribution to development: Trust, networks, and community.

### **2. Economic Change and Social Transformation:**

- The relationship between economic change and social transformation: Industrialization, urbanization, and globalization.
- The role of technology and innovation in economic change: Technological revolutions and their social implications.
- Development and sustainability: Social and environmental dimensions of economic change.

## **Suggested Books:**

- Sen, A. (1999). *Development as Freedom*. Oxford University Press.
- Sachs, J. D. (2005). *The End of Poverty: Economic Possibilities for Our Time*. Penguin Books.
- Giddens, A. (2009). *Sociology*. Polity Press.

## **Economic Geography I (BL-209B)**

**Sub. Code: BL 209B**

**L 4, C 4**

### **Course Objectives**

- This course examines the spatial organization of economic activities and the relationships between geography, economics, and human behavior.
- It explores topics such as globalization, regional development, and the impact of location on economic practices.

### **Unit 1: Introduction to Economic Geography**

- Definition and scope of economic geography
- Key concepts and theories
- The importance of location in economic activities

### **Unit 2: Theoretical Foundations**

- Overview of economic theories (e.g., von Thünen, Weber, Christaller)
- Location theory and its applications
- Regional economic development theories

### **Unit 3: Globalization and Economic Networks**

- The role of globalization in economic geography
- Global supply chains and trade networks
- Impact of technology on economic connectivity

### **Unit 4: Economic Systems and Structures**

- Comparison of different economic systems (capitalism, socialism, mixed economies)

### **Suggested Readings:**

1. "Geography of Economic Activity" by Edward J. Malecki
2. An analysis of how economic activities are distributed across space and the factors influencing these patterns.
3. "Globalization and Its Discontents" by Joseph E. Stiglitz
4. Discusses the economic impacts of globalization, including its geographic implications and consequences.
5. "Regional Development and Planning for the 21st Century: Economic and Spatial Considerations" by Roger R. Stough
6. Focuses on regional economic development theories and planning practices in a global context.
7. "Industrial Clusters and Regional Business Networks in China" by J. Liu and Y. Wang
8. Examines the development of industrial clusters in China

# HUMAN RIGHTS LAW

**Sub Code: BL 202**

**L -4, C -4**

## **Course Objectives**

- Define human rights: Understand the fundamental concept of human rights as universal, inalienable rights that every individual possesses by virtue of being human, irrespective of nationality, ethnicity, gender, or religion.
- Explore the historical development of human rights: Study the evolution of human rights from ancient civilizations, through key historical events such as the Magna Carta, the French Revolution, and the abolition of slavery, leading to the modern concept of human rights.
- Differentiate between civil, political, economic, social, and cultural rights: Understand the different categories of human rights and how they contribute to the protection of individual freedoms and dignity.

### **Unit-I**

Meaning and definition of Human Rights - Evolution of Human Rights

### **Unit-II**

Adoption of Human Rights by the UN Charter - U.N.Commission on Human Rights - Universal Declaration of Human Rights

### **Unit-III**

Regional Conventions on Human Rights - European Convention on Human Rights

### **Unit-IV**

International Conventions on Human Rights - Genocide Convention, Convention against Torture, CEDAW, Child Rights Convention, Convention on Statelessness, Convention against Slavery, Convention on Refugees - International Conference on Human Rights (1968)

## **Suggested Readings:**

- 1 P.R. Gandhi (ed): Blackstone's International Human Rights Documents, Universal Law Publishing Co. Delhi.
- 2 Richard B. Lillich and Frank C. Newman: International Human Rights - Problems of Law and Policy, Little Brown and Company, Boston and Toronto.
3. Frederick Quinn: Human Rights and You, OSCE/ ODIHR, Warsaw, Poland
4. T.S. Batra: Human Rights – A Critique, Metropolitan Book Company Pvt. Ltd., New Delhi.
5. Dr.U. Chandra: Human Rights, Allahabad Law Agency Publications, Allahabad.

## Legal History

**Sub Code: BL 204**

**L 4, C 4**

### Course Objectives

- Introduce the concept of legal history: Study the evolution of law as a social institution, with a focus on how different societies have developed legal systems to regulate behavior, resolve disputes, and maintain order.
- Examine the origins of law: Investigate the earliest forms of law, including customary law, religious law, and tribal codes in ancient societies.
- Understand the concept of justice: Analyze how different cultures have defined and approached justice, and how those definitions influenced the structure and function of legal systems.
- Explore how religious beliefs shaped the legal systems in various cultures, including Jewish law, Islamic law (Sharia), and Canon law (the law of the Catholic Church).

### Unit I: Early Developments (1600- 1836)

- a. Charters of the East India Company: 1600, 1661, 1726 and 1753
- b. Settlements: Surat, Madras, Bombay and Calcutta
- c. Courts: Mayor's Court of 1726 and Supreme Court of 1774

### Unit II: Early Developments (1600- 1836)

- a. Conflict: Raja Nanad Kumar, Kamaluddin, Patna Case, and Cossijurah
- b. Warren Hastings: Judicial Plans of 1772, 1774 and 1780
- c. Lord Cornwallis: Judicial Plans of 1787, 1790 and 1793

### Unit III: Evolution of Law and Legal Institutions

- a. Development of Personal Laws
- b. Development of Law in Presidency Towns
- c. Development of Civil law in Mufassil: Special Emphasis on Justice, Equity and Good Conscience

### Unit IV:

- a. The Second Law Commission
- b. Establishment of High Courts, 1861
- c. Privy Council and Federal Court: Appeals and working of Privy Council
- d. Privy Council, Features of Federal Court

### Suggested Readings:

1. M.P. Jain – Outlines of Indian Legal History
2. V.D. Kulshrethta – Landmarks of Indian Legal and Constitutional History

## LAW OF EVIDENCE

Sub. Code: BL 206

L – 4, C – 4.

### Course Objectives

- Understand the burden of proof: Study the concept of the burden of proof, which dictates which party is responsible for proving the facts of a case. Understand the difference between the prosecution's burden in criminal cases and the plaintiff's burden in civil cases.
- Examine the standard of proof: Learn about the standard of proof required in different types of cases, including the higher standard of beyond a reasonable doubt in criminal cases and the lower standard of preponderance of the evidence in civil cases.
- Study presumptions in evidence law: Explore legal presumptions (e.g., presumption of innocence in criminal law) and their role in shifting the burden of proof to the opposing party.
- Study the Admissibility and Use of Expert Evidence

### Unit-I:

The Indian Evidence Act, 1872 — Salient features of the Act – Meaning and kinds of Evidence — Interpretation clause — May Presume, shall presume and Conclusive proof - Fact, Fact in issue and Relevant facts — Distinction between Relevancy and Admissibility - Doctrine of Res Gestae — Motive, preparation and conduct.

### Unit-II:

Admissions & Confessions: General Principles concerning Admissions — Differences between "Admission" and "Confession" — Confessions obtained by inducement, threat or promise – Confessions made to police officer - Statement made in the custody of a police officer leading to the discovery of incriminating material Dying Declarations and their evidentiary value — Other Statements by persons who cannot be called as Witnesses.

### Unit-III:

Relevancy of Judgments — Opinion of witnesses — Expert's opinion — Opinion on Relationship especially proof of marriage — Facts which need not be proved — Oral and Documentary Evidence - General Principles concerning oral evidence and documentary evidence — Primary and Secondary evidence — Modes of proof of execution of documents **Unit-IV:**

Rules relating to Burden of Proof - Presumption as to Dowry Death — Estoppel — Kinds of estoppel — Res Judicata, Waiver and Presumption.

### Suggested Readings:

1. BatukLal: The Law of Evidence, 13th Edition, Central Law Agency, Allahabad, 1998.
2. M. Munir: Principles and Digest of the Law of Evidence, 10th Edition (in 2 vols), Universal Book Agency, Allahabad, 1994.
3. Vepa P. Saradhi: Law of Evidence 4th Edn. Eastern Book Co., Lucknow, 1989.
4. Avtar Singh: Principles of the Law of Evidence, 11th Edn. Central Law Publications.
5. V. Krishnama Chary: The Law of Evidence, 4th Edn. S.Gogia & Company, Hyderabad.

## LAW OF CRIMES

**Sub. Code: BL 208**

**L – 4, C – 4.**

- I. Understand the elements of a crime: Learn about the essential elements required to establish a crime under the IPC, including actus reus (guilty act) and mens rea (guilty mind).
- II. Examine criminal responsibility: Study the concept of criminal capacity and the factors that may affect liability, such as age, insanity, intoxication, duress, and consent.
- III. Explore the classifications of crimes: Understand the different classifications of crimes under the IPC, including cognizable offenses, non-cognizable offenses, bailable offenses, non-bailable offenses, and compoundable offenses.
- IV. Examine offenses against the state: Study crimes related to national security and sovereignty, such as treason, sedition, and terrorism (Sections 121 to 130 of IPC).

### **Unit-I:**

Concept of crime - Definition and meaning of crime - Distinction between crime and tort - Stages of crime - Intention, Preparation, Attempt and Commission of Crime - Elements of Crime - Actus Reus and Mensrea - Codification of Law of Crimes in India

### **Unit-II:**

General exceptions - Abetment - Criminal Conspiracy - Offences against the State -

### **Unit-III:**

Offences affecting human body (offences affecting human life) Culpable Homicide and Murder – Hurt and Grievous Hurt - Wrongful restraint and Wrongful confinement -

### **Unit-IV:**

Offences affecting the public health, safety, convenience, decency and morals - Offences against Property - Theft - Extortion - Robbery & Dacoity - Cheating - Mischief - Criminal Trespass

### **Suggested Readings:**

1. RatanLal and DhirajLal: Indian Penal Code, Wadhwa& Co., 2000.
2. Achutan Pillai: Criminal Law, Butterworth Co., 2000.
3. Gour K.D.: Criminal Law - Cases and Materials, Butterworth Co., 1999.
4. Kenny's: Outlines of Criminal Law, (1998 Edition)

\*\*\*\*

## MICRO ECONOMICS II

Sub. Code: BL – 210

L-4, C-4

### Course Objectives

- Examine advanced consumer behaviour: Build on the theory of consumer preferences and indifference curves. Study revealed preference theory and how it differs from traditional utility theory.
- Explore consumer choice under uncertainty: analyse how consumers make choices under conditions of risk and uncertainty using concepts like expected utility theory, risk aversion, and portfolio theory.
- Understand intertemporal choice: Study how consumers make decisions over time, particularly with regard to savings and consumption, and the concepts of present value and discount rates.
- Review advanced production theory: Study production functions in detail, including the law of variable proportions, returns to scale, and isoquants.

### Unit-I: Production Theory

Production Function, Production (TP) curve, Laws of variable proportions, Returns to Factor (Average and Marginal Product) and

### Unit-II: Revenue & Cost theory

General theories and types of Cost (FC, VC), Cost concepts & Curves (TC, AC, MC) & relationship between them, SR & LR Cost theory (SAC, SMC, LAC, LMC etc.), Revenue – Types, Curves & Characteristics (TR, MR, AR etc)

### Unit-III: Markets

Types & Characteristics [PC, Monopoly (inclusive of price discrimination), Oligopoly, Monopolistic Competition], Market Equilibrium (SR & LR) of firm & Industry under PC.

### Unit-IV: Market Dynamics

Effect of Shift in Market Demand & Supply & Shift in Firms Production

### Suggested Readings:

1. Jhingan M.L., Microeconomics Theory, Vrinda Pub.
2. Samuelson & Nordhaus, Economics, Tata Mc Graw Hill.
3. Hal.R. Varian, Intermediate Microeconomics, W.W. Norton & Company.
4. Koutsoyiannis A., Modern Microeconomics, Mac Millan Press.

## **Economic Sociology II (BL-210A)**

**Sub. Code: BL – 210A**

**L-4, C-4**

### **Course Objectives:**

- To explore the social aspects of economic life, including the relationship between economic behavior and social structures.
- To understand how social, political, and cultural factors influence economic processes and institutions.
- To analyze the evolution of economic systems in different societies, focusing on the role of economic sociology in contemporary global economies.
- To examine key theories, concepts, and empirical studies in economic sociology, including the study of capitalism, labor markets, and economic inequality.

### **Unit I: Theories of Economic Sociology**

- Classical Theories: Max Weber, Karl Marx, and Émile Durkheim's Contributions
- Neo-Classical and Institutional Economic Sociology
- Social Embeddedness of Economic Action: Granovetter's Theory
- Social Capital and Economic Development: Pierre Bourdieu and Robert Putnam
- The Role of Trust and Social Networks in Economic Transactions

### **Unit II: The Sociology of Markets and Consumption**

- Markets as Social Institutions: Social Structure of Markets and Market Behavior
- Cultural Dimensions of Consumption: Consumption Patterns and Identity
- Social Networks and Consumer Behavior
- The Role of Advertising, Media, and Branding in Shaping Consumption
- Globalization and its Impact on Local Markets and Consumption

### **Unit III: Labor Markets and Employment**

- Labor as a Social Institution: The Division of Labor and Labor Markets
- Labor Mobility, Migration, and Globalization of Labor
- The Informal Economy: Characteristics and Importance
- Social Stratification and Inequality in Labor Markets: Gender, Class, and Ethnicity
- Employment Relations: Work, Power, and Conflict in the Workplace

### **Unit IV: Capitalism, Socialism, and Development**

- Capitalism: Social, Political, and Economic Dimensions
- Theories of Capitalism: From Max Weber to Contemporary Capitalism
- Socialism and Planned Economies: The Role of State and Central Planning
- Development and Underdevelopment: Theories and Critiques
- Global Economic Inequality: North-South Divide and the Impact of Globalization

## **Unit V: Economic Sociology and Contemporary Issues**

- The Role of the State in Economic Development: Welfare State and Neoliberalism
- Financial Crises and Economic Sociology: The 2008 Global Financial Crisis
- Environmental Sociology and Sustainable Development
- Economic Sociology and the Informal Economy: Migrant Labor and Informal Markets
- Digital Economy and the Impact of Technology on Economic Relations

### **Suggested Books:**

1. "Economic Sociology: An Introduction" by Frank Dobbin
2. "The Social Economy: Market Society and the State" by Roger A. Friedland and Robert R. Alford
3. "The Sociology of Economic Life" by Mark Granovetter and Richard Swedberg
4. "Theories of Economic Sociology" by Neil J. Smelser and Richard Swedberg
5. "Capitalism and Modern Social Theory" by Anthony Giddens

## **Economic Geography II (BL-210B)**

**Sub. Code: BL – 210B**

**L-4, C-4**

### **Course Objectives**

- This course examines the spatial organization of economic activities the relationships between geography, economics, and human behavior.
- It explores topics such as globalization, regional development,
- The impact of location on economic practices.

### **Unit 1: Services and the Knowledge Economy**

- The growth of the service sector in the economy
- Geographic concentrations of knowledge-based industries
- The impact of technology on service delivery and innovation

### **Unit 2: Economic Geography of Trade**

- Patterns and theories of international trade
- Trade agreements and their geographic implications
- The role of logistics and transportation in trade

### **UNIT 3: Environmental Impact of Economic Activities**

- The relationship between economic development and environmental change
- Case studies on pollution, climate change, and resource depletion
- Strategies for sustainable economic practices

### **UNIT 4: Future Trends in Economic Geography**

- The impact of digital economies and e-commerce

### **Suggested Readings:**

1. "Geography of Economic Activity" by Edward J. Malecki
2. An analysis of how economic activities are distributed across space and the factors influencing these patterns.
3. "Globalization and Its Discontents" by Joseph E. Stiglitz
4. Discusses the economic impacts of globalization, including its geographic implications and consequences.
5. "Regional Development and Planning for the 21st Century: Economic and Spatial Considerations" by Roger R. Stough
6. Focuses on regional economic development theories and planning practices in a global context.
7. "Industrial Clusters and Regional Business Networks in China" by J. Liu and Y. Wang
8. Examines the development of industrial clusters in China and their implications for regional economic geography.

# **SEMESTER V**

## HINDI-I

Sub. Code : 301

L 4, C 4

### Course Objectives

- Enhance writing skills: Focus on improving the students' ability to write in Hindi across various forms, including essays, letters, stories, reports, and dialogues.
- This objective aims at developing grammatical accuracy, coherence, and clarity in written communication.
- Strengthen oral communication: Encourage students to converse in Hindi to improve fluency, pronunciation, and vocabulary. This includes group discussions, debates, and presentations to build confidence in speaking.
- Promote listening comprehension: Develop the ability to understand spoken Hindi through various mediums, including audio clips, films, and lectures. Focus on comprehension and interpretation skills.

## **SPANISH I (BL- 301A)**

**Sub. Code: BL – 301A**

**L-4, C-4**

### **Course Objectives**

By the end of this course, students will be able to:

- Understand and use basic Spanish vocabulary and grammar.
- Engage in simple conversations about everyday topics.
- Read and comprehend short texts in Spanish.
- Write basic sentences and paragraphs in Spanish.

### **Unit 1: Introduction to Spanish**

- Overview of the Spanish language and its global significance
- Alphabet and pronunciation
- Basic greetings and introductions

### **Unit 2: Basic Grammar and Vocabulary**

- Nouns, articles, and gender
- Common adjectives and their agreement with nouns
- Essential vocabulary: family, colors, numbers

### **Unit 3: Present Tense Verbs**

- Introduction to regular verbs (AR, ER, IR)
- Conjugation patterns and usage
- Practical exercises and dialogues

### **Unit 4: Common Expressions and Questions**

- Essential phrases for everyday conversation
- Forming questions and negation

### **Suggested Readings:**

1. Madrigal's Magic Key to Spanish" by Margarita Madrigal
2. A classic introductory book that simplifies grammar and vocabulary, making it accessible for beginners.
3. "Practice Makes Perfect: Spanish Verb Tenses" by Dorothy Richmond
4. Focuses on mastering verb tenses with clear explanations and exercises.
5. "Easy Spanish Step-By-Step" by Barbara Bregstein
6. A structured approach to learning Spanish, emphasizing grammar and vocabulary in a logical progression.
7. "Living Language Spanish" (Complete Course)
8. A comprehensive language course that includes audio components and a

variety of exercises.

## **German- I (BL-301B)**

**Sub. Code: BL – 301B**

**L-4, C-4**

### **Course Objectives:**

- To develop proficiency in understanding, speaking, reading, and writing German at an introductory level.
- To build a solid foundation in German grammar and vocabulary.
- To practice listening and speaking skills through interactive exercises, role plays, and dialogues.
- To understand and engage with basic German texts, including short stories, articles, and everyday conversations.
- To appreciate German culture, traditions, and history through authentic materials like songs, films, and cultural readings.

### **Unit 1: Introduction to German Language**

#### **1. The German Alphabet and Pronunciation:**

- The German alphabet: Letters, sounds, and pronunciation rules.
- Pronunciation of common German vowels and consonants (e.g., ä, ö, ü, ß).
- Stress and intonation patterns in German.

#### **2. Basic Greetings and Introductions:**

- Introducing oneself: Name, nationality, profession, etc.
- Common greetings: "Hallo," "Guten Morgen," "Wie geht's?"
- Phrases for polite conversation: "Danke," "Bitte," "Entschuldigung."

#### **3. Numbers and Basic Vocabulary:**

- Counting in German: Numbers 1-100.
- Days of the week, months, seasons.
- Family members, colors, and simple adjectives.

### **Unit 2: Grammar Fundamentals**

#### **1. Nouns, Articles, and Gender:**

- Understanding German noun genders (masculine, feminine, neuter).
- Definite and indefinite articles: der, die, das, ein, eine.
- Plural forms of nouns.

#### **2. Present Tense of Regular Verbs:**

- Conjugation of regular verbs in the present tense (e.g., spielen, arbeiten).
- Common regular verbs and their usage in sentences.
- Sentence structure: Subject-verb-object.

#### **3. Personal Pronouns and Possessive Adjectives:**

- Forms of personal pronouns (ich, du, er/sie/es, wir, ihr, sie/Sie).
- Possessive pronouns (mein, dein, sein, ihr, unser).

### **Unit 3: Expanding Vocabulary and Communication**

- 1. Describing People, Places, and Things:**
  - Describing appearance, personality, and characteristics.
  - Vocabulary for everyday objects, places, and locations.
  - Describing where things are (prepositions of place).
- 2. Asking and Answering Questions:**
  - Formulating simple questions: “Wie?”, “Was?”, “Wo?”, “Wann?”
  - Yes/no questions and question words.
  - Asking for directions, time, and information.
- 3. Useful Phrases for Everyday Situations:**
  - At the supermarket, restaurant, or doctor's office.
  - Making requests and giving polite commands.
  - Expressing likes, dislikes, and preferences.

### **Unit 4: German Sentence Structure and Verb Conjugation**

- 1. Present Tense of Irregular Verbs:**
  - Conjugation of common irregular verbs (e.g., sein, haben, gehen, essen).
  - Using irregular verbs in questions and negative sentences.
  - Common sentence patterns: Affirmative, negative, and questions.
- 2. Word Order in Sentences:**
  - Basic word order in German (SVO structure).
  - Word order with time expressions and negation.
  - Position of adverbs and objects in a sentence.
- 3. Modal Verbs:**
  - Introduction to modal verbs: können, wollen, müssen, dürfen, sollen, mögen.
  - Using modal verbs in the present tense to express necessity, permission, and ability.

### **Unit 5: Reading Comprehension and Writing Skills**

- 1. Short Texts and Dialogues:**
  - Reading and understanding short dialogues and texts on familiar topics.
  - Answering comprehension questions based on short readings.
  - Expanding vocabulary through reading.
- 2. Writing Simple Sentences and Paragraphs:**
  - Writing descriptions, letters, and simple emails in German.
  - Correct sentence structure and grammar in written communication.
  - Writing about oneself, hobbies, daily activities, and family.
- 3. Introduction to German Culture Through Texts:**

- Basic cultural readings: Traditional German foods, holidays, and festivals.
- Understanding German customs and social etiquette.

## **Unit 6: German Culture and Traditions**

### **1. German Holidays and Traditions:**

- Celebrating Christmas, Easter, and other German traditions.
- Understanding cultural significance: Oktoberfest, Karneval, and more.
- The importance of family and social customs in German-speaking countries.

### **2. Introduction to German Music, Films, and Art:**

- German classical music and famous composers (e.g., Beethoven, Bach).
- German cinema: Key films, directors, and genres.
- The influence of German art and philosophy on world culture.

## **Suggested Books:**

1. *Culture Smart! Germany* by Barry Tomalin
2. *A Concise History of Germany* by Mary Fulbrook
3. *German Short Stories for Beginners* by Olly Richards
4. *Deutsch im Blick (University of Texas Online Textbook, Free Resource)*
5. *German Grammar in a Nutshell* by Christine Stiefel (Langenscheidt)
6. *Practice Makes Perfect: German Sentence Builder* by Ed Swick
7. *German Grammar for Beginners* by Jenny Russ
8. *Practice Makes Perfect: German Verb Tenses* by Ed Swick

## Chinese-I (BL-301C)

Sub. Code: BL – 301C

L-4, C-4

### Course Objectives:

- To develop basic proficiency in the Chinese language in speaking, listening, reading, and writing.
- To learn the fundamental grammar rules and sentence structures in Mandarin Chinese.
- To master basic vocabulary, focusing on daily life topics such as greetings, food, travel, and family.
- To acquire a solid understanding of Chinese characters and their formation.
- To introduce students to the cultural, social, and historical context of China.

### Unit 1: Introduction to Chinese Language

#### 1. Overview of the Chinese Language:

- Introduction to Mandarin Chinese as the official language of China.
- Importance of Chinese dialects: Mandarin vs. Cantonese.
- The role of Chinese in the global context.

#### 2. Chinese Pronunciation: Pinyin System:

- The Pinyin system: Tones, initials, and finals.
- Pronunciation practice with tone marks and common sounds (e.g., “x,” “q,” “zh,” “ch”).
- The importance of tones in Chinese communication.

#### 3. Basic Greetings and Introductions:

- Common greetings: 你好 (nǐ hǎo), 您好 (nín hǎo), 再见 (zài jiàn), 谢谢 (xièxiè).
- Introducing oneself: Name, nationality, and occupation.
- Phrases for everyday conversations: 你好吗? (nǐ hǎo ma?) How are you?

### Unit 2: Chinese Characters and Basic Grammar

#### 1. Introduction to Chinese Characters:

- Structure of Chinese characters: Radicals, strokes, and components.
- Simplified vs. traditional characters.
- Writing practice: Basic characters and their meanings (e.g., 我 (wǒ), 你 (nǐ), 中 (zhōng)).

#### 2. Basic Sentence Structure:

- Word order in Chinese: Subject-Verb-Object (SVO) sentence structure.
- Simple affirmative sentences: 我是学生 (wǒ shì xuéshēng) – I am a student.
- Basic negation: 不 (bù) and 没有 (méiyǒu) for negating verbs.

### 3. Pronouns and Possessives:

- Personal pronouns: 我 (wǒ), 你 (nǐ), 他 (tā), 她 (tā), 它 (tā).
- Possessive pronouns: 我的 (wǒ de), 你的 (nǐ de), 他的 (tā de).

## Unit 3: Expanding Vocabulary and Communication

### 1. Daily Life Vocabulary:

- Family members: 父亲 (fùqīn), 母亲 (mǔqīn), 哥哥 (gēgē), 妹妹 (mèimei).
- Numbers: 1-100 (一, 二, 三, ..., 一百).
- Days of the week and time expressions: 今天 (jīntiān), 昨天 (zuótiān), 明天 (míngtiān), 星期 (xīngqī).

### 2. Food and Drink:

- Common foods and drinks: 饺子 (jiǎozi), 米饭 (mǐfàn), 茶 (chá), 水 (shuǐ).
- Ordering food: 我想要 (wǒ xiǎng yào) – I would like.
- Phrases for eating out: 请给我菜单 (qǐng gěi wǒ càidān) – Please give me the menu.

### 3. Expressing Preferences and Asking Questions:

- Expressing likes and dislikes: 我喜欢 (wǒ xǐhuān) – I like.
- Asking for clarification: 什么? (shénme?), 怎么样? (zěnmeyàng?).
- Using question words: 什么 (shénme), 哪 (nǎ), 多少 (duōshǎo), 为什么 (wèishéme).

## Unit 4: Chinese Grammar and Verb Conjugation

### 1. Verbs and Verb Usage:

- Conjugating verbs in the present tense.
- Common verbs: 做 (zuò), 看 (kàn), 听 (tīng), 学习 (xuéxí).
- Verbal phrases: 喜欢做 (xǐhuān zuò) – to like doing, 能做 (néng zuò) – can do.

### 2. Questions and Negations:

- Forming yes/no questions using 吗 (ma).
- Negative sentence structure using 不 (bù) for habitual actions and 没 (méi) for past actions.
- Using “了” (le) to indicate a change of state or action completion.

### 3. Time Expressions and Using the Verb "to be":

- Expressing time: 上午 (shàngwǔ), 下午 (xiàwǔ), 点 (diǎn), 分 (fēn).
- Talking about past, present, and future events: 昨天 (zuótiān), 今天 (jīntiān), 明天 (míngtiān).

## **Unit 5: Reading, Writing, and Listening Skills**

### **1. Reading Short Texts and Dialogues:**

- Reading simple dialogues and short stories based on everyday situations.
- Answering comprehension questions based on reading materials.
- Expanding vocabulary through context.

### **2. Writing Simple Sentences and Paragraphs:**

- Writing about daily routines, hobbies, and interests.
- Practicing basic sentence structures: 我每天都去学校 (wǒ měitiān dōu qù xuéxiào) – I go to school every day.
- Introducing personal information in writing.

### **3. Listening Practice:**

- Listening to audio clips and simple conversations.
- Identifying key words and phrases in spoken Mandarin.
- Developing skills for responding to basic listening exercises.

## **Unit 6: Chinese Culture and Social Context**

### **1. Understanding Chinese Culture and Society:**

- Overview of Chinese culture: Family, respect for elders, and social hierarchy.
- Chinese festivals: 春节 (Chūnjié) – Chinese New Year, 中秋节 (Zhōngqiū Jié) – Mid-Autumn Festival.
- Chinese art and calligraphy: Introduction to Chinese painting and traditional arts.

### **2. Social Etiquette and Communication:**

- Proper etiquette for greetings, gifts, and dining.
- The significance of "face" (面子) and politeness in Chinese culture.
- Understanding social hierarchies and addressing people with respect.

## **Suggested Books:**

- *Integrated Chinese: Level 1, Part 1* by Tao-chung Yao, Yuehua Liu (Cheng & Tsui)
- *Chinese Made Easy for Beginners* by Yamin Ma and Xinying Li
- *Chinese for Beginners* by Yi Ren
- *Culture Smart! China* by Kerry Brown
- *Culture Smart! China* by Kerry Brown
- *China: A History* by John Keay
- *Mandarin Chinese: A Functional Reference Grammar* by Charles N. Li and Sandra A. Thompson
- *The Complete Guide to Chinese Grammar* by Philip Yungkin Lee
- *New Practical Chinese Reader: Volume 1* by Liu Xun (Beijing Language and Culture University Press)

## FRENCH I (BL-301D)

Sub. Code: BL – 301D

L-4, C-4

### Course Objectives

- Understand and use basic French vocabulary and grammar.
- Engage in simple conversations about everyday topics.
- Read and comprehend short texts in French.
- Write basic sentences and paragraphs in French.

### Unit 1: Introduction to French

- Alphabet and pronunciation
- Basic greetings and introductions

### Unit 2: Numbers and Colors

- Counting (1-100)
- Basic colors and their use in sentences

### Unit 3: Days, Months, and Time

- Days of the week and months of the year
- Telling time

### Unit 4: Family and Descriptions

- Vocabulary related to family and relationships

### Suggested Readings:

1. Easy French Step-By-Step" by Myrna Bell Rochester
2. A clear, gradual approach to learning French grammar and vocabulary.
3. "French for Dummies" by Dodi-Katrin Schmidt and Michelle M. Williams
4. Practice Makes Perfect: Complete French Grammar" by Annie Heminway
5. Comprehensive grammar explanations with exercises for practice.
6. "Fluent in French: The Most Complete Study Guide to Learn French" by Frederic Bibard
7. Covers vocabulary, grammar, and cultural insights

## **FAMILY LAW–I (Hindu Law)**

**Sub. Code: BL 303**

**L – 4, C – 4.**

### **Course Objectives**

- Study modern reforms in Hindu law: Understand the role of various reforms, such as the Hindu Marriage Act, 1955, Hindu Adoption and Maintenance Act, 1956, Hindu Succession Act, 1956, and how they have contributed to the modernization of Hindu law.
- Evaluate the role of the Hindu Code Bill: Examine the significance of the Hindu Code Bill in bringing about reforms in marriage, inheritance, and succession, and its impact on the status of Hindu women.
- Assess the challenges and future reforms: Discuss current issues in Hindu law, such as the need for uniform civil code, the treatment of inter-caste marriages, and
- the integration of Hindu law with the principles of gender equality.

### **Unit-I:**

Sources of Hindu Law – Scope and application of Hindu Law – Schools of Hindu Law - Mitakshara and Dayabhaga Schools – Concept of Joint Family, Coparcenary, Joint Family Property and Coparcenary Property

### **Unit-II:**

Marriage - Definition - Importance of institution of marriage under Hindu Law – Conditions of Hindu Marriage

### **Unit-III:**

**Matrimonial Remedies** under the Hindu Marriage Act, 1955 - Restitution of Conjugal Rights – Nullity of marriage – Judicial separation – Divorce

### **Unit-IV:**

Concept of Adoption - Law of Maintenance - Law of Guardianship - Hindu Adoption and Maintenance Act, 1956

### **Suggested Readings:**

1. Paras Diwan : Modern Hindu Law, 13th Edition 2000, Allahabad Agency, Delhi.
2. Paras Diwan: Family Law, 1994 Edition, Allahabad Agency, Delhi.
3. Mayne: Hindu Law - Customs and Usages , Bharat Law House, New Delhi.
4. Sharaf: Law of Marriage and Divorce , 1999.

# CIVIL PROCEDURE CODE AND LAW OF LIMITATION

**Sub. Code: BL 305**

**L -4, C -4**

## **Course objective**

- Understand the nature of civil litigation: Introduce students to the basic concepts of civil law and civil procedure, explaining the difference between civil and criminal procedures.
- Study the objectives of the CPC: Examine the aims of the CPC, which include ensuring justice through fair trial procedures, speedy disposal of cases, and effective enforcement of judgments.
- Familiarize with key terms: Define essential legal terms such as plaintiff, defendant, suit, civil court, jurisdiction, and cause of action.
- Understand the hierarchy of civil courts: Study the structure of the civil courts in India, including district courts, subordinate courts, and high courts, and their functions in the administration of civil justice.

## **Unit-I :**

Codification of Civil Procedure and Introduction to CPC — Principal features of the Civil Procedure Code — Suits — Parties to Suit — Framing of Suit — Institution of Suits — Bars of Suit - Doctrines of Sub Judice and Res Judicata — Place of Suing — Transfer of suits — Territorial Jurisdiction

## **Unit-II :**

Pleadings — Contents of pleadings — Forms of Pleading — Striking out / Amendment of Pleadings - Complaint— Essentials of Complaint - Return of Complaint—Rejection of Complaint—Production and marking of Documents

## **Unit-III :**

Appearance and Examination of parties & Adjournments — Ex-parte Procedure — Summoning and Attendance of Witnesses — Examination — Admissions — Production, Impounding, Return of Documents — Hearing — Affidavit — Judgment and Decree — Concepts of Judgment, Decree, and Interim Orders and Stay — Injunctions — Appointment of Receivers and Commissions — Costs -- Execution — Concept of Execution — General Principles of Execution

## **Unit-IV:**

Suits in Particular Cases — Suits by or against Government — Suits relating to public matters; — Suits by or against minors, persons with unsound mind, - Suits by indigent persons -- Interpleader suits — Incidental and supplementary proceedings - Appeals, Reference, Review and Revision — Appeals from Original Decrees

**Suggested Readings:**

1. Mulla: Code of Civil Procedure:
2. Tripathi (Abridged Edition), 11th Edn.(StudentEdition) Edited by P.M. Bakshi, Bombay, 1985.
3. A.N. Saha: Code of Civil Procedure.
4. C.K. Takwani: Civil Procedure, 4th Edn. Eastern Book Co., Lucknow, 1974.
5. B.B. Mitra: Limitation Act, 17th Edn. Eastern Law House, Calcutta, 1974, Allahabad.
6. Sanjiva Row: Limitation Act, 7th Edn. (in 2 Vols), Law Book Co., Allahabad,

# **CRIMINAL PROCEDURE CODE, LAW OF JUVENILE JUSTICE AND PROBATION OF OFFENDERS**

**Sub. Code: BL 307**

**L -4, C -4**

## **Course Objectives**

- Understand the nature of civil litigation: Introduce students to the basic concepts of civil law and civil procedure, explaining the difference between civil and criminal procedures.
- Study the objectives of the CPC: Examine the aims of the CPC, which include ensuring justice through fair trial procedures, speedy disposal of cases, and effective enforcement of judgments.
- Familiarize with key terms: Define essential legal terms such as plaintiff, defendant, suit, civil court, jurisdiction, and cause of action. Understand the hierarchy of civil courts: Study the structure of the civil courts in India, including district courts, subordinate courts, and high courts, and their functions in the administration of civil justice.
- Examine jurisdiction in civil cases: Discuss the concepts of territorial, pecuniary, and subject-matter jurisdiction in civil courts. Understand how to determine the appropriate court for filing a suit.

## **Unit-I :**

The Code of Criminal Procedure, 1973 : The rationale of Criminal Procedure — The importance of fair trial — Constitutional Perspectives : Articles 14, 20 & 21 — The organization of Police, Prosecutor and Defence Counsel — Pre-trial Process — Arrest — Distinction between “cognizable” and “non-cognizable” offences — Steps to ensure presence of accused at trial -- Warrant and Summons cases — Arrest with and without Warrant — The absconder status — !

## **Unit-II:**

Search and Seizure — Search with and without warrant — Police search during investigation — General Principles of Search

## **Unit-III :**

Trial Process: Commencement of Proceedings — Dismissal of Complaint — Bail, Bailable and Non-bailable Offences — Cancellation of Bails — Anticipatory Bail — General Principles concerning Bail Bond — Preliminary pleas to bar trial — Jurisdiction — Time Limitations — Pleas of Autrefois Acquit and Autrefois Convict — Fair Trial — Concept of fair trial — Presumption of innocence — Venue of trial — Jurisdiction of Criminal Courts — Rights of accused

## **Unit-IV:**

Judgment: Form and content -- Summary trial — Post-conviction orders in lieu of punishment —.

## **Unit-V:**

Probation and Parole: Authority granting Parole — Supervision — Conditional release -- suspension of sentence — Procedure under Probation of Offenders Act, 1958 -- Salient features of the Act.

**Suggested Reading**

1. Kelkar R.V.: Criminal Procedure, 3rd Edn. Eastern Book Co., Lucknow, 1993.

3. Padala Rama Reddi: The Code of Criminal Procedure, 1973, Asia Law House, Hyderabad.
4. Prof. S.N. Misra: The Code of Criminal Procedure, Central Law Agency.
5. M.P. Tandon: Criminal Procedure Code, Allahabad Law Agency.
6. Shoorvir Tyagi: The Code of Criminal Procedure, Allahabad Law Agency.

.....

## MACRO ECONOMICS I

Sub. Code: BL – 309

L-4, C-4

### Course Objectives

- Understanding the scope and nature of macroeconomics: Introduce students to the basic concepts and framework of macroeconomics, including the distinction between microeconomics (study of individual markets and agents) and macroeconomics (study of aggregate economic variables).
- Focus on national economy aggregates: Explain the study of aggregate variables such as GDP (Gross Domestic Product), national income, and the factors that influence them at the national level.
- Understanding the importance of macroeconomic analysis: Discuss the significance of macroeconomic policies in shaping national economic performance, maintaining economic stability, and promoting economic growth.
- Understanding how national income is measured: Introduce students to the methods of calculating national income, such as the income method, expenditure method, and output method.

### Unit-I: Introduction

Difference between Micro & Macroeconomics, Introduction to basic Theories in Macroeconomics

–

### Unit-II: National Income Accounting

Circular flow of Income Model – Two & Three sector models (Closed only) National & Domestic Product – different types & their significance

**Unit-III: Money & Interest** Types & Functions of money, Classification of Money, Demand for & Supply of Money (inclusive of Money Multiplier) Theories of Money – Cambridge & Fisher Theory Inflation & Deflation – Types, .

### Unit-IV: Short Run Analysis

Characteristics of Short Run, Simple Keynesian Model /Theory – Consumption Function,

### Suggested Readings

1. Dwivedi D.N. ,Macroeconomic Theory &Policy, Tata Mac Graw Hill
2. Samuelson & Nordhaus ,Economics, Tata Mac Graw Hill
3. Shapiro, Macroeconomic Analysis,

## **Anthropology-I BL – 309 A**

**Sub. Code: BL – 309A**

**L-4, C-4**

### **Course Objectives:**

- To understand the key concepts and theoretical frameworks in economic anthropology.
- To explore the diversity of economic systems, including traditional, modern, and mixed economies.
- To analyze the role of culture in shaping economic behaviors and systems.
- To examine global economic issues through the lens of anthropological theory.
- To develop critical thinking skills regarding the impact of economic processes on individuals, communities, and societies.

### **Unit 1: Introduction to Economic Anthropology**

- 1. Definition and Scope of Economic Anthropology:**
  - Overview of Economic Anthropology as a subfield of anthropology.
  - The relationship between economic anthropology and traditional economics.
  - Key questions and approaches in economic anthropology.
- 2. Historical Development of Economic Anthropology:**
  - Early theoretical perspectives: From classical political economy to anthropological insights.
  - The influence of Marx, Weber, and other theorists on the study of economic systems.
  - The emergence of key anthropologists: Malinowski, Mauss, Boas, and others.
- 3. The Economic System:**
  - The concept of economic systems in anthropology.
  - Overview of different economic systems: Foraging, horticulture, pastoralism, and industrial economies.
  - Subsistence economy vs. market economy.

### **Unit 2: Theoretical Foundations in Economic Anthropology**

- 1. Classical Economic Theories:**
  - Theories of Adam Smith, Karl Marx, and Max Weber.
  - The labor theory of value and its influence on anthropology.
  - The notion of exchange and market relations.
- 2. Formal vs. Substantive Economics (Karl Polanyi's Approach):**

- Formalism: Economics as a universal set of rules.
  - Substantivism: Economic systems as part of broader cultural systems.
  - Polanyi's critique of Western economic assumptions in non-Western societies.
3. **Reciprocity, Redistribution, and Market Exchange:**
- Types of exchange: Generalized reciprocity, balanced reciprocity, and negative reciprocity.
  - The concept of redistribution in traditional societies (e.g., potlatch).
  - Market exchange in both traditional and modern societies.

### **Unit 3: Production and Labor**

1. **Modes of Production:**
- The concept of modes of production: Kin-based, household, and capitalist systems.
  - Foraging, horticulture, pastoralism, and agriculture as modes of production.
  - Industrial and post-industrial production systems.
2. **Labor and Work:**
- The division of labor in different societies: Gender, age, and status.
  - The anthropology of labor and the concept of "alienation" in capitalist societies.
  - Rituals, kinship, and labor in traditional societies.
3. **The Impact of Capitalism:**
- The rise of capitalism and its impact on traditional economies.
  - Labor migration, wage labor, and the global workforce.
  - Globalization and labor in the 21st century.

### **Unit 4: Consumption and Exchange**

1. **Consumption and Social Status:**
- The role of consumption in defining social identity and status.
  - The relationship between consumption and social relations (e.g., conspicuous consumption).
  - The anthropology of food, housing, and material culture.
2. **The Role of Markets:**
- The development and functioning of markets in various cultures.
  - Comparative perspectives on markets: Local, national, and global markets.
  - The anthropology of money and its role in exchange.
3. **Gift Exchange and Reciprocity:**
- Marcel Mauss and the theory of the gift economy.
  - The social and cultural significance of gift exchange in different societies.
  - Reciprocity and its link to social cohesion and solidarity.

## **Unit 5: Globalization and Economic Change**

### **1. Global Economic Systems and the Anthropology of Development:**

- The anthropology of development and modernization theories.
- Impact of globalization on traditional economies.
- Economic anthropology in the context of international development.

### **2. Neoliberalism and Global Capitalism:**

- The spread of neoliberal economic policies and their impacts on local economies.
- Global capitalism and the anthropology of multinational corporations.
- Case studies of economic transformation in various countries (e.g., Latin America, Asia).

### **3. Environmental and Political Economy:**

- The role of economic systems in environmental degradation.
- Political economy of resource management and environmental conservation.
- Anthropological perspectives on sustainable development and indigenous economies.

## **Suggested Books:**

- *Economic Anthropology: A Systematic Approach* by David W. MacKenzie
- *The Anthropology of Economy: A Reader* edited by Karen S. Ho and Lisa R. Procter
- *The Gift* by Marcel Mauss
- *Globalization: A Very Short Introduction* by Manfred B. Steger
- *A World of Struggle: How Power, Law, and Expertise Shape Global Political Economy* by David Kennedy
- *The Yanomami: The Social Anthropology of an Amazonian People* by Reena L. Halperin
- *Globalization: A Very Short Introduction* by Manfred B. Steger
- *The Anthropology of Development and Globalization* by Richard H. Robbins
- *The Great Transformation: The Political and Economic Origins of Our Time* by Karl Polanyi
- *Economic Anthropology* by Eric R. Wolf.

## **Political Economy-I BL – 309 B**

**Sub. Code: BL – 309B**

**L-4, C-4**

### **Course Objectives:**

- To introduce students to the fundamental concepts and theories in political economy.
- To explore the relationship between politics and economics in both historical and contemporary contexts.
- To analyze the role of state, market, and society in the organization and regulation of economic systems.
- To examine how economic systems are influenced by political ideologies, institutions, and global trends.
- To understand the impact of political economy on issues like development, inequality, and globalization.

### **Unit 1: Introduction to Political Economy**

#### **1. Defining Political Economy:**

- What is Political Economy? Scope, relevance, and interdisciplinary nature.
- The relationship between economics, politics, and sociology.
- Key questions in political economy: How do political decisions influence economic outcomes? How do economic systems shape political structures?

#### **2. Historical Overview:**

- Classical political economy and its evolution: From Mercantilism to Adam Smith.
- Early political economists: Karl Marx, David Ricardo, John Stuart Mill, and others.
- The shift from classical to neoclassical economics and its political implications.

#### **3. The Role of the State in Political Economy:**

- The state's role in regulating and shaping economic life.
- Political economy in a capitalist state: Liberalism, welfare state, and neoliberalism.
- Theories of the state: Marxist, Weberian, and pluralist approaches.

### **Unit 2: Classical Political Economy**

#### **1. Adam Smith and the Foundations of Classical Economics:**

- The invisible hand: Free markets and the role of self-interest.
- The division of labor and specialization.
- The nature of wealth and the principle of comparative advantage.

#### **2. David Ricardo and Comparative Advantage:**

- Comparative advantage theory and international trade.
- The law of diminishing returns and its impact on production and distribution.

- Critiques of Ricardian theory.
- 3. **Karl Marx and the Critique of Capitalism:**
  - Marx's historical materialism and the role of class struggle in shaping the economy.
  - The theory of surplus value and exploitation.

### **Unit 3: Neoliberalism and Contemporary Theories**

1. **The Rise of Neoliberalism:**
  - What is neoliberalism? The shift from Keynesian economics to neoliberal policy.
  - Key principles of neoliberalism: Market liberalization, deregulation, and privatization.
  - The political economy of neoliberalism: The role of international institutions like the IMF, World Bank, and WTO.
2. **Post-War Keynesianism and the Welfare State:**
  - Keynesian economics and the role of government intervention in the economy.
  - The development of welfare states in the 20th century.
  - Crisis of Keynesianism and the rise of neoliberalism in the 1970s.
3. **Theories of Global Political Economy:**
  - Globalization and its political and economic implications.
  - Dependency theory, world-systems theory, and the role of imperialism.
  - The politics of economic development in the Global South.

### **Unit 4: Political Economy of Development**

1. **Theories of Economic Development:**
  - The stages of economic development: Modernization theory and its critiques.
  - Dependency theory and the role of the global economic system in underdevelopment.
  - World-systems theory and the development of peripheral nations.
2. **The State and Economic Development:**
  - The role of the state in development: State-led vs. market-led development.
  - Theories of state intervention and development: Import substitution industrialization (ISI) vs. export-oriented industrialization (EOI).
  - The challenges of governance, corruption, and political stability in developing economies.
3. **Globalization and Development:**
  - The impact of globalization on developing countries: Trade, investment, and inequality.
  - The role of international financial institutions in shaping development policies.
  - The debate between economic liberalization and protectionism.

## **Unit 5: Political Economy of Globalization**

### **1. Understanding Globalization:**

- What is globalization? Economic, political, and cultural dimensions.
- The historical roots and modern processes of globalization.
- The role of technology, finance, and communication in driving globalization.

### **2. The Politics of Global Capitalism:**

- The rise of multinational corporations and their global reach.
- Financialization and the global economy: The role of global finance in economic crises.
- The impact of global trade agreements (e.g., NAFTA, TPP, and WTO).

### **3. Global Inequality and Power Dynamics:**

- The distribution of wealth in a globalized economy.
- Global inequality: Rich vs. poor countries and the politics of inequality.
- The role of the global political economy in shaping patterns of migration, labor exploitation, and environmental degradation.

## **Unit 6: Contemporary Political Economy: Issues and Debates**

### **1. Environmental Political Economy:**

- The relationship between economic development and environmental sustainability.
- Theories of environmental degradation: Tragedy of the commons and ecological modernization.
- Global environmental governance: The role of international agreements and institutions (e.g., Paris Agreement).

### **2. Economic Crises and Political Economy:**

- Theories of economic crises: The role of finance, banking, and speculative bubbles.
- Case studies: The 2008 financial crisis and its aftermath.
- The politics of austerity and economic recovery in crisis-hit economies.

### **3. Economic Inequality and Social Justice:**

- The politics of income and wealth inequality: Causes and consequences.
- Theories of distributive justice: Rawlsian justice vs. libertarianism.
- Global efforts to address inequality: The role of international organizations, NGOs, and movements.

## **Suggested Books:**

- *An Introduction to Political Economy* by James A. Caporaso and David P. Levine
- *The Wealth of Nations* by Adam Smith
- *A Brief History of Neoliberalism* by David Harvey
- *Development as Freedom* by Amartya Sen
- *The Shock Doctrine: The Rise of Disaster Capitalism* by Naomi Klein

## **SPANISH II (BL-302 A)**

**Sub. Code: BL – 302A**

**L-4, C-4**

### **Course Objectives**

By the end of this course, students will be able to:

- Understand and use basic Spanish vocabulary and grammar.
- Engage in simple conversations about everyday topics.
- Read and comprehend short texts in Spanish.
- Write basic sentences and paragraphs in Spanish.

### **Unit 1: Introduction to Spanish**

- Overview of the Spanish language and its global significance
- Alphabet and pronunciation
- Basic greetings and introductions

### **Unit 2: Basic Grammar and Vocabulary**

- Nouns, articles, and gender
- Common adjectives and their agreement with nouns
- Essential vocabulary: family, colors, numbers

### **Unit 3: Present Tense Verbs**

- Introduction to regular verbs (AR, ER, IR)
- Conjugation patterns and usage
- Practical exercises and dialogues

### **Unit 4: Common Expressions and Questions**

- Essential phrases for everyday conversation
- Forming questions and negation

**Suggested Readings:**

1. Madrigal's Magic Key to Spanish" by Margarita Madrigal
2. A classic introductory book that simplifies grammar and vocabulary, making it accessible for beginners.
3. "Practice Makes Perfect: Spanish Verb Tenses" by Dorothy Richmond
4. Focuses on mastering verb tenses with clear explanations and exercises.
5. "Easy Spanish Step-By-Step" by Barbara Bregstein
6. A structured approach to learning Spanish, emphasizing grammar and vocabulary in a logical progression.

## **GERMAN II (BL302 B)**

**Sub. Code: BL – 302B**

**L-4, C-4**

### **Course Objectives**

- Understand and use basic German vocabulary and grammar.
- Engage in simple conversations about everyday topics.
- Read and comprehend short texts in German
- Write basic sentences and paragraphs in German.

### **Unit 1: Introduction to German**

- German alphabet and pronunciation
- Basic greetings and introductions
- Pronunciation drills
- Icebreaker introductions

### **Unit 2: Numbers and Colors**

- Numbers 1-100
- Basic colors and their usage
- Number games
- Color identification exercises

### **Unit 3: Everyday Vocabulary**

- Family members
- Common nouns (e.g., household items, animals)
- Create a family tree
- Vocabulary flashcard games

### **Unit 4: Basic Grammar and Sentence Structure**

- Introduction to articles (definite and indefinite)
- Subject-verb-object structure

**Suggested Readings:**

1. "German Made Simple: Learn to Speak and Understand German Quickly and Easily"  
Author: Arnold Leitner
2. A straightforward introduction to the language, covering essential vocabulary and grammar.
3. "German for Dummies"
4. Author: Wendy Foster
5. "The Everything Learning German Book"
6. "Practice Makes Perfect: Complete German Grammar"
7. Author: Ed Swick
8. A comprehensive workbook that reinforces grammar concepts with exercises and explanations.

## CHINESE II (BL-302C)

**Sub. Code: BL – 302C**

**L-4, C-4**

### **Course Objectives**

By the end of this course, students will be able to:

- Understand and use basic Chinese vocabulary and grammar.
- Engage in simple conversations about everyday topics.
- Read and comprehend short texts in Chinese.
- Write basic sentences and paragraphs in Chinese.

### **Unit 1: Introduction to Chinese**

- Pinyin and pronunciation
- Basic greetings and self-introduction
- Pronunciation practice
- Icebreaker introductions

### **Unit 2: Numbers and Dates**

- Numbers 1-100
- Days of the week and months
- Number games
- Calendar exercises

### **Unit 3: Everyday Vocabulary**

- Family members
- Common nouns (e.g., animals, objects)
- Family tree project
- Vocabulary flashcards

### **Unit 4: Basic Grammar and Sentence Structure**

- Subject-verb-object structure

- Introduction to measure words

### **Suggested Readings**

- "Integrated Chinese" (Textbook + Workbook)
  - Authors: Tao-chung Yao, Yuehua Liu, et al.
  - A comprehensive series that covers speaking, reading, and writing. It includes cultural notes and exercises.
- "Chinese Made Easier"
  - Authors: Maureen S. W. D. H. Wong, et al.
  - Focuses on conversational skills with a gradual introduction to reading and writing.
- "New Practical Chinese Reader"
  - Authors: Liu Xun
  - A popular series that integrates language and cultural elements, with a focus on conversational skills.
- "Reading & Writing Chinese"
  - Author: William McNaughton
  - A guide to learning characters, with clear explanations and practice exercises.

## **FRENCH II (BL-302D)**

**Sub. Code: BL – 302D**

**L-4, C-4**

### **Course Objectives**

- Understand and use basic French vocabulary and grammar.
- Engage in simple conversations about everyday topics.
- Read and comprehend short texts in French.
- Write basic sentences and paragraphs in French.

### **Unit 1: Daily Routines**

- Common verbs (aller, être, avoir)
- Talking about daily activities

### **Unit 2: Food and Drink**

- Vocabulary related to food
- Expressing likes and dislikes

### **Unit 3: Clothing and Shopping**

- Vocabulary for clothing
- Shopping dialogue and role-play

### **Unit 4: Directions and Transportation**

- Asking for and giving directions

### **Suggested Readings:**

1. "Easy French Step-By-Step" by Myrna Bell Rochester
2. A clear, gradual approach to learning French grammar and vocabulary.
3. "French for Dummies" by Dodi-Katrin Schmidt and Michelle M. Williams
4. "Practice Makes Perfect: Complete French Grammar" by Annie Heminway
5. Comprehensive grammar explanations with exercises for practice

## **Family Law – II (Muslim Law)**

**Sub. Code: BL 304**

**L – 4, C – 4.**

### **Course objectives**

- The Muslim Law course provides students with an in-depth understanding of Islamic jurisprudence and its application in modern legal contexts.
- Students will gain knowledge about the principles governing family law, inheritance, contractual relationships, and criminal law within the framework of Shari'ah.
- The course also emphasizes the interaction between personal law and secular law in India and the role of judicial intervention and legal reforms in shaping Muslim law practices.
- By the end of the course, students will have a comprehensive understanding of Muslim personal law and its application in the Indian legal system, and will be able to critically assess contemporary issues and challenges faced by Muslim communities in India and other parts of the world.

### **Unit-I :**

Origin and development of Muslim Law - Sources of Muslim Law - Schools of Muslim Law - Difference between the Sunni and Shia Schools – Sub-schools of Sunni Law - Operation and application of Muslim Law - Conversion to Islam - Effects of conversion - Law of Marriage, nature of Muslim Marriage - Essential requirements of valid Marriage - Kinds of Marriages - distinction between void, irregular and valid marriage

### **Unit-II:**

Divorce - Classification of divorce - different modes of Talaq - Legal consequences of divorce - Dissolution of Muslim Marriage Act, 1939 - Maintenance, Principles of maintenance, Persons entitled to maintenance

### **Unit-III:**

Parentage - Maternity and Paternity - Legitimacy and acknowledgment - Guardianship - Meaning - Kinds of guardianship - Removal of guardian - Difference between Shia and Sunni Law. Gift - Definition of Gift - Requisites of valid gift - Gift formalities - Revocation of gift - Kinds of gift.

### **Unit-IV :**

Waqf \_ Definition - Essentials of Waqf - Kinds of Waqf – Creation of Waqf - - Revocation of Waqf - Salient features of the Waqf Act, 1995 – Mutawalli - Who can be Mutawalli - Powers and duties of Mutawalli - Removal of Mutawalli and Management of Waqf property. Succession - Application of the property of a deceased Muslim

**Suggested Readings:**

1. Tahir Mahmood: The Muslim Law of India, 1980, Law Book Company, Allahabad.
  2. Aquil Ahmed: Text Book of Mohammadan Law, 5th Edition 1992, Central 4. Law Agency, Allahabad.
  3. Prof. G.C.V. Subba Rao: Family Law in India, 6th Edition, 1993, S.Gogia & Company, Hyderabad.
  5. Asaf A.A. Fyzee: Outlines of Mohammadan Law, 4th Edition, 1999, Oxford University Press, Delhi.
- .....

## Legal Language and Legal Writing

Sub. Code: BL 306

L -4, C -4

### Course Objectives

- The Legal Language and Legal Writing course aims to build proficiency in the specialized language used in the legal profession, along with developing practical skills for drafting legal documents and writing persuasive legal arguments.
- Students will gain a strong foundation in legal research, drafting, analytical reasoning, and professional communication, all of which are essential for success in legal practice.
- By the end of the course, students will be prepared to write effectively and ethically in a wide range of legal contexts, and they will have the tools necessary for successful legal practice, whether in litigation, contract law, corporate law, or public policy.
- Engage students in simulated legal scenarios, where they apply their legal writing and research skills to draft documents or provide advice based on a hypothetical case.

### Unit I: Meaning and uses of legal terms

#### Commonly used Latin terms in courts

Ab initio', Res judicata, Res– subjudice, Adhoc, Adinfinitum, Adinterim, Adjourn sine die, Ad litem, Advalorem, Alibi, Aliter, Almamater, Amicus Curiae, Animus, Animus possidendi, Alumini, Anti-meridiem, Bonafide, Bona Vacantia, Causeausans, Coram non judice, Corpus Possessionis, Custodia Legis, Composmentis, Cypress, Defacto, DeJure, Denovo, Donati on mortis cause, Enventresamere, Enroute, Exofficio, Exgratia, Exparte, Ex post facto, Factumvalet, Femesole, Filiusnullius, In forma pauperis, Ibid, Inlimine, Inmemoriam, Inparimaterial, Intelligibledifferentia, Interalia, Interse, Ipsojure, Intoto, Ipsofacto, Ininvitum, Inlocoparentis, Inpais, Inpari delicto, potiores condition possidentis (or defendentis), In rem, Intervivos, Intra-vires, Justertii, Juscivile, Jusdivinum, LexFori, Lex Loci delicti, Lispendens, Locusstandi, Malafide, MensRea, Modusoperandi, Modus Vivendi, Non compos mentis, Nonfeasance, NudumPactum, Onusprobandi, PactaSuntServanda, PariPassu, Pendentelite, Perannum, Percapita, Per diem, Permensem, Perstripes, Persona non grata,

#### Unit II: Legal maxims

1. Absolutasententiaexpositore non-indiget
2. A bundanscautela non nocet.
3. Actio-personalismoritur-cum persona
4. Actoriincumbit onus probandi
5. Actus curiae neminemgravabit
6. Actus deineminifacitinjuriam
7. Actus reus
8. Actus legisneminiestdamnosus

9. Actus non-facit reum nisi mens sit rea
10. Ejusdem Generis
11. Exturpi causa non oritur actione
12. Noscitur a sociis
13. Novus actus interveniens
14. Respondent superior
15. Falsus in uno falsus in omnibus
16. Acquitias sequitur legem
17. Allegans contraria non est audiendus
18. Audi alteram partem
19. Caveat emptor
20. Damnum sine injuria
21. De minimis non curat lex
22. Dolus malus pactum se non servabit
23. Delegates non potest delegare
24. Fiat Justitia ruat caelum
25. Ignorantia legis neminem excusat
26. Injuria sine damno

### **Unit III: Paragraph & Precise Writing of Legal Texts**

### **Unit IV: Writing of Moot Memorials**

#### **Suggested Reading:**

1. Myneni S.R., Legal language and Legal Writing, Central Law Agency, Allahabad.
2. Jain R.L., Legal Language, Central Law Agency, Allahabad.
3. Prasad Anirudh, Legal Language, Central Law Publications, Allahabad.

## PUBLIC INTERNATIONAL LAW

**Sub. Code: BL 308**

**L – 4, C – 4.**

### **Course objectives**

- The Public International Law course aims to provide students with a thorough understanding of the legal rules that govern the relations between states and other international actors.
- By the end of the course, students will be familiar with the sources, subjects, and principles of international law, as well as its application in areas such as human rights, international humanitarian law, trade, investment, and conflict resolution.
- The course prepares students to critically engage with global legal challenges and equips them with the tools to understand and navigate the complexities of international law in contemporary global affairs.
- Analyze the role of international law in global development and the protection of economic, social, and cultural rights, particularly in the context of poverty, disaster relief, and humanitarian assistance.

### **Unit-I:**

Definition, Nature, Scope and Importance of International Law — Relation of International Law to Municipal Law

### **Unit-II:**

State Recognition — State Succession — Responsibility of States for International delinquencies

### **Unit-III:**

Position of Individual in International Law — Nationality — Extradition — Asylum — Privileges and Immunities of Diplomatic Envoys

### **Unit-IV:**

The Legal Regime of the Seas – Evolution of the Law of the Sea – Freedoms of the High Seas – Common Heritage of Mankind – United Nations Convention on the Law of the Sea – Legal Regime of Airspace – Important Conventions relating to Airspace – Paris, Havana, Warsaw and Chicago Conventions – Five Freedoms of Air – Legal Regime of Outer space – Important Conventions such as Outer space Treaty

### **Suggested Readings:**

1. S.K. Kapoor, Public International Law, Central Law Agencies, Allahabad.
2. H.O. Agarwal, International Law and Human Rights, Central Law Publications, Allahabad.
3. S.K. Verma, An Introduction to Public International Law, Prentice Hall of India.

# MACRO ECONOMICS II

**Sub. Code: BL – 310**

**L-4, C-4**

## **Course objectives**

- The Macroeconomics II course aims to deepen students' understanding of the complex dynamics that govern national and global economies.
- It combines advanced theoretical analysis with practical policy applications, preparing students to understand and evaluate the impact of economic policies, global trends, and crises.
- By the end of the course, students should be able to critically assess macroeconomic phenomena, formulate policy recommendations, and utilize econometric tools to analyze real-world economic problems.
- Debates in Macroeconomics: Engage students in contemporary policy debates in macroeconomics, such as austerity vs. stimulus, central bank independence, and the role of fiscal policy in economic stabilization.

## **Unit I: Classical Theory/ Long Run Analysis**

Foundation & features of Classical Theory,

## **Unit II: Principles of Aggregate Demand & Aggregate Supply**

Theory of Aggregate Demand

## **Unit III: New Keynesian/Post Keynesian Economics**

Importance & Scope, Different Theories of Post Keynesian Economics (RET Business Cycle theory etc.)

## **Unit IV: Growth & Development**

Concept of Economic Growth & Economic Development, Neo-Classical Growth Theory, Types of Growth & Development, Factors of Growth & Development

## **Suggested Readings:**

1. Jhingan M.L., Development Economic, Vrinda Pub.
2. Dwivedi D.N., Macroeconomic Theory & Policy, Tata Mac Graw Hill
3. Samuelson & Nordhaus, Economics, Tata Mac Graw Hill
4. Shapiro, Macroeconomic Analysis, Galgotia

\*\*\*\*\*

## **Anthropology-II (BL – 310 A)**

**Sub. Code: BL – 310 A**

**L-4, C-4**

### **Course Objectives:**

- To deepen the understanding of economic behaviors, institutions, and practices from an anthropological perspective.
- To explore the interplay between culture, economy, and society, focusing on contemporary issues.
- To analyze economic systems and their evolution, emphasizing globalization, development, and inequality.
- To examine the roles of exchange, property, labor, and consumption in different societies, using anthropological theories and empirical studies.

### **Unit I: Theoretical Perspectives in Economic Anthropology**

- Classical Approaches: Marxian, Weberian, and Durkheimian Perspectives on Economic Life
- Cultural Economics: The Role of Culture in Economic Decision-Making
- Neoliberalism, Globalization, and Economic Anthropology
- Post-Colonial Critiques of Economic Anthropology
- Political Economy and Economic Anthropology: Key Concepts and Debates

### **Unit II: Modes of Production and Economic Systems**

- Subsistence Economies: Foraging, Horticulture, Pastoralism, and Agriculture
- The Role of Kinship and Social Structures in Economic Systems
- The Rise of Industrial Capitalism and Its Anthropological Impact
- State-Controlled Economies: Socialism, State Capitalism, and Nationalism
- Transition from Traditional to Modern Economic Systems in Developing Societies

### **Unit III: Exchange, Trade, and Markets**

- Theories of Exchange: Reciprocity, Redistribution, and Market Exchange (Mauss, Sahlins, Polanyi)
- The Role of Barter Systems, Gift Economies, and Money in Different Cultures
- Market Systems: Local, National, and Global Markets
- The Anthropology of Global Trade: Commodities, Global Supply Chains, and Fair Trade
- The Informal Economy: Informal Work, Microenterprises, and the Shadow Economy

### **Unit IV: Labor, Property, and Economic Inequality**

- The Anthropology of Labor: Division of Labor, Gender, and Work Relations
- Property Rights: Land Ownership, Intellectual Property, and Cultural Property
- Social and Economic Inequality: Caste, Class, Race, and Gender Dimensions

- Economic Exploitation and Worker's Rights: Case Studies from the Global South
- Anthropology of Development and Underdevelopment: Economic Anthropology's Role in Policy

### **Unit V: Consumption, Development, and Globalization**

- The Anthropology of Consumption: Material Culture, Consumerism, and Identity
- Development Theories and Practices: From Modernization to Post-Development
- Globalization and Its Impact on Local Economies: Culture, Labor, and Power
- The Role of NGOs and International Organizations in Economic Development
- Environmental Anthropology: Sustainability, Resources, and Development

### **Suggested Books:**

1. "Economic Anthropology: A Systematic Approach" by Stephen Gudeman
2. "The Anthropology of Economy: A Reader" edited by Brian Moeran and Richard Wilk
3. "The Gift: The Form and Reason for Exchange in Archaic Societies" by Marcel Mauss
4. "Markets and Money: A Critical Introduction" by Keith Hart and John Sharp
5. "The Anthropology of Development and Globalization" by Richard H. Robbins
6. "Globalization and Its Discontents" by Joseph E. Stiglitz

## **Political Economy-II BL – 310B**

**Sub. Code: BL – 310 B**

**L-4, C-4**

### **Course Objectives:**

- To analyze the relationship between politics and economics in the context of contemporary global capitalism.
- To examine the historical and theoretical foundations of political economy, including critical perspectives on capitalist systems.
- To understand economic policy choices, their implications for governance, and the role of the state in economic management.
- To explore key issues such as economic globalization, economic inequality, neoliberalism, and sustainable development within a political economy framework.

### **Unit I: Theories of Political Economy**

- Classical Political Economy: Adam Smith, David Ricardo, and John Stuart Mill
- Marxist Political Economy: Karl Marx's Theory of Value, Surplus Value, and Historical Materialism
- Neoclassical Political Economy: Marginalism, Utility, and the Role of Markets
- Keynesian Political Economy: Theories of Aggregate Demand, Government Intervention, and Economic Stability
- The Chicago School and Neoliberalism: Market Fundamentalism and Its Critics

### **Unit II: State and the Economy**

- The Role of the State in Economic Systems: Intervention vs. Laissez-Faire
- State Capitalism: Characteristics, Examples, and Contemporary Relevance
- Theories of State and Market Relations: Marxist, Liberal, and Institutionalist Approaches
- The Political Economy of Welfare States: Social Safety Nets, Redistribution, and Fiscal Policy
- Economic Crises and State Responses: The Role of Government in Economic Recovery

### **Unit III: Globalization and Political Economy**

- Globalization and Its Impacts: Economic, Political, and Cultural Dimensions
- Theories of Global Capitalism: World Systems Theory (Wallerstein) and Globalization of Capital
- Global Trade and Finance: WTO, IMF, World Bank, and Global Financial Institutions
- The Politics of Global Economic Governance: Regionalism, Bilateral Agreements, and Trade Wars
- Global Inequality and the South-North Divide: The Political Economy of Development

#### **Unit IV: Neoliberalism and Its Discontents**

- Neoliberalism: Theory, Policies, and Practices
- Privatization, Deregulation, and Austerity: Global Impact of Neoliberal Policies
- The Rise of Multinational Corporations and Financialization
- The Global Financial Crisis of 2008: Causes, Consequences, and Policy Responses
- Resistance to Neoliberalism: Anti-Globalization Movements and Alternative Economic Models

#### **Unit V: Political Economy of Development and Sustainability**

- Theories of Economic Development: Modernization, Dependency Theory, and Post-Colonial Critiques
- The Political Economy of Sustainable Development: Growth vs. Environmental Sustainability
- Green Political Economy: Environmental Economics, Green New Deal, and Eco-Socialism
- The Role of International Organizations in Development: The UN, World Bank, and Regional Development Banks
- Economic Planning in Developing Countries: Challenges and Policy Alternatives

#### **Suggested Books:**

1. **"The Political Economy of Development and Underdevelopment"** by Charles K. Wilber
2. **"Capitalism and Modern Social Theory"** by Anthony Giddens
3. **"Political Economy: A Marxist Introduction"** by Ben Fine
4. **"Global Political Economy"** by John Ravenhill
5. **"The Political Economy of Neoliberalism"** by David Coates
6. **"Globalization and Its Discontents"** by Joseph E. Stiglitz
7. **"Theories of Political Economy"** by James A. Caporaso and David P. Levine

# **SEMESTER VII**

## **LABOUR LAW –I**

**Sub. Code: BL 401**

**L – 4, C – 4.**

### **Course Objectives**

- Students should have a solid understanding of the legal framework that governs the workplace.
- They will be equipped to critically assess the interplay between labour laws and socio-economic policies, the role of trade unions and employer organizations, and the various protections afforded to workers in different sectors and jurisdictions.
- Students will also develop the skills to address labour law issues both in domestic and international contexts, contributing to discussions on labour market regulation, worker protection, and social justice in a rapidly changing world.
- Understand the obligations of employers in complying with labor laws, including the importance of record-keeping, compliance audits, and training programs for workplace rights and safety.

### **Unit-I**

Trade Unions: History of Trade Union Movement - The Trade Union Act 1926 – Definitions - Registration – Rights and Liabilities of Registered Trade Unions – Immunities – Amalgamation and dissolution of Unions

### **Unit-II**

Prevention and Settlement of Industrial Disputes in India - The role of State in Industrial Relations – The Industrial Disputes Act 1947 - Definition of industry - Industrial Dispute – Individual Dispute - workman- Lay off

### **Unit-III**

Authorities under the IDAct – Works committee – Conciliation - Court of inquiry - Labour Courts- Tribunal – Powers and functions of authorities - Voluntary Arbitration - Provisions under Chapter V-A & V- B of the Act- Alteration of conditions of service – Management rights of action during pendency of proceedings

### **Unit-IV**

Standing Orders -Concept and Nature of Standing Orders – scope and coverage- Certification process – its operation and binding effect – Modification and Temporary application of Model

### **Suggested Readings:**

1. Srivastava: Law of Trade Unions , Eastern Book Company, Lucknow
2. .Goswami : Labour and Industrial Law, Central Law Agency.
3. R.F. Rustomji: Law of Industrial Disputes : Asia Publishing House, Mumbai
4. S.N. Misra : Labour and Industrial Law
5. J.N. Malik : Trade Union Law
6. Khan& Khan : Labour Law , Asia Law House, Hyderabad

## **Jurisprudence**

**Sub. Code: BL 403**

**L – 4, C – 4.**

### **Course Objectives**

- The Jurisprudence course, often referred to as the philosophy of law, aims to introduce students to the fundamental principles and theories underlying the concept of law and legal systems.
- The course explores the nature, function, and purpose of law, providing students with the tools to critically examine how laws are created, interpreted, and enforced. Students will engage with a variety of legal philosophies, schools of thought, and historical perspectives, gaining insight into the relationship between law, morality, justice, and society.
- By the end of the course, students will be able to analyze and evaluate the different schools of jurisprudence, understand the key concepts that shape legal theory, and apply these insights to the practical functioning of legal systems.
- Explore key theories about the nature of law, including natural law, positive law, and legal realism, and understand the distinction between law and morality.

### **Unit-I:**

Meaning and Definition of Jurisprudence — General and Particular Jurisprudence - Elements of Ancient Indian Jurisprudence — Schools of Jurisprudence — Analytical, Historical, Philosophical and Sociological Schools of Jurisprudence. Theories of Law — Meaning and Definition of Law

### **Unit-II :**

Sources of Law — Legal and Historical Sources — Legislation - Definition of legislation - Classification of legislation- Supreme and Subordinate Legislation - Direct and Indirect Legislation - Principles of Statutory Interpretation. Precedent — Definition of Precedent — Kinds of Precedent — Stare Decisis — Original and Declaratory Precedents — Authoritative and Persuasive Precedents. Custom – Definition of Custom – Kinds of Custom – General and Local Custom – Custom and Prescription - Requisites of a valid custom - Relative merits and demerits of Legislation , Precedent and Custom as a source of Law .

### **Unit-III:**

Persons — Nature of personality — Legal Status of Lower Animals, Dead Persons and Unborn persons — Legal Persons — Corporations — Purpose of Incorporation — Nature of Corporate Personality - Rights and Duties — Definition of Right — Classification of Rights and Duties —

### **Unit-IV :**

Obligation — Nature of Obligation — Obligation arising out of Contract, Quasi Contract, trust and breach of obligation etc. — Liability — Nature and kinds of liability — Acts — Mens Rea — Intention and Motive — Relevance of Motive

**Unit-V:**

Ownership — Definition and kinds of Ownership - Possession — Elements of Possession -

**Suggested Readings:**

1. Salmond: Jurisprudence, Universal Publishers 12th Edn. 1966.
2. Rama Jois, Legal and Constitutional History of India, Universal Law Publications, Delhi.
3. N.V. Pranjape – Jurisprudence
4. S.R. Dhyeni – Jurisprudence

\*\*\*

## **Company Law**

**Sub. Code: BL 405**

**L – 4, C – 4.**

### **Course Objectives**

- Students will have gained a thorough understanding of the **legal frameworks** that govern the operation of companies, from their incorporation to their dissolution.
- They will be equipped to critically assess corporate governance issues, company finance, shareholder rights, and the protection of stakeholders in business law.
- Additionally, students will be able to analyze the challenges and opportunities posed by evolving corporate regulations, and the role of company law in the modern global economy.
- Study the different types of shares (e.g., ordinary shares, preference shares), the issue of shares, and the rules regarding share capital. Discuss the legal requirements for subscription, allotment, and transfer of shares.

### **Unit-I:**

Definition and attributes of Company — Distinction between Partnership Firm and Company — Kinds of Companies including Multinational Companies — Advantages and Disadvantages of

### **Unit-II:**

Promoters and Registration — Pre-incorporation contracts — Memorandum of Association —

### **Unit-III:**

Prospectus — Members — Shareholders — Share Capital — Shares and Dividends — Debentures.

### **Unit-IV:**

Director, Manager and Secretary — Meetings — Majority powers and minority rights —

### **Unit-V:**

Modes of winding up of companies.

### **Suggested Readings:**

1. Shah : Lectures on Company Law, N.M.Tripathi, Bombay.
2. Avtar Sing : Company Law, Eastern Book Company, 13th Edn. 2001.
3. Charlesworth: Company Law, Sweet and Maxwell, 1996.
4. Ramaiah: Company Law, Wadhwa& Co. 15th Edn. 2001.
5. Dutta: Company Law, Eastern Law House, Calcutta

\*\*\*\*\*

## **ADMINISTRATIVE LAW**

**Sub. Code: BL 407**

**L – 4, C – 4.**

### **Course Objectives**

- Definition and Nature: Understand the basic principles of administrative law, its relationship to constitutional law, and how it regulates the exercise of executive powers by governmental agencies.
- Scope of Administrative Law: Study the scope of administrative law in various contexts, including rule-making, enforcement, and decision-making.
- Examine the role of administrative agencies in the legislative, executive, and judicial functions of government.
- Sources of Administrative Law: Analyze the sources of administrative law, including statutes, regulations, judicial decisions, government orders, and administrative directives.

### **Unit-I:**

Nature and scope of Administrative Law — Meaning, Definition and Evolution of Administrative Law—Reasons for the growth of

### **Unit-II:**

Basic concepts of Administrative Law — Rule of Law — **Interpretation** of Dicey's Principle of Rule of Law — Modern trends

### **Unit-III:**

Classification of Administrative functions — Legislative, Quasi-judicial, Administrative and Ministerial functions — Delegated Legislation — Meaning, Reasons for the growth and Classification of delegated legislation

### **Unit-IV:**

Judicial Control of Administrative Action - Grounds of Judicial Control — Principles of Natural Justice.

### **Unit-V:**

Remedies available against the State — Writs — Lokpal and Lok Ayukta

### **Suggested Readings:**

1. Griffith and Street: Principles of Administrative Law.
2. H.W.R.Wade: Administrative Law, Oxford Publications, 8th Edn. 2000, London.
3. De Smith: Judicial Review of Administrative Action, Sweet and Maxwell, 1998.
4. S.P. Sathe: Administrative Law, Butterworths, 6th Edn. 1998.
5. I.P.Massey: Administrative Law, Eastern Book Company, 5th Edn. 2001.

## ALTERNATE DISPUTE RESOLUTION

Sub. Code: BL 409

L -4, C -4

### Course Objectives

- The Alternative Dispute Resolution (ADR) course is designed to introduce students to methods of resolving disputes outside the traditional court system.
- ADR techniques, such as mediation, arbitration, negotiation, and conciliation, offer parties an opportunity to resolve conflicts more efficiently, cost-effectively, and with greater control over the outcome than formal litigation.
- The course aims to equip students with the knowledge and skills necessary to understand, apply, and analyze different ADR mechanisms.
- Students will explore the principles, processes, advantages, and challenges of ADR, along with the legal frameworks that govern these alternative methods of dispute resolution. By the end of the course, students will be able to assess the suitability of ADR in various contexts and understand how these methods contribute to access to justice and the reduction of the burden on courts.

This is a first clinical paper of which written examination will be for 60 marks and the remaining 40 marks for record and viva voce. There shall be classroom instruction on the following topics:

### Unit-I:

Alternate Dispute Resolution — Characteristics — Advantages and Disadvantages—Unilateral — Bilateral — Triadic (Third Party) Intervention — Techniques and processes -- Negotiation — Conciliation

### Unit-II:

The Arbitration and Conciliation Act, 1996 — Historical Background and Objectives of the Act — Definitions of Arbitration, Arbitrator, Arbitration Agreement -- Appointment of Arbitrator — Termination of Arbitrator -- Proceedings in Arbitral Tribunal -- Termination of Proceedings — Arbitral Award -- Setting aside of Arbitral Award — Finality and Enforcement of Award — Appeals – Enforcement of Foreign Awards. Conciliation – Appointment of Conciliators – Powers and Functions of Conciliator **Unit-III:**

Other Alternative Dispute Resolution Systems —Tribunals.

### Practical Exercises (30 marks)

(a) The students are required to participate in 5 (five) simulation proceedings relating to Arbitration, Conciliation, Mediation and Negotiation. Participation in each such simulation proceeding shall be evaluated for a maximum of 4 (four) marks (Total 5x4=20marks).

(b) Students are required to attend and observe the proceedings of Lok Adalats, Family Courts, Tribunals and other ADR Systems. Each student shall record the above observations in the diary which will be assessed. Record submitted by the student shall be evaluated for 10 marks by the teacher concerned. The Records of the students duly certified by the University Representative

appointed by the Controller of Examinations in consultation with the Chairman, BOS in Law shall be submitted to the University before the commencement of the theory examinations

**Viva- voce (10marks):** There shall be viva-voce examination on the above components. The Viva-voce Board consisting of (i) Principal of the College/the teacher concerned (ii) University Representative appointed by the Controller of Examinations in consultation with the Chairman, BOS in Law, and (iii) an advocate with 10 years experience at the Bar shall evaluate the student in the Viva. The proceedings of the viva-voce shall be recorded.

**Note: Attendance of the students in all the four components of the paper (written examination, participation in simulation proceedings, submission of record and attendance in viva) shall be compulsory.**

**Suggested Readings:**

1. O.P. Tiwari : The Arbitration and Conciliation Act (2nd Edition): Allahabad Law Agency.
2. Johar's : Commentary on Arbitration and Conciliation Act, 1996: Kamal Law House.
3. Acharya N.K.: Law relating to Arbitration and ADR, Asia Law House, Hyderabad
4. Tripathi S.C.: Arbitration, Conciliation and ADR, Central Law Agency, Allahabad.
5. Avatar Singh: Arbitration and Conciliation, Eastern Law Book House, Lucknow.

## Data Analysis-1/ (BL-409A)

Sub. Code: BL 409 A

L -4, C -4

### Course Objectives:

- To develop practical skills that complement academic learning.
- To enhance problem-solving abilities and critical thinking.
- To foster creativity and innovation through practical work.
- To improve communication, teamwork, and leadership skills.
- To make students job-ready by providing exposure to real-world scenarios.
- To ensure students gain competence in tools, software, and techniques that are relevant to their field of study.

### Unit 1: Introduction to Practical Skills and Work Ethics

#### 1. Understanding Practical Skills:

- Importance of practical skills in academic and professional success.
- Distinction between theoretical knowledge and practical application.
- Identifying core skills relevant to students' academic fields.

#### 2. Work Ethics and Professionalism:

- Understanding the concept of work ethics: Punctuality, responsibility, and accountability.
- Teamwork and collaboration in professional settings.
- Ethical decision-making and handling conflicts in the workplace.

#### 3. Time Management:

- Techniques for effective time management: Prioritizing tasks, deadlines, and multitasking.
- Tools for personal and professional time management.
- Stress management and maintaining a healthy work-life balance.

### Unit 2: Communication Skills and Presentation

#### 1. Verbal Communication:

- Mastering effective speaking: Clarity, tone, and expression.
- Public speaking and presentation techniques.
- Interview skills: Preparing for and succeeding in job interviews.

#### 2. Written Communication:

- Writing professional emails, reports, and memos.
- Academic writing: Essays, research papers, and citations.
- Resume writing and crafting a cover letter.

#### 3. Non-Verbal Communication:

- The role of body language in communication.
- Understanding and using visual aids effectively in presentations.
- Active listening skills and empathetic communication.

### **Unit 3: Problem-Solving and Critical Thinking**

#### **1. Problem-Solving Techniques:**

- Approaches to problem-solving: Identifying problems, generating solutions, and evaluating outcomes.
- Creative problem-solving techniques: Brainstorming, lateral thinking, and mind mapping.
- Case studies and real-world problems: Analyzing and providing solutions.

#### **2. Critical Thinking Skills:**

- Understanding the concept of critical thinking: Analyzing, evaluating, and interpreting information.
- Logical reasoning and decision-making frameworks.
- Identifying biases and fallacies in problem-solving and decision-making.

#### **3. Decision-Making and Risk Management:**

- Making informed decisions under uncertainty.
- Understanding risk and how to mitigate it.
- Case studies on decision-making in professional environments.

### **Unit 4: Computer Literacy and Technology Tools**

#### **1. Basic Computer Skills:**

- Operating systems: Introduction to Windows, macOS, and Linux.
- File management and software installation.
- Internet navigation and online security.

#### **2. Microsoft Office Suite:**

- MS Word: Document formatting, tables, and references.
- MS Excel: Data entry, formulas, and data analysis tools.
- MS PowerPoint: Creating and designing presentations.

#### **3. Other Relevant Software Tools:**

- Introduction to design tools like Adobe Photoshop and Illustrator (depending on the course).
- Introduction to statistical tools like SPSS, R, or Python (depending on the course).
- Project management software: Using tools like Trello or Asana for task management.

## **Unit 5: Leadership and Teamwork**

### **1. Understanding Leadership Styles:**

- Theories of leadership: Transformational, transactional, and servant leadership.
- The role of a leader in guiding teams and achieving goals.
- Conflict resolution and leadership during crises.

### **2. Teamwork and Collaboration:**

- The importance of teamwork in professional and academic settings.
- Building and managing effective teams.
- Communication and coordination within teams: Achieving shared goals.

### **3. Project Management Skills:**

- The basics of project management: Planning, organizing, and execution.
- Understanding project management tools and methodologies (e.g., Agile, Waterfall).
- Evaluating project success: Time, cost, and quality management.

## **Unit 6: Practical Training or Project Work**

### **1. Internship/Practical Exposure:**

- Hands-on experience in the chosen field (e.g., internship, industry visits, or fieldwork).
- Application of theoretical knowledge in real-world settings.
- Reflection on learning outcomes from the practical exposure.

### **2. Project Work:**

- Undertaking a group or individual project related to the academic discipline.
- Research, data collection, analysis, and presentation of results.
- Collaborative problem-solving and practical application of skills.

### **3. Evaluation and Reporting:**

- Writing a project report or internship report.
- Preparing a presentation on the practical work undertaken.
- Peer and instructor evaluations of performance.

## **Suggested Books:**

- *The Lean Startup: How Today's Entrepreneurs Use Continuous Innovation to Create Radically Successful Businesses* by Eric Ries
- *The Art of Project Management* by Scott Berkun
  
- *The 7 Habits of Highly Effective People* by Stephen R. Covey
- *How to Win Friends and Influence People* by Dale Carnegie
- *Microsoft Office 365 All-in-One For Dummies* by Peter Weverka
- *Leaders Eat Last* by Simon Sinek
- *Microsoft Office 365 All-in-One For Dummies* by Peter Weverka

# Computer Programming-1 (BL-409B)

Sub. Code: BL 409B

L -4, C -4

## Course Objectives:

- To provide students with a foundational understanding of data analysis techniques.
- To teach students how to organize, clean, and interpret data.
- To introduce students to basic statistical methods and data visualization techniques.
- To familiarize students with data analysis software and tools (Excel, SPSS, or R).
- To develop the ability to apply data analysis techniques to real-world problems.

## Unit 1: Introduction to Data Analysis

### 1. Understanding Data:

- Types of data: Qualitative vs. Quantitative, Continuous vs. Discrete.
- Levels of measurement: Nominal, Ordinal, Interval, and Ratio.
- Data collection methods: Surveys, experiments, observational studies, etc.
- Introduction to data sets and variables.

### 2. The Data Analysis Process:

- Steps in the data analysis process: Data collection, cleaning, analysis, and interpretation.
- Overview of data analysis software tools (Excel, SPSS, and R).
- Understanding the importance of data quality: Accuracy, completeness, and consistency.

### 3. Ethics in Data Analysis:

- Ethical considerations in data collection and analysis.
- Data privacy, confidentiality, and informed consent.
- Avoiding data manipulation and bias.

## Unit 2: Descriptive Statistics

### 1. Measures of Central Tendency:

- Mean, Median, Mode: Definitions, calculations, and applications.
- Understanding the use of each measure in different contexts.
- Interpreting and comparing measures of central tendency.

### 2. Measures of Dispersion:

- Range, Variance, Standard Deviation, Interquartile Range.
- Interpreting measures of variability.
- Importance of dispersion in understanding data distribution.

### 3. Data Distribution and Visualization:

- Introduction to histograms, bar charts, and pie charts.
- Introduction to box plots and frequency distributions.
- Introduction to skewness and kurtosis.

### **Unit 3: Probability and Probability Distributions**

#### **1. Introduction to Probability:**

- Basic probability concepts: Events, sample space, and probability rules.
- Conditional probability and Bayes' theorem.
- The law of large numbers and central limit theorem.

#### **2. Probability Distributions:**

- Discrete probability distributions: Binomial and Poisson distributions.
- Continuous probability distributions: Normal and Exponential distributions.
- Applications of probability distributions in real-world scenarios.

#### **3. Sampling and Sampling Distributions:**

- Introduction to sampling methods: Simple random sampling, stratified sampling, and cluster sampling.
- Sampling distribution of the sample mean and central limit theorem.
- The relationship between sample size and estimation accuracy.

### **Unit 4: Inferential Statistics**

#### **1. Estimation:**

- Point estimates and confidence intervals.
- Confidence intervals for population mean, proportion, and variance.
- Margin of error and its interpretation.

#### **2. Hypothesis Testing:**

- Formulation of null and alternative hypotheses.
- Types of errors: Type I and Type II errors.
- Performing hypothesis tests: Z-test, t-test, chi-square test, and ANOVA.
- p-values and their interpretation in decision-making.

#### **3. Chi-Square Tests and Goodness of Fit:**

- Chi-square test for independence and goodness of fit.
- Applications of chi-square tests in categorical data analysis.
- Interpreting chi-square test results and conclusions.

### **Unit 5: Data Visualization and Presentation**

#### **1. Data Visualization Techniques:**

- Importance of data visualization in communicating results.
- Advanced visualization techniques: Scatter plots, line charts, heatmaps.
- Use of color, size, and shapes in enhancing visualizations.

#### **2. Data Visualization Tools:**

- Introduction to Excel for creating visual representations of data.
- Using SPSS and R for generating statistical graphs and plots.
- Visualization of multiple variables: Bubble charts, 3D plots, and correlation matrices.

#### **3. Creating Reports and Presentations:**

- Best practices for presenting data analysis results.

- Structuring reports: Introduction, methodology, findings, and recommendations.
- Using PowerPoint and other tools to present findings to stakeholders.

## **Unit 6: Introduction to Software for Data Analysis**

### **1. Excel for Data Analysis:**

- Using Excel for basic data analysis: Functions, formulas, and pivot tables.
- Creating charts and graphs in Excel.
- Data manipulation and cleaning techniques in Excel.

### **2. Introduction to SPSS:**

- Overview of SPSS: Data entry, coding, and cleaning.
- Conducting descriptive and inferential statistical analysis in SPSS.
- Visualizing data in SPSS: Graphs, charts, and tables.

### **3. Introduction to R:**

- Introduction to R programming language: Basic syntax, data structures, and functions.
- Data manipulation and analysis in R.
- Visualization using R libraries: ggplot2 and other popular packages.

## **Suggested Books:**

- Excel 2021 For Dummies by Greg Harvey.
- Discovering Statistics Using SPSS by Andy Field.
- R for Data Science by Hadley Wickham and Garrett Grolemund.
  
- Statistics for Business and Economics by Paul Newbold, William L. Karlin, and Betty Thorne.
- Data Science for Business by Foster Provost and Tom Fawcett.
- R for Data Science by Hadley Wickham and Garrett Grolemund.
- The Visual Display of Quantitative Information by Edward R. Tufte.
- Data Visualization: A Practical Introduction by Kieran Healy.

# Python Programming-I (BL-409C)

Sub. Code: BL 409C

L -4, C -4

## Course Objectives

- Learn Python syntax and basic programming concepts.
- Develop skills in using control structures and loops.
- Understand and implement functions and data structures.
- Perform file handling and exception management.
- Gain an introduction to object-oriented programming in Python.

## Unit 1: Introduction to Python

- Overview of Python: History, Features, and Applications
- Setting Up the Python Environment (IDE, Jupyter Notebook, etc.)
- Writing and Executing Python Programs
- Understanding Variables, Data Types, and Basic Syntax

## Unit 2: Control Flow and Loops

- Conditional Statements: if, elif, else
- Looping Structures: for and while loops
- Nested Loops and Conditional Expressions
- Introduction to Iterators and Generators

## Unit 3: Functions

- Defining and Calling Functions
- Parameters and Return Values
- Scope of Variables: Local and Global Scope
- Lambda Functions and Recursion

## Unit 4: Data Structures

- Lists, Tuples, and Dictionaries
- Sets and Strings Manipulation
- List Comprehension and Dictionary Comprehension
- Basic Operations and Iteration on Data Structures

## Unit 5: File Handling

- Reading and Writing Files
- Working with Text and Binary Files
- Exception Handling in File Operations
- File Manipulation Techniques

## Suggested Readings

- **"Python Crash Course"** by Eric Matthes
- A hands-on introduction to Python, ideal for beginners.
- **"Automate the Boring Stuff with Python"** by Al Sweigart
- Focuses on practical Python applications for everyday tasks.
- **"Think Python: How to Think Like a Computer Scientist"** by Allen B. Downey
- Explores Python programming with an emphasis on problem-solving.
- **"Python Programming: An Introduction to Computer Science"** by John M. Zelle
- A beginner-friendly introduction to Python and computer science concepts.
- **"Learning Python"** by Mark Lutz
- A comprehensive guide to mastering Python programming.

## **Leadership and Management I (BL-409D)**

**Sub. Code: BL 409D**

**L -4, C -4**

### **Course Objectives**

- Understand key theories and concepts of leadership and management.
- Develop personal leadership skills and management strategies.
- Analyze organizational structures and dynamics.
- Apply leadership and management principles in real-world scenarios.

### **Unit 1: Change Management**

- Theories of organizational change
- Strategies for effective change implementation

### **Unit 2: Ethical Leadership and Corporate Social Responsibility**

- Ethical decision-making frameworks
- The role of leaders in promoting ethical behavior

### **Unit 3: Conflict Resolution and Negotiation**

- Types of conflicts in organizations
- Techniques for effective negotiation and conflict resolution

### **Unit 4: Leadership in a Global Context**

- Cultural influences on leadership and management practices

### **Suggested Readings:**

1. "The Five Dysfunctions of a Team: A Leadership Fable" by Patrick Lencioni
2. A practical guide on building effective teams and addressing common team challenges.
3. "Leaders Eat Last: Why Some Teams Pull Together and Others Don't" by Simon Sinek
4. Discusses the importance of trust and cooperation in effective leadership.
5. "Leadership and Self-Deception: Getting Out of the Box" by The Arbinger Institute

# **SEMESTER VIII**

## **LABOUR LAW-II**

**Sub. Code: BL402**

**L – 4, C –4.**

### **Course Objectives**

- Constitutional and Understand the constitutional provisions relating to labour rights and the key labour statutes governing industrial relations, such as the Industrial Disputes Act, 1947, Trade Unions Act, 1926, Factories Act, 1948, and Shops and Establishments Act.
- International Labour Explore the role of International Labour Organization (ILO) and its conventions in shaping domestic labour laws, focusing on the fundamental principles of labour rights, such as freedom of association, non-discrimination, and the right to equal pay for equal work.
- Industrial Relations System: Study the structure and importance of industrial relations systems in maintaining harmonious employer-employee relationships. Understand the role of trade unions in representing workers and advocating for their rights.
- Formation and Registration of Trade Unions: Explore the legal provisions governing the formation, registration, and functions of trade unions under the Trade Unions Act, 1926.

### **Unit-I**

The Remunerative Aspects – Wages – Concepts of wages - Minimum, Fair, Living Wages - Wage and Industrial Policies - Whitley Commission Recommendations - Provisions of Payment of Wages Act 1936 - Timely payment of wages - Authorised deductions – Claims -

### **Unit-II**

Bonus – concept - Right to claim Bonus – Full Bench formula - Bonus Commission - Payment of Bonus Act 1965 - Application – Computation of gross profit, available, allocable surplus

### **Unit-III**

Employees Security and Welfare aspect - Social Security - Concept and meaning - Social Insurance - Social Assistance Schemes. Social Security Legislations - Law relating to workmen's compensation - The Workmen's Compensation Act 1923 – Definitions - Employer's liability for compensation - Nexus between injury and employment - payment of compensation - penalty for default

#### **Unit-IV**

Employees Provident Fund and Miscellaneous Provisions Act 1952 – Contributions - Schemes under the Act - Benefits. The Maternity Benefit Act 1961 - Definitions- Application - Benefits.

#### **Suggested Readings**

1. S.N.Misra, Labour and Industrial Laws, Central law publication-22<sup>nd</sup> edition. 2006.
2. N.G. Goswami, Labour and Industrial Laws, Central Law Agency.
3. Khan &Kahan, Labour Law-Asia Law house, Hyderabad
4. K.D. Srivastava, Payment of Bonus Act, Eastern Book Company
5. K.D. Srivastava, Payment of Wages Act
6. K.D. Srivastava, Industrial Employment (Standing Orders) Act 1947
7. S.C.Srivastava, Treatise on Social Security
8. Jidwitesukumar Singh, Labour Economics, Deep& Deep, New Delhi
9. V.J.Rao, Factories Law

\*\*\*

# UTTAR PRADESH LAND LAWS

**Sub. Code: BL 404**

**L-4, C-4**

## **Course Objectives**

- Students will have gained a comprehensive understanding of land-related legal principles, including ownership rights, land acquisition, tenancy laws, land reforms, and the legalities surrounding land use and distribution.
- Students will also be able to critically analyze land disputes, propose legal solutions, and understand the broader social, economic, and environmental issues related to land management.
- Examine the challenges posed by rapid urbanization and land scarcity in urban areas, and how legal mechanisms are being adapted to address the needs of growing cities.
- Study the legal measures to prevent land grabbing and illegal encroachments on both public and private land.

## **Unit I: Introduction**

Interpretation Clause, Objects and Clause of UP Zamindari Abolition

## **Unit II: Classes and Rights of Tenure Holder**

Bhumidhar with Transferable Rights, Bhumidhar with Non-Transferable Rights,

## **Unit III: Succession**

General Order of Succession, Succession as per strips, Critical Approach to Law of Succession,

## **Unit IV: Ejectment**

Ejectment of Tenure Holder from the Land of Public Utility, Ejectment of Trespasser, Ejectment of Bhumidhar, Ejectment of Asami, Abandonment and Surrender.

## **Leading Cases For Detail Study**

- \*Abdul Saeed And Another Vs State Of Uttar Pradesh & Others
- \*Smt. Mainia Vs Dy. Director Consolidation
- \*Satyendra Singh Vs State Of Up
- \*Lalsa Vs State Of Up
- \*InduBhushan Vs State Of Up

## **Suggested Reading:**

1. Maurya R.R., Uttar Pradesh Land Laws, Central Law Publications, Allahabad.
2. Singh C.P., Uttar Pradesh Land Laws, Central Law Agency, Allahabad.

---

## **Intellectual property law**

**Sub. Code: BL 406**

**L -4, C -4**

### **Course Objectives**

- Students will have a comprehensive understanding of IPR laws and their application in various sectors.
- They will be equipped with the tools necessary to analyze, protect, and enforce intellectual property rights in a globalized digital economy.
- Students will also be able to navigate legal challenges related to IPR and understand the interplay between innovation, regulation, and public interest in the evolving world of intellectual property.
- Examine the debate over IPR and access to medicines, particularly in the context of generic drugs and compulsory licensing.

### **Unit-I:**

Meaning, Nature, Classification and protection of Intellectual Property — The main forms of Intellectual Property — Copyright, Trademarks, Patents, Designs (Industrial and Layout) --

### **Unit-II:**

Introduction to the leading International instruments concerning Intellectual Property Rights — The Berne Convention — Universal Copyright Convention — The Paris Union — Patent Co-operation Treaty -- The World Intellectual Property Organization (WIPO) and the UNEESCO

### **Unit-III :**

Select aspects of the Law of Copyright in India — The Copy Right Act, 1957 - Historical evolution — Meaning of copyright — Copyright in literary, dramatic and musical works, computer programmes and cinematograph films — Neighbouring rights — Rights of performers and broadcasters, etc. — Ownership and Assignment of copyright — Author's special rights — Notion of infringement — Criteria of infringement — Infringement of copyright in films, literary and dramatic works

### **Unit-IV:**

Intellectual Property in Trademarks and the rationale of their protection - The Trade Marks Act, 1999 — Definition of Trademarks — Distinction between Trademark and Property Mark - Registration — Passing off — Infringement of Trademark — Criteria of Infringement — Remedies. The Designs Act, 2000

**Unit-V:**

Patents — Concept of Patent — Historical overview of the Patents Law in India — Patentable Inventions — Kinds of Patents — Procedure for obtaining patent — The Patents Act, 1970

**Suggested Readings:**

1. P. Narayanan: Patent Law, Eastern Law House, 1995.
2. Roy Chowdhary, S.K. & Other: Law of Trademark, Copyrights, Patents and Designs, Kamal Law House, 1999.
3. Dr. G.B. Reddy, Intellectual Property Rights and the Law 5th Ed. 2005 GogiaLaw Agency.
4. John Holyoak and Paul Torremans: Intellectual Property Law.
- 5 B.L. Wadhwa: Intellectual Property

## Research Methodology (BL406A)

Sub. Code: BL406A

L -4, C -4

### Course Objectives:

- To introduce students to the principles and techniques of conducting academic research.
- To provide the necessary tools and methods for designing, executing, and analysing research projects.
- To develop skills in critical thinking, data collection, analysis, and interpretation.
- To understand ethical considerations and the role of research in advancing knowledge.

### Unit I: Introduction to Research and its Types

- **Definition and Importance of Research:** Understanding research, its scope, and significance in various fields.
- **Types of Research:** Basic vs. Applied Research, Quantitative vs. Qualitative Research, Exploratory, Descriptive, and Analytical Research.
- **Research Process:** Stages in Research – Problem Identification, Literature Review, Hypothesis Formulation, Data Collection, Analysis, and Report Writing.
- **Research Paradigms:** Positivism, Interpretivism, and Pragmatism.

### Unit II: Research Design

- **Meaning and Importance of Research Design:** Types of Research Design – Experimental, Correlational, Cross-Sectional, and Longitudinal Studies.
- **Sampling Techniques:** Probability and Non-Probability Sampling, Sampling Methods (Random, Stratified, Systematic, Cluster, etc.).
- **Sampling Error and Sample Size Determination:** Understanding sample size, margin of error, and confidence levels.
- **Variables in Research:** Independent, Dependent, Control, and Confounding Variables.

### Unit III: Data Collection Methods

- **Primary Data Collection:** Surveys, Interviews, Focus Groups, and Observations.
- **Secondary Data Collection:** Using Existing Data Sources like Databases, Reports, and Published Research.
- **Questionnaire Design:** Types of questions (Closed, Open, Likert Scale, etc.), reliability, and validity of instruments.
- **Fieldwork Techniques:** Participant Observation, Case Studies, Ethnography.
- **Ethical Issues in Data Collection:** Informed Consent, Privacy, Confidentiality, and Ethical Approval.

#### **Unit IV: Data Analysis**

- **Quantitative Data Analysis:** Descriptive and Inferential Statistics, Measures of Central Tendency (Mean, Median, Mode), Variability (Range, Standard Deviation), and Hypothesis Testing (t-tests, chi-square tests, ANOVA).
- **Qualitative Data Analysis:** Thematic Analysis, Content Analysis, Narrative Analysis.
- **Use of Software in Data Analysis:** Introduction to SPSS, Excel, and NVivo for quantitative and qualitative data analysis.
- **Interpreting Research Results:** Drawing Conclusions, Identifying Patterns, and Making Recommendations.

#### **Unit V: Research Report Writing and Presentation**

- **Structure of a Research Report:** Introduction, Literature Review, Methodology, Results, Discussion, Conclusion, and References.
- **Writing the Research Proposal:** Objectives, Scope, Methodology, Timeline, and Budgeting for Research.
- **Academic Writing and Citation Styles:** APA, MLA, Chicago, and Harvard referencing styles.
- **Presenting Research Findings:** Writing and presenting research papers, posters, and oral presentations at academic conferences.
- **Avoiding Plagiarism:** Importance of Originality, Citation Practices, and Ethical Use of Sources.

#### **Unit VI: Ethical Issues in Research**

- **Ethics in Research:** Ethical Principles, Institutional Review Boards (IRB), Research Integrity.
- **Conflict of Interest and Bias:** Recognizing and addressing biases in data collection, analysis, and reporting.
- **Data Integrity and Misuse:** Issues related to falsification, fabrication, and manipulation of data.
- **Research Misconduct:** Types of misconduct and how to avoid them.

#### **Suggested Books:**

1. **"Research Methodology: A Step-by-Step Guide for Beginners"** by Ranjit Kumar
2. **"Research Methodology: Methods and Techniques"** by C.R. Kothari
3. **"Qualitative Research Methods for the Social Sciences"** by Bruce L. Berg
4. **"The Craft of Research"** by Wayne C. Booth, Gregory G. Colomb, and Joseph M. Williams
5. **"Research Methods in Education"** by Louis Cohen, Lawrence Manion, and Keith Morrison
6. **"Practical Research: Planning and Design"** by Paul D. Leedy and Jeanne Ellis Ormrod

# **Publication Ethics and Emerging Trends in Research (BL406B)**

**Sub. Code: BL406B**

**L -4, C -4**

## **Course Objectives:**

- To provide students with a comprehensive understanding of ethical issues in research and publication.
- To explore emerging trends in research methodologies, technology, and publication processes.
- To develop skills in ethical decision-making, responsible conduct of research, and academic writing.
- To prepare students to navigate the complex landscape of modern academic publishing, including open access, peer review, and copyright issues.

## **Unit I: Introduction to Research Ethics**

- **Overview of Research Ethics:** Importance of ethics in research and its role in ensuring integrity, trust, and quality.
- **Ethical Guidelines for Research:** Overview of key ethical principles like respect for persons, beneficence, and justice.
- **Ethical Approval:** Institutional Review Boards (IRB) and ethics committees.
- **Plagiarism:** Definition, types, consequences, and how to avoid it.
- **Authorship and Acknowledgments:** Determining authorship, responsibilities of authors, and proper acknowledgment of contributions.

## **Unit II: Ethical Challenges in Research**

- **Fabrication and Falsification of Data:** Distinguishing between ethical and unethical research practices.
- **Conflicts of Interest:** Identifying and managing conflicts in research and publishing.
- **Data Management and Privacy:** Ethical handling of sensitive data, participant confidentiality, and consent.
- **Research Misconduct:** Types of misconduct (plagiarism, data falsification, authorship disputes), and the process of investigation and reporting.
- **Reproducibility and Transparency:** Ensuring research findings can be replicated and are reported transparently.

### **Unit III: Publication Ethics**

- **Principles of Ethical Publishing:** Fairness, transparency, and accountability in publishing.
- **Peer Review Process:** The role of peer review in ensuring quality and integrity in scientific publishing.
- **Publishing Guidelines:** How to select journals, manuscript preparation, and submission processes.
- **Open Access Publishing:** Definition, advantages, disadvantages, and open-access policies.
- **Copyright and Intellectual Property:** Ownership of research, copyright laws, and licensing (Creative Commons, etc.).

### **Unit IV: Emerging Trends in Research**

- **Digital Transformation in Research:** The impact of technology on research methodologies, data collection, and analysis (e.g., big data, AI, machine learning).
- **Interdisciplinary Research:** Growing importance of interdisciplinary approaches and collaborative research.
- **Citizen Science and Crowdsourcing:** Involving the public in research through citizen science platforms and online collaboration.
- **Preprint Repositories:** Role of preprints in accelerating research dissemination and their ethical implications.
- **Research Integrity in the Digital Age:** Addressing issues related to online publication, social media, and open-source tools.

### **Unit V: Ethical Issues in Emerging Research Areas**

- **Ethics of Artificial Intelligence and Machine Learning in Research:** Ethical concerns in AI-driven research, algorithmic bias, and transparency.
- **Ethics of Genetic and Biomedical Research:** Ethical challenges in genomics, biotechnology, and biomedical research, including gene editing (CRISPR).
- **Environmental Sustainability and Research:** Ethical issues related to climate change, environmental studies, and sustainable development.
- **Ethics of Social Media and Networking in Research:** Ethical use of social media platforms for data collection, research dissemination, and networking.

### **Unit VI: Responsible Conduct of Research**

- **Promoting Research Integrity:** Best practices for ensuring ethical conduct in research.
- **Training and Education in Research Ethics:** Importance of ethics training for researchers at all levels.
- **Role of Institutions in Promoting Ethical Research:** Policies, guidelines, and resources provided by academic and research institutions.

- **Research Ethics in Global Context:** Ethical challenges in international collaborations, including differences in cultural, legal, and institutional contexts.
- **Case Studies and Ethical Dilemmas:** Analyzing real-world cases of ethical dilemmas in research and publication.

**Suggested Books:**

1. **"Publication Ethics: A Primer for Researchers"** by Philip M. Davis
2. **"Ethics in Research & Publication"** by R. S. Dhillon and S. G. R. Murthy
3. **"Research Ethics: A Psychological Approach"** by S. R. Behnke
4. **"Responsible Conduct of Research"** by Adil E. Shamoo and David B. Resnik
5. **"Research Ethics in the Digital Age"** by Jeannette Pols and Sophia de Boer
6. **"Ethics in Science and Engineering"** by L. R. Andrew
7. **"Handbook of Research Ethics and Scientific Integrity"** edited by Barbara Koenig, Sandra Soo-Jin Lee, and Philip K. Robb

---

## **Interpretation of Statutes**

**Sub. Code: BL408**

**L – 4, C –4.**

### **Course Objectives**

- The Interpretation of Statutes course aims to provide students with a comprehensive understanding of the methods, principles, and tools used to interpret and apply statutes (laws made by a legislative body).
- The course focuses on equipping students with the skills needed to interpret legal texts, identify legislative intent, and resolve ambiguities or conflicts in statutes. Students will study the various canons of statutory interpretation and rules of construction used by courts to ascertain the meaning of statutes. The course will also delve into legislative history, judicial precedents, and the interaction between statutory law and constitutional principles.
- The Students will explore the role of judges in interpreting statutes, the importance of context in legal texts, and the balance between the literal and purposive approaches to interpretation.
- The Students will be able to confidently apply these interpretative techniques to real-world legal issues and understand how judicial interpretation can shape the application of law in various contexts.

### **Unit-I:**

Meaning and Definition of Statutes — Classification of Statues — Meaning and Definition of Interpretation — General Principles of Interpretation

### **Unit-II:**

Grammatical Rule of Interpretation — Golden Rule of Interpretation

### **Unit-III:**

Interpretation of Penal Statutes and Statutes of Taxation — Beneficial Construction — Construction to avoid conflict with other provisions

### **Unit-IV:**

External Aids to Interpretation — Statement of objects of legislation, Legislative debates, identification of purpose sought to be achieved through legislation — Internal Aids to Construction

**Suggested Readings:**

1. Vepa P. Sarathi: Interpretation of Statutes, Eastern Book Co, 4th Edition, 1976.
2. Chatterjee: Interpretation of Statutes.
3. G.P. Singh: Principles of Statutory Interpretation, Wadhwa and Company, 8th Ed., 2001.

\*\*\*

## **PROFESSIONAL ETHICS AND PROFESSIONAL ACCOUNTING SYSTEM**

**Sub.Code:BL410**

**L -4, C-4**

### **Course Objectives**

- Students will be able to critically analyze ethical dilemmas and apply ethical principles real-world situations in various professional settings.
- They will be equipped with the knowledge to make ethically sound decisions, ensure compliance with professional codes of conduct, and contribute to the overall integrity and trustworthiness of their chosen profession.
- The course will prepare students to act responsibly, maintain high moral standards, and uphold the values of fairness, honesty, and social responsibility in their professional lives.
- Learn how to build a career based on ethical principles and professional integrity.

The written examination of this second clinical paper will be for 60 marks and the remaining 40 marks for record and viva voce. There shall be classroom instruction on the following topics:

**Unit-I:** Development of Legal Profession in India — The Advocates Act, 1961 — Right to Practice — a right or privilege? - Constitutional guarantee under Article 19(1) (g) and its scope — Enrolment and Practice — Regulation governing enrolment and practice

**Unit-II:** Seven lamps of advocacy — Advocates duties towards public, clients, court, and other advocates and legal aid ;

**Unit-III:** Disciplinary proceedings — Professional misconduct — Disqualifications — Functions of Bar Council of India/State Bar Councils in dealing with the disciplinary proceedings

**Unit-IV:** Accountancy for Lawyers — Nature and functions of accounting —

**Record (30 marks):** Each student shall write 50 selected opinions of the Disciplinary Committees of Bar Councils and 10 major judgments of the Supreme Court of India in the Record. The Record shall be evaluated for 30marks by the teacher concerned. The Records of the students duly certified by the University Representative appointed by the Controller

of Examinations in consultation with the Chairman, BOS in Law shall be submitted to the University before the commencement of the theory examinations.

**Viva- voce (10marks):** There shall be viva-voce examination on the above components. The Viva-voce Board consisting of (i) Principal of the College/the teacher concerned (ii) University Representative appointed by the Controller of Examinations in consultation with the Chairman, BOS in Law, and (iii) an advocate with 10 years' experience at the Bar shall evaluate the student in the Viva. The proceedings of the viva-voce shall be recorded.

**Note: All the three components of the paper (written examination, submission of record and attendance in viva) shall be compulsory.**

### **Suggested Reading**

- **"Professional Ethics in Accounting"** by Steven M. Mintz
- A comprehensive guide to the ethical principles and standards governing the accounting profession, with case studies and examples.
- **"Ethics in Accounting: A Decision-Making Approach"** by Gordon Klein
- Focuses on decision-making in accounting ethics, discussing real-world dilemmas and ethical frameworks.
- **"Ethical Obligations and Decision Making in Accounting"** by Steven M. Mintz and Roselyn E. Morris
- Explores ethical obligations for accountants, with an emphasis on ethical decision-making processes.
- **"Accounting Ethics"** by Rick B. M. G. (Gerrit) Gouwenberg
- A study of ethical issues in accounting, examining key moral theories and the role of ethics in accounting practices.
- **"The Ethics of Accounting and Finance: A Guide for Managers and Investors"** by J. Edward Ketz
- Discusses the role of ethics in financial decision-making, including the impact of accounting systems on corporate governance.

# Data Analysis-II BL 410A

**Sub. Code: BL 410A**

**L -4, C-4**

## Course Objectives

- Learn advanced data cleaning and preprocessing techniques.
- Perform exploratory and statistical data analysis.
- Apply machine learning methods for data interpretation.
- Develop skills in Python for data manipulation and visualization.
- Analyze real-world data for informed decision-making.

## Unit 1: Data Pre-processing and Cleaning

- Handling Missing Data
- Outliers Detection and Treatment
- Data Transformation: Scaling, Normalization, and Encoding
- Data Integration and Reduction Techniques

## Unit 2: Advanced Data Visualization

- Exploratory Data Analysis (EDA) Techniques
- Visualization Tools: Matplotlib, Seaborn, Plotly
- Multidimensional Data Visualization
- Dashboards and Interactive Visualizations

## Unit 3: Statistical Analysis

- Inferential Statistics: Hypothesis Testing and Confidence Intervals
- Correlation and Regression Analysis
- Analysis of Variance (ANOVA)
- Non-parametric Statistical Methods

## Unit 4: Machine Learning Basics

- Introduction to Supervised and Unsupervised Learning
- Linear and Logistic Regression
- Clustering Techniques: K-Means, Hierarchical Clustering
- Decision Trees and Random Forests

## Unit 5: Data Analysis with Python

- Working with Pandas for Data Manipulation
- NumPy for Numerical Computation
- Introduction to Scikit-Learn for Machine Learning
- Case Studies: Applying Python to Real-World Data

## Suggested Readings

- **"Python for Data Analysis"** by Wes McKinney
- A comprehensive guide to using Python's Pandas library for data analysis.
- **"Practical Statistics for Data Scientists"** by Peter Bruce and Andrew Bruce
- Covers statistical methods and their application in data science.
- **"An Introduction to Statistical Learning"** by Gareth James, Daniela Witten, Trevor Hastie, and Robert Tibshirani
- A beginner-friendly introduction to statistical and machine learning techniques.
- **"Data Science from Scratch"** by Joel Grus
- Introduces fundamental concepts of data science with Python.
- **"Hands-On Machine Learning with Scikit-Learn, Keras, and TensorFlow"** by Aurélien Géron
- Focuses on machine learning techniques with practical Python implementation.

## **Computer Programming-II BL410B**

**Sub.Code:BL410B**

**L -4, C-4**

### **Course Objectives**

- Learn advanced programming techniques and concepts.
- Implement and analyse data structures and algorithms.
- Apply object-oriented programming principles.
- Work with file handling and database integration.
- Develop problem-solving skills through practical projects.

### **Unit 1: Advanced Programming Concepts**

- Recursion: Principles, Examples, and Applications
- Pointers and Memory Management (For C/C++)
- Dynamic Memory Allocation
- Error Handling and Debugging Techniques

### **Unit 2: Data Structures**

- Arrays, Linked Lists, Stacks, and Queues
- Trees and Graphs: Basics and Traversals
- Hashing Techniques
- Searching and Sorting Algorithms

### **Unit 3: Object-Oriented Programming (OOP)**

- Principles of OOP: Encapsulation, Inheritance, Polymorphism, and Abstraction
- Class and Object Concepts
- Constructors, Destructors, and Method Overloading
- Advanced Concepts: Interfaces and Abstract Classes

### **Unit 4: File Handling and Data Storage**

- File Operations: Reading, Writing, and Updating Files
- Binary and Text Files
- Random Access File Processing
- Serialization and Deserialization

### **Unit 5: Introduction to Databases and SQL**

- Basics of Database Management Systems (DBMS)
- SQL Syntax: Create, Read, Update, and Delete Operations
- Integrating SQL with Programming Languages
- Practical Case Studies

# Python Programming-II

Sub.Code: BL410C

L -4, C-4

## Course Objectives

- Master advanced Python programming concepts and techniques.
- Work with complex data structures and file handling.
- Apply object-oriented programming for real-world applications.
- Integrate Python with databases and APIs.
- Develop, debug, and test robust Python applications.

## Unit 1: Advanced Python Concepts

- Iterators, Generators, and Decorators
- Context Managers (`with` Statement)
- Working with Dates and Times (`date` `time` module)
- Regular Expressions (`re` module)

## Unit 2: Advanced Data Structures

- Nested Data Structures: Lists of Lists, Dictionaries of Dictionaries
- Collections Module: `namedtuple`, `deque`, `Counter`, and `defaultdict`
- Advanced Operations with Sets and Dictionaries
- Working with JSON and XML Data

## Unit 3: Object-Oriented Programming in Python

- Advanced OOP Features: Method Overloading, Operator Overloading
- Class Methods and Static Methods
- Multiple Inheritance and MRO (Method Resolution Order)
- Abstract Classes and Interfaces (`abc` module)

## Unit 4: Exception Handling and Debugging

- Advanced Exception Handling: Custom Exceptions
- Debugging Techniques and Tools (`pdb` module)
- Logging for Application Debugging (`logging` module)
- Writing Robust Python Code

## Unit 5: Working with Files and Data

- Advanced File Handling: File Modes, Working with Binary Files
- CSV, Excel, and Other File Formats (`csv`, `openpyxl`)
- Data Persistence with SQLite (`sqlite3` module)
- Introduction to Data Analysis with Pandas

## Suggested Readings

- **"Fluent Python"** by Luciano Ramalho
- A comprehensive guide to advanced Python programming techniques and best practices.
- **"Python Cookbook"** by David Beazley and Brian K. Jones
- Provides practical solutions to common Python programming challenges, with a focus on advanced topics.
- **"Python 3 Object-Oriented Programming"** by Dusty Phillips
- Focuses on object-oriented design and advanced OOP concepts in Python.
- **"Effective Python: 59 Specific Ways to Write Better Python"** by Brett Slatkin
- Offers actionable insights and best practices for writing efficient and maintainable Python code.
- **"Automate the Boring Stuff with Python"** by Al Sweigart
- While it's an introductory text, it provides useful real-world examples for automating tasks with Python.
- **"Python for Data Analysis"** by Wes McKinney
- A great resource for learning data analysis with Python, focusing on libraries like Pandas and NumPy.

# **SEMESTERIX**

**Law of Taxation**

**Sub. Code: BL 501**

**L4, C4**

**Course Objectives**

- The Law of Taxation course aims to provide students with a comprehensive understanding of the fundamental principles, concepts, and laws governing taxation. The course explores various types of taxes, the legal framework for tax administration, and the rights and obligations of taxpayers and the state.
- Students will gain the knowledge necessary to analyze, interpret, and apply tax laws, understand tax compliance, and engage in the practical application of tax law in various legal contexts.
- The course is designed to help students develop critical thinking skills regarding the tax system, enhance their understanding of tax policy, and prepare them for careers in taxation law, corporate tax advisory, or public finance.
- Familiarize students with the structure and types of taxes in different jurisdictions, including direct taxes (e.g., income tax, corporate tax) and indirect taxes (e.g., sales tax, VAT).

**Unit – I: Introduction**

a. Definitions

b. Basis of Income

- Charge of Income Tax
- Scope of total Income
- Residential status of an assessee
- Dividend Income

**Unit – II: Incomes which do not form part of total Income**

a. Incomes not included in total income

b. Special provision in respect of newly established industrial undertaking in free trade zones

c. Special provision in respect of newly established hundred per cent export oriented undertaking

d. Income from property held for charitable or religious purpose

e. Income of trusts or institutions from contributions

f. Conditions as to registration of trusts, etc.

**Unit – III: Heads of Income**

a. Salaries

b. Income from house property

c. Profits and gains of business or profession

## B.A. – LL.B. (5 YEARS INTEGRATED COURSE) SYLLABUS

---

### Unit – IV: Tax Authorities

#### Suggested Readings

##### Text books:

1. Dinesh Ahuja and Ravi Gupta, Systematic approach to Income Tax, (Latest Edition)
2. Singhanian, Student Guide to Income Tax, Taxmann (Latest Edition).

##### References:

1. N.A. Palkwllah's Income Tax Act (Two Volume)
2. Iyer's Income Tax Act
3. Chaturvedi's Direct Tax Act (Three Volume)

\*\*\*\*\*

**LAW OF PROPERTY**

**Sub. Code: BL 503**

**L – 4, C – 4.**

**Course Objectives**

- I. The students will have a solid understanding of the legal principles surrounding property rights, ownership, transfer, and dispute resolution.
- II. They will be equipped to navigate the legal complexities of property transactions, including real estate deals, leasing arrangements, inheritance issues, and intellectual property.
- III. The students will be able to critically analyze property laws in the context of social justice, economic development, and legal protections for individuals and communities.
- IV. This knowledge will prepare them for careers in property law, real estate law, and related fields, enabling them to address both individual and societal property issues effectively.

**Unit-I:**

**Meaning** and concept of property — Kinds of property — Transfer of property — Transferable and non-transferable property — Who can transfer — Operation of transfer — Mode of transfer — Conditional transfer — Void and unlawful conditions — Condition precedent and condition subsequent

**Unit-II:**

Doctrine of Election — Covenants — Transfer by ostensible owner — Doctrine of Feeding the Grant by Estoppel — Doctrine of Lis Pendens

**Unit-III:**

Sale - Essential features — Mode of Sale — Rights and liabilities of parties. Mortgage - Kinds of Mortgages - Rights and liabilities of mortgagor and mortgagee

**Unit-IV:**

Lease — Essential features — Kinds of leases — Rights and liabilities of lessor and lessee — Termination of lease — forfeiture — Exchange — Gifts

**Suggested Readings:**

1. Mulla: Transfer of Property, Butterworths Publications.
2. Subba Rao GCV: Commentaries on the Transfer of Property Act.
3. KrishnaMenon: Law of Property.
4. Upadhyas Common Matrix of Transfer of Property.

**ENVIRONMENTAL LAWS**

**Sub. Code: BL 505**

**L – 4, C – 4.**

**Course Objectives**

- The Environmental Law course aims to provide students with a thorough understanding of the legal frameworks, principles, and policies designed to protect the environment and regulate human impact on natural resources.
- The course covers both domestic and international environmental law, with a focus on the role of law in promoting sustainable development and addressing key issues such as pollution control, biodiversity conservation, climate change, natural resource management, and environmental justice.
- The objective is to equip students with the legal knowledge and analytical skills needed to navigate the complexities of environmental governance, as well as to promote awareness of the challenges of balancing economic development with environmental protection.
- Students will learn to interpret and apply environmental laws and policies and to critically assess their effectiveness in addressing contemporary environmental issues.

**Unit-I**

The meaning and definition of environment – Ecology - Ecosystems-Biosphere - Biomes - Ozone depletion - Global Warming - Climatic changes - Need for the preservation, conservation and protection of environment

**Unit-II**

Common Law remedies against pollution - trespass, negligence, and theories of Strict Liability & Absolute Liability - Relevant provisions of I.P.C. and Cr.P.C. and C.P.C., for the abatement of public nuisance in pollution cases

**Unit-III**

The law relating to the preservation, conservation and protection of forests, wild life and endangered species, marine life, coastal ecosystems and lakes etc. - Prevention of cruelty towards animals - The law relating to prevention and control of water pollution - Air Pollution - Environment pollution control mechanism - Law relating to environment protection

**Unit-IV:**

Art. 48A and Art. 51A(g) of the Constitution of India - Right to wholesome environment - Right to development - Restriction on freedom of trade, profession, occupation for the protection of environment - Immunity of Environment legislation from judicial scrutiny(Art.31C) - Legislative powers of the Centre and State Government

## B.A. – LL.B. (5 YEARS INTEGRATED COURSE) SYLLABUS

---

### Unit-V

International Environmental Regime - Transactional Pollution - State Liability - Customary International Law - Liability of Multinational Corporations/Companies - Stockholm Declaration on Human Environment, 1972.

### Suggested Readings:

1. Paras Diwan: Studies on Environmental Cases.
  2. S.N. Jain (ed.): Pollution Control and the Law.
  3. Armin Rosencranz and Shyam Divan: Environmental Law and Policy in India.
  4. A. Agarwal (ed.): Legal Control of Environmental Pollution
  5. Chetan Singh Mehta: Environmental Protection and Law
  6. V.K. Krishna Iyer: Environment Pollution and Law
  7. Shah: Environmental Law
  8. Paras Diwan: Environmental Law and Policy in India, 1991
  9. Dr. N. Maheshwara Swamy, Environmental Law, Asia Law House, Hyderabad.
- .....

**Public Relations BL 505A**

**Sub. Code: BL 505A**

**L – 4, C – 4.**

**Course Objectives:**

- To provide students with an understanding of the theory and practice of public relations.
- To develop skills in strategic communication, media relations, and crisis management.
- To introduce students to PR tools and techniques used in crafting messages for different audiences.
- To enable students to understand and apply PR ethics and professional standards.
- To examine how PR integrates with marketing, advertising, and other aspects of communication within organizations.

**Unit 1: Introduction to Public Relations**

**1. Understanding Public Relations:**

- Definition of PR and its importance in organizational communication.
- The evolution and history of public relations.
- Key functions of PR: Media relations, event planning, crisis management, and community outreach.

**2. The Role of PR in Modern Organizations:**

- PR as a tool for brand building and reputation management.
- The relationship between PR and other communication fields like advertising and marketing.
- PR in non-profit, government, and corporate sectors.

**3. Key PR Theories and Models:**

- Press Agency/Publicity Model, Public Information Model, Two-Way Asymmetrical Model, and Two-Way Symmetrical Model.
- Models of communication in PR: Shannon-Weaver, Berlo's SMCR Model, etc.

**Unit 2: Media Relations and Communication Channels**

**1. Working with the Media:**

- The role of media in PR: Print, broadcast, and digital media.
- Building and maintaining relationships with journalists and media outlets.
- Writing press releases, media kits, and pitch letters.
- Conducting interviews and handling media inquiries.

**2. Communication Channels in PR:**

- Owned, earned, and paid media.

# B.A. – LL.B. (5 YEARS INTEGRATED COURSE) SYLLABUS

---

- Digital PR: Social media, blogs, podcasts, and websites.
- Importance of storytelling in PR: Crafting compelling narratives for various audiences.
- 3. Media Ethics and Laws:**
  - Ethical issues in media relations: Transparency, truth, and accuracy.
  - Legal aspects of PR: Copyright, defamation, privacy laws.
  - The role of public relations professionals in upholding ethical media practices.

## **Unit 3: PR Campaigns and Strategic Communication**

- 1. Planning and Implementing PR Campaigns:**
  - The process of developing a PR campaign: Research, planning, execution, and evaluation.
  - Setting objectives and defining target audiences.
  - Creating PR materials: Newsletters, speeches, brochures, and websites.
- 2. Tactics and Tools in PR:**
  - Press conferences, media interviews, and special events.
  - Social media and digital tools: Content creation, blogging, and influencer partnerships.
  - Using measurement and analytics to track campaign success.
- 3. Evaluating PR Campaign Effectiveness:**
  - Techniques for evaluating PR efforts: Media coverage, public perception, surveys.
  - ROI in public relations: Quantifying impact and success.
  - Case studies of successful and failed PR campaigns.

## **Unit 4: Crisis Communication and Reputation Management**

- 1. Understanding Crisis Communication:**
  - Definition and types of crises: Natural disasters, scandals, product failures, etc.
  - The role of PR in crisis management: Anticipation, response, and recovery.
  - The crisis communication process: Message creation, media management, and stakeholder engagement.
- 2. Developing Crisis Communication Plans:**
  - Importance of a crisis communication strategy and a crisis communication team.
  - Key principles in handling crises: Honesty, timeliness, transparency, and consistency.
  - Using media and social media effectively during a crisis.
- 3. Reputation Management and Brand Protection:**
  - The significance of reputation in public relations.
  - Strategies for managing and maintaining a positive public image.
  - Case studies of organizations that effectively managed their reputation.

## Unit 5: PR in the Digital Age

### 1. Digital PR and Social Media:

- The rise of digital PR: The impact of blogs, social media, and podcasts.
- Creating content for digital platforms: Best practices for blogs, Twitter, Instagram, and Facebook.
- Social media engagement: Building online communities and responding to online criticism.

### 2. Online Reputation and Influencer Marketing:

- The role of influencers and bloggers in modern PR.
- Managing online reviews and user-generated content.
- The importance of SEO and content marketing in PR efforts.

### 3. Ethics and Legal Considerations in Digital PR:

- Ethical issues in social media communication: Transparency, privacy, and disclosure.
- Legal aspects: Copyright, defamation, and social media laws.

## Suggested Books:

- *Public Relations: Strategies and Tactics* by Dennis L. Wilcox and Glen T. Cameron.
- *The New Rules of Marketing & PR* by David Meerman Scott.
- *Crisis Communications: A Casebook Approach* by Kathleen Fearn-Banks.
- *Public Relations: Strategies and Tactics* by Dennis L. Wilcox and Glen T. Cameron.
- *Public Relations: Strategies and Tactics* by Dennis L. Wilcox and Glen T. Cameron.
- *The New Rules of Marketing & PR* by David Meerman Scott.
- *Ethics in Public Relations: Responsible Advocacy* by Patricia J. Parsons.
- *Public Relations Ethics: Theory and Practice* by M. J. Bowen.
- *Public Relations Campaigns: An Integrated Approach* by J. K. Grunig.
- *Effective Public Relations* by Scott M. Cutlip and Allen H. Center

# B.A. – LL.B. (5 YEARS INTEGRATED COURSE) SYLLABUS

---

## Global Politics BL 505B

Sub. Code: BL 505B

L – 4, C – 4.

### Course Objectives:

- To introduce students to the fundamental concepts and theories in global politics.
- To examine global political structures, power dynamics, and governance mechanisms.
- To provide an understanding of contemporary issues such as conflict, security, development, and human rights.
- To analyze the role of international institutions, states, and non-state actors in shaping global politics.
- To foster critical thinking about the impact of globalization and international political change.

### Unit 1: Introduction to Global Politics

#### 1. Understanding Global Politics:

- Definition and scope of global politics.
- Theories and approaches in international relations: Realism, Liberalism, Constructivism, Marxism.
- The concept of the state and the role of sovereignty in global politics.

#### 2. Key Actors in Global Politics:

- The state as a central actor in international relations.
- Non-state actors: International organizations, multinational corporations, civil society, NGOs, and individuals.
- Transnational issues and the role of non-state actors in addressing them.

#### 3. Globalization:

- Definition and key features of globalization.
- The impact of globalization on politics, economics, and culture.
- Debates about the benefits and drawbacks of globalization.

### Unit 2: Theories and Approaches in International Relations

#### 1. Realism and Liberalism:

- Key principles of Realism: Power, national interest, and anarchy.
- Key principles of Liberalism: Cooperation, institutions, and interdependence.
- Comparing Realism and Liberalism in understanding state behavior.

#### 2. Constructivism and Marxism:

## B.A. – LL.B. (5 YEARS INTEGRATED COURSE) SYLLABUS

---

- Constructivism: The role of ideas, identities, and norms in shaping global politics.
  - Marxism and Critical Theory: Understanding global politics through economic structures and class struggle.
  - Feminist and postcolonial approaches to global politics.
3. **Post-Colonialism and Global Governance:**
- The legacy of colonialism in shaping global politics.
  - Global governance and the role of institutions in maintaining order.

### Unit 3: Global Governance and International Institutions

1. **The United Nations and Global Governance:**
  - History and structure of the United Nations.
  - The role of the UN in peacekeeping, human rights, and development.
  - The Security Council and its decision-making process.
2. **Regional Organizations and International Law:**
  - The European Union, African Union, ASEAN, and other regional organizations.
  - International law and its role in global politics: Human rights law, international humanitarian law, and the International Criminal Court.
3. **International Financial Institutions:**
  - The International Monetary Fund (IMF), World Bank, and World Trade Organization (WTO).
  - The role of these institutions in global economic governance.
  - Criticisms and challenges facing these institutions.

### Unit 4: Security and Conflict in Global Politics

1. **Theories of Security:**
  - Traditional security vs. human security.
  - The role of military power in global politics.
  - The security dilemma and arms races.
2. **Global Conflict and War:**
  - Causes of conflict: Ideology, resources, territorial disputes, and ethnic tensions.
  - The role of international institutions in conflict resolution.
  - Case studies of recent conflicts (e.g., Syria, Ukraine, Afghanistan).
3. **Terrorism and Non-Traditional Security Threats:**
  - The rise of global terrorism and its impact on international politics.
  - Non-state actors in global conflict.

# B.A. – LL.B. (5 YEARS INTEGRATED COURSE) SYLLABUS

---

- Cybersecurity and environmental threats as emerging security challenges.

## **Unit 5: Global Political Economy**

### **1. Theories of International Political Economy (IPE):**

- Liberalism, Mercantilism, and Structuralism in understanding the global economy.
- The role of multinational corporations in global economic politics.
- The relationship between politics and economics in a globalized world.

### **2. Global Trade and Development:**

- The World Trade Organization (WTO) and global trade agreements.
- Global poverty, inequality, and the role of development aid.
- Sustainable development and the United Nations' SDGs (Sustainable Development Goals).

### **3. Global Financial Crises and the Role of Global Institutions:**

- The 2008 financial crisis and its global impacts.
- The role of international financial institutions (IMF, World Bank) in global economic stability.
- Issues of debt, austerity, and development in the global South.

## **Unit 6: Human Rights and Global Justice**

### **1. The Concept of Human Rights:**

- Universalism vs. relativism in human rights.
- The role of international organizations in human rights protection (e.g., UN, NGOs).
- Case studies: Human rights violations in different regions (e.g., Myanmar, China, Africa).

### **2. Global Justice and Ethics:**

- Theories of global justice: Cosmopolitanism, communitarianism, and global citizenship.
- Ethical challenges in global politics: Intervention, sovereignty, and the "responsibility to protect."
- Debates on global inequality and justice.

### **3. Humanitarian Intervention and Peacekeeping:**

- The ethical and legal dimensions of humanitarian intervention.
- The role of international organizations in peacekeeping and post-conflict reconstruction.
- Case studies: Rwanda, Bosnia, Libya.

## B.A. – LL.B. (5 YEARS INTEGRATED COURSE) SYLLABUS

---

### Suggested Books:

- *The Globalization of World Politics* by John Baylis, Steve Smith, and Patricia Owens.
- *Global Environmental Politics* by Pamela S. Chasek, David L. Downie, and Janet Welsh Brown.
  
- *Global Politics* by Andrew Heywood.
- *The Globalization of World Politics* by John Baylis, Steve Smith, and Patricia Owens.
- *International Relations* by Joshua S. Goldstein.
- *International Human Rights: Law, Policy, and Process* by Rhona K. M. Smith.
- *The Ethics of Global Development* by David Held.
- *Security Studies: An Introduction* by Paul D. Williams.
- *The Globalization of World Politics* by John Baylis, Steve Smith, and Patricia Owens.

**Introduction to Sociology BL 505C**

**Sub. Code: BL 505C**

**L – 4, C – 4.**

**Course Objectives:**

- To provide students with an understanding of the key concepts, theories, and perspectives in sociology.
- To explore the structure and functions of social institutions and their impact on individual behavior.
- To examine how socialization, culture, and identity shape social interactions.
- To develop critical thinking and analytical skills regarding contemporary social issues.
- To familiarize students with basic research methods in sociology.

**Unit 1: Introduction to Sociology and Sociological Imagination**

**1. Sociology**

- Definition and scope of sociology.
- The significance of sociology in understanding human behavior and society.
- Sociology as a discipline: Interdisciplinary connections with anthropology, psychology, economics, and political science.

**2. The Sociological Imagination:**

- C. Wright Mills' concept of the sociological imagination.
- Understanding the relationship between individual experiences and larger social forces.
- The personal troubles vs. public issues framework.

**3. Sociological Perspectives:**

- Structural Functionalism: Key ideas and major theorists (e.g., Emile Durkheim, Talcott Parsons).
- Conflict Theory: Key ideas and major theorists (e.g., Karl Marx, Max Weber).
- Symbolic Interactionism: Key ideas and major theorists (e.g., George Herbert Mead, Erving Goffman).

## Unit 2: Social Structure and Socialization

1. **The Structure of Society:**
  - Social structure: Role, status, norms, and values.
  - Social institutions: Family, education, religion, economy, and government.
  - Social stratification and inequality: Class, caste, race, and gender.
2. **Socialization:**
  - Definition and importance of socialization.
  - The process of socialization: Agents of socialization (family, peers, schools, media).
  - Socialization across the life course: Childhood, adolescence, adulthood, and old age.
  - Theories of socialization: Freud, Piaget, Cooley, Mead.
3. **Culture and Society:**
  - Culture and its components: Material and non-material culture.
  - Cultural norms, values, and symbols.
  - Cultural diversity and multiculturalism.
  - Ethnocentrism and cultural relativism.

## Unit 3: Social Institutions

1. **Family:**
  - Definition and functions of the family as a social institution.
  - Types of family structures: Nuclear, extended, single-parent, etc.
  - Changes in family patterns: Marriage, divorce, parenting.
  - Family and socialization.
2. **Education:**
  - The role of education in society: Socialization, cultural transmission, social control.
  - Education and inequality: Class, gender, race, and educational outcomes.
  - Theories of education: Functionalism, Conflict Theory, and Symbolic Interactionism.
3. **Religion:**
  - The role of religion in society.
  - Different types of religion: Monotheism, polytheism, animism, etc.
  - Theories of religion: Durkheim, Marx, Weber.
  - Secularization and the role of religion in modern society.

## Unit 4: Social Change and Social Movements

### 1. Social Change:

- Definition and types of social change: Evolution, revolution, reform.
- Causes of social change: Technological advancements, social movements, economic and political factors.
- Theories of social change: Evolutionary, cyclical, and conflict theories.

### 2. Social Movements:

- Definition and characteristics of social movements.
- Types of social movements: Reform movements, revolutionary movements, resistance movements, and expressive movements.
- Major social movements in history: Civil rights movement, feminist movement, environmental movement.

### 3. Globalization and Social Change:

- The impact of globalization on society: Economic, political, and cultural changes.
- Social consequences of globalization: Global inequality, migration, cultural homogenization.
- Technology, the internet, and social media as agents of social change.

## Unit 5: Social Problems and Issues

### 1. Defining Social Problems:

- Characteristics of social problems: Social deviance, crime, inequality, poverty.
- The role of sociological perspective in understanding social problems.
- The social construction of social problems.

### 2. Contemporary Social Issues:

- Poverty, unemployment, and economic inequality.
- Crime and deviance: Theories of crime (strain theory, differential association theory, labeling theory).
- Gender inequality: Women's rights, sexual harassment, gender roles.
- Racism, ethnic conflict, and discrimination.
- Environmental degradation and climate change.

### 3. Addressing Social Problems:

- Social policy and the role of the state in addressing social issues.
- The role of non-governmental organizations (NGOs) and civil society in addressing social problems.
- Social reforms and the role of social movements in effecting change.

**Unit 6: Research Methods in Sociology**

**1. Introduction to Sociological Research:**

- The importance of research in sociology.
- Types of research methods: Quantitative and qualitative research.
- Research process: Problem formulation, hypothesis testing, data collection, and analysis.

**2. Quantitative and Qualitative Research:**

- Surveys, experiments, and statistical analysis.
- Participant observation, ethnography, and case studies.
- Strengths and limitations of different research methods.

**3. Ethics in Sociological Research:**

- Ethical considerations in sociological research: Consent, confidentiality, and researcher bias.
- The role of ethics committees and institutional review boards (IRBs).

**Suggested Books:**

- *Sociology: A Global Introduction* by John J. Macionis and Ken Plummer.
- *Introduction to Sociology* by Anthony Giddens.
- *Social Problems* by John J. Macionis.
- *Sociological Research: Methods and Techniques* by Ranjit Kumar.
- *The Practice of Social Research* by Earl Babbie.
- *Social Problems* by John J. Macionis.
- *The Sociology of Social Problems* by Joel Best.
- *Sociology: A Global Introduction* by John J. Macionis and Ken Plummer.
- *The Sociology of Religion* by Max Weber.

**LAW OF BANKING AND NEGOTIABLE INSTRUMENTS**

**Sub. Code: BL 507**

**L -4, C -4**

**Course objectives**

- By the end of the Law of Banking and Negotiable Instruments course, students will have acquired a comprehensive understanding of the legal principles governing banking operations, negotiable instruments, and financial transactions.
- They will be equipped to interpret, apply, and advise on banking laws in areas such as customer-banker relations, negotiable instruments transactions, dispute resolution, and regulatory compliance in the banking sector.
- The course will also prepare students for careers in banking law, corporate law, financial regulation, and legal practice related to financial institutions.
- Study the increasing emphasis on sustainable banking, green finance, and the role of banks in promoting social responsibility and environmental sustainability.

**Unit-I:**

History of the Banking Regulation Act — Salient features — Banking Business and its importance in modern times.

**Unit-II:**

Relationship between Banker and Customer — Debtor and Creditor Relationship — Fiduciary Relationship — Trustee and Beneficiary

**Unit-III:**

Cheques — Crossed Cheques — Account Payee — Banker's Drafts — Dividend Warrants — Postal order and money orders — Travelers cheques and circular notes — Negotiable instruments and deemed negotiable instruments

**Unit-IV:**

The Paying Banker — Statutory protection to Bankers — Forgeries—Collecting Banker -

**Suggested Readings:**

1. Tannan: Banking Law & Practice in India, 18th Edn., Orient Law House, New Delhi.
2. Avtar Singh: Negotiable Instruments, 3rd Edn., Eastern Book Company, Lucknow, 1997.
3. P.N.Varshney: Banking Law & Practice, 17th Edn. Sultan Chand & Sons, New Delhi.
4. Taxman: Law of Banking, India Law House

**DRAFTING, PLEADINGS AND CONVEYANCING**

**Sub. Code: BL 509**

**L -1,P-6, C -4**

**Course Objectives**

- Students will have acquired practical skills in legal writing and drafting essential for effective representation in both litigation and transactional legal work.
- They will be able to draft pleadings, court applications, legal contracts, conveyances, and other important legal documents with precision, clarity, and adherence to legal standards.
- This course will prepare students for careers as legal drafters, litigation lawyers, conveyancing solicitors, and transactional attorneys, equipping them with the skills to address a wide range of legal needs in real-world practice.
- Participate in simulated exercises for drafting real-world legal documents and pleadings, based on case studies and practical scenarios.

**Unit-I**

**Drafting:** General Principles of Drafting and relevant Substantive Rules shall be taught.

**Unit-II**

**Pleadings:** (i) Civil—Plaint, Written Statement, Interlocutory Application, Original Petition, Affidavit, Execution Petition, Memorandum of Appeal and Revision.

(ii) Petition under Article 226 and 32 of the Constitution of India - Drafting of Writ Petition and PIL Petition.

**Unit-III**

**Conveyancing:** Sale Deed, Mortgage Deed, Lease Deed,

**Practical Exercises**

Apart from teaching the relevant law, the course includes not less than 15 (fifteen) practical exercises in drafting of pleadings carrying a total of 45 marks (3 marks for each) and 15 (fifteen) exercises in conveyancing carrying another 45 marks (3 marks for each exercise) and remaining 10 marks for viva-voce.

These 30 exercises shall be recorded. Each student shall be served with different problems for the purpose of exercise. These exercises shall be assessed and marks may be allotted.

These exercises shall be evaluated by a common committee consisting of (i) Principal of the College/the concerned teacher (ii) University Representative appointed by the Controller of Examinations in consultation with the Chairman, Board of Studies in Law, O.U.; and (iii) an Advocate with 10 years' experience at the Bar. The same committee will also conduct viva-voce on the above concepts. The proceedings of the viva-voce shall be recorded.

**Note:**

## **B.A. – LL.B. (5 YEARS INTEGRATED COURSE) SYLLABUS**

---

- 1. Attendance of the students for viva-voce shall be compulsory.**
- 2. The above records certified by the University Representative appointed by the Controller of Examinations in consultation with the Chairman, BOS in Law shall be submitted to the University for Further Verification**

### **Suggested Readings:**

1. R.N. Chaturvedi : Pleadings and Conveyancing, Central Law Publications.
2. De Souza : Conveyancing, Eastern Law House.
3. Tiwari : Drafting, Pleading and Conveyancing, Central Law Agency.
4. Mogha: Indian Conveyancer, Eastern Law House.
5. Mogha: Law of Pleadings in India, Eastern Law House.
6. Shiv Gopal: Conveyancing, Precedents and Forms, Eastern Book Company

**Body Language-I BL 509A**

**Sub. Code: BL 509A**

**L -1, P-6, C -4**

**Course Objectives:**

- To introduce students to the concept and importance of body language.
- To understand the different types of non-verbal communication, including gestures, facial expressions, posture, and eye contact.
- To learn how body language affects interpersonal communication and how to use it effectively in various social and professional situations.
- To develop skills for interpreting body language in diverse settings.
- To enhance personal and professional communication through better understanding of non-verbal cues.

**Unit 1: Introduction to Body Language**

- 1. What is Body Language?**
  - Definition and significance of body language.
  - The role of non-verbal communication in human interactions.
  - Differences between verbal and non-verbal communication.
  - History and development of body language studies.
- 2. Types of Non-Verbal Communication:**
  - Kinesics (gestures, posture, facial expressions).
  - Proxemics (use of space).
  - Haptics (touch).
  - Chronemics (use of time).
  - Paralanguage (tone, pitch, pace of speech).
  - Eye contact and its significance.
- 3. Understanding the Impact of Body Language:**
  - The relationship between body language and emotions.
  - How body language influences perceptions, trust, and relationships.
  - The role of body language in different cultures.
  - Misinterpretations of body language.

## **Unit 2: Understanding Facial Expressions and Gestures**

### **1. Facial Expressions:**

- The six basic facial expressions (happiness, sadness, fear, anger, surprise, and disgust).
- Microexpressions: Understanding fleeting facial expressions.
- The role of facial expressions in emotional communication.
- How to recognize and respond to facial cues.

### **2. Gestures and Posture:**

- Types of gestures: Emblems, illustrators, affect displays, regulators, and adaptors.
- Understanding the meaning of common gestures.
- The significance of posture in body language.
- How posture conveys confidence, openness, or defensiveness.

### **3. Cultural Variations in Facial Expressions and Gestures:**

- Differences in body language across cultures.
- How to avoid cultural misunderstandings in cross-cultural communication.
- The universality and variability of facial expressions and gestures.

## **Unit 3: Eye Contact and Proxemics**

### **1. The Power of Eye Contact:**

- The importance of eye contact in communication.
- Eye contact and its relationship with confidence, interest, and trust.
- How to interpret eye movement and gaze.
- Cross-cultural differences in the use of eye contact.

### **2. Proxemics:**

- Understanding personal space: Intimate, personal, social, and public distances.
- How to use space effectively in social and professional contexts.
- The impact of crowding and proximity in communication.
- Territoriality and how body language signals ownership of space.

### **3. Body Language and Relationship Building:**

- How body language affects relationships and emotional connections.
- Using non-verbal communication to enhance personal relationships.
- The role of body language in conflict resolution and negotiation.

## Unit 4: Interpreting and Using Body Language Effectively

### 1. Reading Body Language:

- Identifying congruence between verbal and non-verbal communication.
- Techniques for interpreting body language in others.
- How to detect lies or deception through body language.
- The role of intuition in reading body language.

### 2. Using Body Language to Enhance Communication:

- How to use body language to convey authority, confidence, and openness.
- Non-verbal techniques for effective public speaking and presentations.
- How to use body language in interviews and professional settings.
- The role of mirroring and matching in building rapport.

### 3. Body Language in Social Situations:

- Understanding body language in social interactions (e.g., dating, friendships, networking).
- Reading body language cues in group dynamics.
- Strategies for adjusting your body language in response to others.

## Unit 5: Body Language in Professional Settings

### 1. Body Language in the Workplace:

- How body language affects professional relationships.
- Using body language in job interviews and meetings.
- Understanding body language cues in leadership and team interactions.
- How to convey professionalism and confidence non-verbally.

### 2. Non-Verbal Communication in Negotiations:

- The role of body language in negotiations and conflict resolution.
- How to recognize power dynamics through body language.
- Understanding gestures, facial expressions, and posture during negotiations.

### 3. Public Speaking and Body Language:

- The importance of non-verbal communication in public speaking.
- Techniques for improving posture, gesture, and facial expression during speeches.
- Handling nervousness and projecting confidence through body language.

## B.A. – LL.B. (5 YEARS INTEGRATED COURSE) SYLLABUS

---

- *The Definitive Book of Body Language* by Allan and Barbara Pease.
- *Body Language: How to Read Others' Thoughts by Their Gestures* by Allan Pease.
- *The Power of Body Language* by Tonya Reiman.
- *What Every BODY is Saying* by Joe Navarro.
- *The Body Language of Leadership* by Carol Kinsey Goman.
- *Body Language at Work* by Peter Clayton.
- *What Every BODY is Saying* by Joe Navarro.
- *The Body Language of Love* by Allan Pease.
- *Emotions Revealed: Recognizing Faces and Feelings to Improve Communication and Emotional Life* by Paul Ekman.
- *Body Language for Dummies* by Elizabeth Kuhnke.

**Presentation Skills-I BL 509B**

**Sub. Code: BL 509B**

**L -1,P-6, C -4**

**Course Objectives:**

- To equip students with the necessary skills to plan and deliver effective presentations.
- To develop students' ability to engage, inform, and persuade audiences.
- To improve public speaking and presentation techniques through practical exercises.
- To teach students how to use visual aids and other presentation tools effectively.
- To enhance students' confidence in delivering presentations in various professional and academic contexts.

**Unit 1: Introduction to Presentation Skills**

**1. What is a Presentation?**

- Definition and importance of presentations in academic, professional, and social settings.
- Types of presentations: Informative, persuasive, and entertaining.
- Characteristics of an effective presentation.

**2. Understanding Your Audience:**

- The importance of audience analysis.
- Identifying audience expectations and tailoring presentations accordingly.
- Adapting your presentation style for different audience types (e.g., formal, informal, mixed).

**3. Planning and Organizing a Presentation:**

- The steps in planning a presentation.
- Setting objectives and outcomes.
- Structuring the presentation: Introduction, body, conclusion.
- Creating a compelling opening and closing.
- Managing time effectively during a presentation.

**Unit 2: Effective Communication Techniques**

**1. Verbal Communication:**

- Voice modulation: Tone, pitch, speed, and clarity.
- Speaking with confidence and authority.
- Avoiding filler words ("um," "ah," "like").
- Using pauses for emphasis and effect.

**2. Non-Verbal Communication:**

- The importance of body language in presentations.

## B.A. – LL.B. (5 YEARS INTEGRATED COURSE) SYLLABUS

---

- Eye contact: Building trust and engagement.
  - Posture and gesture: How to convey confidence.
  - Facial expressions and their role in communication.
3. **Building Confidence and Reducing Anxiety:**
- Techniques for overcoming stage fright and nervousness.
  - Relaxation exercises before and during the presentation.
  - Power poses and breathing techniques to boost confidence.

### Unit 3: Designing Visual Aids and Supporting Materials

1. **Using Visual Aids:**
- Types of visual aids: Slides, charts, videos, and physical props.
  - Principles of effective slide design: Simplicity, readability, and visual appeal.
  - Do's and don'ts of PowerPoint presentations.
2. **Creating Engaging and Informative Slides:**
- Organizing content visually.
  - Choosing the right visuals: Graphics, images, and diagrams.
  - The role of text in slides: Keeping it brief and clear.
  - Avoiding information overload.
3. **Using Technology in Presentations:**
- Introduction to presentation software (e.g., Microsoft PowerPoint, Google Slides).
  - Using multimedia elements (audio, video) effectively.
  - Incorporating interactive elements (polls, questions, audience participation).

### Unit 4: Delivering a Presentation

1. **Effective Delivery Techniques:**
- The importance of storytelling and structure in maintaining audience engagement.
  - How to present with energy and enthusiasm.
  - Maintaining control of the room: Use of voice, pacing, and movement.
2. **Engaging the Audience:**
- Creating audience rapport: Humor, anecdotes, and questions.
  - Techniques for keeping the audience's attention.
  - Encouraging participation and interaction.
3. **Handling Questions and Feedback:**
- Dealing with questions during and after the presentation.
  - Managing difficult or challenging questions.
  - Techniques for staying calm and composed when answering questions.
  - How to incorporate audience feedback into future presentations.

### Unit 5: Practicing and Refining Your Presentation

#### 1. Rehearsal Techniques:

- The importance of practice: Timing, fluency, and confidence.
- How to rehearse effectively: Alone, with peers, or in front of a mirror.
- Practicing with visual aids and technology.
- Recording your presentation and evaluating it.

#### 2. Self-Evaluation and Peer Feedback:

- Using self-assessment to identify strengths and areas for improvement.
- Giving and receiving constructive feedback.
- Continuous improvement and learning from experience.

#### 3. Final Presentation:

- Students will prepare and deliver a final presentation, demonstrating the skills they have learned throughout the course.
- Emphasis on content, delivery, visual aids, and audience engagement.

### Suggested Books:

- *Presentation Skills 201: How to Take It to the Next Level as a Speaker* by William R. Steele.
- *The Art of Public Speaking* by Stephen E. Lucas.
- *Slide:ology: The Art and Science of Creating Great Presentations* by Nancy Duarte.
- *TED Talks: The Official TED Guide to Public Speaking* by Chris Anderson.
- *Confessions of a Public Speaker* by Scott Berkun.
- *The Art of Public Speaking* by Dale Carnegie.
- *TED Talks: The Official TED Guide to Public Speaking* by Chris Anderson.
- *Resonate: Present Visual Stories that Transform Audiences* by Nancy Duarte.

**Effective Writing Skills-I BL 509C**

**Sub. Code: BL 509C**

**L -1,P-6, C -4**

**Course Objectives:**

- To enhance students' writing skills for academic and professional purposes.
- To improve students' ability to organize their thoughts and present them in a structured manner.
- To develop a strong understanding of the rules of grammar, punctuation, and sentence structure.
- To introduce students to various types of writing, such as essays, reports, and reflective writing.
- To help students develop effective writing strategies, including revision and proofreading techniques.

**Unit 1: Introduction to Writing Skills**

**1. The Importance of Writing:**

- Role of writing in academic and professional life.
- Writing as a tool for communication, expression, and persuasion.
- Overview of different types of writing: Informative, persuasive, descriptive, and narrative.

**2. Basic Writing Concepts:**

- The writing process: Prewriting, drafting, revising, editing, and publishing.
- Elements of good writing: Clarity, coherence, consistency, and conciseness.
- Identifying your audience and purpose in writing.

**3. Fundamentals of Grammar and Style:**

- Parts of speech: Nouns, verbs, adjectives, and adverbs.
- Sentence structure: Simple, compound, and complex sentences.
- Common grammar mistakes to avoid: Subject-verb agreement, punctuation, and articles.
- Developing an effective writing style.

**Unit 2: Paragraph Writing and Structure**

**1. The Structure of a Paragraph:**

- Introduction, body, and conclusion in a paragraph.
- Unity and coherence in paragraphs.
- Topic sentences, supporting details, and concluding sentences.

### 2. **Writing Effective Paragraphs:**

- Organizing ideas logically and cohesively.
- Using transitions between sentences and paragraphs.
- Avoiding run-on sentences and fragments.

### 3. **Paragraph Types:**

- Descriptive, narrative, expository, and persuasive paragraphs.
- Writing introductory and concluding paragraphs effectively.

## **Unit 3: Essay Writing Techniques**

### 1. **Essay Structure and Organization:**

- Introduction, thesis statement, body paragraphs, and conclusion.
- Writing effective thesis statements and topic sentences.
- Developing body paragraphs with clear arguments and evidence.

### 2. **Types of Essays:**

- Descriptive Essays: Writing about a person, place, event, or idea.
- Narrative Essays: Telling a story with a clear beginning, middle, and end.
- Expository Essays: Explaining a topic or process clearly.
- Persuasive Essays: Arguing a position with evidence and reasoning.

### 3. **Essay Revision and Editing:**

- Common pitfalls in essay writing.
- Revising for clarity, coherence, and logical flow.
- Proofreading for grammatical and typographical errors.

## **Unit 4: Writing for Different Purposes**

### 1. **Writing Reports:**

- Structure of a report: Title, introduction, methodology, findings, and conclusion.
- Writing clear, concise, and objective reports.
- Using headings, subheadings, and bullet points for clarity.

### 2. **Business and Professional Writing:**

- Writing emails, memos, and letters in a professional tone.
- Formatting and structuring business correspondence.
- Writing resumes and cover letters effectively.

### 3. **Creative Writing:**

- Elements of creative writing: Character, setting, plot, and theme.
- Writing short stories, poems, and descriptive passages.
- Exploring narrative voice and point of view in creative writing.

## Unit 5: Advanced Writing Techniques

### 1. Improving Vocabulary and Sentence Variety:

- Expanding vocabulary for precise and expressive writing.
- Using synonyms and antonyms effectively.
- Writing with sentence variety to maintain interest and flow.

### 2. Writing with Clarity and Conciseness:

- Eliminating redundancy and wordiness.
- Writing clearly and directly without over-explaining.
- Using active voice over passive voice to enhance clarity.

### 3. Critical Thinking and Argumentation:

- Developing arguments and counterarguments.
- Supporting arguments with credible evidence and examples.
- Writing persuasive arguments with logical reasoning and proper structure.

## Suggested Books:

- *The Elements of Style* by William Strunk Jr. and E.B. White.
- *Writing Academic English* by Alice Oshima and Ann Hogue.
- *On Writing Well* by William Zinsser.
- *The Bedford Handbook* by Diana Hacker.
- *The Little, Brown Handbook* by H. Ramsey Fowler and Jane E. Aaron.
- *On Writing Well: The Classic Guide to Writing Nonfiction* by William Zinsser.
- *Business Writing Essentials* by Gregory L. S. Minter.
- *Creative Writing: A Workbook with Readings* by Julia Bell

**SEMESTER X**

**MOOT COURTS, OBSERVATION OF TRIAL, PRE-TRIAL  
PREPARATIONS AND INTERNSHIP**

**Sub. Code: BALLB 502**

**L-2,P-8, C -6**

**Course Objectives**

- The Moot Court course aims to provide law students with practical experience in oral advocacy, legal research, and drafting of pleadings through simulated court proceedings.
- It is designed to help students develop the skills necessary for real-world legal practice by participating in mock trials, arguing cases before a judge or panel, and presenting legal arguments on behalf of hypothetical clients.
- The course helps students bridge the gap between theory and practice by providing a platform to apply their knowledge of substantive law and procedural rules in a courtroom setting.
- Students will be prepared to represent clients in court, effectively communicate legal arguments, and contribute to legal research and writing, making them ready for future careers in litigation, legal practice, and dispute resolution.

This paper has three components of 30 marks each and viva-voce for 10 marks.

**(A) Moot Court (30 marks):** Every student is required to participate in at least three moot courts in the VI Semester with 10 marks for each. The moot court work will be on an assigned problem and it will be evaluated for 5 marks for written submissions and 5 marks for oral advocacy.

Marks will be given on the basis of written submission and oral advocacy. Written submissions shall include brief summary of facts, issues involved, provisions of laws and arguments, citation, prayer, etc. Marks for oral advocacy may be awarded for communication skills, presentations, language, provisions of law; authorities quoted, court manners, etc. Written Memorials submitted by the students shall be kept by the College for Further Verification.

The performance of student in the moot court shall be evaluated by a committee consisting of (i) Principal of the College (ii) an Advocate with 10 years experience at the Bar; and (iii) the teacher concerned.

## B.A. – LL.B. (5 YEARS INTEGRATED COURSE) SYLLABUS

---

### **(B) Observance of Trial in two cases, one Civil and one Criminal (30 marks):**

Students are required to attend courts to observe at least one civil and one criminal case. They shall maintain a record and enter the various steps observed during their attendance on different days in the court assignment. The Court Observation Record submitted by the students should be evaluated by a committee consisting of (i) Principal of the College/the concerned teacher (ii) University Representative appointed by the Controller of Examinations in consultation with the Chairman, Board of Studies in Law, and (iii) an Advocate with 10 years experience at the Bar and average be taken. Court attendance shall be compulsory and attendance has to be recorded in a register kept therefor. This may be carried under the supervision of a teacher of the college. This scheme will carry 30 marks.

### **(C) Interviewing Techniques and Pre-Trial Preparations and Internship Diary (30 marks):**

Each student should observe two 'interview sessions' of clients either in the Lawyer's Office or in the Legal Aid Office and record the proceedings in a diary, which will carry 15 marks.

Each student has to further observe the preparation of documents and court papers by the Advocate and the procedure for the filing of the suit / petition. This shall be recorded in the diary which will carry 15 marks.

The diary shall clearly indicate the dates on which the above observations are made and they shall be authenticated by the advocate concerned.

Evaluation of the above diary shall be made by the committee consisting of (i) Principal of the College/the concerned teacher (ii) University Representative appointed by the Controller of Examinations in consultation with the Chairman, Board of Studies in Law, O.U.; and (iii) an Advocate with 10 years experience at the Bar and average be taken.

### **Note:**

- 1. Attendance of the students in all the four components of the paper shall be compulsory.**
- 2. The above records, diary certified by the University Representative appointed by the Controller of Examinations in consultation with the Chairman, BOS in Law shall be submitted to the University for Further Verification.**

### **Suggested Readings:**

1. Dr. Kailash Rai: Moot Court Pre-Trial Preparation and Participation in Trial Proceedings, Central Law Publication.
2. Amita Danda: Moot Court for Interactive Legal Education, Gogia Law Agency, Hyderabad.
3. Blackstone's: Books of Moots, Oxford University Press.
4. Mishra: Moot Court Pre-Trial Preparation and Participation in Trial Proceedings, Central Law, Allahabad.

**Body Language-II (BL-502A)**

**Sub. Code: BALLB 502A**

**L-2,P-8, C -4**

**Course Objectives:**

- To introduce students to the phases of trial and pre-trial procedures.
- To enhance understanding of legal terms, courtroom etiquette, and trial strategies.
- To develop skills for preparing cases for trial, including investigation, evidence collection, and witness preparation.
- To expose students to real-world courtroom scenarios through observation of trials.
- To provide opportunities for critical analysis of trial proceedings and the formulation of case strategies.

**Unit 1: Introduction to Trial Procedures**

**1. Overview of the Trial Process:**

- Definition and stages of a trial.
- Key phases: Pre-trial, trial, and post-trial.
- Differences between civil, criminal, and administrative trials.

**2. Participants in a Trial:**

- Roles and responsibilities of judges, attorneys, witnesses, jurors, and court staff.
- Understanding the functions of prosecution and defense counsel.
- Interaction between the judge and counsel during the trial.

**3. Courtroom Etiquette:**

- Formalities and procedures in a courtroom.
- Behavior expectations for lawyers, clients, witnesses, and observers.
- Rules of evidence and courtroom conduct.

**Unit 2: Pre-Trial Preparation and Case Management**

**1. Pre-Trial Motions and Hearings:**

- Understanding pre-trial motions: Motion to dismiss, motion for summary judgment, and motion in limine.
- The role of pre-trial hearings in shaping the trial strategy.
- The discovery process: Gathering evidence and deposing witnesses.
- Developing a pre-trial checklist.

**2. Case Theory Development:**

## B.A. – LL.B. (5 YEARS INTEGRATED COURSE) SYLLABUS

---

- Creating a theory of the case: Crafting a compelling narrative for the court.
  - Identifying key issues in the case and preparing arguments.
  - Legal research and how to use it to develop trial strategy.
  - Preparing exhibits and evidence for presentation in court.
3. **Witness Preparation:**
- Role of witnesses in the trial.
  - Techniques for preparing witnesses for direct and cross-examination.
  - Ethical considerations in witness handling.
  - Mock examination practice for students.

### Unit 3: Observing Trials and Analyzing Courtroom Behavior

1. **The Observation Process:**
- Preparing for trial observation: What to look for in each phase of the trial.
  - Key elements of trial procedure: Opening statements, direct and cross-examination, closing arguments, and jury instructions.
  - Identifying trial tactics: How lawyers build their case and respond to opposing counsel.
2. **Trial Analysis and Case Review:**
- Observing and analyzing the effectiveness of various trial strategies.
  - Understanding the role of the judge and jury during the trial.
  - Ethical considerations for lawyers in trial proceedings.
3. **Courtroom Dynamics:**
- Managing stress and emotion in a courtroom.
  - The role of non-verbal communication (body language, tone) in a trial.
  - The influence of media and public opinion on trial proceedings.

### Unit 4: Trial Strategies and Techniques

1. **Opening Statements and Closing Arguments:**
- Crafting a persuasive opening statement.
  - Closing arguments: Summarizing the case and making a compelling appeal to the jury.
  - Techniques for emphasizing key evidence and witness testimony.
2. **Direct and Cross-Examination:**
- Developing effective questioning strategies.
  - Techniques for managing difficult witnesses.
  - Cross-examination strategies: Impeaching the credibility of witnesses.
  - The role of objections during examination.
3. **Handling Objections and Courtroom Challenges:**

## B.A. – LL.B. (5 YEARS INTEGRATED COURSE) SYLLABUS

---

- Common objections in trial and how to respond.
- Understanding the rules of evidence.
- The importance of timing and courtroom decorum when making objections.

### Unit 5: Post-Trial and Case Reflection

#### 1. Post-Trial Procedures:

- Understanding the judgment phase and what happens after the trial.
- Filing appeals and the appellate process.
- The importance of post-trial motions and the possibility of retrials.

#### 2. Reflection on Trial Observation:

- Discussing observations with instructors and peers.
- Analyzing courtroom strategies used by both parties in observed trials.
- Identifying areas of improvement in trial presentation and strategy.

#### 3. Career Preparation and Legal Practice:

- How trial experience informs legal practice.
- Career paths for lawyers: Litigators, trial consultants, and corporate counsel.
- Professional development through continuous learning and trial experience.

### Suggested Reading:

- *The Anatomy of a Trial* by John M. Conley.
- *Trial Preparation* by William A. Hall.
- *Winning at Trial* by D. Shane Read.
- *The Trial Lawyer's Art* by McElhaney James W.
- *After the Verdict* by Steven M. H. Wallen.
- *The Complete Idiot's Guide to Jury Trials* by David A. Moran.
- *The Anatomy of a Trial* by John M. Conley.
- *The Trial Lawyer: What It Takes to Win* by David Berg.

**Presentation Skills-II BL-502B**

**Sub. Code: BALLB 502B**

**L-2,P-8, C -4**

**Course Objectives:**

- To develop advanced presentation techniques for delivering high-impact presentations.
- To enhance the use of multimedia tools and visual aids in presentations.
- To improve audience engagement strategies and handle diverse audience dynamics.
- To practice dealing with difficult questions and objections during presentations.
- To gain confidence in presenting complex ideas clearly and persuasively.
- To develop personal presentation style and authenticity in delivery.

**Unit 1: Advanced Presentation Structures**

**1. Crafting a Compelling Narrative:**

- Creating a clear and coherent storyline for presentations.
- Using storytelling techniques to engage the audience.
- The structure of persuasive presentations: Introduction, Body, Conclusion.
- Balancing facts with emotional appeal for greater impact.

**2. The 3-Point Rule:**

- Simplifying complex ideas: Focusing on three key takeaways.
- The importance of repetition and emphasis in presenting main ideas.
- Using logical progression to help the audience follow the message.

**3. Developing Powerful Introductions and Conclusions:**

- Crafting powerful openings that grab attention.
- Ending with impact: The importance of strong closing statements.
- Leaving the audience with a memorable call to action.

**Unit 2: Advanced Audience Engagement Techniques**

**1. Understanding Your Audience:**

- Identifying audience needs, interests, and expectations.
- Tailoring your presentation to suit different audience types (e.g., corporate executives, academic audiences, general public).
- Building rapport and establishing credibility with the audience.

**2. Interactive Presentation Techniques:**

## B.A. – LL.B. (5 YEARS INTEGRATED COURSE) SYLLABUS

---

- Using questions, polls, and live feedback to maintain engagement.
  - The art of audience interaction: How to read non-verbal cues from the audience.
  - Techniques for creating a participatory atmosphere in virtual and in-person settings.
- 3. Dealing with Diverse Audiences:**
- Strategies for addressing different types of personalities and communication styles.
  - Techniques for managing difficult or disengaged audiences.
  - Adjusting presentation tone, pace, and language to connect with various groups.

### Unit 3: Mastering the Use of Visual Aids and Multimedia

- 1. Designing Effective Visual Aids:**
- Principles of good design: Simplicity, clarity, and consistency.
  - How to use PowerPoint, Prezi, and other tools to create visually appealing slides.
  - Using infographics, charts, and graphs to enhance understanding.
- 2. Integrating Video, Sound, and Interactive Elements:**
- When and how to incorporate multimedia into your presentation.
  - Using video clips and sound effectively to support your message.
  - Avoiding over-reliance on technology and balancing visual aids with your spoken words.
- 3. Non-Verbal Communication and Body Language:**
- Using gestures, posture, and eye contact to enhance your message.
  - Managing stage presence: How to move with purpose and confidence.
  - The impact of facial expressions and tone of voice on audience perception.

### Unit 4: Handling Questions, Objections, and Difficult Situations

- 1. Managing Q&A Sessions:**
- How to prepare for and anticipate questions.
  - Techniques for handling difficult or hostile questions.
  - Maintaining composure and confidence during Q&A.
  - Answering questions clearly and concisely.
- 2. Dealing with Objections and Pushback:**
- Techniques for addressing objections with respect and persuasion.
  - Turning challenges into opportunities for engagement.
  - Using body language to handle tension during difficult discussions.
- 3. Handling Unexpected Situations:**
- Staying calm when technology fails or when unexpected disruptions occur.

## B.A. – LL.B. (5 YEARS INTEGRATED COURSE) SYLLABUS

---

- Recovering from mistakes or missteps during a presentation.
- How to maintain control over the presentation in high-pressure situations.

### **Unit 5: Virtual and Hybrid Presentations**

#### **1. Delivering Presentations in Virtual Settings:**

- Best practices for presenting through video conferencing tools (Zoom, MS Teams, etc.).
- Managing virtual audience engagement through chat, polls, and Q&A.
- Adjusting presentation style for virtual environments.

#### **2. Hybrid Presentations:**

- Balancing in-person and online audiences.
- Technical considerations for hybrid presentations (audio, video, screen-sharing).
- Keeping both groups engaged and ensuring equal participation.

#### **3. Overcoming Virtual Presentation Challenges:**

- Handling technical glitches and troubleshooting.
- Managing distractions and ensuring smooth communication in virtual settings.
- Building presence and maintaining confidence on camera.

### **Unit 6: Personal Style and Authenticity in Presentations**

#### **1. Finding Your Unique Presentation Style:**

- Understanding the importance of authenticity in presentation delivery.
- How to develop your natural speaking style and avoid "performing."
- Finding balance between professionalism and personality.

#### **2. Building Confidence and Overcoming Stage Fright:**

- Techniques to boost self-confidence before and during a presentation.
- Overcoming fear of public speaking and managing nerves.
- The role of positive body language in building confidence.

#### **3. Feedback and Continuous Improvement:**

- Techniques for soliciting and incorporating feedback after a presentation.
- Using video recordings of your presentations for self-assessment.
- The role of practice in mastering presentation skills.

**Suggested Books:**

- *Talk Like TED* by Carmine Gallo.
- *Made to Stick* by Chip Heath & Dan Heath.
- *Presentation Zen* by Garr Reynolds.
- *The Art of Public Speaking* by Dale Carnegie.
- *Virtual Presentations: Best Practices and Strategies for Successful Online Speaking* by Andy Lopata.
- *The Virtual Presenter's Handbook* by Carole Gaskell.
- *The Quick and Easy Way to Effective Speaking* by Dale Carnegie.
- *Crucial Conversations: Tools for Talking When Stakes Are High* by Kerry Patterson, Joseph Grenny, Ron McMillan, Al Switzler

**Effective Writing Skills II (BL-502C)**

**Sub. Code: BALLB 502C**

**L-2,P-8, C -4**

**Course Objectives:**

By the end of this course, students will be able to:

1. Analyze and apply the principles of effective writing.
2. Organize ideas clearly and logically in various writing formats.
3. Revise and edit their work to enhance clarity and coherence.
4. Adapt writing styles to different audiences and purposes.
5. Utilize research and evidence to support arguments and claims.

**UNIT 1: Introduction to Effective Writing**

- Overview of the writing process: prewriting, drafting, revising, editing, and publishing
- The importance of audience and purpose in writing

**UNIT 2: Writing Fundamentals**

- Grammar and punctuation essentials
- Sentence structure and variety

**UNIT 3: Organizing Ideas**

- Outlining techniques for clarity and coherence
- The structure of essays: introduction, body, and conclusion

**UNIT 4: Academic Writing**

- Writing thesis statements and arguments

### **Suggested Readings:**

1. "On Writing: A Memoir of the Craft" by Stephen King  
A blend of memoir and writing advice, King shares insights on the writing process and his personal journey.
2. "The Elements of Style" by William Strunk Jr. and E.B. White  
A classic guide that emphasizes clarity, brevity, and the fundamental principles of English style.
3. "Writing Down the Bones: Freeing the Writer Within" by Natalie Goldberg  
Encourages writers to find their voice and express themselves freely, blending writing exercises with personal reflections.
4. "Bird by Bird: Some Instructions on Writing and Life" by Anne Lamott  
Offers practical advice and encouragement, emphasizing the importance of perseverance in the writing process.

# **School of Engineering and Technology**

## **Shobhit University, Gangoh**

(Established by UP Shobhit University Act No. 3, 2012)

### **School of School of Engineering and Technology**

#### **Ordinances, Regulations & Syllabus**

For

#### **Master of Engineering, Two Year Programme**

#### **Semester System**

(w.e.f. session 2013-14)

Revised and approved in the year 2019 (13<sup>th</sup> Meeting, Board of Studies)

## **Programme Educational Objectives (PEOs)**

**PEO 1** To provide a strong foundation in advanced engineering principles, enabling students to develop innovative and efficient solutions for complex problems in their chosen field of specialization.

**PEO 2** To foster research capabilities, encouraging students to explore emerging technologies, conduct independent research, and contribute to the development of new methodologies in engineering practices.

**PEO 3** To develop critical thinking, analytical abilities, and problem-solving skills, equipping students to effectively apply engineering concepts to real-world challenges and deliver optimized solutions in professional environments.

**PEO 4** To provide in-depth knowledge in specialized areas like Artificial Intelligence, Machine Learning, IoT, Robotics, and renewable energy, preparing students to lead advancements in these cutting-edge technologies.

**PEO 5** To instill a strong sense of professional ethics, responsibility, and social consciousness, ensuring that graduates make informed decisions that positively impact society, the environment, and industry standards.

**PEO 6** To enhance leadership, teamwork, and communication skills, preparing students to work collaboratively in multidisciplinary teams and effectively lead projects in diverse engineering and technology domains.

**PEO 7** To ensure graduates are industry-ready by providing hands-on learning experiences, internships, and exposure to current industry practices, equipping them with practical skills for immediate contributions to engineering projects.

**PEO 8** To promote lifelong learning and adaptability, preparing graduates to stay current with technological advancements and continuously upgrade their knowledge and skills throughout their professional careers in engineering.

## Programme Specific Objectives (PSO's)

**PSO 1** To equip students with advanced knowledge in core engineering subjects, enabling them to design, develop, and optimize systems and solutions for complex engineering challenges.

**PSO 2** To develop expertise in emerging technologies such as Artificial Intelligence, Machine Learning, Internet of Things, and Robotics, preparing students to lead innovations in these high-demand fields.

**PSO 3** To provide in-depth skills in research methodology, enabling students to conduct independent research, contribute to technological advancements, and develop novel solutions in their specialized areas.

**PSO 4** To enhance problem-solving capabilities through practical applications, fostering the ability to analyze, design, and implement engineering systems that meet real-world technical and environmental challenges.

**PSO 5** To instill a strong understanding of industry standards, quality control, and sustainable engineering practices, ensuring that students can contribute to projects with environmental and societal considerations.

**PSO 6** To improve leadership, teamwork, and project management skills, preparing students to lead multidisciplinary teams and manage engineering projects efficiently in dynamic and diverse work environments.

**PSO 7** To ensure mastery of advanced computational tools, simulation techniques, and design software, enabling students to model, analyze, and optimize engineering systems across various industries.

**PSO 8** To promote ethical practices, professional integrity, and social responsibility, ensuring graduates understand the broader impact of engineering decisions and contribute positively to society, technology, and the environment.

## Programme Outcome Objectives (POO's)

**POO 1** Graduates will have a deep understanding of advanced engineering principles, enabling them to apply theoretical and practical knowledge to solve complex engineering problems across various domains.

**POO 2** Graduates will demonstrate strong analytical, critical thinking, and problem-solving abilities, applying appropriate methodologies to design, analyze, and optimize solutions for real-world engineering challenges.

**POO 3** Graduates will possess advanced research skills, enabling them to conduct independent research, contribute to innovation, and stay at the forefront of technological developments in their field.

**POO 4** Graduates will be proficient in the use of modern engineering tools, software, and technologies to model, simulate, and optimize engineering systems and processes across diverse industries.

**POO 5** Graduates will be able to design and develop engineering systems and solutions with an understanding of sustainability, environmental impact, and societal considerations, contributing to ethical engineering practices.

**POO 6** Graduates will demonstrate strong leadership qualities, effective communication skills, and the ability to work collaboratively in multidisciplinary teams, ensuring successful project management and execution.

**POO 7** Graduates will understand and apply industry best practices, standards, and ethical considerations, ensuring their engineering solutions adhere to regulatory requirements and contribute positively to society and the environment.

**POO 8** Graduates will be capable of effectively managing engineering projects, demonstrating proficiency in planning, budgeting, resource management, and risk assessment to achieve project goals within deadlines and constraints.

**POO 9** Graduates will engage in lifelong learning, adapting to evolving technologies and continuously upgrading their knowledge and skills to remain competitive and contribute meaningfully to the engineering profession.

**POO 10** Graduates will demonstrate professional and ethical responsibility, making informed decisions with a focus on the long-term impact of engineering solutions, and positively influencing society and the global engineering community.

**Grand Total: 74**

## **Software Engineering Methodologies**

**CE- 501**

**L T P Credits**

**3 1 0 4**

### **Unit-I**

The software crisis, principles of software engineering, programming-in-the-small vs. programming-in-the-large, The Software Lifecycle, Software and systems engineering: overview, examples and industrial realities Project Management - Project Planning and Scheduling, Team organization.

### **Unit-II**

SRS (Software requirement specification). Design for reuse, design for change, design notations, design evaluation and validation, coding and testing, software maintenance and reliability.

### **Unit-III**

Software Economics, Software Quality and standards, Software Metrics - Measurement, Estimation and Prediction, Requirements Management, Configuration Management., Risk Management Testing and Inspection Architecture Description Languages, Pattern-Oriented Software Architecture, Component-based Development, Aspect-oriented development

### **Unit-IV**

CASE (Computer Aided Software Engineering): CASE and its Scope, CASE support in software life cycle, documentation, project management, internal interface, Reverse Software Engineering, Architecture of CASE environment.

### **Unit-V**

Issues in project management-team structure, scheduling, software quality assurance. Object

Oriented methodology: object oriented paradigm, OO analysis and design, examples of methodologies

**Suggested Readings:**

1. Shari Lawrence Pfleeger, "Software Engineering, Theory and Practice," Prentice-Hall 1998.
2. Merlin Dorfman and Richard H. Thayer, "Software Engineering, Edited ," IEEE Computer Society Press, 1997.
3. Sommerville: Software Engineering 8th Edition. Addison Wesley. 2006
4. R. S. Pressman, "Software Engineering – A practitioner's approach", 5th Ed., McGraw Hill Int. Ed., 2001
5. Schulmeyer, Zero Defect Software, McGraw-Hill, 1992.

## Analysis and Design of Algorithms

**CE- 503**

**L T P Credits**

**3 1 0 4**

### **Unit-I: Analyzing Algorithms & Problems**

Introduction to algorithms, Time and Space Complexity, Basic elements of data structures like linked lists, stacks and queues, trees, graphs, recursion. Different types of sorting algorithms and their complexities

### **Unit-II: Dynamic Sets, Searching and Graphs**

Introduction, Array, amortized time analysis, red black trees, hashing, heaps, dynamic equivalence relations and union-find programs, priority queues with decrease key operations, traversing graphs, DFS, strongly connected components, biconnected components, minimum spanning tree algorithm, single source shortest paths, all pair shortest paths

### **Unit - III: Greedy and Dynamic Methods**

Greedy methods with examples such as Optimal Reliability Allocation, Knapsack, Dynamic programming with examples such as Knapsack, All pair shortest paths – Warshal's and Floyd's algorithms, Resource allocation problem.

### **Unit - IV: Backtracking and NP – Hard and NP Complete problems**

General backtracking and Branch and Bound Methods, 8 queen, sum of subset, graph coloring, Hamilton cycles, 0/1 knapsack problem, NP – Hard and NP Complete problems: Basic Concepts, Cook's theorem, NP – Hard graph problems, NP hard Scheduling.

## **Unit - V: Parallel Algorithms and Approximation Algorithms**

Introduction, parallelism, PRAM and other models, some simple PRAM algorithms, handling write conflicts, Merging and Sorting, Finding Connected Components, Approximation Algorithms: Introduction, Absolute Approximation,  $\epsilon$ -approximation, polynomial time approximation schemes, fully polynomial time approximation schemes. String matching algorithms.

### **Suggested Readings:**

1. V. Aho , J. E. Hopcroft and J. D. Ullman, “The Design and Analysis of Algorithms”, Addison-Wesley, 1974.
2. T. H. Cormen , C. E. Leiserson and R. L. Rivest, “Introduction to Algorithms 2nd edition”, PHI. 2009.
3. M. R. Garey and D. S. Johnson, “Computers and Intractability: A Guide to the Theory of NPCompleteness”,Freeman, 1979.
4. J. Van Leuween ed, Handbook of Theoretical Computer Science, Vol A., Elsevier, 1990.

## Advanced Database Management Systems

CE- 505

L T P Credits

3 1 0 4

### Unit -I: Introduction

An overview of database management system, database system Vs file system, Architecture, Advantages, Disadvantages, data models, relational algebra, SQL, Normal forms.

### Unit-II: Query Processing

General strategies for query processing, transformations, expected size, statistics in estimation, query improvement, query 'evaluation, view processing, query processor

### Unit-III: Recovery

Reliability, transactions, recovery in centralized DBMS, reflecting updates, Buffer management, logging schemes, disaster recovery.

### Unit - IV: Concurrency

Introduction, serializability, concurrency control,-locking schemes, timestamp based order, optimistic scheduling, multiversion techniques, deadlocks Object Oriented Data base Development: Introduction, Object definition language, creating object instances, Object query language

### Unit - V: Distributed Databases and Data Warehousing

Basic concepts, options for distributing a database, distributed DBMS, Data warehousing: Introduction, basic concepts, data warehouse architecture, data characteristics, reconciled data

layer, data transformation, derived data layer, user interface, Object Relational Databases: Basic concepts enhanced SQL, advantages of object relational approach.

**Suggested Readings:**

1. An Introduction to database systems by Bipin C. Desai, Galgolia Publications,1997.
2. Principles of distributed database systems, by M. Tamer & Valduricz, 2" edition, LPE Pearson Education,2009.
3. Database system concepts by Korth,2008.

## **Computer Communication and Networks**

**CE- 507**

**L T P Credits**

**3 1 0 4**

### **Unit -I**

Review of data communication techniques, Data transmission, line coding, error control coding. Data switching, circuit switching, message and packet switching. Network model ISO-OSI model, primitives and services.

### **Unit -II**

Elements of queuing. Data link control Simplex, pipelined and sliding window protocols, simplex performance analysis. X 25 data link layer. Random access techniques. Pure, slotted and finite population ALOHAs. Stability in ALHOAs.

### **Unit -III**

Routing and congestion control static, adaptive, centralized and distributed routing procedures,

Congestion control, Local Area Networks LAN topologies and protocols, IEEE 802.x protocols, implementation and performance issues, High speed LANs.

### **Unit -IV**

Transport layer. Quality of service transport classes. Design issues, buffer management, synchronization.

## **Unit - V**

Session and presentation layer synchronization issues, formatting data compression data security, session Layer-Design issues, remote procedure call. Presentation Layer-Design issues, Data compression techniques, cryptography.

### **Suggested Readings:**

1. Forouzan, "Data Communication and Networking", TMH 2006.
2. A.S. Tanenbaum, "Computer Networks", 3rd Edition, Prentice Hall India, 1997.
3. S. Keshav, "An Engineering Approach on Computer Networking", Addison Wesley, 1997
4. W. Stallings, "Data and Computer Communication", Macmillan Press, 1989.

## **Fundamental of Computer Programming**

**CE-509**

### **Unit 1:**

**Introduction to Programming** Overview of computer programming, history of programming languages, types of programming languages, and the role of algorithms in programming. Basic concepts of software development and the software development life cycle.

### **Unit 2:**

**Basic Concepts of Programming** Understanding data types, variables, constants, and operators. Introduction to expressions and statements. Importance of input and output in programming.

### **Unit 3:**

**Control Structures** Exploration of control flow mechanisms such as conditionals (if, else, switch) and loops (for, while, do-while). Understanding the significance of flowcharts and pseudocode in representing logic.

### **Unit 4:**

**Functions and Modular Programming** Introduction to functions, parameters, return values, and the concept of modular programming. Importance of code reusability and organization. Overview of function overloading and recursion.

### **Unit 5:**

**Data Structures** Basic data structures including arrays, lists, stacks, and queues. Understanding how to store and manipulate data effectively. Introduction to strings and their manipulation.

# **Fundamental of Mathematics**

## **CE-511**

### **Unit 1: Number Systems**

Introduction to various number systems including natural numbers, whole numbers, integers, rational numbers, and irrational numbers. Understanding real numbers and their properties.

### **Unit 2: Algebraic Expressions and Equations**

Exploration of algebraic expressions, like terms, and polynomials. Understanding linear equations and inequalities in one variable, as well as methods for solving them.

### **Unit 3: Functions and Graphs**

Introduction to the concept of functions, types of functions (linear, quadratic, exponential), and their properties. Understanding how to represent functions graphically and analyze their behavior.

### **Unit 4: Trigonometry**

Fundamental concepts of trigonometry, including the study of angles, sine, cosine, and tangent functions. Introduction to trigonometric identities and their applications in solving problems.

### **Unit 5: Geometry**

Basic concepts of geometry, including points, lines, angles, and shapes. Exploration of properties and theorems related to triangles, quadrilaterals, circles, and polygons.

## **Mathematics**

### **CE- 511 A**

#### **Unit 1: Number Systems**

Introduction to natural numbers, whole numbers, integers, rational numbers, and irrational numbers. Exploration of the properties of real numbers and their applications.

#### **Unit 2: Algebra**

Study of algebraic expressions, equations, and inequalities. Understanding polynomials, factoring, and the basics of quadratic equations. Introduction to functions and their graphs.

#### **Unit 3: Geometry**

Basic concepts of points, lines, angles, and geometric shapes. Exploration of properties and theorems related to triangles, quadrilaterals, and circles. Introduction to coordinate geometry.

#### **Unit 4: Trigonometry**

Fundamental concepts of trigonometric ratios, functions, and identities. Applications of trigonometry in solving problems involving angles and triangles.

#### **Unit 5: Calculus**

Introduction to limits, derivatives, and integrals. Understanding the basic principles of differentiation and integration, along with their applications in real-world scenarios.

## Basic Mathematics

### CE-511 B

#### Unit 1: Number Systems

Introduction to different types of numbers including natural numbers, whole numbers, integers, rational numbers, and irrational numbers. Understanding place value and number representation.

#### Unit 2: Arithmetic Operations

Fundamental operations such as addition, subtraction, multiplication, and division. Introduction to order of operations and properties of numbers.

#### Unit 3: Fractions and Decimals

Understanding fractions, types of fractions, and operations with fractions. Introduction to decimals, conversion between fractions and decimals, and operations with decimals.

#### Unit 4: Ratios and Proportions

Concept of ratios and their applications. Understanding proportions, solving problems involving direct and inverse proportions.

#### Unit 5: Percentages

Understanding percentages and their applications. Calculating percentage increases and decreases, and solving problems related to discounts and interest.

## **Mathematics-I**

### **CE-511 C**

#### **Unit 1: Sets and Functions**

Introduction to sets, types of sets, and operations on sets. Understanding functions, domain, range, and types of functions including one-to-one, onto, and inverse functions.

#### **Unit 2: Algebra**

Study of real numbers, algebraic expressions, and polynomials. Operations on polynomials, factorization techniques, and solving quadratic equations.

#### **Unit 3: Trigonometry**

Fundamental trigonometric ratios, identities, and equations. Applications of trigonometry in right triangles and the unit circle. Introduction to inverse trigonometric functions.

#### **Unit 4: Coordinate Geometry**

Basics of the Cartesian coordinate system. Study of lines, slopes, distance formula, and midpoints. Introduction to conic sections such as circles, parabolas, ellipses, and hyperbolas.

#### **Unit 5: Calculus - Limits and Continuity**

Introduction to limits, properties of limits, and techniques for evaluating limits. Understanding the concept of continuity and its implications in calculus.

## Algorithms Lab

### CE-551

1. Write a program to find the factorial of a number using recursion.
2. Create a program to implement binary search on a sorted array.
3. Develop a program to sort an array using the bubble sort algorithm.
4. Write a program to find the nth Fibonacci number using iteration.
5. Implement a program to check if a string is a palindrome.
6. Create a program to perform matrix addition.
7. Write a program to implement the insertion sort algorithm.
8. Develop a program to reverse an array using pointers.
9. Implement a program to calculate the greatest common divisor (GCD) using the Euclidean algorithm.
10. Create a program to perform linear search on an array.
11. Write a program to implement the selection sort algorithm.
12. Develop a program to count the number of vowels in a given string.
13. Implement a program to generate prime numbers within a specified range.
14. Create a program to find the sum of digits of a number.
15. Write a program to merge two sorted arrays into a single sorted array.
16. Develop a program to implement quicksort on an array.
17. Implement a program to check if two strings are anagrams of each other.
18. Create a program to calculate the power of a number using recursion.
19. Write a program to print the Pascal's triangle up to a given number of rows.
20. Develop a program to perform depth-first search (DFS) on a graph represented using an adjacency list.

## Seminar-I

### CE- 581

1. Create a program to implement a simple calculator that performs addition, subtraction, multiplication, and division.
2. Develop a program to convert temperature between Celsius and Fahrenheit.
3. Write a program to generate random numbers within a specified range.
4. Create a program to find the maximum and minimum values in an array.
5. Implement a program to count the number of occurrences of a character in a string.
6. Write a program to check if a number is prime.
7. Develop a program to display the first n prime numbers.
8. Create a program to implement a basic to-do list using an array.
9. Write a program to sort a list of names alphabetically.
10. Implement a program to find the longest word in a sentence.
11. Create a program to convert a decimal number to binary.
12. Write a program to count the number of words in a given sentence.
13. Develop a program to remove duplicates from an array.
14. Create a program to implement a simple text-based game (e.g., guess the number).
15. Write a program to calculate the area of different shapes (circle, rectangle, triangle) based on user input.
16. Implement a program to perform basic file operations (read, write, append).
17. Create a program to validate an email address format.
18. Write a program to simulate a simple banking system with deposit and withdrawal functions.
19. Develop a program to implement a basic Tic-Tac-Toe game.
20. Create a program to find the intersection of two arrays.

## **Resource Management of Computer Systems**

**CE- 502**

**L T P Credits**

**3 1 0 4**

### **Unit -I**

Historical perspectives, interrupt mechanism, Loader, linker, assembler, command interpreter, compiler, operating system, interpreters, Hardware Resources, Resource management, Virtual Computers, The Hardware Interface, The CPU, Memory and Addressing, Interrupts, I/O Devices, The Operating System Interface, Information and Meta-Information

### **Unit -II**

Concurrent processes; mutual exclusion and synchronization, system calls and protection, Context switching and the notion of a process and threads; synchronization and protection issues; scheduling.

### **Unit -III**

Memory management including virtual memory and paging techniques; i/o architecture and device management.

### **Unit -IV**

File systems; distributed file systems, Issues in the design of distributed file systems, Examples of distributed systems, deadlock detection and protection.

### **Unit -V**

Protection and Security. Architecture of the UNIX operating system ,Case Study of Unix,, Windows, and Real-Time OS.

**Suggested Readings:**

1. Andrew S. Tanenbaum, “Modern Operating Systems”, Second Edition, Pearson Education, Inc., 2001.
2. Uresh Vahalia, “UNIX Internals: The New Frontiers”, PEARSON Education, 1996.
3. J. Mauro and R. McDougall, “Solaris Internals: Core Kernel Architecture”, Sun Microsystems Press, 2001.
4. Daniel P. Bovet and Marco Cesati, “Understanding the Linux kernel”, O'Reilly & Associates, Inc., 1998.

## Soft Computing

**CE- 504**

**L T P Credits**

**3 1 0 4**

### **Unit –I : Neural Networks**

History, overview of biological Neuron-system, Mathematical Models of Neurons, ANN architecture, Learning rules, Learning Paradigms-Supervised, Unsupervised and reinforcement Learning, ANN training Algorithms-perceptions, Training rules, Delta, Back Propagation Algorithm, Multilayer Perception Model, Hopfield Networks, Associative Memories, Applications of Artificial Neural Networks.

### **Unit –II : Fuzzy Logic**

Introduction to Fuzzy Logic, Classical and Fuzzy Sets: Overview of Classical Sets, Membership Function, Fuzzy rule generation. Operations on Fuzzy Sets: Compliment, Intersections, Unions, Combinations of Operations, Aggregation Operations.

### **Unit –III : Fuzzy Arithmetic**

Fuzzy Numbers, Linguistic Variables, Arithmetic Operations on Intervals & Numbers, Lattice of Fuzzy Numbers, Fuzzy Equations.

### **Unit -IV : Applications of Fuzzy Logic**

Fuzzy Logic: Classical Logic, Multivalued Logics, Fuzzy Propositions, Fuzzy Qualifiers, Linguistic Hedges. Uncertainty based Information: Information & Uncertainty, Nonspecificity of Fuzzy & Crisp Sets, Fuzziness of Fuzzy Sets.

### **Unit –V: An Introduction to Genetic Algorithms**

Neural network approaches in engineering analysis, design and diagnostics problems; applications of probabilistic reasoning approaches. Theoretical Foundations of Genetic Algorithms, Genetic Algorithms in Engineering.

**Suggested Readings:**

1. Goldberg, "Genetic Algorithms," Addison Wesley, ISBN 0-201-15767-5,1989,
2. Golden, "Mathematical Methods for Neural Network Analysis and Design," MIT Press, 1996
3. Ahmad Lotfi, Jonathan Garibaldi, "Applications and Science in Soft Computing", Springer,2004.
4. Rajkumar Roy, Mario Koppen "Soft Computing and Industry: Recent Applications", Springer,2002.

## High Performance Computer Architecture

	<b>L</b>	<b>T</b>	<b>P</b>	<b>Credits</b>
<b>CE- 506</b>	<b>3</b>	<b>1</b>	<b>0</b>	<b>4</b>

### Unit –I

Introduction to High Performance Computing: Overview, Pipeline vs. Parallel Processing Parallel Architectures: Classification and Performance. Pipeline Processing: Pipeline Performance, design of arithmetic pipelines, multifunction pipes.

### Unit -II

Concept of reservation table, collision vector and hazards. Instruction Processing Pipes: Instruction and data hazard, hazard detection and resolution, delayed jumps, delayed execution. RISC Philosophy.

### Unit –III

Pipeline scheduling Theory: Greedy pipeline scheduling algorithm, state diagram, modified state diagram, Latency cycles, Optimal cycles, scheduling of static & dynamic Pipelines. Implementation of pipeline schedulers.

### Unit –IV

Interconnection Networks: Interconnection network classification, Single stage/ Multistage Networks, crossbars, Clos Networks, Benes Networks, Routing algorithms. Omega, Cub-connected and other networks.

## **Unit -V**

High performance memory system; Shared memory multiprocessors and cache coherence; Multiprocessor interconnection networks; Performance modeling.

### **Suggested Readings:**

1. M. R. Bhujade, "Parallel Computing", Newage International Pvt. Ltd., 1995.
2. Stallings, William, "Computer organization and architecture, designing for performance",  
Prentice Hall of India, 1997
3. J. L. Hennessy and D. A. Patterson, "Computer architecture: a quantitative approach", Harcourt  
Asia, Singapore 1996.

## Mobile & Wireless Communication

**CE- 522**

**L T P Credits**

**3 1 0 4**

### **Unit –I**

Introduction: Applications, history, market, reference model and overview. Wireless Transmission— Frequencies, signals, antennas, signal propagation, multiplexing, modulation, spread spectrum, cellular system.

### **Unit –II**

MAC and Telecommunication system: Specialized MAC, SDMA, FDMA, TDMA- fixed TDM, classical ALOHA, slotted, ALOHA, CSMA, DAMA, PKMA, reservation TDMA. Collision avoidance, polling inhibit sense multiple access.(CDMA, comparison, GSM- mobile services, architecture radio interlace, protocol, localization, calling, handover, security, new data services, Introduction to W'LL.

### **Unit –III**

Satellite and Broadcast Systems: History, Applications, GEO, LEO, MEO, routing, localization, handover in satellite system. Digital audio and video broadcasting, Wireless LAN: IEEE 802.11- System and protocol architecture, physical layer. MAC layered management. Bluetooth--- User scenarios, physical layer, MAC layer, networking, security and link management.

### **Unit -IV**

Mobile network Layer: Mobile IP- goals, assumption, requirement, entities, terminology, IP packet delivery, Agent advertisement and discovery, registration, tunneling, encapsulation, optimization, reverse tunneling, IPV6. DHCP, Adhoc Networks- routing, destination sequence distance vector, dynamic source routing, hierarchical algorithm, alternative metric Mobile, Transport Layer:

Traditional TCP, Indirect TCP, Snooping TCP, Mobile TCP fast retransmission recovery, transmission/timeout freezing, selective retransmission, Transaction oriented TCP.

### **Unit -V**

Support for Mobility: File System, WWW-HIT, HTML, system architecture. WAP architecture, wireless datagram, protocol, wireless transport layer security, wireless transaction protocol, application environment, telephony application.

### **Suggested Readings:**

1. Jochen Schiller, " Mobile Communication" , Pearson Education,2002.
2. Lee, " Mobile Cellular Telecommunications" McGRAW- WILL, 2nd Edition,1990.

## Real Time System

	<b>L</b>	<b>T</b>	<b>P</b>	<b>Credits</b>
<b>CE- 524</b>	<b>3</b>	<b>1</b>	<b>0</b>	<b>4</b>

### Unit -I

Introduction: Issues in Real-Time Computing, Structures of Real-Time System, Task Classes, Performance Measures for Real-Time Systems, Estimating Program Run Times

### Unit -II

Task Assignment and Scheduling : Classical Uni-processor Scheduling algorithm, Uni-processor Scheduling of IRIS Tasks, Task Assignment, Mode Changes, Fault Tolerant Scheduling.

Real-Time Database : Basic Definitions, Real-Time Vs General-Purpose Databases, Main Memory Databases, Transaction Priorities, Transaction Aborts, Concurrency Control Issues, Disk Scheduling algorithm, A Two Phase Approach To Improve Predictability, Maintain Serialization Consistency, Databases for Hard Real Time Systems.

### Unit -III

Programming Languages and Tools : Desired Language characteristics, Data Typing , Control Structures , Facilitating Hierarchical Decomposition, Packages, Runtime Error (Exception) Handling, Overloading and Generics, Multitasking ,Low-Level Programming, Task Scheduling, Timing Specifications, Some experimental Languages, Programming Environments, Run-Time Support.

### Unit -IV

Real-Time Communication : Network Topologies ,Protocols ,Clocks , A Non Fault Tolerant Synchronization

Algorithm, Impact of Faults , Fault Tolerant Synchronization in Hardware, Synchronization in Software

### **Unit -V**

Fault Tolerant Techniques Fault Types , Fault Detection, Fault and error Containment, Redundancy, Data Diversity, Reversal Checks, Malicious or Byzantine Failures, Integrated Failure Handling, Obtaining Parameter Values, Reliability Models for Hardware Redundancy, Software Error models, Taking Time into Account

### **Suggested Readings:**

1. C.M. Krishna, Kang G. Shin, “Real-Time Systems”, Tata McGraw Hill,1997.
2. Hermann Kopetz, “Real-Time Systems” Design Principles for Distributed Embedded Applications Springer-Verlag New York Inc. 2011.

## **Cloud Computing**

	<b>L</b>	<b>T</b>	<b>P</b>	<b>Credits</b>
<b>CE- 526</b>	<b>3</b>	<b>1</b>	<b>0</b>	<b>4</b>

### **Unit –I : Understanding Cloud Computing**

Cloud Computing – History of Cloud Computing, Cloud Architecture, Cloud Storage, Why Cloud Computing Matters, Advantages of Cloud Computing, Disadvantages of Cloud Computing, Companies in the Cloud Today, Cloud Services.

### **Unit –II : Developing Cloud Services**

Web-Based Application, Pros and Cons of Cloud Service Development, Types of Cloud Service Development, Software as a Service , Platform as a Service, Web Services, On-Demand Computing, Discovering Cloud Services Development Services and Tools, Amazon Ec2, Google App Engine, IBM Clouds.

### **Unit –III : Cloud Computing For Everyone**

Centralizing Email Communications, Collaborating on Schedules, Collaborating on To-Do Lists, Collaborating Contact Lists, Cloud Computing for the Community, Collaborating on Group Projects and Events, Cloud Computing for the Corporation.

### **Unit –IV : Using Cloud Services**

Collaborating on Calendars, Schedules and Task Management, Exploring Online Scheduling Applications, Exploring Online Planning and Task Management, Collaborating on Event Management, Collaborating on Contact Management, Collaborating on Project Management, Collaborating on Word Processing, Collaborating on Databases, Storing and Sharing Files.

## **Unit –V : Other Ways To Collaborate Online**

Collaborating via Web-Based Communication Tools, Evaluating Web Mail Services, Evaluating Web Conference Tools, Collaborating via Social Networks and Groupware, Collaborating via Blogs and Wikis.

### **Suggested Readings:**

1. Michael Miller, Cloud Computing: Web-Based Applications That Change the Way You Work and Collaborate Online, Que Publishing, August 2008.
2. Haley Beard, Cloud Computing Best Practices for Managing and Measuring Processes for On-demand Computing, Applications and Data Centers in the Cloud with SLAs, Emereo Pty Limited, July 2008.

## Operating systems Lab

### CE- 552

1. Create a program to simulate the First-Come, First-Served (FCFS) CPU scheduling algorithm.
2. Implement a program to demonstrate the Round Robin (RR) scheduling algorithm.
3. Write a program to simulate the Shortest Job First (SJF) scheduling algorithm.
4. Develop a program to implement process creation and termination using fork and exec in C.
5. Create a program to demonstrate inter-process communication using pipes.
6. Write a program to simulate the Banker's algorithm for deadlock avoidance.
7. Implement a program to demonstrate the production-consumer problem using semaphores.
8. Develop a program to simulate memory management using paging.
9. Create a program to implement the Least Recently Used (LRU) page replacement algorithm.
10. Write a program to demonstrate file handling operations (create, read, write, delete) in a simulated file system.
11. Implement a program to showcase the concept of threads and thread synchronization.
12. Create a program to simulate the allocation of memory using the best-fit and worst-fit strategies.
13. Write a program to demonstrate the use of mutexes in thread synchronization.
14. Develop a program to simulate the elevator algorithm for disk scheduling.
15. Create a program to implement a simple shell that can execute commands.
16. Write a program to demonstrate the use of condition variables in thread synchronization.
17. Implement a program to simulate the FIFO page replacement algorithm.
18. Create a program to perform a basic network socket communication between a client and server.
19. Write a program to demonstrate the concept of file permissions in a UNIX-like environment.
20. Develop a program to implement a simple job scheduling system with priorities.

## Seminar-II

### CE-582

1. Develop a program to scrape data from a website using web scraping techniques.
2. Write a program to create a simple RESTful API using a web framework.
3. Implement a program to analyze text files and count word frequency.
4. Create a program to generate QR codes from user input.
5. Write a program to implement basic user authentication using a database.
6. Develop a program to visualize data using charts and graphs.
7. Create a program to convert audio files from one format to another.
8. Write a program to send automated emails using an email library.
9. Implement a program to parse and manipulate JSON data.
10. Create a program to monitor system resource usage (CPU, memory) in real time.
11. Write a program to perform sentiment analysis on text data.
12. Develop a program to simulate a simple chatbot using predefined responses.
13. Create a program to perform image processing tasks like resizing and filtering.
14. Write a program to implement a task scheduling system with deadlines.
15. Implement a program to manage a simple inventory system with CRUD operations.
16. Create a program to encrypt and decrypt text using a basic algorithm.
17. Write a program to generate random passwords with specific criteria.
18. Develop a program to simulate a simple voting system with user input.
19. Create a program to implement a URL shortener service.

## **Data Mining and Warehousing**

	<b>L</b>	<b>T</b>	<b>P</b>	<b>Credits</b>
<b>CE- 601</b>	<b>3</b>	<b>1</b>	<b>0</b>	<b>4</b>

### **Unit -I**

Data Mining: Data Mining Functionalities, Data Preprocessing, Data Cleaning, Data Integration and Transformation, Data Reduction, Data Discretization and Concept Hierarchy Generation.

Association Rule Mining: Efficient and Scalable Frequent Item set Mining Methods, Mining Various Kinds of Association Rules, Association Mining to Correlation Analysis, Constraint-Based Association Mining.

### **Unit -II**

Classification and Prediction: Issues Regarding Classification and Prediction, Classification by Decision Tree Introduction, Bayesian Classification, Rule Based Classification, Classification by Back propagation, Support Vector Machines, Associative Classification, Lazy Learners, Other Classification Methods, Prediction, Accuracy and Error Measures, Evaluating the Accuracy of a Classifier or Predictor, Ensemble Methods, Model Section.

### **Unit -III**

Cluster Analysis: Types of Data in Cluster Analysis, A Categorization of Major Clustering Methods, Partitioning Methods, Hierarchical methods, Density-Based Methods, Grid-Based Methods, Model-Based Clustering Methods, Clustering High Dimensional Data, Constraint-Based Cluster Analysis, Outlier Analysis.

### **Unit -IV**

Data Warehousing and Business Analysis: Data warehousing Components, Building a Data warehouse, Mapping the Data Warehouse to a Multiprocessor Architecture, DBMS Schemas for Decision Support, Data Extraction, Cleanup, and Transformation Tools, Metadata, reporting,

Query tools and Applications, Online Analytical Processing (OLAP), OLAP and Multidimensional Data Analysis.

### **Unit -V**

Mining Object, Spatial, Multimedia, Text and Web Data: Multidimensional Analysis and Descriptive Mining of Complex Data Objects, Spatial Data Mining, Multimedia Data Mining, Text Mining, Mining the World Wide Web.

### **Suggested Readings:**

1. Jiawei Han and Micheline Kamber “Data Mining Concepts and Techniques” Second Edition, Elsevier, Reprinted 2008.
2. Alex Berson and Stephen J. Smith “Data Warehousing, Data Mining & OLAP”, Tata McGraw – Hill Edition, Tenth Reprint 2007.
3. K.P. Soman, Shyam Diwakar and V. Ajay “Insight into Data mining Theory and Practice”, Easter Economy Edition, Prentice Hall of India, 2006.  
Prentice Hall of India, 2006.

## Internet and Web Technology

	L	T	P	Credits
CE- 603	3	1	0	4

### Unit –I : Introduction

Internet Protocol model, Internet Addresses, IP routing concepts, Table Driven and next hop routing, other routing related protocols, Internet Access through PPP, SLIP, WWW, Web servers, Browsers.

### Unit –II : Router Technology

Hubs, Bridges, Routers, Routing Protocols, Routing Security, Switch based routing, routing in unicast environment, multicasting, mobile routing.

### Unit –III : Web Server Technology

Web's Robot global access to information, HTML, HTTP, Accessing a web server, publishing on web server, secure HTTP, Secure Sockets Layer, WWW Proxies, IIS, Case study of apache web server.

### Unit –IV : Browsing Systems

Searching and web casting Technique, Popular web servers, basic features, bookmarks, cookies, progress indicators, customization of browsers, browsing tricks, next generation web browsing, search engines, architecture of search engines, search tools, web crawlers, types of crawlers, scalable web crawler, incremental crawler, parallel crawler, focused crawler, agent based crawler, case study of IE.

## **Unit –V : Website Development**

HTML, XHTML, DHTML, XML, Structuring data, namespaces, XML schema Documents, Document Object Model, DOM methods, Simple API for XML, XSL, SOAP, ASP.Net. Security and management issues for creating a web site

### **Suggested Readings:**

1. Chuck Musciano & Bill Kennedy, HTML & XHTML [SPD],2008.
2. D. Hunter, et. Al. Beginning XML [WROX],2000.
3. Douglas E. Comer; Computer Networks and Internets - PE,2012.
4. Mike Thelwall: Web Crawlers And Search Engines - Emerald Group Publishing Limited,2011.

## **Medical Image Processing**

	<b>L</b>	<b>T</b>	<b>P</b>	<b>Credits</b>
<b>CE- 605</b>	<b>3</b>	<b>1</b>	<b>0</b>	<b>4</b>

### **Unit –I : Fundamentals of Image Processing**

Introduction, Elements of visual perception, Steps in Image Processing Systems, Image Acquisition, Sampling and Quantization, Pixel Relationships, Colour Fundamentals and Models, File Formats. Introduction to the Mathematical tools.

### **Unit –II : Image Enhancement and Restoration**

Spatial Domain: Gray level Transformations Histogram Processing Spatial Filtering, Smoothing and Sharpening, Frequency Domain: Filtering in Frequency Domain, DFT, FFT, DCT, Smoothing and Sharpening filters – Homomorphic Filtering., Noise models, Constrained and Unconstrained restoration models.

### **Unit –III : Image Segmentation and Feature Analysis**

Detection of Discontinuities, Edge Operators, Edge Linking and Boundary Detection, Thresholding, Region Based Segmentation, Motion Segmentation, Feature Analysis and Extraction.

#### **Unit –IV : Medical Imaging**

Biological Imaging, Magnetic Resonance Imaging, Nuclear medicine, Tactile Imaging, Tomography, Echocardiography, Radiography, Magnetic Resonance Imaging (MRI), Ultrasound, Endoscopy, Elastography, Image, Compression of medical images, Use of Medical Imaging in pharmaceutical clinical trials.

#### **Unit –V : Applications of Image Processing**

Representation and Description, Image Recognition, Image Understanding ,Image Classification, Video Motion Analysis, Image Fusion, Steganography, Colour Image Processing.

#### **Suggested Readings:**

1. Rafael C.Gonzalez and Richard E.Woods, “Digital Image Processing”, Third Edition, Education, 2008.
2. Milan Sonka, Vaclav Hlavac and Roger Boyle, “Image Processing, Analysis and Machine Vision”, Third Edition, Third Edition, Brooks Cole, 2008.
3. Anil K.Jain, “Fundamentals of Digital Image Processing”, Prentice-Hall India, 2007.
4. Madhuri A. Joshi, ‘Digital Image Processing: An Algorithmic Approach’, Prentice-Hall 33 India, 2006.
5. Rafael C.Gonzalez , Richard E.Woods and Steven L. Eddins, “Digital Image Processing Using MATLAB”, First Edition, Pearson Education, 2004.

## Software Verification, Validation and Testing

	<b>L</b>	<b>T</b>	<b>P</b>	<b>Credits</b>
<b>CE- 607</b>	<b>3</b>	<b>1</b>	<b>0</b>	<b>4</b>

### **Unit –I**

Introduction, Definition of testing, goals, psychology, model for testing, effective testing, limitations of testing, Defs. Of Failure, faults or bug, error, incident, test case, test ware, life cycle of bug, bug effects, bug classification, test case design, testing methodology, development of test strategy, verification, validation, testing life cycle model, testing techniques, testing principles.

### **Unit –II**

Verification and validation: Verification activities, verification of requirements, verification of HL design, verification of data design, verification of architectural design, verification of UI design, verification of LL design, intro. to validation activities.

### **Unit –III**

Black Box testing : Boundary value analysis, equivalence class partitioning, state table based testing, decision table based, grappling, error guessing, White Box testing: Logic coverage criteria, basic path testing, graph matrices, loop testing, data flow testing, mutation testing.

### **Unit -IV**

Static Testing: Types of static testing, technical reviews, inspections, inspection process, structured walk through, walk through process, adv. Of static testing, Validation Testing: Unit testing, drivers, stubs, integration testing, methods, effect of module coupling and cohesion, functional testing, system testing, recovery testing, security testing, stress testing, performance testing, usability testing.

## **Unit -V**

Test Automation and debugging: S/w measurement and testing, testing metrics, tools debugging, design of practical test cases, reducing no. of test cases, regression testing and test case mgmt.

### **Suggested Readings:**

1. Daniel Galin, Software quality assurance – from theory to implementation , Pearson education, 2009.
2. Aditya Mathur, Foundations of software testing, Pearson Education, 2008
3. Srinivasan Desikan and Gopaldaswamy Ramesh, Software testing – principles and practices , Pearson education, 2006
4. Ron Patton, Software testing , second edition, Pearson education, 2007
5. Alan C Gillies, “Software Quality Theory and Management”, Cengage Learning, Second edition, 2003

## Security of Information System

	<b>L</b>	<b>T</b>	<b>P</b>	<b>Credits</b>
<b>CE- 623</b>	<b>3</b>	<b>1</b>	<b>0</b>	<b>4</b>

### **Unit –I**

Encryption and De-encryption: Terminology and Background: and De-encryption cryptosystems, Plain Text and cipher. Encryption algorithm, crypto analysis. Introduction to ciphers, Monoalphabetic, substitutions, ployalphabetic.

### **Unit -II**

Secure encryption systems: Hard problems: complexity NP-complete problems, characteristics of NP complete, the meaning of NP completeness, NP completeness and cryptography, properties of arithmetic operations, inverse, primes, GCD, modular arithmetic, properties of modular arithmetic, computing the inverse, Fermat's theorem, algorithm for computing inverses, random number generation.

### **Unit -III**

Public key encryption systems: concept and characteristics, introduction to merkle-hellman knapsacks, RSA, Digital signatures, DSS, Hash Algorithms: hash concept, description of hash algorithms, MD4, MD5, SHA1, SHA2, Secure Secret key systems: DES, AES.

### **Unit -IV**

Applied cryptography, protocols, practices, key management protocols Operating system, database, program security.

## **Unit -V**

Electronic Commerce Security: Network Security with IPSec, Web Security using SSL, E-cash and Secure Electronic Transaction (SET), System Security: System Security using Firewalls and VPN's. \* Worms and Viruses Case Studies, Miscellaneous, Smart Cards and security, Digital Watermarking and Steganography.

### **Suggested Readings:**

1. Wenbo Mao, Modern Cryptography: Theory and Practice, Prentice Hall, 2004
2. William Stallings, "Cryptography and Network Security (4th Edition)", PEARSON Education,2006.
3. Behrouz A. Forouzan, "Cryptography and Network Security", McGraw-Hill Education,2007.

## Network Security

	<b>L</b>	<b>T</b>	<b>P</b>	<b>Credits</b>
<b>CE- 625</b>	<b>3</b>	<b>1</b>	<b>0</b>	<b>4</b>

### **Unit -I**

Introduction: The OSI Security Architecture, Security Attacks, Security Services, Security Mechanisms, A Model for Internetwork Security, Internet Standards the Internet Society, Symmetric Encryption and Message Confidentiality, Symmetric Encryption Principles, Symmetric Encryption Algorithms, Cipher Block Modes of Operation, Location of Encryption Devices, Key Distribution.

### **Unit -II**

Public-Key Cryptography: Public-Key Cryptography and Message Authentication, Approaches to Message Authentication, Secure Hash Functions and HMAC, Public Key Cryptography Principles, Public-Key Cryptography Algorithms , Digital Signatures, Key Management.

### **Unit -III**

Security applications: Authentication Applications, Kerberos, X.509 Directory Authentication Service, Public Key Infrastructure, Electronic Mail Security, Pretty Good Privacy (PGP), S/MIME, IP Security: IP Security Overview, IP Security Architecture, Authentication Header, Encapsulating Security Payload, Combining Security Associations, Key Management Web Security, Web Security Requirements, Secure Sockets Layer (SSL) and Transport Layer Security (TLS), Secure Electronic Transaction (SET).

### **Unit -IV**

Network Management Security: Basic Concepts of SNMP, SNMPv1 Community Facility,8.3

SNMPv3.SYSTEM SECURITY, INTRUDERS, Intruders, Intrusion Detection, Password Management.

### **Unit -V**

Malicious Software, Viruses and Related Threats, Virus Countermeasures Distributed Denial of Service Attacks. FIREWALLS, Firewall Design Principles, Trusted Systems, Common Criteria for Information Technology Security Evaluation.

### **Suggested Readings:**

1. Wenbo Mao, Modern Cryptography: Theory and Practice, Prentice Hall, 2004.
2. William Stallings, “Cryptography and Network Security (4th Edition)”, PEARSON Education,2006.
3. Behrouz A. Forouzan, “Cryptography and Network Security”, McGraw-Hill Education,2008.

## **Minor Project**

**CE-671**

### **Unit 1: Project Introduction**

Overview of project objectives, scope, and significance. Discussion of project ideas and selection process. Importance of planning and requirements gathering.

### **Unit 2: Literature Review**

Research and review of existing work related to the project topic. Analysis of methodologies, technologies, and frameworks relevant to the project.

### **Unit 3: Project Planning**

Development of a project plan, including timeline, milestones, and resource allocation. Creation of a detailed project proposal outlining goals and deliverables.

### **Unit 4: System Design**

Design of the system architecture, including user interface, database schema, and overall functionality. Preparation of design documents and diagrams.

### **Unit 5: Implementation**

Coding and development of the project according to the design specifications. Use of appropriate programming languages and tools to build the system.

## Seminar-III

### CE-681

1. Create a program to analyze and visualize climate data over the last decade.
2. Develop a program to implement a basic machine learning model for classification.
3. Write a program to perform data cleaning and preprocessing on a dataset.
4. Create a program to simulate a simple financial calculator for loans and investments.
5. Implement a program to automate the backup of files to a specified location.
6. Write a program to generate a word cloud from a given text input.
7. Develop a program to create a simple budgeting application.
8. Create a program to scrape and analyze product reviews from an e-commerce website.
9. Implement a program to track and visualize personal fitness activities.
10. Write a program to create an interactive quiz application.
11. Develop a program to simulate a simple event management system.
12. Create a program to implement a text-based adventure game.
13. Write a program to perform image classification using a pre-trained model.
14. Implement a program to analyze network traffic and visualize it.
15. Create a program to build a simple content management system (CMS).
16. Write a program to automate data entry tasks using a graphical user interface (GUI).
17. Develop a program to monitor social media sentiment on a specific topic.
18. Create a program to generate personalized reading recommendations based on user preferences.
19. Write a program to implement basic cryptography for secure messaging.
20. Develop a program to create a virtual assistant that can answer simple queries.

## Dissertation

CE- 692

### **Unit 1: Introduction to Dissertation**

Overview of dissertation objectives, significance, and structure. Discussion on the importance of original research and academic integrity.

### **Unit 2: Topic Selection**

Guidance on selecting a relevant and feasible research topic. Methods for narrowing down ideas and defining research questions.

### **Unit 3: Literature Review**

Conducting a comprehensive review of existing literature related to the chosen topic. Techniques for analyzing and synthesizing previous research.

### **Unit 4: Research Methodology**

Overview of different research methodologies (qualitative, quantitative, mixed methods). Selection of appropriate research design, sampling techniques, and data collection methods.

### **Unit 5: Presentation and Defense**

Preparation for presenting the dissertation findings to an academic committee. Strategies for effectively defending the research and addressing questions.

**Shobhit University, Gangoh**

**(Established by UP Shobhit University Act No. 3, 2012)**

**School of School of Engineering and Technology**

**Ordinances, Regulations & Syllabus**

**For**

**Master of (MCA), Two Year Programme**

**Semester System**  
**(W.e.f. session 2013-14)**

**Revised and approved in the year 2021 (17<sup>th</sup> Meeting, Board of  
Studies)**

## **Programme Educational Objectives (PEOs)**

**PEO 1** To provide a strong foundation in computer science and software engineering, enabling students to develop, design, and implement advanced IT solutions for complex challenges.

**PEO 2** To enhance critical thinking and problem-solving abilities, allowing graduates to analyze, design, and optimize algorithms and systems for real-world applications in diverse domains.

**PEO 3** To develop leadership skills, effective communication, and teamwork capabilities, preparing students to manage projects and lead multidisciplinary teams in delivering innovative IT solutions.

**PEO 4** To foster research skills and encourage innovation, enabling students to explore emerging technologies and contribute to advancements in software development and computer science.

**PEO 5** To promote ethical behavior, professional integrity, and continuous learning, ensuring graduates stay adaptable and contribute positively to the evolving IT industry throughout their careers.

**PEO 6** To nurture leadership qualities, communication skills, and teamwork, preparing students to manage projects and collaborate effectively within multidisciplinary teams, ensuring success in software development and IT management.

**PEO 7** To instill a sense of ethical responsibility, professionalism, and integrity, ensuring that graduates understand the societal impact of technology and contribute positively to the global IT community.

**PEO 8** To promote lifelong learning and adaptability, preparing graduates to continually update their skills, stay current with emerging technologies, and remain competitive in an ever-evolving IT landscape.

### Programme Specific Objectives (PSO's)

**PSO 1** To develop proficiency in designing, implementing, and testing software applications using modern programming languages, frameworks, and tools to address complex computational problems.

**PSO 2** To equip students with advanced knowledge of computer networks, protocols, and cybersecurity, enabling them to design secure, scalable, and efficient networked systems.

**PSO 3** To provide expertise in database management, data structures, and data analysis, empowering students to design efficient data-driven applications for real-world business and scientific solutions.

**PSO 4** To explore emerging technologies such as Artificial Intelligence, Machine Learning, Cloud Computing, and Big Data, preparing students to innovate and apply these technologies in various domains.

**PSO 5** To cultivate strong analytical and problem-solving skills, enabling students to conduct research and develop innovative solutions to complex problems in software engineering and IT.

**PEO 6** To develop expertise in software testing methodologies, debugging, and quality assurance processes, ensuring that software applications meet industry standards and perform reliably in diverse environments.

**PEO 7** To enhance students' communication and interpersonal skills, preparing them for effective teamwork, leadership, and technical presentations in multidisciplinary, collaborative software development environments.

**PEO 8** To instill a strong sense of professional ethics and a commitment to lifelong learning, ensuring students can adapt to technological advancements and contribute positively to the IT industry

## Programme Outcome Objectives (POO's)

**POO 1** Graduates will demonstrate a solid understanding of computer science fundamentals, software engineering principles, and IT solutions to address complex real-world problems across various domains.

**POO 2** Students will possess advanced problem-solving skills, applying analytical and computational methods to design efficient algorithms and software solutions for technical challenges.

**POO 3** Graduates will be proficient in designing, developing, testing, and deploying software applications using modern programming languages, frameworks, and software engineering methodologies.

**POO 4** Students will gain expertise in database design, management, and optimization, and will be able to create efficient database systems for storing and retrieving data.

**POO 5** Graduates will be adept in utilizing emerging technologies such as AI, Machine Learning, Cloud Computing, and Big Data to innovate and solve modern-day challenges.

**POO 6** Students will understand networking protocols, communication models, and security principles to design and manage secure, efficient computer networks and distributed systems.

**POO 7** Graduates will adhere to ethical standards and demonstrate professional conduct in their practice, ensuring responsibility, accountability, and respect in all computing-related endeavors.

**POO 8** Students will develop strong research skills, contributing to the advancement of technology through innovative solutions and exploration of new computational techniques and methodologies.

**POO 9** Graduates will possess effective communication skills, enabling them to work collaboratively in multidisciplinary teams, share ideas clearly, and present technical information effectively to stakeholders.

**POO 10** Graduates will engage in lifelong learning, continuously updating their knowledge and adapting to new technologies, methodologies, and industry trends to remain competitive in the evolving IT landscape.

## I semester

Code	Course Title	Cr.	L	T	P
MCA-101	Java	4	3	1	0
MCA-102	Advanced DBMS	4	3	1	0
MCA-103	Advanced DAA	4	3	1	0
MCA-104	Network Fundamentals	4	3	1	0
MCA-133 MCA-133 A/ MCA-133 B/ MCA-133 C/ MCA-133 D	Optimization Techniques / Elements of Statistics / Combinatorial Optimization Multi-objective Optimization Biostatistics	4	3	1	0
MCA-151	Lab JAVA	2	0	0	2
MCA-152	Lab Advanced DBMS	2	0	0	2
MCA-153	Lab Design and analysis of Algorithm	24	15	5	4

### PROFESSIONAL ELECTIVE-I

1. MCA-131      Mobile Computing
2. MCA-132      Theory of Computation
3. MCA-133      Optimization techniques
4. MCA-134      Data Warehousing and Data Mining

## II semester

Code	Course Title	Cr.	L	T	P
MCA-201	Software Engineering & Project Management	4	3	1	0
MCA-202	ASP .Net	4	3	1	0
MCA-203	Python	4	3	1	0
MCA-204	Artificial Intelligence	4	3	1	0
MCA-231	Distributed Operating System	4	3	1	0
MCA-251	Lab Software Engineering and Project Management	2	0	0	2
MCA-252	Lab ASP. Net	2	0	0	2
MCA-253	Lab Python	2	0	0	2
	Total	26	15	5	6

### PROFESSIONAL ELECTIVE-II

1. MCA-231      Distributed Operating System
2. MCA-232      Embedded System
3. MCA-233      Linux/ Unix

### OPEN ELECTIVE

1. MCA-241      Cloud Computing
2. MCA-241 A    Digital Electronics
3. MCA-241 B    Business Communication

4. MCA-241 C Research Methodologies
5. MCA-241 D Cognitive Analytics and social skills for Professional Development

### III semester

Code	Course Title	Cr.	L	T	P
MCA-301	PHP	4	3	1	0
MCA-302	Data Science	4	3	1	0
MCA-304	Cryptography and Network Security	4	3	1	0
MCA-332	Compiler Design	4	3	1	0
MCA-351	Lab PHP	2	0	0	2
MCA-352	Lab Data Science	2	0	0	2
MCA-353	Lab Cryptography and Network Security	2	0	0	2
MCA-354	Minor Project	4	0	0	2
MCA-355	Seminar Based on Learning	2	0	0	2
	Total	24	9	3	10

#### PROFESSIONAL ELECTIVE-III

1. MCA-331 Soft Computing
2. MCA-332 Compiler Design

#### OPEN ELECTIVE

1. MCA-303 Android Programming
2. MCA-304 Cryptography and Network Security
3. MCA-304 A Professional Ethics and Social Responsibility for Sustainability
4. MCA-304 B Enterprise Resource Planning
5. MCA-305 C Software Project Planning and Management
6. MCA-306 D Internet of Everything

Code	Course Title	Cr.	L	T	P
MCA-462	MAJOR PROJECT PRESENTATION & VIVA	24	-	-	-

# JAVA

**MCA-101**

**L – 3 T – 1 P-0**

## **Module I: Introduction to Java**

Introduction, Java Virtual Machine and their architecture, JDK & JRE, Environment Variable, Features and differences with C++, Data Types, Identifiers and Variables, Operators and Expressions, Type Conversion, Control flow, arrays, Constants, Methods. Java Class Libraries: java.lang, java.io, java.math, java.text and java.util package.

## **Module II: Java with Object Orientated Features**

**Class & Objects:** Introducing Classes, A Closer look at Methods and Classes, constructor, static members. **Inheritance:** Types and use of super keyword, Final method and classes. **Interfaces and Packages:** Definition and their implementation, defining class path. **Exception Handling:** Errors and Exceptions, Exception Handling Mechanism, caught and uncaught exceptions, Exception class hierarchy, handling exceptions with try, catch, finally block, defining custom exception. **Multithreading:** Thread life cycle, creating and controlling threads.

## **Module III: I/O and Applets**

Run time input/output operations, io classes and their methods implementation, Applets life cycle, Applets program and their execution, Displaying various geometric shapes using 2D Graphics.

## **Module IV: GUI components using AWT and Event Handling**

**AWT:** Making Windows, Frames, Panels, and Forms. Working with command buttons, text fields, labels, list boxes, layout manager, menus etc. **Event Handling:** Event Handling, Delegation Model, Event Classes, Event Listener interfaces, Adapter Classes.

## **Text & References:**

### **Text:**

- Patrick Naughtn and Herbert Schildt The Complete Reference, Java 2, TMH
- Douglas E.Cmer, Computer Networks & Internet, Pearson.

### **References:**

# ADVANCED DATABASE MANAGEMENT SYSTEM

**MCA-102**

**L – 3 T –1 P -0**

**Module -I:** Basics of PL/SQL

PL/SQL basics, blocks, architecture, variables, constants, attributes, character set, PL/SQL, data types, control structure, conditional and sequential control statements.

**Module -II:** PL/SQL

PL/SQL precompiler, cursors, type of cursors, exceptions, Indexing, View, triggers, PL/SQL Stored procedures and packages

**Module -III:** Distributed Databases

Introduction, Advantages, Architecture, Homogeneous & Heterogeneous DDBMS, Distributed Data Storage (Fragmentation & Replication), Distributed Transactions, Commit protocol, Concurrency Control in Distributed Databases, Availability, Distributed Query Processing

**Module-IV:** Parallel Databases

Introduction, Architecture, I/O Parallelism and Skew, Inter-query Parallelism, Intra-query Parallelism, Intra-operation Parallelism (Parallel Sort, Parallel Join), Interoperation Parallelism, Design of Parallel Systems.

**Module-V:** Object Oriented Database Management System

Introduction, Object-Oriented Data Model, Object Oriented Languages, Persistent Programming Languages, Object-Relational Databases: Nested Relations, Complex Types, Inheritance, Reference Types, Querying with Complex Types, Functions and Procedures Storage for Object Databases.

**TEXT BOOKS:**

1. H. F. Korth and A. Silberschatz: Database System Concepts, McGraw Hill, New Delhi, 1997.
2. Raghu Ramkrishnan, Johannes Gehrke , “Database Management Systems”, McGraw Hill International, 2007
3. Abraham Silberschatz, Henry Korth, S, Sudarshan,, “Database System Concepts”, McGraw Hill International, 2005
4. C.J.Date, Longman, “An Introduction to Database System”, Pearson Education, 2003

**REFERENCE BOOKS:**

1. R. A. Elmasri and S. B. Navathe: Fundamentals of Database Systems, 3rd ed., Addison-Wesley, 1998.
2. R. Ramakrishnan: Database Management Systems, 2nd ed., McGraw Hill, New York, 1999.
3. Elmasri R and Navathe SB, “Fundamentals of Database Systems”, Addison Wesley, 2000.

# ADVANCED DESIGN & ANALYSIS OF ALGORITHMS

MCA-103

L -3 T - 1 P - 0

## **Module I:** Algorithm Analysis

Introduction Algorithms Complexity measures, Best, worst and average-case complexity functions, problem complexity, quick review of basic data structures and algorithm design principles.

## **Module II: Sorting and searching Order statistics**

Sorting by selection, insertion and bubble, Divide & Conquer Strategy, Heap Sort, Quick Sort Data Sorting in Linear time. other sorting algorithms— radix sort, merge sort, sternsons Matrix Multiplication.

Searching in static table— binary search, path lengths in binary trees and applications, optimality of binary search in worst cast and average-case Binary search trees, construction of optimal weighted binary search trees; Searching in dynamic table -randomly grown binary search trees, AVL and (a, b) trees. Hashing: Basic ingredients, analysis of hashing with chaining and with open addressing.

## **Module III: Advanced Design and Analysis Techniques**

Dynamic programming- Elements of dynamic programming, Chain-matrix multiplication, All pair shortest path (Flayed -algorithm), Optimal Binary Search Tree.

Greedy algoirhtms- Elements of the greedy strategy, Huffman codes, Single-source shortest path in a directed graph, Knapsack problem.

## **Module IV: Graph Algorithms**

Elementary graphs Algorithms, Minimum spanning Trees minimum spanning trees— Kruskal's and Prim's algorithms— Johnson's implementation of Prim's algorithm using priority queue data structures, Single source Shortest paths, All Pair Shortest Paths. *String processing* : String searching and Pattern matching, Knuth-Morris-Pratt algorithm and its analysis.

## **Module V : NP-completeness**

Informal concepts of deterministic and nondeterministic algorithms, P and NP , NP-completeness, statement of Cook's theorem, some standard NP-complete problems, approximation algorithms.

### **Text Books:**

## NETWORK FUNDAMENTALS

**MCA-104**

**L-3 T-1 P-0**

### **Introduction to Computer Networks**

Need to share resources, Concepts of Layering, Distributed System and Networks, Prerequisites, Definition, Categories and Components, Connections, Layers and Services, Applications of Computer Networks, Data Communication Fundamentals- Introduction, Frequency and Band, Analog and Digital Signals and Transmission, Coding Mechanism, Modulation, Multiplexing and De-multiplexing, TDM, FDM, Switching and Routing, Transmission and Errors

### **Physical Layer**

Introduction, Duties of Physical Layer, Infrared and Millimeter Waves, ISM Bands, Optical Lights and Free Space Optics, Wired Physical Layer, Wireless Physical Layer

**The Data Link Layer** Duties of Data Link Layer, The Error, The Protocols

### **The Medium Access Sub layer**

Introduction, Wired MAC Layer, The LLC Layer, Wireless MAC, The MAC Layer, The Generic Frame Structure, Connecting Device at Data Link Layer, Virtual LAN.

### **The Network Layer**

Introduction, Duties of Network Layer, Connection Oriented Forwarding using Virtual Circuits, Connection Less Forwarding using Datagram, Connection Oriented Vs Connectionless Forwarding, Forwarding Examples, Routing Algorithms, Congestion, Network Layer Switching

### **The Transport Layer**

Introduction, Duties of Transport Layer Connection Management at Transport Layer, Congestion Control, Comparison with Data Link Layer

### **The Application Layer**

Introduction, Domain Name System: Name Space, Registration Process, Name Servers, Resource Records, Types of Resource Records, Dynamic DNS, WWW and HTTP, Bluetooth

### **Text:**

# MOBILE COMPUTING

**MCA-131**

**L -3 T – 1 P - 0**

## **Course Contents:**

### **Module I:**

**Global System for Mobile Communication (GSM) system overview:** GSM Architecture, Mobility management, Network signalling. GSM Additional services: Teletext, Facsimile, Videotext services.

### **Module II: (Wireless) Medium Access Control**

Motivation for a specialized

MAC (Hidden and exposed terminals, Near and far terminals), SDMA, FDMA, TDMA, CDMA.

**Mobile Network Layer:** Mobile IP (Goals, assumptions, entities and terminology, IP packet delivery, agent advertisement and discovery, registration, tunneling and encapsulation, optimizations), Dynamic Host Configuration Protocol (DHCP).

**Module III: Mobile Transport Layer:** Traditional TCP, Indirect TCP, Snooping TCP, Mobile TCP, Fast retransmit/fast recovery, Transmission /time-out freezing, Selective retransmission, Transaction oriented TCP.

### **Module IV: Mobile Data Communication**

W LANs (Wireless LANs) IEEE 802.11 standard, Mobile IP.

**Third Generation (3G) Mobile Services:** Introduction to International Mobile Telecommunications 2000 (IMT 2000) vision, Wideband Code Division Multiple Access (W-CDMA), and CDMA 2000, Quality of services in 3G.

### **Module V: Global Mobile Satellite Systems**

Mobile Satellite Systems (GEO, MEO and LEO), case studies of the IRIDIUM and GLOBALSTAR systems.

## **Text & References:**

### **Text:**

# THEORY OF COMPUTATION

MCA-132

L -3 T – 1 P - 0

## UNIT-I

**Theory of Automata:** Definition of an Automaton, Description of a Finite Automaton, Transition Systems, Properties of Transition Functions, Acceptability of a String by a Finite Automaton, Nondeterministic Finite State Machines, The Equivalence of DFA and NDFA, Mealy and Moore Models, Minimization of Finite Automata Exercises

## UNIT-II

**Formal Language:** Basic Definitions and Examples, Chomsky Classification of Languages, Languages and Their Relation, Recursive and Recursively Enumerable Sets, Operations on Languages, Languages and Automata

## UNIT-III

**Regular Sets and Regular Grammars:** Regular Expressions, Finite Automata and Regular Expressions, Pumping Lemma for Regular Sets, Application of Pumping lemma, Closure Properties of Regular Sets, Regular Sets and Regular Grammars

## UNIT-IV

**Context-Free languages and Pushdown Automata:** Context-free languages and Derivation Trees, Ambiguity in Context free Grammars, Simplification of Context-free Grammars, Normal Forms, Pumping Lemma and Decision Algorithms for context free languages, Basic Definitions of Pushdown Automata, Acceptance by pda, Pushdown Automata and Context free Languages, Parsing and Pushdown Automata

## UNIT-IV

**Turing Machines and Linear Bounded Automata:** Turing Machine Model, Representation of Turing Machines, Language Acceptability by Turing Machines, Design of Turing Machines, Universal Turing Machines and Other modifications, The Model of Linear Bounded Automaton, Turing Machines and Type 0 Grammars, Linear Bounded Automata and languages, Halting Problem of Turing Machines, NP-Completeness.

# OPTIMIZATION TECHNIQUES

MCA-133

L-3 T-1 P-0

## **Module I: Introduction of OR and Linear Programming**

Basic Definition, Nature and Significance of OR, feature of OR Approach Application and Scope of OR, General Methods for Solving Or Models. General Structure of Linear Programming, Advantages and Limitations of Linear Programming, Application Areas of Linear Programming. Linear Programming Solutions: Mathematical formulation of LPP, Standard form of LPP, Multiple Solution, Unbounded Solutions, Infeasible Solution of LPP.

## **Module II: Simplex Method**

Maximization and Minimization Problem, Solution of LPP using Graphical method, Simplex Method, two Phase Method, Big M Method.

## **Module III: Duality in LPP**

Dual Linear Programming Problem, Rules for Constructing the Dual from Primal, Feature of Duality

## **Module IV: Transportation Problem**

Mathematical Model of Transportation Problem, Transportation Method, North West Corner Method, Linear Cost Method, Vogel's Approximation Method, Unbalanced Supply and Demand, Degeneracy Problem, Alternative Optional Solution, Maximization Transportation Problem..

## **Module V: Queueing Models**

Markovian queues – Birth and Death processes – Single and multiple server queueing models (M/M/1 & M/M/S) – Little's formula – Queues with finite waiting rooms – Queues with impatient customers: Balking and renegeing.

## **Module VI: Theory of Games**

Two Person Zero-Sum Games, Pure Strategies, Game with Saddle Point, Games without Saddle Point, Rule of Dominance, Methods for Solving Problems without Saddle Point.

## **Module VII: Project Management**

Basic Idea of PERT & CPM, Difference between PERT & CPM, PERT/CPM Network Components and Precedence Relationship Critical Path Analysis, Project Scheduling, Project Time-Cost, Trade-Off, Resource Allocation.

## **Text & References:**

## Elements of Statistics

**MCA-133 A**

**Cr L T P 4 3 1 0**

### **Unit 1**

BASIC STATISTICS AND INDEX NUMBERS: Definition - Nature - Scope - Role and Importance of Statistics, Index Numbers: Definition - Uses - Problems in Construction - Methods - Simple and Weighted, Index Numbers in Economics: Laspeyer's and Paache's Index Numbers - Fishers Ideal Index Number - Marshall and Edgeworths Index Numbers.

### **Unit 2**

CENSUS AND SAMPLING: Census and Sampling: Meaning - Features - Population and Sample. Sampling: Meaning - Types of Sampling, Sampling Design: Meaning - Types – Challenges, Design of Questionnaire, Sampling Errors.

### **Unit 3**

COLLECTION AND TABULATION OF DATA: Collection of Data: Meaning - Types of Data: Primary and Secondary - Qualitative and Quantitative, Tabulation of Data: Meaning - Objectives - Classification of Tabulation - Types of Tables - Presentation of Tables.

### **Unit 4**

MEASURES OF CENTRAL TENDENCY, DISPERSION AND DIAGRAMMATICS: Measures of Central Tendency: Characteristics - Median - Mode - Harmonic Mean - Geometric Mean - Simple Problems, Measures of Dispersion-I: Features - Quartile Deviation - Mean Deviation - Standard Deviation - Its usefulness.

### **Unit 5**

Measures of Dispersion-II: Range - Quartiles - Deciles - Percentiles - Characteristics - Simple Problems, Diagrammatic and Graphic Representation - Bar Diagrams - Pie Diagrams - Histograms - Pictograms - Cartograms - Frequency Graphs - Ogives – LorenzCurve.

### **Reference Books:**

3. Miller, Irwin and Miller, Marylees(2006): John E.Freund's Mathematical Statistics with Applications, (7th Edn.), Pearson Education, Asia

## Combinatorial Optimization

MCA-133 B

Cr L T P 4 3 1 0

### Unit 1

Linear and Integer Programs, Formulating real world problems as linear and integer linear programs, formulating combinatorial optimization problems as integer linear programs, recap of important concepts in linear algebra

### Unit 2

Geometry of Polyhedra: Feasible region of LPs and polyhedra, Convexity, Extreme points, Faces and facets. Solving linear programs: Possible outcomes (infeasibility, unboundedness, and optimality) and their certificates, bases and canonical forms, the Simplex method and its geometric interpretation, the ellipsoid method and separation oracles.

### Unit 3

Duality Weak duality, strong duality, complementary slackness, Farkas's Lemma. Combinatorial Optimization Primal-dual method for exact and approximation algorithms, Shortest paths, Minimum cost perfect matchings, Max-Flow Min-Cut Theorem, Totally Unimodular Matrices

### Unit 4

Additional topics (if time permits) Interior-point methods, Randomized/Online algorithms for LPs, Integer Programs, Convex Optimization, Matroids, T-joins, Applications to Game Theory.

### Unit 5

Range of optimization techniques, including divide and conquer, local optimization, dynamic programming, branch and bound, simulated annealing, genetic algorithms, approximation algorithms, integer and linear programming, and greedy algorithms.

### Reference Books:

1. Cook, Cunningham, Pulleyblank and Schrijver. Combinatorial Optimization. Wiley-Interscience, 1998
2. Schrijver. Combinatorial Optimization. Springer, 2003.
3. Grotschel, Lovasz and Schrijver. Geometric Algorithms and Combinatorial Optimization. Springer, 1993

## Multi-Objectives Optimization

**MCA-133 C**

**Cr L T P 4 3 1 0**

### **Unit 1**

Methods for multi-objective optimization and their combination with multi-criteria decision-making techniques, classical methods for treating multi-objective problems will be presented, and their deficiencies will be clarified

### **Unit 2**

Advanced methods, which are based on Pareto-optimality, will be presented. The major part of the course will be based on evolutionary techniques for optimization problems with and without constraints.

### **Unit 3**

Leading algorithms will be presented and compared, such as: NSGA-II, SPEA-2, and MO-CMA-ES. Methods to compare algorithms will be detailed including test functions and measures to analyze the obtained approximated Pareto-optimal set and front. The numerical limitations of the presented algorithms will be clarified.

### **Unit 4**

Methods to cope with such limitations will be described and in particular how to handle the curse of dimensionality of the Pareto-front.

### **Unit 5**

Multi-criteria decision-making approaches will be presented, and their combination with multi-objective optimization

### **Reference Books:**

1. Multi-Objective Optimization in Theory and Practice I: Classical Methods, Andre A. Keller
2. Schrijver. Combinatorial Optimization. Springer, 2003.
3. Extended Multi-Objective Optimization Problems, Andre A. Keller

## Biostatistics

MCA-133 D

Cr L T P 4 3 1 0

### Unit 1

Introduction: Statistics, Biostatistics, Frequency distribution, Measures of central tendency: Mean, Median, Mode- Pharmaceutical examples, Measures of dispersion: Dispersion, Range, standard deviation, Pharmaceutical problems, Correlation: Definition, Karl Pearson's coefficient of correlation, Multiple correlation.

### Unit 2

Regression: Curve fitting by the method of least squares, fitting the lines  $y = a + bx$  and  $x = a + by$ , Multiple regression, standard error of regression- Pharmaceutical Examples Probability: Definition of probability, Binomial distribution, Normal distribution, Poisson's distribution, properties – problems Sample, Population, large sample, small sample, Null hypothesis, alternative hypothesis, sampling, essence of sampling, types of sampling, Error-I type, Error-II type, Standard error of mean (SEM) - Pharmaceutical examples Parametric test: t-test(Sample, Pooled or Unpaired and Paired) , ANOVA, (One way and Two way), Least Significance difference

### Unit 3

Non Parametric tests: Wilcoxon Rank Sum Test, Mann-Whitney U test, KruskalWallis test, Friedman Test, Introduction to Research: Need for research, Need for design of Experiments, Experiential Design Technique, plagiarism Graphs: Histogram, Pie Chart, Cubic Graph, response surface plot, Counter Plot graph Designing the methodology: Sample size determination and Power of a study, Report writing and presentation of data, Protocol, Cohorts studies, Observational studies, Experimental studies, Designing clinical trial, various phases.

### Unit 4

Blocking and confounding system for Two-level factorials Regression modeling: Hypothesis testing in Simple and Multiple regression models Introduction to Practical components of Industrial and Clinical Trials Problems: Statistical Analysis Using Excel, SPSS, MINITAB, DESIGN OF EXPERIMENTS, R - Online Statistical Software's to Industrial and Clinical trial approach

### Unit 5

Design and Analysis of experiments: Factorial Design: Definition, 2<sup>2</sup>, 2<sup>3</sup> design. Advantage of factorial design Response Surface methodology: Central composite design, Historical design, Optimization Techniques

### Reference Books:

1. Pharmaceutical statistics- Practical and clinical applications, Sanford Bolton, publisher Marcel Dekker Inc. NewYork.
2. Fundamental of Statistics – Himalaya Publishing House- S.C.Guptha Design and Analysis of Experiments –PHI Learning Private Limited, R. Pannerselvam,
3. Design and Analysis of Experiments – Wiley Students Edition, Douglas and C.Montgomery

# DATA WAREHOUSING AND DATA MINING

**MCA-134**

**L -3 T – 1 P - 0**

## **Module I: Data Warehousing**

Introduction to Data Warehouse, its competitive advantage, Data warehouse vs Operational Data, Things to consider while building Data Warehouse

## **Module II: Implementation**

Building Data warehousing team, Defining data warehousing project, data warehousing project management, Project estimation for data warehousing, Data warehousing project implementation

## **Module III: Techniques**

Bitmapped indexes, Star queries, Read only tablespaces, Parallel Processing, Partition views, Optimizing extraction process

## **Module IV: Data Mining**

From Data ware housing to Data Mining, Objectives of Data Mining, the Business context for Data mining, Process improvement, marketing and Customer Relationship Management (CRM), the Technical context for Data Mining, machine learning, decision support and computer technology.

## **Module V: Data Mining Techniques and Algorithms**

Process of data mining, Algorithms, Data base segmentation or clustering, predictive Modeling, Link Analysis, Data Mining Techniques, Automatic Cluster Detection, Decision trees and Neural Networks.

## **Module VI: Data Mining Environment**

Case studies in building business environment, Application of data ware housing and Data mining in Government, National Data ware houses and case studies.

## **Text & References:**

S.No	List of programs
1.	Print "Hello, World!" to the console.
2.	Take two integers as input and print their sum.
3.	Check if a given number is even or odd.
4.	Compute the factorial of a non-negative integer.
5.	Generate the Fibonacci series up to a specified number.
6.	Determine if a given number is prime.
7.	Reverse and print a given string.
8.	Convert Celsius to Fahrenheit and vice versa.
9.	Perform addition, subtraction, multiplication, and division.
10.	Count the number of vowels and consonants in a string.
11.	Check if a given string is a palindrome.
12.	Calculate simple interest given principal, rate, and time.
13.	Sort an array of integers in ascending order.
14.	Find the maximum and minimum values in an array.
15.	Implement linear search to find an element in an array.

S.No	List of programs
1.	Write a program to create table insert sample records, update a record, delete a record, and retrieve records from the table.
2.	Write a Program that defines two variables and a constant, then calculates the sum and area of a circle.
3.	Write a Program to find the greatest of three numbers using IF-THEN-ELSE
4.	Write a Program to calculate the factorial of a number using a FOR loop.
5.	Write a Program to handle an arithmetic exception for division by zero.
6.	Write a Program using an explicit cursor to fetch and display employee names.
7.	Write a Program to inserts a record and counts the total rows using an implicit cursor.
8.	Write a Program to create a trigger that automatically updates stock when a sale is made,
9.	Write a Program that creates a stored procedure to retrieve employee details by ID.
10.	Write a Program to create a package that includes a function to calculate factorial.
11.	Write a Program that simulates horizontal fragmentation by creating department-specific employee tables.
12.	Write a Program to perform a distributed transaction across two employee tables.
13.	Write a Program to simulate parallel query execution by splitting a large dataset into parts.
14.	Write a Program that simulates a parallel sort operation on a dataset.
15.	Write a Program that demonstrates various types of joins: Inner Join, Left Join, Right Join, and Full Outer Join.

## Lab Design and analysis of Algorithm

### MCA-153

1. Implement Bubble Sort to sort an array of integers.
2. Implement Selection Sort to sort an array of integers.
3. Implement Insertion Sort to sort an array of integers.
4. Implement Merge Sort to sort an array using the divide-and-conquer approach.
5. Implement Quick Sort to sort an array using the partitioning method.
6. Implement Binary Search to find an element in a sorted array.
7. Implement Linear Search to find an element in an unsorted array.
8. Calculate the time complexity of different sorting algorithms.
9. Find the longest common subsequence between two strings.
10. Solve the Knapsack problem using dynamic programming.
11. Implement Dijkstra's algorithm for shortest path in a weighted graph.
12. Implement Breadth-First Search (BFS) for traversing a graph.
13. Implement Depth-First Search (DFS) for traversing a graph.
14. Solve the N-Queens problem using backtracking.
15. Implement Prim's algorithm for minimum spanning tree.
16. Implement Kruskal's algorithm for minimum spanning tree.

# SOFTWARE ENGINEERING & PROJECT MANAGEMENT

**MCA-201**

**L -3 T – 1 P - 0**

## **Module I: Introduction to Software Engineering and Project Management**

Introduction to Software Engineering: Software, Evolving role of software, Three “R”-Reuse, Reengineering and Retooling, An Overview of IT Project Management: Define project, project management framework, the role of project Manager, Systems View of Project Management, Stakeholder management, Project phases and the project life cycle.

## **Module II: Software Development Life Cycle Models**

Overview of Software Development Life Cycle, Process Models: Waterfall Model, Evolutionary Process Model: Prototype and Spiral Model, Incremental Process model: Iterative approach, RAD, JAD model, Concurrent Development Model, Agile Development: Extreme programming, Scrum.

## **Module III: Software Requirement Analysis and Specification**

Types of Requirement, Feasibility Study, Requirement Analysis and Design: DFD, Data Dictionary, Requirement Elicitation: Interviews, Questionnaire, Brainstorming, Facilitated Application Specification Technique (FAST), Use Case Approach. SRS Case study, Software Estimation: Size Estimation: Function Point (Numerical). Cost Estimation: COCOMO (Numerical), COCOMO-II (Numerical), Earned Value Management.

## **Module IV: Software Project Planning**

Business Case, Project selection and Approval, Project charter, Project Scope management: Scope definition and Project Scope management, Creating the Work Breakdown Structures, Scope Verification, Scope Control.

## **Module V: Project Scheduling and Human Resource management**

Relationship between people and Effort: Staffing Level Estimation, Effect of schedule Change on Cost, Degree of Rigor & Task set selector, Project Schedule, Schedule Control, CPM (Numerical), Human Resource Planning, Acquiring the Project Team, Resource Assignment, Loading, Leveling, Developing the Project Team: Team Structures, Managing the Project Team.

## **Module VI: Software Quality and Risk Management**

Software quality, software reliability models, Overview of ISO 9001, SEI Capability Maturity Model, McCalls Quality Model, Six Sigma, Formal Technical Reviews, Tools and Techniques for Quality Control, Quality Control Charts, Modern Quality Management, Risk Management: Identify IT Project Risk, Risk Analysis and Assessment, Risk Strategies, Risk Monitoring and Control, Risk Response and Evaluation.

## **Module VII: Software Maintenance**

Maintenance Process, Maintenance Model, Estimation of maintenance cost, Regression Testing, Reverse Engineering, Software Re-engineering, Configuration Management and Documentation.

## **Text & References:**

### ***Text***

- Software Engineering, 5th and 7th edititon, by Roger S Pressman, McGraw Hill publication

# ASP.NET

MCA-202

L -3 T – 1 P - 0

## **Module I: Introduction to .NET technologies**

Features of .NET, .NET Framework, CLR, MSIL, .NET class library, .NET Languages, CTS, assemblies, manifest, and metadata, What is ASP.NET?, Difference between ASP and ASP.NET.

## **Module II: Controls in ASP.NET**

Overview of Dynamic Web page, Understanding ASP.NET Controls, Applications, Web servers, Installation of IIS.Web forms, web form controls -server controls, client controls. Adding controls to a web form, Buttons, Text Box, Labels, Checkbox, Radio Buttons, List Box. Adding controls at runtime. Running a web Application, creating a multiform web project. Form Validation: Client side validation, server Side validation, validation Controls: Required Field Comparison Range. Calendarcontrol, Ad rotator Control, Internet Explorer Control.

## **Module III: Overview of ADO.NET and XML**

What is ADO.NET, from ADO to ADO.NET. ADO.NET architecture, Accessing Data using Data Adapters and Datasets , using Command & Data Reader, binding data to data bind Controls, displaying data in data grid, XML basics, attributes, fundamental XML classes: Document, text writer, text reader. XML validations, XML in ADO.NET, The XML Data Document.

## **Module IV: ASP.NET Applications**

Creating, tracking, caching, error handling, Securing ASP.NET applications- form based applications, window based application.

## **Module V: Web services**

Introduction, State management- View state, Session state, Application state, Building ASP.NET web services, working with ASP.NET applications, creating custom controls.

## **Text & References:**

### ***Text:***

- ASP.NET Unleashed by Stephen Walther, SAMS publications

### ***References:***

- ASP.NET and C#.NET, Wrox publication.

# PYTHON

**MCA-203**

**L -3 T – 1 P - 0**

## **UNIT – I:**

**Introduction:** History of Python, Need of Python Programming, Applications Basics of Python Programming Using the REPL(Shell), Running Python Scripts, Variables, Assignment, Keywords, Input-Output, Indentation.

## **UNIT – II:**

**Operators and Expressions:** Types - Integers, Strings, Booleans; Operators- Arithmetic Operators, Comparison (Relational) Operators, Assignment Operators, Logical Operators, Bitwise Operators, Membership Operators, Identity Operators, Expressions and order of evaluations Control Flow- if, if-elif-else, for, while, break, continue, pass

## **UNIT – III:**

**Functions:** Defining Functions, Calling Functions, Passing Arguments, Keyword Arguments, Default Arguments, Variable-length arguments, Anonymous Functions, Fruitful Functions (Function Returning Values), Scope of the Variables in a Function - Global and Local Variables, Modules: Creating modules, import statement, from. Import statement, name spacing, Python Packages

## **UNIT – IV:**

**Data Structures:** Lists- Operations, Slicing, Methods, Tuples, Sets, Dictionaries, Sequences, Comprehensions. **Exceptions:** Errors in a Python Program (Compile-Time Errors, Runtime Errors, Logical Errors), Exceptions, Exception Handling, Types of Exceptions, The Except Block, the assert Statement, User- Defined Exceptions, Logging the Exceptions. **Files:** Files, Types of Files in Python, Opening a File, Closing a File, Working with Text Files Containing Strings, Knowing Whether a File Exists or Not, Working with Binary Files, The with Statement, Pickle in Python, The seek() and tell() Methods

## **UNIT – V:**

**Object Oriented Programming OOP in Python:** Classes, 'self variable', Methods, Constructor Method, Inheritance, Overriding Methods **Regular Expressions:** Regular Expressions, Sequence Characters in Regular Expressions, Quantifiers in Regular Expressions, Special Characters in Regular Expressions, Using Regular Expressions on Files, Retrieving Information from a HTML File

## **Data Science and Data Visualization using Python**

**Data Science Using Python:** Data Frame (Creating Data Frame from an Excel Spreadsheet, Creating Data Frame from .csv Files, Creating Data Frame from a Python Dictionary, Creating Data from Python List of Tuples, Operations on Data Frames) **Data Visualization:** Bar Graph, Histogram, creating a Pie Chart, Creating Line Graph, **Plotting:** Plotting using PyLab, Plotting mortgages and extended examples

## **Text books**

1. Python Programming: A Modern Approach, Vamsi Kurama, Pearson
2. Learning Python, Mark Lutz, Orielly

**Reference Books:**

1. Think Python, Allen Downey, Green Tea Press
2. Core Python Programming, W.Chun, Pearson
3. Introduction to Python, Kenneth A. Lambert, Cengage

# ARTIFICIAL INTELLIGENCE

**MCA-204**

**L-3 T-1 P-0**

## **Module I:**

**Fundamental Issues:** Overview of AI problems, Examples of successful recent AI applications, Intelligent behaviour, The Turing test, Rational versus non-rational reasoning, Problem characteristics: Fully versus partially observable, Single versus multi-agent, Deterministic versus stochastic, Static versus dynamic, Discrete versus continuous, Nature of agents: Autonomous versus semi-autonomous, Reflexive, Goal-based, and Utility-based, Importance of perception and environmental interactions, Philosophical and ethical issues.

## **Module II:**

**Basic Search Strategies:** Problem spaces (states, goals and operators), Problem solving by search, Factored representation (factoring state into variables), Uninformed search (breadth-first, depth-first, depth-first with iterative deepening), Heuristics and informed search (hill-climbing, generic best-first, A\*), Space and time efficiency of search, Constraint satisfaction (backtracking and local search methods).

## **Module III:**

**Advanced Search:** Constructing search trees, Dynamic search space, Combinatorial explosion of search space, Stochastic search: Simulated annealing, Genetic algorithms, Monte-Carlo tree search, Implementation of A\* search, Beam search, Minimax Search, Alpha-beta pruning, Expectimax search (MDP-solving) and chance nodes.

**Knowledge Representation:** Propositional and predicate logic, Resolution in predicate logic, Question answering, Theorem proving, Semantic networks, Frames and scripts, conceptual graphs, conceptual dependencies.

## **Module IV:**

**Reasoning under Uncertainty:** Review of basic probability, Random variables and probability distributions: Axioms of probability, Probabilistic inference, Bayes' Rule, Conditional Independence, Knowledge representations using Bayesian Networks, Exact inference and its complexity, Randomized sampling (Monte Carlo) methods (e.g. Gibbs sampling), Markov Networks, Relational probability models, Hidden Markov Models, Decision Theory Preferences and utility functions, Maximizing expected utility.

## **Module V:**

**Agents:** Definitions of agents, Agent architectures (e.g., reactive, layered, cognitive), Agent theory, Rationality, Game Theory Decision-theoretic agents, Markov decision processes (MDP), Software agents, Personal assistants, and Information access Collaborative agents, Information-gathering agents, Believable agents (synthetic characters, modelling emotions in agents), Learning agents, Multi-agent systems Collaborating agents, Agent teams, Competitive agents (e.g., auctions, voting), Swarm systems and Biologically inspired models.

**Expert Systems:** Architecture of an expert system, existing expert systems: MYCIN, RI. Expert system shells.

**Text & References:**

# DISTRIBUTED OPERATING SYSTEM

MCA-231

L-3 T-1 P-0

## Module I

**Fundamentals:** What is Distributed Computing Systems? Evolution of Distributed Computing System; Distributed Computing System Models; What is Distributed Operating System? Issues in Designing a Distributed Operating System; Introduction to Distributed Computing Environment (DCE).

**Message Passing:** Introduction, Desirable features of a Good Message Passing System, Issues in PC by Message Passing, Synchronization, Buffering, Multi-datagram Messages, Encoding and Decoding of Message Data, Process Addressing, Failure Handling, Group Communication.

## Module II:

**Remote Procedure Calls:** Introduction, The RPC Model, Transparency of RPC, Implementing RPC Mechanism, Stub Generation, RPC Messages, Marshaling Arguments and Results, Server Management, Parameter-Passing Semantics, Call Semantics, Communication Protocols for RPCs, Complicated RPCs, Client-Server Binding, Exception Handling, Security, Some Special Types of RPCs, RPC in Heterogeneous Environments, Lightweight RPC, Optimization for Better Performance, Case Studies: Sun RPC.

## Module III

**Distributed Shared Memory:** Introduction, General Architecture of DSM systems, Design and Implementation Issues of DSM, Granularity, Structure of Shared Memory Space, Consistency Models, Replacement Strategy, Thrashing, Other approaches to DSM, Heterogeneous DSM, Advantages of DSM. Synchronization: Introduction, Clock Synchronization, Event Ordering, Mutual Exclusion, Dead Lock, Election Algorithms

## Module IV

**Resource Management:** Introduction, Desirable Features of a Good Global Scheduling Algorithm, Task Assignment Approach, Load – Balancing Approach, Load – Sharing Approach Process Management: Introduction, Process Migration, Threads.

## Module V

**Distributed File Systems:** Introduction, Desirable Features of a Good Distributed File System, File models, File–Accessing Models, File – Sharing Semantics, File – Caching Schemes, File Replication, Fault Tolerance, Atomic Transactions and Design Principles.

## Text & References:

- Distributed Operating Systems 1st Edition by Andrew S. Tanenbaum
- Distributed Systems: Principles and Paradigms (2nd Edition) 2nd Edition, by Andrew S. Tanenbaum, Maarten Van Steen
-

# CLOUD COMPUTING

**MCA-241**

**L -3 T – 1 P - 0**

## **MODULE I: CLOUD ARCHITECTURE AND MODEL**

Technologies for Network-Based System – System Models for Distributed and Cloud Computing – NIST Cloud Computing Reference Architecture. Cloud Models:- Characteristics – Cloud Services – Cloud models (IaaS, PaaS, SaaS) – Public vs Private Cloud –Cloud Solutions - Cloud ecosystem – Service management – Computing on demand.

## **MODULE II: VIRTUALIZATION**

Basics of Virtualization - Types of Virtualization - Implementation Levels of Virtualization - Virtualization Structures - Tools and Mechanisms - Virtualization of CPU, Memory, I/O Devices - Virtual Clusters and Resource management – Virtualization for Data-center Automation.

## **MODULE III: CLOUD INFRASTRUCTURE**

Architectural Design of Compute and Storage Clouds – Layered Cloud Architecture Development – Design Challenges - Inter Cloud Resource Management – Resource Provisioning and Platform Deployment – Global Exchange of Cloud Resources.

## **MODULE IV: PROGRAMMING MODEL**

Parallel and Distributed Programming Paradigms – MapReduce , Twister and Iterative MapReduce – Hadoop Library from Apache – Mapping Applications - Programming Support - Google App Engine, Amazon AWS - Cloud Software Environments -Eucalyptus, Open Nebula, OpenStack, Aneka, CloudSim

## **MODULE V: SECURITY IN THE CLOUD**

Security Overview – Cloud Security Challenges and Risks – Software-as-a-Service Security – Security Governance – Risk Management – Security Monitoring – Security Architecture Design – Data Security – Application Security – Virtual Machine Security - Identity Management and Access Control – Autonomic Security.

### **Text & References:**

## Digital Electronics

### Subject Code- MCA- 241 A

#### UNIT-1:

##### Number System and Data Representation

Number System: Binary, Octal, Decimal and Hexadecimal Number System and Their Interconversion. Binary Codes: Bcd, Excess 3, Parity, Gray, Ascii And Ebcidic Codes, Their Advantages And Disadvantages. Data Representation: (Related To 8 Bit Number), Real Number Representation, Underflow, Overflow, Range and Accuracy of Numbers.

#### UNIT-2:

##### Binary Arithmetic

Binary Addition, Decimal Subtraction Using 9's And 10's Complement, Binary Subtraction Using 1's And 2'nd Compliment, Multiplication And Division .Logic Gates: Truth Table, Properties And Symbolic Representation Of NOT, AND, OR, NOR, NAND, EX-OR, EX – NOR GATES, NOR and NAND GATES As A Universal Gates.

#### UNIT-3

##### Boolean algebra

Laws And Identities Of Boolean Algebra, Demorgan's Theorem, Use Of Boolean Algebra For Simplification Of Logic Expression, Karnaugh Map For 2,3,4 Variable, Simplification Of Sop And Pos Logic Expression Using K-Map.

#### UNIT-4:

##### Combinational / Sequential Circuits

Half Adder, Full Adder, Parallel Adder, Half Subtractor, Full Subtractor, 4 Bit Binary Adder/Subtractor, Multiplexer, demultiplexer, Decoder, Encoder, Parity Detector.

#### UNIT-5:

##### Architecture Of 8086

Block Diagram Of 8086, Pin Diagram Of 8086, Minimum And Maximum Mode, Addressing Modes, Instruction Set: Data Transfer, Arithmetic, Logical, String Manipulation, Control Transfer, Unconditional Branch, Conditional Branch, Flag, Processor Control.

## **Business Communication**

### **Subject Code- MCA- 241 B**

#### Unit 1

Business Vocabulary – Writing: Drafting Notices, Agenda, and Minutes – Reading: Business news, Business articles.

#### Unit 2

Writing: Style and vocabulary – Business Memorandum, letters, Press Releases, reports – proposals – Speaking: Conversational practice, telephonic conversations, addressing a gathering, conducting meetings.

#### Unit 3

Active Listening: Pronunciation – information gathering and reporting – Speaking: Cross-Cultural Issues, Group Dynamics, and negotiation & persuasion techniques.

#### Unit 4

PROFESSIONAL WRITING: Letter writing – Types, Parts and Styles of Formal Letters – Language to be used in Formal Letters – Letters of Enquiry, Complaint, and Apology with Replies – Letter of Application -Resume – E-mail – Active and Passive Voice.

#### Unit 5

REPORT WRITING: Types of Reports – Formats of Reports – Memo Format – Letter Format and Manuscript Format- Parts of Technical Report – Informational, Analytical and Project Reports – Idioms and Phrases.

## **Research Methodologies**

**Subject Code- MCA- 241 C**

Unit 1.

Foundations of Research: Meaning, Objectives, Motivation, Utility. Concept of theory, empiricism, deductive and inductive theory. Characteristics of scientific method - Understanding the language of Research - Concept, Construct, Definition, Variable. Research Process.

Unit 2.

Problem Identification & Formulation - Research Question - Investigation Question - Measurement Issues - Hypothesis - Qualities of a good Hypothesis Null Hypothesis & Alternative Hypothesis. Hypothesis Testing - Logic & Importance.

Unit 3.

Research Design: Concept and Importance in Research - Features of a good research design - Exploratory Research Design - concept, types and uses, Descriptive Research Designs - concept, types and uses. Experimental Design: Concept of Independent & Dependent variables.

Unit 4.

Qualitative and Quantitative Research: Qualitative research - Quantitative research - Concept of measurement, causality, generalization, and replication. Merging the two approaches.

Unit 5.

Measurement: Concept of measurement- what is measured? Problems in measurement in research- Validity and Reliability. Levels of measurement Nominal, Ordinal, Interval, and Ratio.

## **Cognitive Analytics and Social Skills for Professional Development**

### **Subject Code- MCA- 241 D**

#### Unit I:

Cognitive Analytics and Social Cognition Understanding the self-preliminaries, Models of Understanding Self- T-E-A Model, Johari Window, PE Scale, Meaning and Importance of Self Esteem, Self-Efficacy, Self-Respect, Behavioral Communication- Assertive Skills, Technology adoption, Social Media Etiquettes, Creativity (ICEDIP Model), Visualization, Problem sensitivity, Problem Solving (Six Thinking Hats), Cognitive Flexibility, Cognitive Errors, Introduction to Social Cognition, Attribution Processes (Perceptual Errors), Social Inference, Stereotyping, Prejudice, Accepting Criticism.

#### Unit II:

Attitudes & Emotional Intelligence Understanding Attitudes , Characteristics of Attitude (valence, multiplicity, relation to needs, centrality, pervasiveness, invisible, acquired), Components of Attitudes (Affective, Cognitive, Behavioral), What are Emotions, Healthy and Unhealthy expression of emotions, Relevance of EI at workplace, Emotional Intelligence and Competence, Components of Interpersonal & Intrapersonal Intelligence, Relevance of EI at workplace

#### Unit III:

Leadership and Managing Excellence Team Design Features, Life Cycle of a Teams, Types and Development of Team Building, Issues in Team Performance , Types of leaders, Leadership styles in organizations, Situational Leadership , Strategic Leadership and Change Management- Mentoring, Building Trust, Building a Culture of Inclusion, Sociometry (Sociometry Criteria, Applications of Sociometry, Construction of sociogram), Personal Branding, Time Management, Work Life Integration, Relationship Management (Personal & Professional)

#### Unit IV:

Conflict Resolution and Negotiation Meaning, nature, sources, stages & types of conflicts, Factors affecting conflict, Impact of Conflict, Ethical Dilemmas in Conflict, Conflict Resolution Strategies, Comparison of conflict management styles, Matching conflict management approach with group conditions, Third Party Intervention- Mediation, mediation process, function of the mediator, preconditions for mediation, Intercultural communication and conflict resolution, Negotiation - Types, purpose, stages, Four pillars of negotiation, Strategies, Persuasion, Behavior and conduct during negotiation, closing the negotiation

#### Unit V:

Values & Ethics Meaning & its type, Difference between values and Ethics, Relationship between Values and Ethics, Significance of moral values, Practical Applications of Values & Ethics, Significance of moral values, Moral Icons, Its role in personality development , Character building- “New Self-awareness”, Personal values-Empathy, honesty, courage, commitment, Core Values - Respect, Responsibility, Integrity, Care, & Harmony, Resilience and Agility in Uncertainty, Overview of Resilience , Locus of control, Paradox of choice, Overcoming negative thinking- ABC technique (Adversity, believes and consequences), Personality & cognitive variables that promote resilience, Role of family and social networks, Models, Symptoms and consequences of stress.

# EMBEDDED SYSTEMS

**MCA-232**

**L -3 T – 1 P - 0**

## **Module 1: INTRODUCTION**

Introduction: Evolution of Computers, Technological Trends, Measuring performance Speed up, Computer organization: von Neumann Machine Architecture, Functional units and components, Program development tools. Instruction pipelining and parallel processing: Instruction pipeline, hazards, Data forwarding paths, RISC vs. CISC processors.

## **Module2: EMBEDDED SYSTEM**

Introduction of embedded system, Processor: Embedded Processors in a System, Microprocessor, Microcontroller, Single Purpose Processors and Application specific system processors (ASSPs) in embedded systems. Embedded hardware units and devices

## **Module 3: INTERRUPTS HANDLER, EMBEDDED SOFTWARE**

Interrupts handler, Embedded software, Final Machine Implement-able Software for a System, Coding of Software in Machine Codes, software in Processor Specific Assembly Language, Software in High Level Language, Program Models for Software Designing, Software for Concurrent Processing and Scheduling of Multiple Tasks and ISRs Using an RTOS, Software for the Device Drivers and Device Management using an Operating System, Software tools in designing of an Embedded System, Needed Software Tools in the Exemplary cases. Examples of Embedded System

## **Module 4: The Embedded Computing Platform**

Embedded Computing Platform, CPU Bus, Memory Devices, I/O Devices, Component Interfacing

## **Module 5: Real-Time Operating Systems**

Inter Process Communication & Synchronization of Processes, task and threads, multiple processes in an application, multiple threads in an application, task and states, task and data clear cut distinction between functions, ISRs and Tasks by their Characteristics.

## **Module 6: CONCEPT OF SEMAPHORES**

Concept of semaphores, Use of a Single Semaphore as an event signalling variable or notifying variable (event flag), Use of a Single Semaphore as resource key and in critical Section, Mutex, Use of Multiple Semaphores, Use of Mutex, Counting Semaphores, P and V semaphores shared data: Problem of Sharing Data by Multiple Tasks and Routines, Shared Data, Deadlock Situations ,inter process Communication semaphores, Message Queues, Mailboxes, Pipes, Sockets, Remote Procedure Calls (RPCs).

## LINUX/ UNIX

MCA-233

L-3 T-1 P-0

### **Unit-1 Introduction of UNIX and Shell:**

Introduction, History, Architecture, Experience the Unix environment, Basic command sls, cat, cal, date, calendar, who, printf, tty, sty, uname, passwd, echo, tput, bc, script, spell and ispell, Introduction to Shell Scripting, Shell Scripts, read, Command Line Arguments, Exit Status of a Command, The Logical Operators && and||, exit, if, and case conditions, expr, sleep and wait, while, until, for,\$,@, redirection, set and shift, trap.

### **Unit-2 UNIX File System:**

The file, what's in a filename? The parent-child relationship, pwd, the Home directory, absolute path names, using absolute pathnames for a command, cd, mkdir, rmdir, Relative path names, The UNIX file system. Basic File Attributes: Is -l, the -d option, File Permissions, chmod, Security and File Permission, users and groups, security level, changing permission, changing ownership and group, File Attributes, More file attributes: hard link, symbolic link, umask, find.

### **Unit-3 Simple Filters:**

Pr, head, tail, cut, paste, sort, uniq, tr commands, Filters using Regular Expression: grep, Regular Expression, egrep, fgrep, sed instruction, Line Addressing, Inserting and Changing Text, Context addressing, writing selected lines to a file, the-f option, Substitution, Properties of Regular Expressions.

### **Unit-4 Awk and Advanced Shell Programming:**

Awk-Advanced Filters: Simple awk Filtering, Splitting a Line into Fields, printf, the Logical and Relational Operators, Number Processing, Variables, The -f option, BEGIN and END positional Parameters, getline, Built-invariables, Arrays, Functions, Interface with the Shell, Control Flow. The sh command, export, the Command, Conditional Parameter Substitution, Merging Streams, Shell Functions, eval, Exec Statement and Examples

### **Unit-5 Process and System Administration:**

Process basics, PS, internal and external commands, running jobs in background, nice, at and batch, cron, time commands, Essential System Administration root, administrator's privileges, startup & shutdown, managing disk space, cpio, tar, Customizing the Environment : System Variables, profile, sty, Aliases, Command History, On-line Command Editing.

## Software Engineering and Project Management lab

**MCA-251**

**L T P 0 0 2**

<b>S.No</b>	<b>List of programs</b>
1.	Write a program to take task names as input and display them.
2.	Write a program to updates a task's status (Pending/Done) and shows the result.
3.	Write a program to counts how many tasks have been inputted.
4.	Write a program to multiplies the number of hours by a fixed hourly rate to calculate the cost.
5.	Write a program that assigns a priority (High, Medium, Low) to a task and displays it.
6.	Write a program to checks if a task's due date has passed and displays a reminder.
7.	Write a program to marks specific tasks as milestones based on user input.
8.	Write a program to calculates how many tasks are completed out of the total.
9.	Write a program to assigns a person to a task and displays the assignment.
10.	Write a program to log defects with a status (Open/Closed).
11.	Write a program to multiplies the number of tasks by the estimated hours to give a total project effort.
12.	Write a program to input and display project risks.
13.	Write a program to prints task names with start and end dates in a simple list format.
14.	Write a program to simple First-Come-First-Serve (FCFS) scheduler that orders tasks by input time.
15.	Write a program to program that sums up task durations to calculate total project time.

## Lab ASP. Net

### MCA-252

1. Create a simple ASP.NET Web Form that displays "Hello, World!".
2. Build a contact form that captures user input and sends an email.
3. Develop a login page with user authentication using session management.
4. Create a registration form that saves user data to a SQL database.
5. Implement a product catalog page displaying data from a database.
6. Build a shopping cart application with add, remove, and checkout functionalities.
7. Create a CRUD (Create, Read, Update, Delete) application for managing a list of books.
8. Develop an employee management system with role-based access.
9. Implement a search feature for a blog with pagination.
10. Create a dashboard that visualizes data using charts (e.g., using Chart.js).
11. Build a simple API that returns JSON data for a list of users.
12. Implement file upload functionality with size and type validation.
13. Create a multi-language support page using resource files.
14. Develop a URL shortening service using ASP.NET MVC.
15. Implement session state management and demonstrate session tracking.
16. Build a survey application that saves responses to a database.
17. Create a forum page allowing users to post and comment on threads.
18. Develop a booking system for appointments with calendar integration.
19. Implement a real-time chat application using SignalR.
20. Create a blog platform with user roles for authors and admins.

## Lab Python

### MCA-253

1. Print "Hello, World!" to the console.
2. Calculate the sum of two numbers entered by the user.
3. Check if a given number is even or odd.
4. Compute the factorial of a non-negative integer.
5. Generate the Fibonacci series up to a specified number.
6. Determine if a given number is prime.
7. Reverse a string provided by the user.
8. Convert Celsius to Fahrenheit and vice versa.
9. Implement a basic calculator for addition, subtraction, multiplication, and division.
10. Count the number of vowels and consonants in a given string.
11. Check if a given string is a palindrome.
12. Calculate the area of a rectangle given width and height.
13. Sort a list of integers in ascending order.
14. Find the maximum and minimum values in a list.
15. Implement linear search to find an element in a list.
16. Create a program to read and write to a text file.
17. Generate a random number and create a guessing game.
18. Count the number of words in a sentence provided by the user.
19. Create a simple to-do list application using lists.
20. Implement a basic quiz application that asks questions and evaluates answers.

# SOFT COMPUTING

**MCA-331**

**L -3 T – 1 P - 0**

## **Introduction to Soft Computing**

Introduction, Fuzzy Computing, Neural Computing, Genetic Algorithms, Associative Memory, Adaptive Resonance Theory, Applications

## **Fundamentals of Neural Network**

Introduction, Model of Artificial Neuron, Architectures, Learning Methods, Taxonomy of NN Systems, Single-Layer NN System, Applications.

## **Back Propagation Network**

Background, Back-Propagation Learning, Back-Propagation Algorithm.

## **Associative Memory**

Description, Auto-associative Memory, Bi-directional Hetero associative

## **Fundamentals of Genetic Algorithms**

Introduction, Encoding, Operators of Genetic Algorithm, Basic Genetic Algorithm.

## **Swarm Intelligent System**

Introduction to swarm intelligence, Background, ACO, ABC, Cuckoo search algorithms.

## **Text & References:**

# PHP

**MCA-301**

**L -3 T – 1 P - 0**

**Module I: Introduction to PHP Servers :** Introducing Apache, PHP, MySql, Installing XAMPP, PHP, MySql, Configuring Apache for PHP, Introduction to PHP, Syntax, Common PHP Script Elements, Variables, String, Operators, If...Else, Switch, Arrays, Looping, Functions, Forms, \$\_GET, \$\_POST, Date, Include, Error, Exception, Filter, PHP ODBC, Working With Forms, Processing Forms, Form Validation, Addressing the Stateless Nature of HTTP, Hidden Form Fields.

**Module II: File Handling :**File and Directory Handling, Including Files, File Access, Displaying directory files, Copying and renaming files, Deleting files, Opening and closing files, Reading files, Writing files, Logging visitor details, Enabling file uploads, Creating and upload form, Creating an upload script, Uploading a file

**Module III: PHP and My SQL:**Introducing databases Connect MySQL, Creating new database MySQL Create, Creating database table MySQL Insert, SQL data types, Inserting table data, Altering an existing table, Updating records, Deleting data, tables and databases, SQL Queries MySQL Select, MySQL Where, MySQL Order By, MySQL Update, MySQL Delete,, Creating Mysql user and password, Connecting a user to Mysql, Listing databases, Listing table names, Creating a database, Deleting a database, Creating a database table, Inserting table data, Altering tables, Retrieving data from a table

**Module IV: Advance PHP :** Declaring a class and Objects, The new keyword and constructor, Destructor, Access method and properties using \$this variable, Public ,private, protected properties and methods, Static properties and method, Class constant, Introducing cookies, Set a cookie, Access limitation, Introducing sessions, Starting session, Session without cookies, Setting session persistence, Cookies or session, Sending plain text E-mail, Sending html E-mail, Creating an attachment form, Sending attachment with E-mail

## **Module – V: Content Management System**

Introduction of Content Management System, Introduction about WordPress, WordPress.org vs. WordPress.com Introduction about drupal, Drupal installation, Maintenance mode, Working with plugins, Working with themes, Updation and deletion plugins, Upgrade the drupal versions, Forum Social media buttons, Slide show, Comments, Audio and video file in drupe, You tube in your drupal site

# COMPILER DESIGN

MCA-332

L -3 T – 1 P - 0

## **Module I: Introduction**

Introduction to Compilers, Classification of grammars, Context free grammars, Regular grammars, Deterministic finite State Automata (DFA) & Non-DFA.

## **Module II: Syntax Analysis**

Scanners, Top down parsing, LL grammars, Bottom up parsing, Polish expression Operator Precedence grammar, IR grammars, Comparison of parsing methods, Error handling.

## **Module III: Symbol Table**

Symbol table handling techniques, Organization for non-block and block structured languages.

## **Module IV: Code Generation/Intermediate Code Generation**

Run time storage administration, Static and dynamic allocation, Intermediate forms of source program, Polish N-tuple and syntax trees, Semantic analysis and code generation.

## **Module V: Code Optimization**

Code optimization, Folding, redundant sub-expression evaluation, Optimization within iterative loops.

## **Text & References:**

### ***Text:***

# ANDROID PROGRAMMING

**MCA-303**

**L -3 T – 1 P - 0**

## **Module –I: Basics of Android**

What is Android, History and Version, Installing softwares , Setup Eclipse, Hello Android example, Internal Details, Dalvik VM , Software Stack , Android Core Building Blocks , Android Emulator , AndroidManifest.xml , R.java file , Hide Title Bar , Screen Orientation

## **Module –II: UI Widgets**

Working with Button, Toast, Custom Toast, Button, Toggle Button, Switch Button, Image Button, CheckBox, AlertDialog, Spinner, AutoCompleteTextView, RatingBar, DatePicker, TimePicker, ProgressBar, Quick Contact Budge, Analog Clock and Digital Clock, Working with hardware Button, File Download

## **Module –III: Activity, Intent & Fragment**

Activity Lifecycle, Activity Example, Implicit Intent, Explicit Intent, Fragment Lifecycle, Fragment Example, Dynamic Fragment

## **Module –IV: Android Menu & Layout Manager**

Option Menu, Context Menu, Popup Menu , Relative Layout, Linear Layout, Table Layout, Grid Layout

## **Module –V: Adaptor & Views**

Array Adaptor, ArrayList Adaptor, Base Adaptor, GridView , WebView , ScrollView , SearchView , TabHost , DynamicListView , ExpandedListView

## **Text & Reference:**

- Android Programming: The Big Nerd Ranch Guide (Big Nerd Ranch Guides) (By: Bill Philips & Brian Hardy)
- Android Recipes: A Problem-Solution Approach, Dave Smith & Jeff Friesen

# Data Science

**MCA-302**

**L -3 T – 1 P - 0**

## **Module 1: Big Data & Statistics**

Overview of Big Data; Characteristics of Big Data.

- Important statistical concepts used in data science
- Difference between population and sample
- Types of variables
- Measures of central tendency
- Measures of variability
- Coefficient of variance
- Skewness and Kurtosis

## **Module 2: Inferential statistics**

Inferential statistics is used to generalize of populations, from which samples are drawn. This is a new branch of statistics, which helps you learn to analyze representative samples of large data sets. In this module, you will learn –

- Normal distribution
- Test hypotheses
- Central limit theorem
- Confidence interval
- T-test
- Type I and II errors
- Student's T distribution

## **Module 3: Python**

Python is the most important and necessary topic that every data scientist should have knowledge about. In this section, our instructors will take you through the basics of Python and areas where it can be used. You will learn how to use some of the current tools such as Numpy, Pandas, and Matplotlib. Therefore, module 1 includes –

- Environment set-up
- Jupyter overview
- Python Numpy
- Python Pandas
- Python Matplotlib

## **Module 4: Exploratory data analysis**

- Data visualization
- Missing value analysis
- The correction matrix
- R programming language

## **Module 5: Supervised machine learning**

This is a comprehensive module to help you understand how to make machines or computers interpret human language. You will learn –

- Python Scikit tool

- Neural networks
- Support vector machine
- Logistic and linear regression
- Decision tree classifier

# Cryptography and Network Security

## MCA-304

### Unit 1: Introduction to Cryptography

Overview of cryptography, historical background, and applications. Basic terminology such as plaintext, ciphertext, and key. Exploration of types of cryptography including symmetric and asymmetric methods. Introduction to classical ciphers like the Caesar cipher and Vigenère cipher, along with modern cryptographic algorithms.

### Unit 2: Symmetric Key Cryptography

Focus on block ciphers including DES and AES, as well as their modes of operation. Discussion of stream ciphers such as RC4 and their applications. Key management and distribution strategies will be covered, along with cryptographic protocols that utilize symmetric key cryptography. Examination of potential attacks on symmetric key systems.

### Unit 3: Asymmetric Key Cryptography

Principles of asymmetric cryptography, including the RSA algorithm for key generation, encryption, and decryption. Study of the Diffie-Hellman key exchange method and the concepts of digital signatures and certificates. Analysis of applications related to asymmetric cryptography.

### Unit 4: Hash Functions and Message Integrity

Introduction to hash functions and their importance in cryptography. Exploration of the properties of cryptographic hash functions, with a focus on common examples like MD5, SHA-1, and SHA-256. Discussion on message authentication codes (MACs) and the applications and security implications of hash functions.

### Unit 5: Network Security Protocols

Overview of network security concepts and practices. Detailed examination of Secure Sockets Layer (SSL) and Transport Layer Security (TLS), as well as Internet Protocol Security (IPsec). Insights into virtual private networks (VPNs), firewalls, and intrusion detection systems.

# Compiler Design

**MCA-332**

## **Unit 1: Introduction to Compiler Design**

Overview of compiler design and its phases. The role of compilers in programming languages. Lexical analysis, syntax analysis, and semantic analysis. Introduction to different types of translators, including interpreters.

## **Unit 2: Lexical Analysis**

Detailed study of lexical analysis and its importance. Design and implementation of finite automata. Use of regular expressions in token specification. Construction of lexical analyzers and tools like Lex.

## **Unit 3: Syntax Analysis**

Introduction to context-free grammars and parsing techniques. Overview of parsing algorithms, including top-down and bottom-up parsing. Study of predictive parsing, recursive descent parsing, and LR parsing. Construction of parse trees and syntax trees.

## **Unit 4: Semantic Analysis**

Understanding semantic analysis and its role in compiler design. Techniques for type checking and symbol table management. Implementation of semantic actions and the use of attribute grammars. Error detection and handling during semantic analysis.

## **Unit 5: Intermediate Code Generation**

Overview of intermediate representations used in compilers. Techniques for generating intermediate code from syntax trees. Three-address code, quadruples, and other forms of intermediate code. Optimization techniques at the intermediate level.

## **Professional Ethics and Social Responsibility for Sustainability**

**MCA-304 A**

### **Unit 1: Introduction to Professional Ethics**

Overview of professional ethics and its significance in various fields. Examination of ethical theories and frameworks. Discussion on the role of values and morals in professional conduct. Case studies highlighting ethical dilemmas in professional settings.

### **Unit 2: Ethical Decision-Making**

Analysis of decision-making processes in ethical contexts. Models of ethical decision-making and their applications. Factors influencing ethical decisions in professional practice. Strategies for resolving ethical conflicts and dilemmas.

### **Unit 3: Social Responsibility**

Definition and importance of social responsibility in business and professional environments. Examination of corporate social responsibility (CSR) initiatives. The relationship between social responsibility and sustainability. Impact of social responsibility on stakeholder engagement.

### **Unit 4: Sustainability and Ethical Practices**

Understanding sustainability in the context of professional ethics. Exploration of environmental ethics and sustainable practices. Discussion on the role of professionals in promoting sustainable development. Case studies of organizations implementing sustainable practices.

### **Unit 5: Global Perspectives on Ethics and Responsibility**

Examination of ethical standards across different cultures and societies. Challenges of maintaining ethical standards in a globalized world. The impact of globalization on professional ethics and social responsibility. Comparative analysis of ethical practices in various countries.

# **Enterprise Resource Planning**

## **MCA-304 B**

### **Unit 1: Introduction to Enterprise Resource Planning**

Overview of Enterprise Resource Planning (ERP) systems and their significance in organizations. Examination of the evolution of ERP and its integration with business processes. Discussion on the components and architecture of ERP systems.

### **Unit 2: ERP Modules and Functionality**

Detailed exploration of various ERP modules, including finance, human resources, supply chain management, manufacturing, and customer relationship management. Understanding the functionality and interconnectivity of these modules within an ERP system.

### **Unit 3: ERP Implementation Strategies**

Analysis of ERP implementation methodologies and best practices. Overview of project planning, resource allocation, and change management during implementation. Discussion on the challenges and risks associated with ERP implementation.

### **Unit 4: ERP Customization and Integration**

Examination of customization options within ERP systems. Strategies for integrating ERP with existing legacy systems and other software applications. Case studies of successful ERP integration projects.

### **Unit 5: Data Management and Reporting in ERP**

Understanding the importance of data management within ERP systems. Overview of data migration processes and data quality management. Discussion on reporting tools and techniques for data analysis in ERP environments.

MCA-304 C

### **Unit 1: Introduction to Software Project Management**

Overview of software project management principles and practices. Examination of the software development lifecycle and its phases. Discussion on the roles and responsibilities of a project manager in software projects.

### **Unit 2: Project Planning and Estimation**

Introduction to project planning concepts and methodologies. Techniques for project estimation, including expert judgment, analogy-based estimation, and parametric models. Discussion on work breakdown structure (WBS) and project scheduling.

### **Unit 3: Risk Management in Software Projects**

Identification and analysis of risks in software projects. Development of risk management plans and strategies for mitigating risks. Tools and techniques for monitoring and controlling project risks.

### **Unit 4: Resource Management and Team Dynamics**

Overview of resource management in software projects, including human, financial, and material resources. Discussion on team dynamics, communication, and conflict resolution. Strategies for building and leading effective project teams.

### **Unit 5: Quality Assurance and Control**

Introduction to quality management in software projects. Examination of quality assurance and quality control processes. Techniques for measuring and ensuring software quality throughout the project lifecycle.

## **Internet of Everything**

### **MCA-304 D**

#### **Unit 1: Introduction to the Internet of Everything**

Overview of the Internet of Everything (IoE) and its significance. Examination of the components of IoE: people, processes, data, and things. Discussion on the evolution of IoE from the Internet of Things (IoT) and its implications.

#### **Unit 2: Architecture and Technologies of IoE**

Understanding the architectural framework of IoE systems. Overview of enabling technologies such as sensors, connectivity protocols, and cloud computing. Examination of data processing and analytics in IoE environments.

#### **Unit 3: IoE Communication Models**

Analysis of communication models used in IoE. Discussion on device-to-device, device-to-cloud, and cloud-to-cloud communication. Exploration of protocols and standards that facilitate communication in IoE.

#### **Unit 4: Data Management and Analytics**

Introduction to data management challenges in IoE. Techniques for collecting, storing, and processing large volumes of data. Discussion on data analytics and visualization tools to derive insights from IoE data.

#### **Unit 5: Security and Privacy in IoE**

Examination of security challenges and vulnerabilities in IoE systems. Strategies for securing IoE devices and networks. Discussion on privacy concerns and regulations affecting IoE applications.

S.No	List of programs
1.	Write a program to implement the Caesar cipher for encryption and decryption of a given plaintext.
2.	Create a program that implements a substitution cipher by mapping each letter of the alphabet to another letter.
3.	Write a Program to Implement a transposition cipher for rearranging letters.
4.	Write a basic version of the DES encryption and decryption.
5.	Write a Program to Demonstrate Triple DES encryption and decryption.
6.	Write a Program to Implement one block cipher mode (e.g., CBC).
7.	Write a Program to Create a calculator for modular arithmetic operations.
8.	Write a Program to Generate RSA keys using two prime numbers.
9.	Write a Program to Implement Euclid's algorithm for finding GCD.
10.	Write a Program to Compute MD5 hash for a given string.
11.	Write a Program to Implement SHA-256 hash function for messages
12.	Write a Program to Generate a MAC using HMAC.
13.	Write a Program to Simulate a basic Kerberos authentication process.
14.	Write a Program to Demonstrate PGP encryption and decryption.
15.	Write a Program to Simulate a simple firewall rule for access control.

## Lab PHP

### MCA-351

1. Create a simple PHP script that prints "Hello, World!".
2. Build a form that takes user input and displays the submitted data.
3. Implement a user registration system that stores data in a MySQL database.
4. Create a login system with session management to authenticate users.
5. Develop a contact form that sends an email with user details.
6. Build a CRUD application to manage a list of books in a database.
7. Create a simple calculator that performs basic arithmetic operations.
8. Implement a file upload feature with validation for file types.
9. Develop a program that generates a random password.
10. Create a page that displays data from an API using cURL.
11. Implement pagination for displaying a list of products from a database.
12. Build a blog platform with post creation and commenting features.
13. Create a program to read and display contents of a text file.
14. Develop a shopping cart system that tracks selected items.
15. Implement user roles (admin and user) with access control.
16. Create a program that generates and displays a QR code.
17. Build a survey application that collects and displays user responses.
18. Create a simple image gallery that displays images from a folder.

## Lab Data Science

### MCA-352

- 1) Load a CSV file and display basic statistics using pandas.
- 2) Clean a dataset by handling missing values and duplicates.
- 3) Visualize data distributions using histograms and box plots with Matplotlib.
- 4) Implement a linear regression model to predict housing prices.
- 5) Perform exploratory data analysis (EDA) on a dataset with seaborn.
- 6) Create a scatter plot to visualize the relationship between two variables.
- 7) Build a decision tree classifier for a classification problem.
- 8) Implement k-means clustering on a dataset and visualize clusters.
- 9) Generate a word cloud from a text document.
- 10) Use Natural Language Processing (NLP) to tokenize and analyze text data.
- 11) Perform sentiment analysis on tweets using a pre-trained model.
- 12) Create a dashboard using Plotly Dash to visualize key metrics.
- 13) Implement feature scaling (standardization and normalization) on a dataset.
- 14) Build and evaluate a random forest classifier for a binary classification problem.
- 15) Create a time series analysis and forecasting model using ARIMA.
- 16) Use PCA (Principal Component Analysis) to reduce dimensionality of a dataset.
- 17) Implement a recommendation system using collaborative filtering.
- 18) Analyze geographical data and create maps using Folium.

## Minor Project

### MCA-354

1. Build a personal expense tracker application with user authentication.
2. Develop a simple blogging platform that allows users to create and manage posts.
3. Create a task management tool with features for adding, updating, and deleting tasks.
4. Implement a movie recommendation system using a collaborative filtering algorithm.
5. Build a weather dashboard that fetches real-time data from a weather API.
6. Develop a quiz application that scores user responses and provides feedback.
7. Create an online library management system for borrowing and returning books.
8. Implement a chat application using WebSockets for real-time communication.
9. Build a recipe sharing platform with user-generated content and ratings.
10. Develop a fitness tracking app that logs workouts and progress over time.
11. Create a simple e-commerce website with product listings and a shopping cart.
12. Implement a travel itinerary planner that helps users organize trips.
13. Build a note-taking application with features for tagging and searching notes.
14. Create a polling application for gathering opinions on various topics.
15. Develop an online resume builder that allows users to create and download resumes.
16. Implement a simple forum for discussions with user registration and threads.
17. Create a personal blog with customizable themes and comment functionality.
18. Build a language learning app that quizzes users on vocabulary and grammar.
19. Develop a digital art gallery to showcase user-uploaded artworks.
20. Create a simple game (e.g., Tic-Tac-Toe) that can be played against a computer or another user.

## Seminar Based on Learning

### MCA-355

- 1) Create a program that tracks learning progress over time using visualizations.
- 2) Develop a quiz application that adapts questions based on user performance.
- 3) Build a flashcard app for studying vocabulary or concepts with spaced repetition.
- 4) Implement a study group platform that connects learners with similar interests.
- 5) Create a resource-sharing tool for educational materials and links.
- 6) Develop a personalized learning path generator based on user goals.
- 7) Implement a gamified learning experience that rewards users for completing tasks.
- 8) Create a journal application for users to reflect on their learning experiences.
- 9) Build a web scraper to gather educational content from various websites.
- 10) Develop an interactive tutorial platform for teaching coding skills.
- 11) Create a language learning app with pronunciation feedback using speech recognition.
- 12) Implement a project-based learning platform that connects projects with relevant resources.
- 13) Build a mentorship matching system that pairs learners with experienced mentors.
- 14) Create a community forum for discussing learning strategies and sharing tips.
- 15) Develop a visualization tool to map out concepts and their relationships.
- 16) Implement a time management tool specifically designed for students.
- 17) Create a podcast aggregator focused on educational content.
- 18) Build an AI-powered chatbot to answer common learning-related questions.
- 19) Develop a survey tool for gathering feedback on learning experiences.
- 20) Create a platform for hosting and attending webinars on various topics.

## **MAJOR PROJECT PRESENTATION & VIVA**

**MCA-462**

### **Unit 1: Introduction to the Internet of Everything**

Overview of the Internet of Everything (IoE) and its significance. Examination of the components of IoE: people, processes, data, and things. Discussion on the evolution of IoE from the Internet of Things (IoT) and its implications.

### **Unit 2: Architecture and Technologies of IoE**

Understanding the architectural framework of IoE systems. Overview of enabling technologies such as sensors, connectivity protocols, and cloud computing. Examination of data processing and analytics in IoE environments.

### **Unit 3: IoE Communication Models**

Analysis of communication models used in IoE. Discussion on device-to-device, device-to-cloud, and cloud-to-cloud communication. Exploration of protocols and standards that facilitate communication in IoE.

### **Unit 4: Data Management and Analytics**

Introduction to data management challenges in IoE. Techniques for collecting, storing, and processing large volumes of data. Discussion on data analytics and visualization tools to derive insights from IoE data.

### **Unit 5: Security and Privacy in IoE**

Examination of security challenges and vulnerabilities in IoE systems. Strategies for securing IoE devices and networks. Discussion on privacy concerns and regulations affecting IoE applications.

## **Shobhit University, Gangoh**

(Established by UP Shobhit University Act No. 3, 2012)

### **School of School of Engineering and Technology**

#### **Ordinances, Regulations & Syllabus**

For

#### **Master of (MCA) Lateral Entry, Two Year Programme**

**Semester System**  
(w.e.f. session 2013-14)

**Approved and adopted in the year 2013 (1<sup>th</sup> Meeting, Board of  
Studies)**

## **Programme Educational Objectives (PEOs)**

**PEO 1** To provide a strong foundation in computer science and software engineering, enabling students to develop, design, and implement advanced IT solutions for complex challenges.

**PEO 2** To enhance critical thinking and problem-solving abilities, allowing graduates to analyze, design, and optimize algorithms and systems for real-world applications in diverse domains.

**PEO 3** To develop leadership skills, effective communication, and teamwork capabilities, preparing students to manage projects and lead multidisciplinary teams in delivering innovative IT solutions.

**PEO 4** To foster research skills and encourage innovation, enabling students to explore emerging technologies and contribute to advancements in software development and computer science.

**PEO 5** To promote ethical behavior, professional integrity, and continuous learning, ensuring graduates stay adaptable and contribute positively to the evolving IT industry throughout their careers.

**PEO 6** To nurture leadership qualities, communication skills, and teamwork, preparing students to manage projects and collaborate effectively within multidisciplinary teams, ensuring success in software development and IT management.

**PEO 7** To instill a sense of ethical responsibility, professionalism, and integrity, ensuring that graduates understand the societal impact of technology and contribute positively to the global IT community.

**PEO 8** To promote lifelong learning and adaptability, preparing graduates to continually update their skills, stay current with emerging technologies, and remain competitive in an ever-evolving IT landscape.

## **Programme Specific Objectives (PSO's)**

**PSO 1** To develop proficiency in designing, implementing, and testing software applications using modern programming languages, frameworks, and tools to address complex computational problems.

**PSO 2** To equip students with advanced knowledge of computer networks, protocols, and cybersecurity, enabling them to design secure, scalable, and efficient networked systems.

**PSO 3** To provide expertise in database management, data structures, and data analysis, empowering students to design efficient data-driven applications for real-world business and scientific solutions.

**PSO 4** To explore emerging technologies such as Artificial Intelligence, Machine Learning, Cloud Computing, and Big Data, preparing students to innovate and apply these technologies in various domains.

**PSO 5** To cultivate strong analytical and problem-solving skills, enabling students to conduct research and develop innovative solutions to complex problems in software engineering and IT.

**PEO 6** To develop expertise in software testing methodologies, debugging, and quality assurance processes, ensuring that software applications meet industry standards and perform reliably in diverse environments.

**PEO 7** To enhance students' communication and interpersonal skills, preparing them for effective teamwork, leadership, and technical presentations in multidisciplinary, collaborative software development environments.

**PEO 8** To instill a strong sense of professional ethics and a commitment to lifelong learning, ensuring students can adapt to technological advancements and contribute positively to the IT industry

## **Programme Outcome Objectives (POO's)**

**POO 1** Graduates will demonstrate a solid understanding of computer science fundamentals, software engineering principles, and IT solutions to address complex real-world problems across various domains.

**POO 2** Students will possess advanced problem-solving skills, applying analytical and computational methods to design efficient algorithms and software solutions for technical challenges.

**POO 3** Graduates will be proficient in designing, developing, testing, and deploying software applications using modern programming languages, frameworks, and software engineering methodologies.

**POO 4** Students will gain expertise in database design, management, and optimization, and will be able to create efficient database systems for storing and retrieving data.

**POO 5** Graduates will be adept in utilizing emerging technologies such as AI, Machine Learning, Cloud Computing, and Big Data to innovate and solve modern-day challenges.

**POO 6** Students will understand networking protocols, communication models, and security principles to design and manage secure, efficient computer networks and distributed systems.

**POO 7** Graduates will adhere to ethical standards and demonstrate professional conduct in their practice, ensuring responsibility, accountability, and respect in all computing-related endeavors.

**POO 8** Students will develop strong research skills, contributing to the advancement of technology through innovative solutions and exploration of new computational techniques and methodologies.

**POO 9** Graduates will possess effective communication skills, enabling them to work collaboratively in multidisciplinary teams, share ideas clearly, and present technical information effectively to stakeholders.

**POO 10** Graduates will engage in lifelong learning, continuously updating their knowledge and adapting to new technologies, methodologies, and industry trends to remain competitive in the evolving IT landscape.

# DATA COMMUNICATIONS AND NETWORKING

CCA-505

Cr. L T P  
4 3 1 0

## Unit - I

**Transmission Technology:** Frequency, Spectrum, Bandwidth, Time Domain Concept, Frequency Domain Concept, Data & Signals i.e. Analog Signal, Digital Signal, Analog Data, Digital Data. Signal Strength, Decibals, Decibal-watt, Decibal-milivolt.

**Relationship between data rate & Bandwidth:** Nyquist Theorem & Shannon's Theorem, Bit Rate & Baud Rate.

## Unit- II

**Transmission Impairments:** Attenuation & Attenuation Distortion, Delay Distortion, Noise, SNR, Thermal Noise, Inter modulation Noise, Cross Talk, Impulse Noise.

**Transmission Media:** Basic idea of electromagnetic spectrum, Guided Transmission Media (UTP, STP, COAX, Optical Fiber), Unguided Transmission Media (Wireless Transmission, Microwave Transmission, Infrared Transmission).

## Unit - III

**Communication System:** Communication System Model, Data Communication Model.

**Amplitude Modulation Theory:** Mathematical Representation of AM, Frequency Spectrum of AM waves, Power relations in AM wave.

**Frequency and Phase Modulation Theory:** Mathematical Representation of FM, Frequency Spectrum of FM waves, Phase Modulation, Effect of Noise in Frequency Modulation.

## Unit - IV

**Signal Encoding Techniques:** Transferring Analog Signals into a Digital form i.e. PCM, Delta Modulation (DM), Digital Signal encoding Techniques: NRZ-L, NRZI, MultiLevel, Binary (Bipolar-AMI, Pseudoternary) Biphasic (Manchester code & Differential Manchester code)

**Encoding or Modulation Technique** for Transforming Digital data into Analog Signals: ASK, FSK, PSK, BPSK and QPSK.

## Unit - V

**Data Communication Technologies:** Asynchronous and Synchronous Transmission, Line Configurations: Point-to-Point, Multipoint, Simplex, Half Duplex and full duplex Transmission.

**Multiplexing:** FDM, TDM, Synchronous TDM, Statistical – TDM.

**Circuit Switching Networks:** Switching Concepts, Space division switching, Time division switching, Control Signaling (Inbound & outbound), Common channel Signaling.

**Packet Switching Networks:** Packet Switching Principles, Datagram packet switching & Virtual circuit packet switching, Frame Relay.

**Interfacing:** RS-232C, X.25, X.21, V.21 & V.28.

**Computer Network:** Goals and uses of Network, LAN, MAN, WAN, Network architecture & layering, OSI model and design Issues of Layers.

# JAVA PROGRAMMING

CCA-503

Cr. L T P  
4 3 1 0

## Unit – I

Introduction to Java: Importance and features of Java, Keywords, constants, variables and Data Types, Operators and Expressions, Decision Making, Branching and Looping: if..else, switch,?: operator, while, do, for statements, labeled loops, jump statements: break, continue, return. Introducing classes, objects and methods: defining a class, adding variables and methods, creating objects, constructors, class inheritance.

Arrays and String: Creating an array, one and two dimensional arrays, string array and methods, Classes: String and String Buffer classes, Wrapper classes: Basics types, using super, Multilevel hierarchy abstract and final classes, Object class, Packages and interfaces, Access protection, Extending Interfaces, packages.

## Unit – II

Exception Handling: Fundamentals exception types, uncaught exceptions, throw, throw, final, built in exception, creating your own exceptions, Multithreaded Programming: Fundamentals, Java thread model: priorities, synchronization, messaging, thread classes, Run able interface, inter thread Communication, suspending, resuming and stopping threads.

## Unit-III

Input/Output Programming: Basics, Streams, Byte and Character Stream, predefined streams, Reading and writing from console and files. . Networking: Basics, networking classes and interfaces, using java.net package, doing TCP/IP and Data-gram Programming

## Unit – IV

The Collection Framework: collection interfaces, collection classes(ArrayList, LinkedList, Hash set), Accessing a Collection via an Iterator, Vector, More utility class: StringTokenizer, Date.

## Unit – V

Event Handling: Different Mechanism, the Delegation Event Model, Event Classes, Listener Interfaces, Adapter and Inner Classes, Working with windows, Graphics and Text, using AWT controls, Layout managers and menus, Java Applet. Beans: Introduction to Java Beans and Swings, Servlets

# THEORY OF COMPUTATION

CCA-505

L T P Cr

3 1 0 4

## UNIT I:

Introduction; Alphabets, Strings and Languages; Automata and Grammars, Deterministic finite Automata (DFA)-Formal Definition, Simplified notation: State transition graph, Transition table, Language of DFA, Nondeterministic finite Automata (NFA), NFA with epsilon transition, Language of NFA, Equivalence of NFA and DFA, Minimization of Finite Automata, Distinguishing one string from other, Myhill-Nerode Theorem

## UNIT II:

Regular expression (RE) , Definition, Operators of regular expression and their precedence, Algebraic laws for Regular expressions, Regular expression to FA, DFA to Regular expression, Arden Theorem, Non Regular Languages, Pumping Lemma for regular Languages . Application of Pumping Lemma, Closure properties of Regular Languages, Decision properties of Regular Languages, FA with output: Moore and Mealy machine, Equivalence of Moore and Mealy Machine, Applications and Limitation of FA, Pumping lemma.

## UNIT III:

Context Free Languages – Leftmost and rightmost derivation, parsing and ambiguity, ambiguity in grammar and languages, normal forms

Context free grammar (CFG) and Context Free Languages (CFL): Definition, Examples, Derivation Derivation trees, Ambiguity in Grammar, Inherent ambiguity, Ambiguous to Unambiguous CFG, Useless symbols, Simplification of CFGs, Normal forms for CFGs: CNF and GNF.

## UNIT IV:

Pushdown Automata – NDPDA, DPDA, context free languages and PDA, comparison of deterministic and non-deterministic versions, closure properties, pumping lemma for CFL, Acceptance by Final state, Acceptance by empty stack, Deterministic PDA, Equivalence of PDA and CFG, CFG to PDA and PDA to CFG.

## UNIT V:

Turing machines (TM): Basic model, definition and representation, Instantaneous Description, Language acceptance by TM, Variants of Turing Machine, TM as Computer of Integer functions, Universal TM, Church's Thesis, Recursive and recursively enumerable languages, Halting problem, Introduction to Decidability, Undecidable problems about TMs. Post correspondence problem (PCP), Modified PCP, Introduction to recursive function theory, Chomsky Hierarchy

# C# PROGRAMMING

CCA-507

Cr. L T P  
4 3 1 0

## UNIT - I

**The CLR and .NET Framework:** Understand the motivation behind the .NET platform, Common Language Infrastructure (CLI). Know the role of the Common Type System (CTS), the Common Language Specification (CLS) and the Common Language Runtime (CLR), Understand the assembly, metadata, namespace, type distinction, Contrast single-file and multi-file assemblies, Know the role of the Common Intermediate Language (CIL), Platform independent .NET(Mono / Portable .NET distributions).

## UNIT - II

**Evolution of C# Language:** Language Fundamentals, Reference and value Types, primitive types the Nullable and enum types, Classes and objects, Defining classes Creating objects, Using static members, Garbage Collector, Overloading Methods, Various Constructors. Encapsulating data, access modifiers, properties, indexers arrays and readonly fields. Handling errors and throwing exceptions The Root object class. Inheritance and polymorphism specialization and generalization, Abstract classes, nesting of classes. Structures. String and DateTime classes.

## UNIT - III

**Event handling paradigm** Delegates and events. Anonymous delegates and lambda expression FUNC and Action delegates.

**Generics Collections** Interfaces, overriding interface implementation. Explicit interface implementation. Collection, IEnumerable, IEnumerator, IList, IComparer and their Generic equivalent. Working with generic List, Stack, Dictionary and Queue.

**Programming Window Forms Applications:**The notifies - subscribers paradigm for handling events. .NET framework for handling GUI events. Introduction to WPF and building an WPF application **UNIT - IV Introducing LINQ and XML:** XML A quick introduction. LINQ and C#. Defining and executing a Query. Implicitly typed local variables. Anonymous Types, Extension Methods and Lambda Expressions. Putting LINQ to work. LINQ to SQL Fundamentals of ADO.NET Updating retrieving and deleting data using LINQ to SQL. **TEXT BOOKS:**

# ADVANCE OPERATING SYSTEM

CCA-509

Cr. L T P  
4 3 1 0

## Unit-I

Introduction: Definition of operating systems, Operating System Design Issues, types of operating systems, Batch Systems, multi programming, time-sharing parallel, distributed and real-time systems, Operating system structure, Operating system components and services.

Process Management: Process concept, Process scheduling, Cooperating processes, Interprocess communication, CPU scheduling criteria, Scheduling algorithms, Multiple-processor scheduling, Real-time scheduling and Algorithm evaluation.

## Unit-II

Process Synchronization and Deadlocks: The Critical-Section problem, synchronization hardware, Semaphores, Classical problems of synchronization, Critical regions, Deadlocks-System model, Characterization, Deadlock prevention, Avoidance and Detection, Recovery from deadlock, Combined approach to deadlock handling.

## Unit-III

Storage management: Memory Management-Logical and Physical Address Space, Swapping, Contiguous Allocation, Paging, Segmentation with paging in MULTICS and Intel 386, Virtual Memory, Demand paging and its performance, Page replacement algorithms, Allocation of frames, Thrashing, Page Size and other considerations, Demand segmentation.

## Unit-IV

File systems, secondary Storage Structure, File concept, access methods, directory implementation, Efficiency and performance, recovery, Disk structure, Disk scheduling methods, Disk management, Recovery, Disk structure, disk scheduling methods, Disk management, Swap-Space management, Disk reliability.

## Unit-V

Security & Case Study: Protection and Security-Goals of protection, Domain of protection, Access matrix, Implementation of access Matrix, Revocation of Access Rights, language based protection, The Security problem, Authentication, One Time passwords, Program threats, System threats, Threat Monitoring, Encryption. Case Study: Linux.

# NETWORK SECURITY & CRYPTOGRAPHY

CCA-502

Cr L-T-P

4 3-1-0

## Unit - I

**Introduction to the Concept of Security:** Introduction to Computer Security, Network Security, Cryptology & Cryptography, Introduction to Security attacks, Services and Mechanism. **Symmetric Key Encipherment:** Conventional encryption Model, Classical encryption techniques substitution ciphers & transposition ciphers, Cryptanalysis, Stereography, Stream & Block Ciphers

## Unit - II

**Block Ciphers:** Block Cipher Principals, Shannon's Theory of Confusion and Diffusion, Fiestal structure, DES, Strength of DES, Differential & Linear Cryptanalysis of DES, Block Cipher Modes of operation, Triple DES, IDEA encryption & Decryption, Strength of IDEA, Confidentiality using Conventional Encryption, Traffic confidentiality, key distribution, random number generation

## Unit - III

**Mathematics of Cryptography:** Introduction to Graph, Ring and Field, Prime and relative prime numbers, Modular Arithmetic, Fermat's & Euler's Theorem, Primality Testing, Euclid's Algorithm, Chinese remainder theorem, Discrete logarithms. **Asymmetric Key Encipherment:** Principals of public key cryptosystems, RSA Algorithms, Security of RSA, key management, Diffie- Hellman key exchange algorithm.

## Unit - IV

**Integrity, Authentication & Hash Function:** Authentication requirements, Authentication functions, Message Authentication Codes. Hash functions, Birthday Attacks, Security of Hash function & MAC, MD5 Message Digest Algorithm, Secure Hash Algorithm. **Digital Signatures:** Digital Signature, Authentication Protocol, DSS, Proof of Digital Signature Algorithms.

## Unit - V

**Network Security Applications: Authentication Applications:** Kerberos & X.509, Directory Authentication Services **E-Mail Security:** PGP, S/MIME. **IP Security:** Architecture, Authentication Header, Encapsulating Security Payloads, Combining Security Associations, key management. **Web Security:** Secure Socket Layer & Transport Layer Security , Secure electronic Transaction, **System Security:** Intruder, Intrusion Detection, Password Management. **Malicious Software:** Viruses and related threads. **Firewall:** Firewall design principles, trusted Systems

# SYSTEM PROGRAMMING

CCA-504

Cr L-T-P

4 3-1-0

## Unit - I

Introduction To PC Architecture (Intel Pentium, PC Hardware, segments and addressing, Registers, Assembly Language Basics, Machine Addressing, special DEBUG features, Data Definition Directives, Addressing Formats, COM Programs.

## Unit - II

Program Logic And Control Jmp, Loop and conditional jump Instructions, Boolean operations, Shifting, Rotating, Keyboard And Screen Processing, String Operations, Arithmetic Operations and Table Processing, Searching, sorting.

## Unit - III

Macro Working and Linking, Macro Definition, The LOCAL Directive, Reception Directives, Conditional Directives, Intra-segment and Inter-segment calls, passing parameters, Advanced Screen and Keyboard Processing, BIOS Interrupt 16H for Keyboard input, Extended Function Keys.

## Unit - IV

Disk Processing Disk Organization, File allocation Table, File Control Block, Sequential Reading of a Disk File, Random Processing, Miscellaneous disk Processing Features, File Handlers and Extended DOS functions, BIOS Disk Operations, Dos Memory Management, Program Segment Prefix, DOS Memory Control, Program loader, program overlays, Resident programs.

## Unit - V

Assemblers And Macroprocessor, Design of Assembler, Data Structure, format of Databases, Algorithm, Macro instructions, Features of a macro facility, Atwopass algorithm and a single pass algorithm. LOADERS, Compile-and-go Loaders, General Loader Schemes, Absolute Relocating and Direct-Linking loaders.

# KNOWLEDGE MANAGEMENT & EXPERT SYSTEM

CCA-508

Cr. L T P

4 3 10

## Unit - I

Introduction to knowledge Management Distinction between data , information & knowledge. Concept of knowledge creation, Intellectual Capital Creation, Human Capital, Customer Capital and Organizational Capital

## Unit-II

Socio-cultural aspects & organizational aspects Tacit & Explicit knowledge & Knowledge Organization . Knowledge Storage and Distribution, KM tools, Data warehouse, Data mining, knowledge management evaluation & Valuation of Knowledge.

## Unit-III

K- Sharing Practices and Barriers. K – culture, KM In Indian organizations and MNC. Learning Organizations & Organizational Learning

## Unit – IV

**Expert System** Existing Expert Systems (DENDRAL, MYCIN), Architecture of expert system, Features of Expert system, Genetic algorithm, Fuzzy logic, Neural Networks, Intelligent Agents, Meta Knowledge, Expertise Transfer, Self Explaining System, User and expert systems.

## Unit-V

K-Initiative, K-Strategic issues in knowledge management, K-Commerce

## Reference Books:

# COMPILER DESIGN

CCA-510

Cr L-T-P

4 3-1-0

## Unit - I

Compiler Structure: Compilers and Translators, Various Phases of Compiler, Pass Structure of Compiler, Bootstrapping of Compiler, Lexical Analysis: The role of Lexical Analyzer, A simple approach to the design of Lexical Analyzer, Regular Expressions, Transition Diagrams, Finite state Machines, Implementation of Lexical Analyzer, Lexical Analyzer Generator: LEX, Capabilities of Lexical Analyzer, The Syntactic Specification of Programming Languages: CFG, Derivation and Parse tree, Ambiguity, Capabilities of CFG

## Unit - II

Basic Parsing Techniques: Top-Down parsers with backtracking, Recursive Descent Parsers, Predictive Parsers, Bottom-up Parsers, Shift-Reduce Parsing, Operator Precedence Parsers, LR parsers SLR, Canonical LR, LALR), Syntax Analyzer Generator: YACC, Intermediate Code Generation: Different Intermediate forms: three address code, Quadruples & Triples. Syntax Directed translation mechanism and attributed definition. Translation of Declaration, Assignment, Control flow, Boolean expression, Array References in arithmetic Expressions, procedure calls, case statements, postfix translation.

## Unit - III

Run Time Memory Management: Static and Dynamic storage allocation, stack based memory allocation Schemes, Symbol Table management

## Unit - IV

Error Detection and Recovery: Lexical phase errors, Syntactic phase errors, Semantic errors.

## Unit - V

Code Optimization and Code Generation: Local optimization, Loop optimization, Peephole optimization, Basic blocks and flow graphs, DAG, Data flow analyzer, Order of evaluation, Register allocation and code selection

## ADVANCED DBMS

CCA-601

Cr. L T P

4 3 10

### Unit 1:

Introduction: Basic Concepts, Records and Files, Abstraction and Data Integration, Three-Level Architecture Proposal for DBMS, Components of a DBMS, Advantages and Disadvantages of a DBMS. Data Associations, Data Models. Classification: Relational Data Model, Network Data Model, Hierarchical Model. Manipulation, Updates, Implementation of data models, ER Diagrams. Relational Model: Relational Database, Relational Algebra, Relational Calculus. Relational Database Design, Relational Scheme and Relational Design.

### Unit 2:

Anomalies in a Database: A Consequence of Bad Design, Universal Relation, Functional Dependency, Relational Database Design. Relational Database Manipulation, SQL, Data Manipulation, Basic Data Retrieval, Condition Specification, Arithmetic and Aggregate Operators. Normalization: 1NF, 2NF, 3NF, BCNF, 4NF, and other higher normal forms.

### Unit 3:

SQL Join: Multiple Tables Queries, Set Manipulation, Categorization, Updates, Views. SQL Programming: Procedures, Cursors, Triggers. Concurrency Management, Serializability, Concurrency Control, Locking Scheme, Timestamp- Based Order, Optimistic Scheduling, Multiversion Techniques, Deadlock and Its Resolution. Database Security, Integrity, and Control, Security and Integrity, Threats, Defense Mechanisms, Integrity.

### Unit 4:

Introduction to DDBMS: Fundamentals of DDBMS (Transparent management of distributed & replicated data, Reliability, Improved performance, System expansion), Types of DDBMS. Overview of three-tier Client server architecture.

### Unit 5:

Data Fragmentation, Replication and allocation techniques for distributed database design. Query processing, concurrency control and recovery in DDBMS.

## ADVANCE DAA

CCA-603

Cr. L T P  
4 3 1 0

### Unit-I

**Introduction to Algorithms** Analysis of algorithm, Design of algorithm, complexity of algorithm, asymptotic notations, Recurrences. Sorting in polynomial time: Insertion sort, Merge sort, Quick sort, heap sort. Sorting in linear time: counting sort, bucket sort, radix sort. Medians and order statistics.

### Unit-II

**Elementary data structure** binary search tree. **Advanced data structure** Red Black tree, Augmenting data structure, binomial heaps, B-tree, Fibonacci heap and data structure for disjoint sets.

### Unit-III

**Advanced design and analysis techniques** Dynamic programming, Greedy algorithm, Backtracking, Amortized analysis.

### Unit-IV

**Graph algorithm** Breadth first search, Depth first search, Minimum spanning tree, Kruskal's algorithms, Prim's algorithms, Single source shortest path, All pair shortest path, Maximum flow and Traveling salesman problem.

### Unit-V

**String matching:** The naïve String Matching algorithm, The Rabin-Karp Algorithm, String Matching with finite automata, The Knuth-Morris Pratt algorithm. Randomized algorithms, string matching, NP-hard and NP-completeness, Approximation algorithms.

# EXPERT INTELLIGENCE SYSTEM

CCA-605

Cr. L-T-P  
4 3-1-0

## Unit - I

**Introduction:** Introduction to Artificial Intelligence, History, What is AI, Importance of AI, Issues, Simulation of sophisticated & Intelligent Behaviors in different area, problem solving in games, natural language, automated reasoning, visual perception, Search algorithms: Informed search, Uninformed search, Hill Climbing, Depth first search, Best first search, And or graph.

## Unit - II

**Processing and understanding Natural Languages:** Understanding Natural Languages: Applications of Natural Languages, Natural Language processing, Parsing techniques: Rules of parsing, Top down parsing, Bottom up parsing, Transformational grammars, Context free grammar, Transition networks, Fillmore's grammars, Shanks Conceptual Dependency.

## Unit - III

**Knowledge Representation:** Graphs, Frames structures and related structures, Semantic Nets and Partitioned Nets, Scripts, Introduction to PROLOG, Production Rules, Knowledge Based systems, Inference engine, Forward deductions and backward deductions, Matching production rules against working memory.

## Unit - IV

**Expert System** Existing Expert Systems (DENDRAL, MYCIN), Architecture of expert system, Features of Expert system, Genetic algorithm, Fuzzy logic, Neural Networks, Intelligent Agents, Meta Knowledge, Expertise Transfer, Self Explaining System, User and expert systems.

## Unit - V

**Pattern Recognition** Introduction to Pattern Recognition, Structured Description, Symbolic Description, Machine perception, Line Finding, Interception, Semantic & Model, Object Identification, Speech Recognition. **Programming Language** Introduction to programming Language, LISP, PROLOG.

## DISTRIBUTED OS

CCA-607

Cr. L T P

4 3 10

### UNIT I:

Introduction: Distributed Computing Models, Software Concepts, Hardware Concepts, The Client-Server model, Issues in design of a distributed operating system.

### UNIT II:

COMMUNICATION: Introduction to Message Passing, Advantages and features of message passing, Message format, Message Buffering, Remote Procedure Call, Extended RPC Models, Remote Object Invocation, Message Oriented Communication.

### UNIT III:

Processes And Synchronization: Threads, code migration, clock synchronization, logical clocks, global state, Election algorithms, mutual exclusion, Distributed transaction.

### UNIT IV:

Distributed Deadlock Detection: System model, Resources vs. communication deadlocks, deadlock prevention, avoidance, detection and resolution, Centralized deadlock detection, distributed deadlock detection, path pushing and edge chasing algorithm

UNIT V: Distributed Shared Memory: Introduction, General architecture of distributed shared memory, Design and implementation, Issues of DSM, Granularity, structure of shared memory space, consistency models, thrashing, advantages of DSM

UNIT VI: Distributed File System: Introduction, Desirable features of good distributed file system, file models, file accessing, sharing, caching methods, file replication, fault tolerance, Case Study: CORBA (CORBA RMI and Services)

Text Books:

1 Andrew Tanenbaum, Maarten Van Steen, "Distributed System-Principals Paradigm", PHI Publication.

2 Singhal and Shivratri, "Advanced Concept in Operating Systems", McGraw Hill.

# NEURAL NETWORK

UCA 601

Cr. L T P

4 3 10

## UNIT – I INTRODUCTION TO NEURAL NETWORKS

Introduction, Humans and Computers, Organization of the Brain, Biological Neuron, Biological and Artificial Neuron Models, Characteristics of ANN, McCulloch-Pitts Model, Historical Developments, Potential Applications of ANN.

## UNIT – II ESSENTIALS OF ARTIFICIAL NEURAL NETWORKS

Artificial Neuron Model, Operations of Artificial Neuron, Types of Neuron Activation Function, ANN Architectures, Classification Taxonomy of ANN – Connectivity, Learning Strategy (Supervised, Unsupervised, Reinforcement), Learning Rules.

## UNIT – III SINGLE LAYER FEED FORWARD NETWORKS

Introduction, Perceptron Models: Discrete, Continuous and Multi-Category, Training Algorithms: Discrete and Continuous Perceptron Networks, Limitations of the Perceptron Model.

## UNIT – IV MULTI- LAYER FEED FORWARD NETWORKS

Credit Assignment Problem, Generalized Delta Rule, Derivation of Back propagation (BP) Training, Summary of Back propagation Algorithm, Kolmogorov Theorem, Learning Difficulties and Improvements.

## UNIT - V ASSOCIATIVE MEMORIES

Paradigms of Associative Memory, Pattern Mathematics, Hebbian Learning, General Concepts of Associative Memory, Bidirectional Associative Memory (BAM) Architecture, BAM Training Algorithms: Storage and Recall Algorithm, BAM Energy Function. Architecture of Hopfield Network: Discrete and Continuous versions, Storage and Recall Algorithm, Stability Analysis. Neural network applications: Process identification, control, fault diagnosis.

# Mobile Computing

CCA 51

Cr. L T P

4 3 1 0

## Unit 1: Introduction to Mobile Computing

This unit covers the fundamentals of mobile computing, including its evolution, definitions, and scope. It explores mobile computing applications and the types of mobile computing devices. The unit discusses various architectures, such as client-server and peer-to-peer, and introduces mobile communication protocols.

## Unit 2: Mobile Communications and Networking

This unit delves into wireless communication systems, including cellular networks, satellite communication, and Wi-Fi. Topics include GSM, GPRS, and 3G/4G/LTE standards, as well as mobile IP and TCP. The unit also explores challenges in mobile network design, including handoff, roaming, and network congestion.

## Unit 3: Mobile Application Development

This unit introduces mobile application platforms and development environments. Key topics include the mobile app lifecycle, app architecture, and mobile UI design principles. The unit provides an overview of Android and iOS app development, covering essential concepts like user interaction, activity lifecycle, and data persistence.

## Unit 4: Mobile Operating Systems

This unit focuses on mobile operating systems such as Android, iOS, and Windows Phone. It explores system architecture, file systems, security, and app management. The unit examines the unique requirements of mobile OS design, including power management, multitasking, and security protocols.

## Unit 5: Data Management in Mobile Computing

This unit addresses data storage, retrieval, and synchronization in mobile environments. Topics include cloud storage solutions, mobile database systems, and synchronization mechanisms. The unit explores data consistency, offline access, and techniques for data optimization in mobile applications.

# Computer Graphics

CCA 512

Cr. L T P

4 3 10

## Unit 1: Introduction to Computer Graphics

This unit introduces the fundamentals of computer graphics, including its applications, history, and essential terminology. It covers basic concepts such as graphics hardware, display devices, and coordinate systems, along with an overview of graphics software.

## Unit 2: Graphics Primitives and Drawing Algorithms

This unit explores fundamental graphics primitives, such as points, lines, and circles, and their role in rendering images. It includes algorithms for line drawing (e.g., DDA and Bresenham's algorithms) and circle drawing, as well as polygon filling methods like scanline fill and boundary fill.

## Unit 3: 2D Transformations and Viewing

This unit covers the mathematical foundations of 2D transformations, including translation, rotation, scaling, and shearing. It discusses matrix representations of transformations, homogeneous coordinates, and composite transformations. Topics also include windowing, viewport transformations, and clipping algorithms like Cohen-Sutherland and Liang-Barsky.

## Unit 4: 3D Transformations and Viewing

Building on 2D concepts, this unit introduces 3D transformations, including 3D rotation, translation, scaling, and projection transformations. It covers the 3D viewing pipeline, perspective and parallel projections, and transformations for viewing in three-dimensional space.

## Unit 5: Illumination, Shading, and Color Models

This unit delves into the principles of light, color, and shading in computer graphics. It covers color models like RGB, CMYK, and HSV, as well as illumination models and shading techniques, including flat shading, Gouraud shading, and Phong shading.

# Computer Based Numerical & Statistical Techniques

CCA 511

Cr. L T P

4 3 1 0

## Unit 1: Introduction to Numerical Methods

This unit covers the basics of numerical methods, including error analysis, sources of error, and types of errors such as absolute, relative, and percentage errors. Concepts of numerical stability, convergence, and significant figures are discussed, setting a foundation for solving computational problems accurately.

## Unit 2: Solution of Nonlinear Equations

This unit focuses on methods for finding roots of nonlinear equations, including iterative techniques like the bisection method, Newton-Raphson method, and secant method. Criteria for convergence, applications of root-finding methods, and considerations for choosing appropriate techniques are explored.

## Unit 3: Interpolation and Curve Fitting

This unit delves into interpolation methods for estimating values within a given data set. Polynomial interpolation techniques, such as Newton's and Lagrange's interpolation, are introduced alongside spline interpolation. Curve fitting using least squares regression is also covered, highlighting applications in data analysis.

## Unit 4: Numerical Differentiation and Integration

This unit introduces methods for numerical differentiation and integration, including finite differences, trapezoidal rule, and Simpson's rule. Practical applications of these techniques in engineering and scientific calculations are covered, along with discussions on truncation and round-off errors.

## Unit 5: Statistical Methods and Probability Distributions

This unit provides an overview of statistical methods and probability distributions, covering measures of central tendency and dispersion, basic probability theory, and key distributions such as binomial, Poisson, and normal distributions. Hypothesis testing, correlation, and regression analysis are introduced, applying statistical techniques to computational data analysis.

# Introduction to Numerical Methods

CCA 511A

Cr. L T P

4 3 1 0

## Unit 1: Fundamentals of Numerical Methods

This unit introduces the basic concepts and significance of numerical methods in solving mathematical problems. It covers the types of numerical errors, including truncation and round-off errors, and discusses the importance of accuracy and precision in numerical computations. The unit also includes an overview of numerical algorithms and their applications in various fields.

## Unit 2: Solutions of Linear Equations

This unit focuses on methods for solving systems of linear equations. It covers direct methods such as Gaussian elimination and matrix factorization techniques, including LU decomposition. The unit also discusses iterative methods like Jacobi and Gauss-Seidel methods, addressing convergence criteria and practical applications of these techniques in engineering and computational problems.

## Unit 3: Interpolation and Approximation

This unit explores interpolation techniques used to estimate unknown values from known data points. It covers polynomial interpolation methods such as Lagrange and Newton's interpolation, as well as spline interpolation for piecewise approximation. The unit emphasizes error analysis in interpolation and discusses the importance of approximation in numerical analysis.

## Unit 4: Numerical Differentiation and Integration

This unit introduces techniques for numerical differentiation and integration. It covers finite difference methods for approximating derivatives and various numerical integration methods, including the trapezoidal rule and Simpson's rule. The unit also discusses the concepts of error estimation in numerical integration and the applications of these methods in solving real-world problems.

## Unit 5: Ordinary Differential Equations

This unit focuses on numerical methods for solving ordinary differential equations (ODEs). It covers initial value problems and discusses methods such as Euler's method, Runge-Kutta methods, and multi-step methods. The unit emphasizes stability, convergence, and error analysis.

in the context of ODEs, providing insights into the practical applications of these techniques in modeling dynamic systems.

## **Statistical Methods for Data Analysis**

**CCA 511B**

**Cr. L T P**

4 3 1 0

### **Unit 1: Introduction to Statistics and Data Exploration**

This unit introduces the fundamental concepts of statistics, including types of data, data collection methods, and descriptive statistics. It covers measures of central tendency such as mean, median, and mode, as well as measures of dispersion like range, variance, and standard deviation. The unit emphasizes data visualization techniques, including histograms, box plots, and scatter plots, to aid in exploratory data analysis.

### **Unit 2: Probability Theory and Distributions**

This unit focuses on the foundational principles of probability theory and its role in statistical analysis. It covers concepts such as probability rules, conditional probability, and Bayes' theorem. The unit also introduces discrete and continuous probability distributions, including the binomial, Poisson, normal, and exponential distributions. Applications of these distributions in real-world scenarios are discussed to illustrate their relevance.

### **Unit 3: Inferential Statistics and Hypothesis Testing**

This unit explores the principles of inferential statistics, including estimation, confidence intervals, and hypothesis testing. It covers the formulation of null and alternative hypotheses, types of errors, and significance levels. Various hypothesis tests, such as t-tests, chi-square tests, and ANOVA, are introduced, along with their applications in comparing groups and making inferences from sample data.

### **Unit 4: Regression Analysis**

This unit delves into regression analysis, focusing on simple linear regression and multiple regression techniques. It covers the principles of modeling relationships between variables, estimating parameters, and assessing model fit using R-squared and residual analysis. The unit also discusses assumptions of regression analysis and introduces logistic regression for binary outcomes, highlighting applications in predictive modeling.

### **Unit 5: Advanced Statistical Methods**

This unit covers advanced statistical techniques used for data analysis, including non-parametric tests, time series analysis, and multivariate analysis. It introduces methods such as Kruskal-

Wallis test, Mann-Whitney U test, and principal component analysis (PCA). The unit emphasizes the application of these advanced techniques in complex data scenarios and discusses the interpretation of results to inform decision-making.

## **Linear Algebra and Matrix Computations**

**CCA 511C**

**Cr. L T P**

**4 3 1 0**

### **Unit 1: Introduction to Linear Algebra**

This unit covers the fundamental concepts of linear algebra, including the definition and properties of vectors and matrices. It introduces operations such as addition, scalar multiplication, and matrix multiplication. The unit also discusses special types of matrices, such as square, diagonal, and identity matrices, and emphasizes the importance of linear combinations and span in vector spaces.

### **Unit 2: Systems of Linear Equations**

This unit focuses on methods for solving systems of linear equations, including Gaussian elimination and matrix inversion techniques. It covers the concepts of consistency and uniqueness of solutions and introduces the rank of a matrix and its implications for the solution of linear systems. The unit also discusses applications of linear systems in various fields, such as engineering and computer science.

### **Unit 3: Determinants and Eigenvalues**

This unit explores determinants and their properties, including methods for calculating determinants and applications in solving linear equations. The unit introduces eigenvalues and eigenvectors, discussing their significance in linear transformations and matrix diagonalization. It also covers the characteristic polynomial and the spectral theorem, emphasizing their applications in data analysis and system stability.

### **Unit 4: Vector Spaces and Linear Transformations**

This unit delves into the concepts of vector spaces, subspaces, and bases. It introduces linear transformations, including their properties and representations using matrices. The unit discusses the relationship between linear transformations and matrix multiplication, as well as concepts of the kernel and image of a transformation. Applications of vector spaces in various domains, such as computer graphics and optimization, are also highlighted.

### **Unit 5: Numerical Methods in Linear Algebra**

This unit focuses on numerical techniques for performing matrix computations, including methods for solving linear systems, eigenvalue problems, and matrix factorizations such as LU and QR decompositions. It covers the concepts of numerical stability and conditioning, as well as iterative methods for large systems. The unit emphasizes the practical implementation of these methods using computational tools and libraries.

## **Regression Analysis and Modeling**

**CCA 511C**

**Cr. L T P**

**4 3 10**

### **Unit 1: Introduction to Regression Analysis**

This unit introduces the fundamental concepts of regression analysis, including its purpose and applications in statistical modeling. It covers the basic terminology and principles of simple linear regression, focusing on the relationship between dependent and independent variables. The unit discusses the interpretation of regression coefficients, goodness-of-fit measures, and the assumptions underlying linear regression models.

### **Unit 2: Multiple Regression Analysis**

This unit expands on simple linear regression to explore multiple regression analysis. It covers the formulation of the multiple regression model, including interactions and polynomial terms. The unit discusses techniques for assessing model fit, including adjusted R-squared and F-tests, and examines the implications of multicollinearity. Practical considerations in model selection and evaluation, including variable selection methods, are also addressed.

### **Unit 3: Model Diagnostics and Validation**

This unit focuses on model diagnostics and validation techniques to assess the adequacy of regression models. It covers residual analysis, including checking for homoscedasticity, normality, and independence of errors. The unit discusses outlier detection and influence measures, such as Cook's distance, and emphasizes the importance of cross-validation techniques to ensure the robustness of the regression models.

### **Unit 4: Advanced Regression Techniques**

This unit explores advanced regression techniques, including logistic regression for binary outcomes and other generalized linear models. It discusses the use of regression for categorical data, including multinomial and ordinal logistic regression. The unit also introduces regularization techniques such as Lasso and Ridge regression to address overfitting and enhance model performance.

### **Unit 5: Applications of Regression Modeling**

This unit examines real-world applications of regression modeling across various fields such as economics, healthcare, and social sciences. It covers case studies and practical examples demonstrating the use of regression analysis in predictive modeling and decision-making. The unit emphasizes the interpretation of results and the communication of findings to stakeholders, highlighting the ethical considerations in data analysis and modeling.

## **Introduction to Programming and Computer Organization**

**CCA 513**

**Cr. L T P**

**4 3 10**

### **Unit 1: Introduction to Programming Concepts**

This unit covers the fundamental concepts of programming, including the basic syntax and structure of programming languages. It introduces key programming constructs such as variables, data types, operators, and control structures including conditionals and loops. The unit emphasizes problem-solving techniques and algorithm development, preparing students for writing simple programs.

### **Unit 2: Functions and Modular Programming**

This unit focuses on the concepts of functions and modular programming. It covers the definition and usage of functions, including parameters and return values. The unit discusses the importance of code reusability and organization, exploring topics such as function overloading and recursion. Practical exercises reinforce the development of modular code for solving complex problems.

### **Unit 3: Data Structures and Algorithms**

This unit introduces fundamental data structures such as arrays, linked lists, stacks, and queues. It covers the implementation and application of these data structures in programming. The unit also discusses basic algorithms, including searching and sorting techniques, emphasizing their efficiency and performance. Practical examples are used to illustrate the importance of choosing the right data structure for specific problems.

### **Unit 4: Basics of Computer Organization**

This unit provides an overview of computer organization, covering the architecture of computer systems. It discusses the components of a computer, including the CPU, memory, and input/output devices. The unit introduces concepts such as data representation, binary arithmetic, and assembly language basics. It emphasizes the relationship between hardware and software, preparing students for deeper exploration of computer systems.

### **Unit 5: Introduction to Operating Systems**

This unit introduces the fundamentals of operating systems, covering their role and functions in managing computer resources. It discusses processes, memory management, and file systems. The unit explores various operating system concepts, including multitasking, scheduling, and synchronization. Practical examples highlight the interaction between programming and operating system functionalities, preparing students for further studies in system programming.

## **Information Systems Management**

**CCA 506A**

**Cr. L T P**

**4 3 10**

### **Unit 1: Introduction to Information Systems**

This unit provides an overview of information systems and their role in organizations. It covers the types of information systems, including transaction processing systems, management information systems, and decision support systems. The unit discusses the components of information systems, including hardware, software, data, people, and processes, as well as the strategic importance of information systems in modern business.

### **Unit 2: Information Systems and Organizational Strategy**

This unit examines the role of information systems in shaping organizational strategy. It discusses how information systems support competitive advantage, streamline operations, and enable innovation. Topics include value chain analysis, strategic alignment of IT and business goals, and the role of enterprise systems in integrating business functions. Case studies are used to illustrate the strategic impact of information systems.

### **Unit 3: Managing Information Technology Infrastructure**

This unit covers the planning, development, and management of IT infrastructure within organizations. It includes an overview of hardware, software, networking, and data management. The unit discusses cloud computing, virtualization, and emerging technologies that influence IT infrastructure decisions. Key concepts in IT service management and cost management are introduced, with a focus on optimizing IT resources.

### **Unit 4: Data Management and Business Intelligence**

This unit focuses on the management of data as a critical organizational asset. Topics include database management systems, data warehousing, and data governance. The unit introduces business intelligence and analytics, discussing how data is used to support decision-making and gain insights. Topics such as big data, data mining, and predictive analytics are covered, highlighting their applications in real-world business scenarios.

### **Unit 5: Information Systems Security and Ethical Issues**

This unit addresses the importance of information systems security and ethical considerations in managing information systems. It covers topics such as cybersecurity threats, risk management, and security policies. The unit also explores privacy, data protection regulations, and ethical issues related to information systems. Case studies illustrate best practices for securing information assets and maintaining ethical standards in information systems management.

## **Enterprise Resource Planning**

**CCA 506B**

**Cr. L T P**

**4 3 10**

### **Unit 1: Introduction to ERP Systems**

This unit provides an overview of Enterprise Resource Planning (ERP) systems, their purpose, and their role in modern organizations. It covers the evolution of ERP from legacy systems, the characteristics of ERP systems, and the benefits they offer. The unit also introduces core ERP components, such as finance, human resources, manufacturing, and supply chain management, emphasizing the need for integration across business functions.

### **Unit 2: ERP and Business Process Integration**

This unit examines how ERP systems facilitate business process integration. It discusses key concepts such as business process reengineering (BPR), workflow automation, and data integration. The unit covers how ERP systems streamline processes across departments and enhance information flow, improving efficiency and decision-making. Real-world examples illustrate the transformation of business processes through ERP.

### **Unit 3: ERP Implementation Lifecycle**

This unit focuses on the ERP implementation process, including the stages of ERP lifecycle: planning, design, implementation, testing, and go-live. It discusses key factors for successful implementation, such as change management, user training, and project management. The unit also addresses common challenges in ERP implementations, such as cost overruns, resistance to change, and data migration issues.

### **Unit 4: ERP Systems and Technology**

This unit covers the technical aspects of ERP systems, including system architecture, cloud-based ERP, and ERP software modules. It introduces leading ERP software solutions, such as SAP, Oracle, and Microsoft Dynamics, and discusses criteria for selecting the right ERP system for a business. The unit also explores emerging technologies, such as artificial intelligence (AI), Internet of Things (IoT), and analytics, and their integration with ERP systems.

### **Unit 5: Post-Implementation and ERP Maintenance**

This unit addresses the post-implementation phase of ERP and focuses on system maintenance, upgrades, and performance optimization. It discusses the importance of ongoing support and user training for maintaining ERP effectiveness. The unit also covers ERP performance metrics, continuous improvement, and assessing return on investment (ROI). Case studies highlight the impact of ERP on long-term business success.

---

**CCA 506C** **Information Security Management** **Cr. L T P**

**4 3 10**

**Unit 1: Introduction to Information Security**

This unit covers the fundamentals of information security, including the concepts of confidentiality, integrity, and availability (CIA triad). It introduces key terms, types of threats, and the importance of securing information assets. The unit explores the goals of information security and provides an overview of cybersecurity frameworks, such as ISO/IEC 27001 and NIST.

**Unit 2: Risk Management and Assessment**

This unit focuses on risk management principles, including risk identification, assessment, and mitigation strategies. It covers risk assessment methodologies, such as qualitative and quantitative analysis, and discusses the importance of implementing risk management practices. The unit also addresses security policies, asset classification, and strategies for managing security risks in organizations.

**Unit 3: Security Technologies and Controls**

This unit introduces various security technologies and controls used to protect information systems. Topics include firewalls, intrusion detection systems, encryption, access control, and endpoint security. The unit covers technical, administrative, and physical controls, emphasizing how they work together to secure systems. It also explores the role of identity and access management (IAM) in protecting digital resources.

**Unit 4: Security Governance, Compliance, and Legal Issues**

This unit discusses security governance frameworks, regulatory compliance requirements, and legal issues in information security. It covers standards like GDPR, HIPAA, and SOX, as well as industry-specific regulations. The unit emphasizes the importance of security policies, incident

response plans, and audit practices in maintaining compliance and addressing legal challenges in information security.

## **Unit 5: Incident Response and Business Continuity**

This unit focuses on incident response planning, disaster recovery, and business continuity management. It covers the steps involved in detecting, analyzing, and responding to security incidents, including the role of a Computer Security Incident Response Team (CSIRT). The unit also explores business continuity planning, data backup, and recovery strategies, emphasizing their importance in minimizing the impact of security incidents.

## **Business Process Management**

**CCA 506D**

**Cr. L T P**

**4 3 10**

### **Unit 1: Introduction to Business Process Management**

This unit provides an overview of Business Process Management (BPM), its purpose, and its significance in enhancing organizational performance. It covers basic BPM concepts, including process identification, modeling, and improvement. The unit discusses the lifecycle of BPM and explores the benefits of process-oriented management in aligning operations with strategic goals.

### **Unit 2: Process Modeling and Analysis**

This unit focuses on process modeling techniques, such as flowcharts, Business Process Model and Notation (BPMN), and data flow diagrams. It covers the principles of process mapping and introduces tools for visualizing workflows. The unit also discusses methods for analyzing processes to identify inefficiencies, bottlenecks, and areas for improvement, emphasizing the importance of detailed process documentation.

### **Unit 3: Process Design and Improvement**

This unit explores techniques for designing and improving business processes. Topics include process redesign, reengineering, and optimization, with a focus on methodologies like Lean, Six Sigma, and Total Quality Management (TQM). The unit addresses strategies for improving process efficiency, reducing costs, and enhancing quality, as well as the role of innovation in process improvement.

### **Unit 4: Process Automation and Technology Integration**

This unit examines the role of technology in automating and supporting business processes. It covers automation tools such as Robotic Process Automation (RPA) and discusses the integration of Enterprise Resource Planning (ERP) and Customer Relationship Management

(CRM) systems in BPM. The unit explores how digital transformation, artificial intelligence (AI), and data analytics can drive process efficiency and agility.

## **Unit 5: BPM Governance and Performance Management**

This unit addresses BPM governance and the importance of establishing a framework for monitoring and managing process performance. Topics include key performance indicators (KPIs), process metrics, and the use of dashboards for real-time monitoring. The unit also discusses change management, stakeholder engagement, and best practices for sustaining process improvements and ensuring continuous alignment with organizational objectives.

### **Computing & Its Application**

**UCA 502**

**Cr. L T P**

**4 3 10**

## **Unit 1: Introduction to Computing**

This unit provides an overview of computing, including the history and evolution of computers and computing technologies. It introduces the basic components of a computer system, such as hardware, software, and networks, and explores the fundamental concepts of data processing. The unit also discusses types of computer systems, from personal computers to mainframes, and their applications in various fields.

## **Unit 2: Computer Software and Operating Systems**

This unit focuses on the role of software in computing, covering types of software such as system software, application software, and programming languages. It explores the functions and architecture of operating systems, including process management, memory management, and file systems. The unit also introduces popular operating systems like Windows, macOS, and Linux, emphasizing their features and applications.

## **Unit 3: Data Management and Databases**

This unit introduces data management concepts and database systems. It covers the basics of database management systems (DBMS), including relational databases, SQL, and data models. The unit discusses the importance of data storage, retrieval, and management in supporting business applications, as well as the role of data warehouses and cloud storage in modern data management.

## **Unit 4: Networking and the Internet**

This unit provides an overview of networking fundamentals, including network types (LAN, WAN), protocols, and internet technologies. It covers the basics of TCP/IP, DNS, and network security, emphasizing their roles in enabling communication and data exchange. The unit

explores the impact of the internet on business, society, and daily life, with an introduction to emerging concepts like the Internet of Things (IoT).

## **Unit 5: Applications of Computing in Various Fields**

This unit examines the diverse applications of computing across different industries, including healthcare, education, finance, and entertainment. It explores topics such as e-commerce, digital marketing, artificial intelligence, and machine learning, highlighting how these technologies are transforming business operations and enhancing decision-making. The unit also discusses ethical and societal considerations in the application of computing technologies.

### **Management Information System**

**UCA 504**

**Cr. L T P**

**4 3 1 0**

## **Unit 1: Introduction to Management Information Systems**

This unit provides an overview of Management Information Systems (MIS), its components, and its role in organizations. It covers the key concepts of information systems, including data, information, and knowledge, and explores the importance of MIS in decision-making and operational efficiency. The unit also discusses the evolution of MIS and the types of information systems used in business, such as transaction processing systems and executive support systems.

## **Unit 2: Information Systems and Business Strategy**

This unit examines the role of MIS in supporting business strategy and achieving competitive advantage. It discusses strategic models like Porter's Five Forces and the value chain and how information systems can enhance organizational capabilities. The unit explores the alignment of IT strategy with business goals, focusing on enterprise applications like ERP, CRM, and SCM that enable integration and collaboration.

## **Unit 3: System Development and Implementation**

This unit focuses on the processes involved in developing and implementing MIS. It covers the system development life cycle (SDLC), including planning, analysis, design, implementation, and maintenance. The unit also introduces alternative methodologies, such as agile and prototyping. Topics include requirements gathering, feasibility analysis, and the challenges and best practices in MIS implementation.

## **Unit 4: Data Management and Business Intelligence**

This unit covers the importance of data management in MIS, including database management systems (DBMS) and data warehousing. It introduces data mining, business intelligence, and analytics to support informed decision-making. The unit explores data visualization techniques

and reporting tools, focusing on how MIS leverages data for insights into business performance and market trends.

## **Unit 5: Security, Ethical, and Social Issues in MIS**

This unit addresses the security, ethical, and social considerations in MIS. It covers topics like cybersecurity threats, risk management, and data privacy, including regulations such as GDPR. The unit also explores ethical issues related to information systems, such as intellectual property, digital rights, and social responsibility, emphasizing the need for secure and ethical management of information systems.

### **Software Project Management**

**UCA 506**

**Cr. L T P**

**4 3 1 0**

## **Unit 1: Introduction to Software Project Management**

This unit provides an overview of software project management, including its purpose, scope, and key principles. It covers the roles and responsibilities of a project manager and introduces project management frameworks, methodologies, and processes. Topics include project life cycles, the importance of effective project planning, and an introduction to common project management standards like PMBOK and Agile.

## **Unit 2: Project Planning and Scheduling**

This unit focuses on project planning, including defining project scope, objectives, and deliverables. It covers techniques for creating work breakdown structures (WBS), estimating resources, time, and costs, and developing project schedules. The unit introduces tools like Gantt charts and PERT diagrams, as well as techniques for managing project dependencies and critical paths to ensure timely completion.

## **Unit 3: Risk Management in Software Projects**

This unit addresses risk management in software projects, including identifying, analyzing, and mitigating risks. It covers types of project risks, such as technical, operational, and resource risks, and introduces qualitative and quantitative risk assessment techniques. The unit emphasizes the importance of proactive risk management, contingency planning, and tools like risk matrices and impact analysis.

## **Unit 4: Project Monitoring, Control, and Quality Management**

This unit focuses on monitoring and controlling project progress, including tracking project performance, managing changes, and ensuring quality. Topics include key performance indicators (KPIs), earned value management (EVM), and quality management practices such as

software testing and quality assurance. The unit also discusses corrective actions, issue tracking, and maintaining alignment with project goals.

## **Unit 5: Project Closure and Evaluation**

This unit covers the final stages of a software project, including project delivery, documentation, and evaluation. It discusses the importance of conducting post-project reviews, capturing lessons learned, and assessing project success against objectives and metrics. The unit also addresses project handover, client satisfaction, and continuous improvement in project management practices.

## **Introduction to Expert Systems**

**CCA 605A**

**Cr. L T P**

**4 3 10**

### **Unit 1: Fundamentals of Expert Systems**

This unit introduces the basic concepts of expert systems, their history, and their significance in artificial intelligence. It covers the characteristics and components of expert systems, including the knowledge base, inference engine, and user interface. The unit also explores the advantages and limitations of expert systems and provides an overview of various applications in fields such as medicine, engineering, and finance.

### **Unit 2: Knowledge Representation and Acquisition**

This unit focuses on knowledge representation techniques used in expert systems, including rules, frames, semantic networks, and logic-based representations. It discusses the process of knowledge acquisition and elicitation from domain experts, as well as methods for structuring and organizing knowledge. The unit also introduces knowledge engineering and explores tools and techniques for building a robust knowledge base.

### **Unit 3: Inference Mechanisms and Reasoning**

This unit delves into the inference mechanisms that drive expert systems, including forward and backward chaining, rule-based reasoning, and case-based reasoning. It discusses various reasoning approaches, such as deduction, induction, and abduction, and covers uncertainty management techniques like fuzzy logic and probabilistic reasoning. Practical examples illustrate how inference engines draw conclusions based on knowledge.

### **Unit 4: Expert System Development and Tools**

This unit covers the methodologies and tools used in developing expert systems. It introduces development frameworks, including knowledge-based shell systems, and discusses prototyping and iterative development. The unit explores various expert system development environments

and languages, such as CLIPS and Prolog, providing hands-on experience with popular tools used to design and implement expert systems.

## **Unit 5: Applications, Ethics, and Future of Expert Systems**

This unit examines real-world applications of expert systems in areas such as healthcare, finance, and customer service. It discusses the ethical implications of expert systems, including issues of trust, transparency, and accountability. The unit also explores the future of expert systems, the integration with machine learning and AI, and emerging trends in intelligent systems, highlighting the evolving role of expert systems in modern technology.

## **Knowledge Representation and Reasoning**

**CCA 605B**

**Cr. L T P**

**4 3 10**

### **Unit 1: Introduction to Knowledge Representation**

This unit covers the basics of knowledge representation, its significance in artificial intelligence, and the challenges involved in representing real-world knowledge. It explores the key characteristics of an effective knowledge representation system, including expressiveness, efficiency, and inferencing ability. The unit also introduces various forms of knowledge representation, such as declarative, procedural, and structural approaches.

### **Unit 2: Logic-Based Representation**

This unit delves into logic-based representation techniques, covering propositional and predicate logic. It discusses logical connectives, quantifiers, and the syntax and semantics of logical expressions. The unit introduces the concepts of resolution and unification in logic, along with inference rules and theorem proving, to enable reasoning and problem-solving in logical systems.

### **Unit 3: Semantic Networks and Frames**

This unit explores structured knowledge representation techniques, including semantic networks and frames. It covers how entities, relationships, and attributes are represented in semantic networks, along with inheritance and hierarchical relationships. The unit also discusses frames as a way to organize structured data, emphasizing slot-filler structures and their applications in representing real-world objects and scenarios.

### **Unit 4: Rule-Based Systems and Production Rules**

This unit focuses on rule-based systems as a method of knowledge representation. It covers production rules, rule chaining (forward and backward), and the structure of rule-based inference engines. The unit also examines the strengths and limitations of rule-based reasoning, discussing

examples of rule-based expert systems and their applications in problem-solving and decision-making.

### **Unit 5: Reasoning Under Uncertainty**

This unit addresses reasoning methods used when information is incomplete or uncertain. It introduces probabilistic reasoning, Bayesian networks, fuzzy logic, and belief networks, exploring how they are used to handle uncertainty in knowledge representation. The unit covers key concepts in uncertainty management and discusses applications of these techniques in fields like diagnostics, decision support, and robotics.

## **Expert System Design and Development**

**CCA 605C**

**Cr. L T P**

**4 3 10**

### **Unit 1: Fundamentals of Expert Systems**

This unit provides an introduction to expert systems, defining their purpose, components, and applications in artificial intelligence. It covers the architecture of expert systems, including the knowledge base, inference engine, and user interface. The unit also introduces knowledge acquisition methods and the role of expert systems in fields like healthcare, finance, and engineering.

### **Unit 2: Knowledge Representation Techniques**

This unit explores different knowledge representation methods crucial for designing expert systems. It covers rule-based representation, semantic networks, frames, and object-oriented representations. The unit emphasizes the importance of structured knowledge and discusses the pros and cons of each representation method, focusing on their suitability for various expert system applications.

### **Unit 3: Inference Mechanisms and Reasoning Strategies**

This unit delves into inference mechanisms essential for expert systems to perform reasoning. It covers rule-based reasoning (forward and backward chaining), case-based reasoning, and the handling of uncertainty using fuzzy logic and probabilistic reasoning. The unit also introduces hybrid reasoning approaches, illustrating how inference engines draw conclusions from structured knowledge.

### **Unit 4: Expert System Development Process and Tools**

This unit focuses on the process of developing expert systems, from initial knowledge acquisition and analysis to system design and testing. It introduces development environments

and tools, including expert system shells and programming languages like CLIPS and Prolog. The unit discusses prototyping and iterative testing as key steps in refining expert systems to ensure accuracy and usability.

## **Unit 5: Applications, Evaluation, and Ethical Considerations**

This unit examines various real-world applications of expert systems, such as diagnostic systems in medicine, financial advisory systems, and technical support. It also covers evaluation techniques to assess the performance and reliability of expert systems. The unit discusses ethical considerations, including transparency, accountability, and the potential impact of expert systems on decision-making and job roles.

### **Applications of Expert Systems in Industry**

**CCA 605D**

**Cr. L T P**

**4 3 10**

## **Unit 1: Introduction to Expert Systems and Industrial Applications**

This unit provides an overview of expert systems, their architecture, and key components, including the knowledge base and inference engine. It introduces the significance of expert systems in industry and discusses their role in automating complex decision-making tasks, enhancing efficiency, and supporting strategic objectives. The unit also highlights early successes of expert systems across various industrial sectors.

## **Unit 2: Expert Systems in Manufacturing and Production**

This unit explores the use of expert systems in manufacturing, including applications in process control, quality management, and predictive maintenance. It covers the role of expert systems in optimizing production processes, monitoring equipment, and diagnosing machine faults. Case studies illustrate how expert systems reduce downtime, improve product quality, and support just-in-time manufacturing.

## **Unit 3: Expert Systems in Finance and Banking**

This unit examines the applications of expert systems in finance and banking, focusing on credit scoring, fraud detection, and investment analysis. It discusses how expert systems analyze financial data, assess risk, and support decision-making in lending and investment. The unit also covers regulatory compliance and explores the role of expert systems in enhancing operational efficiency and customer service.

## **Unit 4: Expert Systems in Healthcare and Diagnostics**

This unit focuses on the use of expert systems in healthcare, particularly in diagnostics, treatment planning, and patient monitoring. It covers the structure of medical expert systems, including

knowledge bases designed for specific health conditions, and examines examples like MYCIN and DENDRAL. The unit discusses how expert systems assist healthcare professionals in improving diagnostic accuracy and personalizing patient care.

## **Unit 5: Expert Systems in Customer Service and Technical Support**

This unit addresses the role of expert systems in automating customer service and technical support processes. It covers the development of knowledge-based systems for troubleshooting, guiding customers, and answering FAQs. The unit also discusses the use of expert systems in industries like telecommunications and consumer electronics, highlighting their contribution to improved customer satisfaction and reduced service costs.

## **Multimedia Computing**

**CCA 609**

**Cr. L T P**

**4 3 10**

### **Unit 1: Introduction to Multimedia Computing**

This unit introduces the fundamentals of multimedia, including the types of multimedia data (text, audio, images, video, and animation) and their applications in various fields like entertainment, education, and business. It covers basic concepts of multimedia systems, multimedia data representation, digitization, and the importance of compression.

### **Unit 2: Digital Audio and Video Processing**

This unit focuses on digital audio and video technologies, covering sampling, formats, and compression techniques for audio and video data. It discusses codecs like MP3, AAC, MPEG, and H.264, exploring methods for efficient storage and transmission. Topics include audio and video editing basics, synchronization, and streaming media challenges.

### **Unit 3: Image and Graphics Processing**

This unit explores the principles of image representation, color models, and graphics processing techniques. Topics include image transformation, filtering, and basic image processing operations, as well as an introduction to vector and raster graphics. The unit also covers applications of image processing in multimedia, such as image enhancement, compression, and graphics for animation.

### **Unit 4: Multimedia Storage, Databases, and Retrieval**

This unit discusses the management of multimedia data, including multimedia databases, storage formats, and retrieval techniques. Topics cover content-based image and video retrieval, indexing, metadata tagging, and the organization of multimedia data. It also introduces

multimedia content management systems (CMS) and their applications in digital libraries and archives.

## **Unit 5: Multimedia Networking and Applications**

This unit covers the delivery of multimedia content over networks, including streaming protocols, Quality of Service (QoS), and network architectures for multimedia applications. It explores real-time multimedia applications, such as live streaming and video conferencing, along with challenges in bandwidth, latency, and multimedia synchronization. The unit also touches on emerging multimedia applications like virtual reality and augmented reality.

## **Pattern Recognition**

**CCA 611**

**Cr. L T P**

**4 3 10**

### **Unit 1: Introduction to Pattern Recognition**

This unit introduces the basics of pattern recognition, including definitions, scope, and applications across various fields like image analysis, speech recognition, and biometrics. It covers key concepts such as feature extraction, classification, and decision theory. The unit also discusses the difference between supervised and unsupervised learning in pattern recognition.

### **Unit 2: Statistical Pattern Recognition**

This unit covers statistical approaches to pattern recognition, including probability theory, Bayes decision theory, and discriminant functions. It explores topics like parametric and non-parametric techniques, including linear discriminant analysis (LDA) and k-nearest neighbors (k-NN). The unit also introduces Gaussian models and probabilistic frameworks for classification.

### **Unit 3: Feature Selection and Dimensionality Reduction**

This unit focuses on feature selection techniques, emphasizing the importance of identifying relevant features for accurate classification. It covers methods like principal component analysis (PCA), independent component analysis (ICA), and feature selection algorithms. The unit discusses the curse of dimensionality and the role of dimensionality reduction in improving recognition performance.

### **Unit 4: Clustering and Unsupervised Learning**

This unit introduces clustering techniques used in unsupervised learning. Topics include popular clustering algorithms like k-means, hierarchical clustering, and density-based clustering (DBSCAN). The unit discusses clustering evaluation metrics, applications of clustering in pattern recognition, and the role of clustering in grouping and segmenting unlabeled data.

## **Unit 5: Neural Networks and Deep Learning for Pattern Recognition**

This unit covers neural networks and deep learning approaches for pattern recognition. It introduces basic neural network architectures, training algorithms, and common activation functions. The unit explores deep learning models such as convolutional neural networks (CNNs) and recurrent neural networks (RNNs), discussing their applications in image, speech, and text recognition tasks.

### **Client-Server Computing**

**UCA 603**

**Cr. L T P**  
**4 3 10**

#### **Unit 1: Introduction to Client-Server Computing**

This unit provides an overview of client-server computing, including its architecture, components, and advantages. It discusses the differences between client-server and peer-to-peer architectures and introduces various types of client-server models. The unit also covers the fundamental concepts of networking and communication protocols that enable client-server interactions.

#### **Unit 2: Client-Server Architecture and Design**

This unit explores different client-server architectures, including two-tier, three-tier, and n-tier models. It discusses the roles of clients and servers, the communication between them, and the responsibilities of each component. The unit also covers design considerations, such as scalability, performance, and security, as well as best practices for developing robust client-server applications.

#### **Unit 3: Communication Protocols and Middleware**

This unit focuses on communication protocols used in client-server computing, such as HTTP, TCP/IP, and WebSocket. It introduces middleware technologies that facilitate communication and data exchange between clients and servers. The unit also discusses remote procedure calls (RPC), message-oriented middleware, and the role of APIs in client-server interactions.

#### **Unit 4: Database Connectivity in Client-Server Applications**

This unit examines database connectivity and management in client-server applications. It covers techniques for accessing databases from client applications, including ODBC, JDBC, and ORM frameworks. The unit discusses the importance of data consistency, transaction management, and security measures in database-driven client-server systems.

#### **Unit 5: Security and Performance in Client-Server Computing**

This unit addresses security challenges and performance optimization techniques in client-server computing. It covers authentication, authorization, encryption, and secure communication methods. The unit also explores performance factors, including load balancing, caching, and resource management, providing strategies for optimizing client-server applications for high availability and responsiveness.

## Advanced Computer System Architecture

**UCA 603**

**Cr. L T P**

**4 3 10**

### Unit 1: Fundamentals of Computer Architecture

This unit provides an overview of computer architecture, covering the basic components of computer systems, including the CPU, memory hierarchy, and input/output systems. It discusses the evolution of computer architecture and introduces fundamental concepts such as instruction sets, data paths, and control units. The unit also covers performance metrics and benchmarking techniques for evaluating computer systems.

### Unit 2: Advanced Processor Architectures

This unit focuses on advanced processor designs, including superscalar, out-of-order execution, and speculative execution architectures. It discusses concepts like pipelining, cache memory organization, and virtual memory. The unit also explores multicore and many-core architectures, examining their impact on performance, energy efficiency, and parallel processing capabilities.

### Unit 3: Memory Systems and Storage Architecture

This unit examines memory systems in-depth, covering cache design, memory hierarchy, and different types of memory technologies (RAM, ROM, SSDs, etc.). It discusses memory management techniques, including paging and segmentation, and explores storage architecture for high-performance systems. The unit also addresses issues related to data consistency, reliability, and fault tolerance in memory systems.

### Unit 4: Parallel and Distributed Architectures

This unit introduces parallel and distributed computing architectures, covering shared memory and distributed memory models. It discusses parallel processing techniques, including SIMD and MIMD architectures, and explores programming models for parallel systems, such as OpenMP and MPI. The unit also addresses challenges in synchronization, communication, and load balancing in distributed systems.

## **Unit 5: Emerging Trends in Computer Architecture**

This unit explores emerging trends and technologies in computer architecture, including quantum computing, neuromorphic computing, and energy-efficient architectures. It discusses the implications of these technologies for future computing systems and the challenges they present. The unit also examines the role of hardware-software co-design and the impact of machine learning on computer architecture.

### **Dissertation**

**CCA 602**

**Cr. L T P**

**4 3 10**

## **Unit 1: Introduction to Research Methodology**

This unit introduces the principles of research methodology, including the research process, types of research, and the importance of defining research questions. It covers qualitative and quantitative research methods, literature review techniques, and ethical considerations in research. The unit emphasizes the significance of proper planning and organization in conducting research for a dissertation.

## **Unit 2: Literature Review and Theoretical Framework**

This unit focuses on conducting a comprehensive literature review, identifying relevant sources, and synthesizing findings. It covers the development of a theoretical framework that supports the research question and informs the study. The unit emphasizes critical analysis of existing literature and how it relates to the proposed research, guiding the direction of the dissertation.

### **Unit 3: Research Design and Methodology**

This unit explores the development of a research design, including selecting appropriate research methods, sampling techniques, and data collection strategies. It discusses various data analysis methods, both qualitative and quantitative, and the importance of validating results. The unit also covers the creation of research instruments, such as surveys and interview protocols, ensuring they align with the research objectives.

### **Unit 4: Writing the Dissertation**

This unit covers the structure and organization of a dissertation, including the introduction, methodology, results, discussion, and conclusion chapters. It provides guidelines for academic writing style, citation formats, and referencing standards. The unit emphasizes the importance of clear communication and the presentation of research findings, as well as the revision process and addressing feedback from advisors.

### **Unit 5: Presentation and Defense of the Dissertation**

This unit prepares students for the oral presentation and defense of their dissertation. It covers strategies for effectively communicating research findings to an audience, including presentation skills and visual aids. The unit also discusses the process of defending the dissertation before a committee, addressing questions, and incorporating feedback for future research or publication.

### **Seminar and Progress Reports**

**CCA 604**

**Cr. L T P**

**4 3 10**

### **Unit 1: Introduction to Seminars and Reports**

This unit introduces the purpose and significance of seminars and progress reports in academic and professional contexts. It covers the various types of seminars, including formal presentations

and informal discussions, and outlines the essential components of effective progress reports. The unit emphasizes the importance of communication skills and audience engagement in presenting research findings.

## **Unit 2: Research Topics and Literature Review**

This unit focuses on selecting appropriate research topics for seminars and progress reports. It covers techniques for conducting literature reviews, identifying key sources, and synthesizing relevant information. The unit emphasizes the importance of establishing a theoretical framework and developing clear objectives to guide research and presentations.

## **Unit 3: Structuring Presentations and Reports**

This unit explores the structure and organization of seminars and progress reports. It discusses the typical components, including introduction, methodology, results, discussion, and conclusion. The unit provides guidelines for creating clear and coherent presentations, emphasizing the effective use of visual aids and presentation software to enhance communication.

## **Unit 4: Presentation Skills and Techniques**

This unit focuses on developing effective presentation skills for delivering seminars and progress reports. It covers techniques for public speaking, managing anxiety, and engaging the audience. The unit emphasizes the importance of body language, voice modulation, and the use of visual aids to enhance the clarity and impact of presentations.

## **Unit 5: Feedback, Evaluation, and Future Directions**

This unit discusses the process of receiving and incorporating feedback from peers and advisors during seminars and report presentations. It covers evaluation criteria used to assess the quality of presentations and reports. The unit emphasizes the importance of reflecting on feedback to improve future research and presentation skills and discusses the next steps in the research process based on feedback received.

## **Lab Java Programming**

### **CCA-551**

1. Create a simple PHP script that prints "Hello, World!".
2. Build a form that takes user input and displays the submitted data.
3. Implement a user registration system that stores data in a MySQL database.
4. Create a login system with session management to authenticate users.
5. Develop a contact form that sends an email with user details.
6. Build a CRUD application to manage a list of books in a database.
7. Create a simple calculator that performs basic arithmetic operations.
8. Implement a file upload feature with validation for file types.
9. Develop a program that generates a random password.
10. Create a page that displays data from an API using cURL.
11. Implement pagination for displaying a list of products from a database.
12. Build a blog platform with post creation and commenting features.
13. Create a program to read and display contents of a text file.
14. Develop a shopping cart system that tracks selected items.
15. Implement user roles (admin and user) with access control.
16. Create a program that generates and displays a QR code.
17. Build a survey application that collects and displays user responses.
18. Create a simple image gallery that displays images from a folder.

## **Lab C# Programming**

### **CCA-553**

1. Write a C# program to calculate the factorial of a number using recursion.
2. Create a program that finds the greatest common divisor (GCD) of two integers using the Euclidean algorithm.
3. Develop a program that checks if a given string is a palindrome.
4. Write a C# program to sort an array of integers using the bubble sort algorithm.
5. Implement a program that reads a list of integers from the user and finds the maximum and minimum values.
6. Create a program to count the number of vowels and consonants in a given string.
7. Write a C# program to generate the Fibonacci series up to a specified number of terms.
8. Develop a program that reverses an array of integers.
9. Create a program to find the sum of the digits of a given integer.

10. Write a C# program to implement a basic calculator that performs addition, subtraction, multiplication, and division.
11. Implement a program to check if a number is prime.
12. Write a program that displays the multiplication table of a number provided by the user.
13. Create a program to find the second largest number in an array.
14. Write a C# program to convert a binary number (as a string) to its decimal equivalent.
15. Develop a program that counts the occurrences of each character in a string.
16. Implement a program to merge two sorted arrays into a single sorted array.
17. Write a C# program to print the first n prime numbers.
18. Create a program that removes duplicates from an array of integers.

### **Lab Network Security & Cryptography Lab**

#### **CCA-552**

1. Write a program to implement the Caesar cipher encryption and decryption.
2. Create a program that uses the Vigenère cipher for text encryption and decryption.
3. Develop a program to perform a simple hash function (like SHA-256) on a given string.
4. Write a program that demonstrates symmetric key encryption and decryption using AES.
5. Create a program to implement RSA encryption and decryption.
6. Develop a program that generates a pair of RSA keys (public and private).
7. Write a program to demonstrate digital signatures using RSA.
8. Create a program that implements Diffie-Hellman key exchange.
9. Develop a program to encrypt and decrypt files using symmetric encryption.
10. Write a program that verifies the integrity of a file using checksums (MD5 or SHA-1).
11. Create a program that uses SSL/TLS to secure a simple client-server communication.
12. Develop a program to implement HMAC (Hash-based Message Authentication Code).
13. Write a program that simulates a man-in-the-middle attack and its prevention.
14. Create a program that implements a simple password manager with encryption.
15. Develop a program to perform steganography by hiding a message in an image.
16. Write a program to analyze network traffic and detect anomalies using basic heuristics.
17. Create a program that implements a simple firewall rule-checking mechanism.
18. Develop a program to simulate phishing detection by analyzing email content.
19. Write a program to implement two-factor authentication using a time-based one-time password

### **Lab Compiler Design**

#### **CCA-554**

1. Write a program to implement a lexical analyzer (lexer) for a simple programming language.
2. Create a program to construct a syntax tree for arithmetic expressions.
3. Develop a program to implement a parser using recursive descent parsing.

4. Write a program that implements the Shunting Yard algorithm to convert infix expressions to postfix notation.
5. Create a program to evaluate postfix expressions.
6. Develop a program to perform semantic analysis and check for variable declaration and usage.
7. Write a program to generate intermediate code from a given source code.
8. Create a program to implement basic optimization techniques (constant folding, dead code elimination).
9. Develop a program to implement a simple code generator that translates intermediate code to assembly language.
10. Write a program to implement a symbol table with insertion, lookup, and deletion functionalities.
11. Create a program that performs type checking for a simple programming language.
12. Develop a program to implement operator precedence parsing.
13. Write a program to simulate a finite state machine (FSM) for a given regular expression.
14. Create a program to implement lexical analysis with regular expressions.
15. Develop a program that performs syntax-directed translation for arithmetic expressions.
16. Write a program to implement dynamic memory allocation and garbage collection in a simple language.
17. Create a program that generates a control flow graph (CFG) from a given intermediate representation.
18. Develop a program to implement an error recovery mechanism in a parser.
19. Write a program that analyzes and generates reports on the complexity of a given program.
20. Create a program to implement a simple interpreter for a basic programming language.

### **Lab Advanced DBMS**

#### **CCA-651**

1. Write a program to create a database schema using SQL for a simple library management system.
2. Develop a program that connects to a database and performs CRUD operations using JDBC.
3. Create a program to implement a stored procedure that calculates the total sales for a given month.
4. Write a program to demonstrate the use of triggers in a database (e.g., updating inventory on a sale).
5. Develop a program that executes complex SQL queries involving joins, subqueries, and group functions.
6. Create a program to implement database normalization techniques and demonstrate denormalization.
7. Write a program to manage user authentication and authorization in a database application.

8. Develop a program to back up and restore a database using SQL commands.
9. Create a program that performs data mining operations, such as clustering or classification, on a dataset.
10. Write a program to implement transaction management and demonstrate ACID properties.
11. Develop a program that uses indexing to improve query performance in a large database.
12. Create a program that implements full-text search capabilities in a database.
13. Write a program to demonstrate the use of database views and materialized views.
14. Develop a program to perform data replication and synchronization between two databases.
15. Create a program that implements a data warehouse schema using star and snowflake designs.
16. Write a program to perform ETL (Extract, Transform, Load) operations on a dataset.
17. Develop a program that integrates a NoSQL database (like MongoDB) with a relational database.
18. Create a program to analyze query execution plans and optimize queries for performance.
19. Write a program that demonstrates data privacy techniques, such as data masking or encryption.
20. Develop a program to implement a distributed database system and demonstrate data consistency.
- 21.

### **Lab Advanced DAA**

#### **CCA-653**

1. Write a program to implement Dijkstra's algorithm for finding the shortest path in a weighted graph.
2. Create a program that uses dynamic programming to solve the 0/1 Knapsack problem.
3. Develop a program to perform matrix multiplication using Strassen's algorithm.
4. Write a program to implement the Prim's algorithm for minimum spanning tree generation.
5. Create a program that demonstrates the A\* search algorithm for pathfinding.
6. Write a program to solve the Traveling Salesman Problem using a brute force approach.
7. Develop a program that uses the Ford-Fulkerson method to find the maximum flow in a flow network.
8. Create a program that implements the branch and bound technique for solving the N-Queens problem.
9. Write a program to implement the Floyd-Warshall algorithm for all-pairs shortest paths.
10. Develop a program that applies the Bellman-Ford algorithm to find the shortest paths from a single source.
11. Create a program to implement a Huffman coding algorithm for data compression.
12. Write a program that uses backtracking to solve the Sudoku problem.
13. Develop a program to implement the Rabin-Karp algorithm for substring search.
14. Create a program to implement K-means clustering algorithm for data segmentation.

15. Write a program that demonstrates the Quick Sort algorithm with different pivot strategies.

### **LAB Minor Project**

#### **CCA 655**

1. Develop a simple task management application with user authentication and CRUD operations.
2. Create a basic e-commerce website with product listings, shopping cart functionality, and order processing.
3. Write a program to build a personal finance tracker that allows users to manage expenses and budgets.
4. Implement a library management system that handles book borrowing, returns, and member management.
5. Create a weather forecasting application that fetches data from a public API and displays current conditions.
6. Develop a quiz application that allows users to take quizzes, track scores, and view results.
7. Write a program to create a note-taking application with rich text formatting and cloud synchronization.
8. Implement a simple blog platform where users can create, edit, and comment on posts.
9. Create a fitness tracking application that allows users to log workouts, track progress, and set goals.
10. Develop a recipe management system that enables users to search for recipes and save their favorites.
11. Write a program to build a social media dashboard that aggregates posts from multiple platforms.
12. Implement a music player application that allows users to create playlists and play local audio files.
13. Create a voting system for surveys or polls, with user authentication and result visualization.
14. Develop an online ticket booking system for events or movies with seat selection.
15. Write a program to implement a basic chat application using WebSockets for real-time communication.

### **Lab Dissertation**

#### **CCA 602**

1. Develop a comprehensive system for managing academic research papers, including submission, review, and publication processes.
2. Create a program that analyzes large datasets using machine learning algorithms for predictive analytics.
3. Implement a blockchain-based voting system to enhance transparency and security in electoral processes.

4. Design a smart home automation system that integrates various IoT devices for energy efficiency and convenience.
5. Write a program for sentiment analysis on social media data to gauge public opinion on various topics.
6. Create a personalized recommendation system for an e-commerce platform based on user behavior and preferences.
7. Develop a virtual reality application for immersive education experiences in science or history.
8. Implement a comprehensive health monitoring system that collects and analyzes data from wearable devices.
9. Create a program for automated essay scoring using natural language processing techniques.
10. Design a disaster management system that predicts natural disasters and provides real-time alerts and resources.
11. Develop an augmented reality application for interior design, allowing users to visualize furniture in their space.
12. Write a program to facilitate peer-to-peer energy trading using smart contracts on a blockchain.
13. Create a multi-language learning platform that adapts to individual student progress and preferences.
14. Implement a content management system (CMS) for online journalism that allows for multimedia integration and collaboration.
15. Develop a cybersecurity simulation tool that helps organizations train employees on threat detection and response.
16. Create a program that analyzes traffic data to optimize urban transportation systems and reduce congestion.

### **Lab Seminar and Progress Reports**

#### **CCA 604**

1. Develop a web-based application for tracking seminar registrations and managing attendee lists.
2. Create a program that generates automated progress reports for ongoing research projects.
3. Implement a presentation tool that allows users to create and share interactive slideshows.
4. Write a program to analyze feedback from seminar participants and generate summary reports.
5. Create a project management tool that helps teams track milestones and deadlines for seminars and presentations.
6. Develop a database system for organizing and retrieving seminar materials and resources.
7. Implement a video conferencing tool with features for screen sharing and recording seminars.
8. Create a program that schedules seminar sessions and sends reminders to participants.
9. Develop an online platform for submitting and reviewing seminar papers and abstracts.

10. Write a program that visualizes progress over time for individual research projects using graphs and charts.
11. Create a system for peer review of seminar presentations, allowing participants to provide constructive feedback.
12. Develop a mobile app that allows users to access seminar schedules and speaker bios on the go.
13. Implement a notification system for updates on upcoming seminars and related events.
14. Create a program that tracks attendance and engagement metrics during online seminars.
15. Develop a collaborative document editor for preparing seminar papers and reports in real time.
16. Write a program to create customizable templates for seminar presentations and reports.
17. Create a system for archiving and accessing past seminar recordings and materials.
18. Develop a resource-sharing platform where participants can exchange seminar-related documents and links.

**Shobhit University, Gangoh**

(Established by UP Shobhit University Act No. 3, 2012)

**School of School of Engineering and Technology**

**Ordinances, Regulations & Syllabus**

For

**Bachelor of Engineering, Four Year Programme**

**Semester System**

(w.e.f. session 2013-14)

Revised and approved in the year 2021 (17<sup>th</sup> Meeting, Board of Studies)

## **Programme Educational Objectives (PEOs)**

**PEO 1** Graduates will acquire a strong foundation in engineering principles, enabling them to design, develop, and implement innovative solutions to complex engineering problems across various industries.

**PEO 2** Graduates will develop the ability to apply critical thinking, problem-solving skills, and engineering techniques to analyze, evaluate, and resolve real-world challenges in their chosen engineering discipline.

**PEO 3** Graduates will gain hands-on experience in using modern engineering tools, software, and technologies, enabling them to effectively design, model, and optimize engineering systems and processes.

**PEO 4** Graduates will demonstrate the ability to work collaboratively in multidisciplinary teams, manage engineering projects, and communicate technical information effectively to both technical and non-technical stakeholders.

**PEO 5** Graduates will adhere to professional and ethical standards, ensuring their engineering solutions are socially responsible, environmentally sustainable, and aligned with industry best practices and regulatory requirements.

**PEO 6** Graduates will develop leadership and management skills, preparing them to take on roles of responsibility in both technical and managerial aspects of engineering projects.

**PEO 7** Graduates will engage in lifelong learning and stay current with emerging technologies, ensuring continuous professional growth and adaptability to the evolving engineering landscape.

**PEO 8** Graduates will contribute to the betterment of society by creating innovative solutions that address societal challenges, promote sustainable development, and enhance the quality of life globally.

## Programme Specific Objectives (PSO's)

**PSO 1** To equip students with a solid foundation in core engineering concepts, preparing them to design, analyze, and develop solutions for complex technical challenges in various fields.

**PSO 2** To develop proficiency in modern engineering tools, techniques, and technologies, enabling students to effectively design, model, and optimize engineering systems and processes across diverse applications.

**PSO 3** To enhance problem-solving skills, encouraging students to apply engineering principles and critical thinking to develop innovative and sustainable solutions for real-world challenges in their discipline.

**PSO 4** To foster a strong understanding of professional ethics, environmental sustainability, and social responsibility, ensuring students create engineering solutions that are both technically sound and socially beneficial.

**PSO 5** To provide hands-on experience through laboratory work, internships, and projects, helping students gain practical exposure to the application of engineering concepts in real-world scenarios.

**PSO 6** To nurture teamwork, leadership, and communication skills, preparing students to effectively collaborate in multidisciplinary teams, manage engineering projects, and communicate complex ideas to diverse audiences.

**PSO 7** To ensure students develop a global perspective on engineering practices, preparing them to adapt and innovate in response to technological advancements and the needs of a rapidly changing world.

**PSO 8** To foster lifelong learning habits, ensuring students remain adaptable and stay updated with the latest trends, technologies, and advancements in their engineering field throughout their careers.

## Programme Outcome Objectives (POO's)

**POO 1** Graduates will have a strong foundation in engineering fundamentals, enabling them to apply core principles and methodologies to solve real-world engineering problems across various disciplines.

**POO 2** Graduates will possess the ability to analyze complex engineering systems, design innovative solutions, and optimize processes while considering technical, environmental, and societal constraints.

**POO 3** Graduates will be proficient in using modern engineering tools, software, and technologies to model, simulate, and solve engineering problems, ensuring efficient and effective system designs.

**POO 4** Graduates will develop critical thinking, problem-solving, and decision-making skills to address engineering challenges, ensuring that solutions are feasible, sustainable, and aligned with industry standards.

**POO 5** Graduates will demonstrate the ability to work effectively in multidisciplinary teams, manage projects, and communicate technical information clearly to diverse audiences, both within and outside of engineering fields.

**POO 6** Graduates will adhere to ethical, professional, and legal standards in engineering practice, ensuring their solutions positively impact society, the environment, and the global engineering community.

**POO 7** Graduates will be capable of undertaking independent research, applying engineering principles to explore new solutions, and contributing to advancements in technology and engineering practices.

**POO 8** Graduates will have strong leadership and interpersonal skills, enabling them to manage engineering projects, lead teams, and coordinate with stakeholders to achieve desired outcomes.

**POO 9** Graduates will demonstrate an understanding of sustainability, applying green engineering principles to minimize the environmental impact of their designs and promote socially responsible engineering practices.

**POO 10** Graduates will embrace lifelong learning, continuously updating their knowledge and skills to stay relevant with evolving technologies, methodologies, and trends in engineering, ensuring professional growth throughout their careers.

## CMAN-101

Cr. L T P  
4 3 1 0

### COURSE OBJECTIVES:

The objectives of this course are to

1. Develop a strong foundation in matrix algebra, including matrix operations, eigenvalues, eigenvectors, and matrix diagonalization.
2. Understand and solve higher-order ordinary differential equations using various methods, including Euler-Cauchy and variation of parameters.
3. Learn numerical methods for solving ordinary differential equations, such as Picard's method and Euler methods.
4. Explore functions of several variables, including limits, differentiability, Jacobians, and Taylor's theorem.
5. Study series solutions of second-order linear differential equations and properties of Bessel functions and Legendre polynomials.

### Course Outcomes:

At the end of this course, students will demonstrate the ability to:

1. Apply matrix algebra techniques to solve linear equations, calculate eigenvalues and eigenvectors, and understand matrix diagonalization.
2. Solve linear and simultaneous differential equations using various analytical methods like Euler-Cauchy and variation of parameters.
3. Implement numerical methods to solve ordinary differential equations and analyze the convergence of infinite series.
4. Evaluate functions of several variables, apply the chain rule, and find extrema using Taylor's theorem and Jacobians.
5. Solve second-order differential equations using series methods and understand the properties of Bessel functions and Legendre polynomials.

### Unit-I

**Matrix Algebra:** Rank of a matrix, Inverse of a matrix by elementary operations; Solution of linear simultaneous equations and their numerical solutions by Gauss elimination, Eigenvalues and Eigenvectors of matrices by Cayley-Hamilton theorem; Diagonalisation of matrices; Orthogonal, Hermetian, Skew-Hermetian, Normal and Unitary matrices and their elementary properties.

### Unit-II

**Ordinary Differential Equations:** Linear differential equation of nth order with constant coefficients, Simultaneous Linear differential equations, Euler-Cauchy equations, Solution of second order differential equations by change of dependent and independent variables; Method of variation of parameters for second order differential equations.

### Unit-III

**Numerical Solution of ODE:** Picard's method, Taylor's series, Euler method & Modified Euler method. Definition of Sequence and series with example, Convergence of infinite series; Comparison test, Ratio test, Root test, Logarithmic test, De Morgan's test, Cauchy integral test.

#### **Unit-IV**

**Functions of Several Variables:** Limit continuity and differentiability of functions of two variables; Euler's theorem, Tangent plane and normal, Change of variables, Chain rule; Jacobians, Taylor's Theorem for two variables; Extrema of functions of two or more variables.

#### **Unit-V**

**Solution in Series:** Solution in series of second order linear differential equations with polynomial coefficients; Bessel and Legendre equations and their series solutions; Properties of Bessel functions and Legendre polynomials.

#### **Reference Books :**

1. Kreyszig, E. *Advanced Engineering Mathematics*. 8<sup>th</sup> Edition. Wiley Eastern, 2004.
2. Grewal, B.S. *Engineering Mathematics*. 39<sup>th</sup> Edition. Khanna Publishers, 2005.

**Course Description:**

This course introduces essential mathematical concepts and techniques for engineering students, covering calculus, linear algebra, differential equations, vector calculus, and probability theory. The aim is to provide students with the analytical tools needed to model and solve real-world engineering problems.

**Unit 1: Calculus**

Functions, Limits, and Continuity: Definitions, limit laws, and continuity.

Differentiation: Differentiation of functions, product and quotient rules, chain rule, higher-order derivatives.

Applications of Differentiation: Tangents and normals, maxima and minima, optimization problems, curve sketching.

Integration: Definite and indefinite integrals, techniques of integration (substitution, integration by parts), improper integrals.

Applications of Integration: Area under curves, volumes of solids of revolution.

**Unit 2: Linear Algebra**

Matrices and Determinants: Basic operations, types of matrices, determinants, properties.

System of Linear Equations: Gaussian elimination, inverse of a matrix, rank of a matrix, consistency of linear systems.

Eigenvalues and Eigenvectors: Definitions, properties, diagonalization, Cayley-Hamilton theorem, applications to systems of differential equations.

Vector Spaces: Subspaces, linear independence, basis, and dimension.

**Unit 3: Ordinary Differential Equations**

First-order Differential Equations: Separable equations, exact equations, integrating factors, applications (growth models, electrical circuits).

Second and Higher-order Differential Equations: Solutions of linear differential equations, homogeneous and non-homogeneous equations, method of undetermined coefficients, variation of parameters.

Applications: Mechanical vibrations, electrical networks, and other physical applications.

**Unit 4: Vector Calculus**

Vector Functions: Differentiation and integration of vector functions, gradient, divergence, and curl.

Line, Surface, and Volume Integrals: Green's theorem, Stokes' theorem, and Gauss's divergence theorem.

Applications: Fluid flow, electromagnetism, and potential fields.

### **Unit 5: Probability and Statistics**

Probability Theory: Basics of probability, conditional probability, independent events, Bayes' theorem.

Random Variables: Discrete and continuous random variables, probability density function (PDF), cumulative distribution function (CDF), and expectation.

Probability Distributions: Binomial, Poisson, and Normal distributions, applications to engineering problems.

Statistics: Measures of central tendency (mean, median, mode), measures of dispersion (variance, standard deviation), hypothesis testing, confidence intervals.

### **Recommended Textbooks:**

1. Advanced Engineering Mathematics by Erwin Kreyszig, 11th Edition, Wiley, 2020.
2. Higher Engineering Mathematics by B.S. Grewal, 44th Edition, Khanna Publishers, 2022.
3. Linear Algebra and Its Applications by David C. Lay, 6th Edition, Pearson, 2021.
4. Introduction to Probability and Statistics for Engineers and Scientists by Sheldon M. Ross, 6th Edition, Academic Press, 2020.
5. Differential Equations and Boundary Value Problems: Computing and Modeling by C.H. Edwards and David E. Penney, 6th Edition, Pearson, 2018

**Course Description:**

This course aims to provide students with the basic mathematical tools and concepts essential for understanding more advanced topics in engineering. The focus is on algebra, trigonometry, coordinate geometry, basic calculus, and introductory probability and statistics, which form the foundation for problem-solving in engineering fields.

**Unit 1: Algebra**

Polynomials: Degree, factorization, roots of polynomials, quadratic equations, and their applications.

Arithmetic and Geometric Progressions: Definitions, nth term, sum of series, applications in engineering.

Binomial Theorem: Expansion, general term, and applications.

Logarithms: Properties of logarithms, solving logarithmic equations, applications.

**Unit 2: Trigonometry**

Trigonometric Functions: Definitions, identities, and equations.

Inverse Trigonometric Functions: Domains, ranges, and basic properties.

Trigonometric Equations: General solutions, applications to physical problems.

Applications of Trigonometry: Heights and distances, simple harmonic motion, and waves.

**Unit 3: Coordinate Geometry**

Straight Lines: Equation of a line in different forms, slope, angle between two lines, distance formula, applications.

Circles: Standard equation, tangents and normals, intersection of a circle with a line.

Conic Sections: Parabola, ellipse, and hyperbola - standard equations and simple properties.

Applications in Engineering: Modelling of trajectories and orbits, structural designs.

**Unit 4: Calculus**

Limits and Continuity: Concept of a limit, properties of limits, continuity of a function.

Differentiation: Basic rules, derivatives of standard functions, product rule, quotient rule, chain rule.

Applications of Differentiation: Rate of change, maxima and minima, curve sketching.

Integration: Basic rules of integration, integration of standard functions, definite and indefinite integrals.

Applications of Integration: Area under curves, volumes of revolution, and simple applications in physics.

### **Unit 5: Probability and Statistics**

Probability Basics: Definitions, sample space, events, conditional probability, independence, and Bayes' theorem.

Random Variables: Discrete and continuous, probability mass function (PMF), probability density function (PDF), cumulative distribution function (CDF).

Descriptive Statistics: Measures of central tendency (mean, median, mode), measures of dispersion (variance, standard deviation).

Basic Probability Distributions: Binomial, Poisson, and normal distributions.

Introduction to Hypothesis Testing: Null and alternative hypotheses, significance levels, z-tests and t-tests.

### **Recommended Textbooks:**

1. Basic Engineering Mathematics by John Bird, 8th Edition, Routledge, 2021.
2. Engineering Mathematics by K.A. Stroud and Dexter Booth, 8th Edition, Palgrave Macmillan, 2020.
3. College Algebra and Trigonometry by Margaret Lial, John Hornsby, David Schneider, 7th Edition, Pearson, 2021.
4. Introduction to Probability and Statistics for Engineers and Scientists by Sheldon M. Ross, 6th Edition, Academic Press, 2020.
5. Calculus: Early Transcendentals by James Stewart, 9th Edition, Cengage Learning, 2020.

**Course Description:**

This course covers advanced mathematical techniques and applications necessary for solving engineering problems. It includes advanced calculus, differential equations, numerical methods, and complex variables, providing tools to model, analyze, and solve practical problems in engineering disciplines.

**Unit 1: Advanced Calculus**

Partial Differentiation: Functions of several variables, total derivatives, chain rule, Jacobians.

Taylor's Theorem for Multivariable Functions: Expansion of functions in two variables.

Maxima and Minima of Functions of Several Variables: Lagrange multipliers method and applications.

Multiple Integrals: Double and triple integrals, applications to area, volume, and center of mass.

Applications of Calculus: Engineering problems involving optimization, mass distribution, and fluid mechanics.

**Unit 2: Ordinary and Partial Differential Equations**

First-Order Differential Equations: Separable, exact, and linear equations, applications in mechanics and electrical circuits.

Higher-Order Differential Equations: Solutions of linear differential equations with constant coefficients, method of undetermined coefficients, and variation of parameters.

Partial Differential Equations (PDEs): Classification, method of separation of variables, wave equation, heat equation, and Laplace equation.

Applications: Mechanical vibrations, heat conduction, and fluid flow analysis.

**Unit 3: Numerical Methods**

Roots of Equations: Bisection method, Newton-Raphson method, and secant method.

Numerical Integration: Trapezoidal rule, Simpson's rule, and Gaussian quadrature.

Numerical Solutions to ODEs: Euler's method, Runge-Kutta methods (2nd and 4th order).

Finite Difference Methods for PDEs: Forward and backward difference methods, Crank-Nicolson method.

Applications: Numerical simulations in engineering problems such as heat transfer and structural analysis.

**Unit 4: Complex Variables and Complex Analysis**

**Complex Numbers and Functions:** Basic properties of complex numbers, polar form, complex functions, and their derivatives.

**Analytic Functions:** Cauchy-Riemann equations, harmonic functions, conformal mapping.

**Complex Integration:** Cauchy's theorem, Cauchy's integral formula, Taylor and Laurent series, residue theorem, and its applications.

**Applications in Engineering:** Fluid dynamics, electromagnetic fields, and signal processing.

### **Unit 5: Fourier Series and Laplace Transforms**

**Fourier Series:** Periodic functions, Fourier series expansions, half-range expansions, and applications in engineering (signal processing, vibrations).

**Laplace Transforms:** Definition and properties, inverse Laplace transforms, solving ordinary differential equations using Laplace transforms.

**Applications of Fourier Series and Laplace Transforms:** Solution of heat, wave, and Laplace equations, control systems, and circuit analysis.

### **Recommended Textbooks:**

1. Advanced Engineering Mathematics by Erwin Kreyszig, 11th Edition, Wiley, 2020.
2. Applied Mathematics for Engineers and Physicists by L.A. Pipes and L.R. Harvill, 4th Edition, Dover Publications, 2014.
3. Numerical Methods for Engineers by Steven C. Chapra and Raymond P. Canale, 8th Edition, McGraw-Hill, 2020.
4. Complex Variables and Applications by James Ward Brown and Ruel V. Churchill, 9th Edition, McGraw-Hill, 2021.
5. Fourier Analysis and Its Applications by Gerald B. Folland, 2nd Edition, American Mathematical Society, 2020.

**Course Description:**

This course provides an in-depth study of advanced mathematical concepts and methods used in engineering and applied sciences. It covers advanced topics such as optimization techniques, advanced numerical methods, transform techniques, special functions, and integral equations. These topics are essential for solving complex engineering problems.

**Unit 1: Optimization Techniques**

**Linear Programming:** Formulation, graphical method, simplex method, duality, sensitivity analysis.

**Non-Linear Programming:** Introduction to non-linear optimization, Lagrange multipliers, Kuhn-Tucker conditions.

**Dynamic Programming:** Bellman's principle of optimality, recursive equations, applications to inventory control, resource allocation.

**Applications:** Optimization problems in engineering, project management, and operations research.

**Unit 2: Advanced Numerical Methods**

**Interpolation and Extrapolation:** Newton's forward and backward interpolation, Lagrange interpolation, spline interpolation.

**Numerical Solutions to Nonlinear Systems:** Fixed-point iteration, Newton's method for systems of equations.

**Numerical Methods for ODEs and PDEs:** Higher-order Runge-Kutta methods, finite element method (FEM), finite volume method (FVM).

**Error Analysis and Stability:** Concepts of error, stability, and convergence in numerical methods.

**Applications:** Numerical simulation of fluid dynamics, structural analysis, and heat transfer.

**Unit 3: Integral Transforms**

**Fourier Transform:** Fourier integrals, Fourier cosine and sine transforms, properties and applications to PDEs.

**Laplace Transform:** Review of Laplace transforms, inverse Laplace transforms, convolution theorem, application to ODEs and PDEs.

**Z-Transform:** Introduction, properties, inverse Z-transform, application in discrete-time systems and digital signal processing.

**Applications:** Signal processing, control systems, electrical circuits, and mechanical vibrations.

#### **Unit 4: Special Functions**

Gamma and Beta Functions: Definitions, properties, and applications in engineering problems.

Bessel Functions: Bessel's equation, Bessel functions of the first and second kinds, applications in vibration and heat conduction problems.

Legendre Polynomials: Legendre's equation, generating functions, orthogonality, applications in potential theory and electrostatics.

Applications: Solutions to boundary value problems in cylindrical and spherical coordinates.

#### **Unit 5: Integral Equations and Calculus of Variations**

Integral Equations: Volterra and Fredholm integral equations, kernel functions, methods of solving integral equations, applications.

Green's Function: Application of Green's function to solve boundary value problems.

Calculus of Variations: Euler-Lagrange equation, isoperimetric problems, Hamilton's principle, applications to mechanics and engineering.

Applications: Structural mechanics, fluid dynamics, and electrostatics.

#### **Recommended Textbooks:**

1. Advanced Engineering Mathematics by Erwin Kreyszig, 11th Edition, Wiley, 2020.
2. Numerical Methods for Engineers by Steven C. Chapra and Raymond P. Canale, 8th Edition, McGraw-Hill, 2020.
3. Applied Mathematical Methods by J. David Logan, 4th Edition, Wiley, 2018.
4. Introduction to Optimization by Pablo Pedregal, 3rd Edition, Springer, 2021.
5. Special Functions for Scientists and Engineers by W.W. Bell, 2nd Edition, Dover Publications, 2014.

**UNIT-I**

**Two Dimensional Force Systems:** Basic concepts, Laws of motion, Principle of Transmissibility of forces, Resultant of a force system, Simplest Resultant of Two dimensional concurrent and Non-concurrent Force systems, Lami's Theorem, Distributed force system, Free body diagrams, Types of supports- Support reactions for beams with different types of loading-Concentrated, uniformly distributed and uniformly varying loading.

**UNIT-II**

Beam: Introduction, Shear force and Bending Moment, Shear force and Bending Moment Diagrams for Statically Determinate Beams

Trusses: Introduction, Simple Truss and Solution of Simple truss, Method of Joints and Method of Sections.

**UNIT-III**

Simple stress and strain: Normal and shear stresses. One Dimensional Loading; members of varying cross section, bars in series. Tensile Test diagram for ductile and brittle materials, Elastic constants, Strain energy. Bending of Beams: theory of pure bending, neutral surface and neutral axis, stresses in beams of different cross sections. Theory of Torsion, Torque and twist, Shear stress due to torsion circular sections.

**UNIT-IV**

Centroid and Moment of Inertia: Centroid of plane, curve, area and composite bodies, Moment of inertia of plane area, Parallel Axes Theorem, Perpendicular axes theorems, Mass Moment of Inertia

**Unit-V**

Engineering Thermodynamics: Thermodynamic system, Surrounding and the Universe, Control volume phase, Macroscopic & microscopic point of view, Thermodynamic equilibrium, Thermodynamic properties, State path process, Cyclic process, Laws of thermodynamics, Carnot cycle, Clausius inequality, Enthalpy and entropy, Principle of entropy increase.

**UNIT I****Fundamentals of Statically Determinate Structures**

Types of statically determinate & indeterminate structures, static and kinematic indeterminacy, stability of structures, principle of superposition, Maxwell's reciprocal theorems. Framed structure : Computation of internal forces in statically determinate framed structures such as plane truss, plane frame, grids.

**UNIT II****Strain energy & Displacement of Statically Determinate structures**

Strain Energy : Resilience, strain energy due to axial loads & flexure, proof resilience, modulus of resilience, impact loads, and sudden loads Displacement : Differential equation of elastic curve, relation between moment, slope and deflection, Displacement of beam by Macaulay's method

**UNIT III****Direct and Bending stresses + Column & Struts**

Direct and Bending stresses Members subjected to eccentric loads, middle third rule, kernel of Section, stress distribution. Applications of Direct & Bending stresses. Columns and Struts ,Buckling of columns, different end conditions, effective length, Least radius of gyration Applications: Euler's and Rankine's formulae,

**UNIT IV****Statically Indeterminate beam**

Types of statically indeterminate beams, Consistent Deformation Method, Basic principles for fixed beam, basics of moment distribution Method. Propped Cantilever beam : Analysis of propped cantilever beams. Fixed beam : Computation of fixed-end actions for various types of loads And secondary effects using basic principles, beams of varying moment of Inertia. Continuous beams

**UNIT V****Computer Applications in Structural Engg. (for Laboratory Only)**

Use of professional software such as STAAD-Pro, SAP, ETABS etc. for Determining response of frames structure of the topics related to this course

**Reference Books:**

1. Junarkar S.B. & Shah H.J.; Mechanics of Structures Vol-I; Charter publishing house, Anand
2. Wang. C.K., Intermediate Structural analysis. Tata McGraw Hill book Company. Delhi

**UNIT I**

**Introduction to Rigid Body Mechanics**

Definition and importance of rigid body mechanics. Basic concepts (position, displacement, velocity, acceleration). Reference frames (inertial, non-inertial). Rigid body idealization and modeling

**UNIT II**

**Kinematics of Rigid Bodies**

Translation, rotation, and general motion. Angular displacement, velocity, and acceleration. Euler's angles and rotation matrices. Relative motion and velocity analysis

**UNIT III**

**Kinetics of Rigid Bodies**

Newton-Euler equations. Angular momentum and moment of inertia. Work-energy principle and conservation of energy. Impulse-momentum principle

**UNIT IV**

**Planar Motion of Rigid Bodies**

. Planar kinematics and kinetics. Equations of motion (translation, rotation). Force and moment analysis. Application to linkages, gears, and cams

**UNIT V**

**Three-Dimensional Motion of Rigid Bodies**

3D kinematics and kinetics. Euler's equations and angular velocity. Gyroscopic motion and precession. Application to rotating shafts and machinery. Vibrations and Oscillations

2. Bedford, A., & Fowler, W. . Engineering Mechanics: Statics & Dynamics. 6th ed. McGraw-Hill.

**CMEN -101C**

**FLUID MECHANICS**

**UNIT I**

**INTRODUCTION**

Units & Dimensions. Properties of fluids - Specific gravity, specific weight, viscosity, compressibility, vapour pressure and gas laws capillarity and surface tension concepts of system, energy equation, momentum equation

**UNIT II**

**FLOW THROUGH CIRCULAR CONDUITS**

Laminar flow through circular conduits and circular annuli. Boundary layer concepts. Boundary layer thickness. Hydraulic and energy gradient. Darcy Weisbach equation. Friction factor and Moody diagram. Commercial pipes. Minor losses. Flow through pipes in series and in parallel.

**UNIT III**

**DIMENSIONAL ANALYSIS**

Dimension and units: Buckingham's II theorem Discussion on dimensionless parameters. Models and similitude. Applications of dimensionless parameters.

**UNIT IV**

**ROTO DYNAMIC MACHINES**

Homologous units. Specific speed. Elementary cascade theory. Theory of turbo machines. Euler's equation. Hydraulic efficiency. Velocity components at the entry and exit of the rotor. radial flow and axial flow machines. Centrifugal pumps, turbines,

**UNIT V**

**POSITIVE DISPLACEMENT**

Reciprocating pumps, Indicator diagrams, Work saved by air vessels. Rotary pumps.

## **CMEN-101 D**

## **FREE BODY DIAGRAM MECHANICS**

### **UNIT I**

#### **Introduction to Free Body Diagrams**

Definition and importance of free body diagrams Basic concepts (forces, moments, torques)  
Drawing free body diagrams Identifying support reactions

### **UNIT II**

#### **Equilibrium of Particles and Rigid Bodies**

Equilibrium equations (2D, 3D) Force and moment analysis Application to simple machines  
(levers, pulleys.) Center of gravity and center of mass; Moments and force

### **UNIT III**

#### **Force in Beams and Frames**

Beam analysis (simply supported, cantilever). Frame analysis (simple, compound). Force and  
moment diagrams. Application to structural systems

### **UNIT IV**

#### **Torques and Rotational Equilibrium**

Torque and rotational equilibrium. Application to gears, pulleys, and shafts. Rotational kinematic  
Angular momentum.

### **UNIT V**

#### **Stress and Strain Analysis**

Introduction to stress and strain. Axial loading Torsional loading. Bending and shear stress

## CECN-101 FUNDAMENTALS OF ELECTRONICS

Cr. L T P  
4 3 1 0

### COURSE OBJECTIVES:

The objectives of this course are to

1. Understand the working principles of semiconductor diodes, their characteristics, and practical applications.
2. Learn the construction, operation, and configurations of Bipolar Junction Transistors (BJTs) and Field Effect Transistors (FETs).
3. Explore the basics and practical applications of Operational Amplifiers in analog circuits.
4. Master digital electronics concepts, including Boolean algebra, K-map minimization, and gate simplifications.
5. Gain knowledge of communication systems, focusing on modulation techniques and wireless communication technologies.

### Course Outcomes:

At the end of this course, students will demonstrate the ability to:

1. Describe the concept of PN Junction and devices.
2. Explain the concept of BJT, FET and MOFET.
3. Apply the concept of Operational amplifier to design linear and non-linear applications.
4. Perform number systems conversions, binary arithmetic and minimize logic functions.
5. Describe the fundamentals of communication technologies.

### UNIT-I

**Semiconductor Diode:** Depletion layer, V-I characteristics, ideal and practical Diodes, Diode Equivalent Circuits, Zener Diodes breakdown mechanism (Zener and avalanche)

**Diode Application:** Diode Configuration, Half and Full Wave rectification, Clippers, Clampers, Zener diode as shunt regulator, Voltage-Multiplier Circuits

**Special Purpose two terminal Devices:** Light-Emitting Diodes, Photo Diodes, Varactor Diodes, Tunnel Diodes.

### UNIT-II

**Bipolar Junction Transistor:** Transistor Construction, Operation, Amplification action. Common Base, Common Emitter, Common Collector Configuration

**Field Effect Transistor:** Construction and Characteristic of JFETs. Transfer Characteristic. MOSFET (MOS) (Depletion and Enhancement) Type, Transfer Characteristic.

### UNIT-III

**Operational Amplifiers:** Introduction, Op-Amp basic, Practical Op-Amp Circuits (Inverting Amplifier, Non-inverting Amplifier, Unit Follower, Summing Amplifier, Integrator, Differentiator). Differential and Common-Mode Operation, Comparators.

### UNIT-IV

**Digital Electronics:** Number system & representation, Binary arithmetic, Introduction of Basic and Universal Gates, using Boolean algebra simplification of Boolean function. K Map Minimization upto 6 Variables.

## **UNIT-V**

**Fundamentals of Communication Engineering:** Basics of signal representation and analysis, Electromagnetic spectrum Elements of a Communication System, Need of modulation and typical applications, Fundamentals of amplitude modulation and demodulation techniques.

**Introduction to Wireless Communication:** Overview of wireless communication, cellular communication, different generations and standards in cellular communication systems, Fundamentals of Satellite & Radar Communication.

### **Text Books:**

5. A. Anand Kumar, “Fundamental of Digital Circuits,” PHI 4th edition, 2018.

4 3 1 0

**Unit-I**

**Bipolar Junction Transistors:** Transistor amplifier, small signal Equivalent circuits (Hybrid- $\pi$  model), Graphical Analysis, biasing the BJT for discrete-circuit design, Basic Single Stage BJT amplifier configurations.

**Unit-II**

**MOSFETS:** Construction of Enhancement and Depletion mode MOSFET, Drain & Transfer characteristics, Internal capacitances of MOSFET, MOSFET as an amplifier, Biasing in MOS amplifier circuits, Basic configurations of MOS amplifier, Analysis of Source follower.

**Unit-III**

**Frequency Response:** BJT internal capacitances and high frequency model, frequency response of CE amplifier, MOSFET internal capacitances and high frequency model, frequency response of CS amplifier.

**Unit-IV**

**Feed Back:** Properties of negative feedback, four basic feedback topologies (series shunt; series-series; shunt-shunt; & shunt-series) determination of Loop gain

**Unit-V**

**Oscillators:** Basic principles of sinusoidal oscillator Different oscillator circuits (RC phase shift, Wein-bridge, Collpitts, Hartley, Clap. and Crystal Oscillators.)

<b>Cr</b>	<b>L</b>	<b>T</b>	<b>P</b>
<b>4</b>	<b>3</b>	<b>1</b>	<b>0</b>

### Unit-I

**Introduction:** Types of Digital circuits and their characteristics, Number system: Direct conversion between bases, Negative numbers & BCD and their arithmetic's, Boolean algebra, Logic gates, Minimization of Boolean Functions: K-Map & Tabular method, Error detecting & correcting codes, hamming codes.

### Unit-II

**Combinational Logic Circuits:** Design Procedure, Adders, Subtractors, Code conversion, Multiplexers/ Demultiplexers, Encoder/ decoders, decimal adders & amplitude comparators. Decoder and driver circuits for 7-segment LED displays.

### Unit-III

**Sequential Logic Circuits:** Flip-Flops and their conversions, excitation table, state table & state diagram, state reduction, Shift registers and their applications. Design of synchronous and asynchronous counters.

### Unit-IV

**Memory and Programmable Logic:** RAM, Types of RAM. ROM, Types of ROM. Programmable Logic Device (PLD), Programmable Logic Array(PLA), Programmable Array Logic(PAL).

### Unit-V

**Asynchronous Sequential Logic:** Analysis procedure, circuit with latches, design procedure, reduction of state and flow table, race free state assignment, hazards.

### Reference Books :

1. Digital Design by M Moris Mano, 2nd Edn.PHI
2. Introduction to Digital Microelectronic Circuits, by Gopalan, TMH.
3. Switching Circuit & Logic Design by Hill & Peterson, Wiley
4. Digital Circuit & Logic Design, by Holsworth.

## UNIT I

**Measuring Instruments:** Classification , deflecting, control and damping torques , Ammeters and Voltmeters , PMMC, moving iron type instruments , expression for the deflecting torque and control torque , Errors and compensations, extension of range using shunts and series resistance. Electrostatic Voltmeters-electrometer type and attracted disc type Extension of range of E.S. Voltmeters.

**Instrument transformers:** CT and PT – Ratio and phase angle errors , design considerations Type of P.F. Meters – dynamometer and moving iron type 1-ph and 3-ph meters , Frequency meters , resonance type and Weston type , synchrosopes.

## UNIT II

**Measurement of Power:** Single phase dynamometer wattmeter, LPF and UPF, Double element and three element dynamometer wattmeter, expression for deflecting and control torques , Extension of range of wattmeter using instrument transformers , Measurement of active and reactive powers in balanced and unbalanced systems.

## UNIT III

**Measurement of Energy:** Single phase induction type energy meter , driving and braking torques , errors and compensations , testing by phantom loading using R.S.S. meter. Three phase energy meter, trivector meter, maximum demand meters.

## UNIT IV

**Potentiometers:** Principle and operation of D.C. Crompton's potentiometer, standardization Measurement of unknown resistance, current, voltage.

**Resistance Measurements:** Method of measuring low, medium and high resistance , sensitivity of Whetstone's bridge , Carey Foster's bridge, Kelvin's double bridge for measuring low resistance, measurement of high resistance , loss of charge method.

## UNIT V

**A.C. Bridges:** Measurement of inductance, Quality Factor - Maxwell's bridge, Hay's bridge, Anderson's bridge, Owen's bridge. Measurement of capacitance and loss angle, Desauty Bridge. Wien's bridge, Schering Bridge.

**Magnetic Measurements:** Ballistic galvanometer, equation of motion, flux meter, constructional details, comparison with ballistic galvanometer. Determination of B-H Loop methods of reversals six point method , A.C. testing , Iron loss of bar samples, core loss measurements by bridges and potentiometers.

**TEXT BOOKS:**

1. Electrical Measurements and measuring Instruments – by E.W. Golding and F.C. Widdis, fifth Edition, Wheeler Publishing.
2. Electrical & Electronic Measurement & Instruments by A.K.Sawhney, DhanpathRai& Co.

**REFERENCE BOOKS**

### Unit 1: Fuels:

Introduction, Classification of fuels, Calorific value, Methods for determination of Calorific value of fuel, Classification of coal by rank, Analysis of coal, Proximate & Ultimate analysis of coal, Biomass, Biogas, Biodiesel: Definition, Types, Physical Characteristics and Biodiesel Production procedure.

### Unit 2 Polymers:

Introduction, Nomenclature of polymers, Functionality, Types of Polymerization, Classification of Polymers, Plastics, Important Thermoplastic and Thermosetting Resins, Synthetic Fibres, Ion-exchange resins, Rubbers (Elastomers), Vulcanization of rubber, De-vulcanization, Synthetic rubbers or elastomers, Application of rubber, Bio-polymers, Degradation of polymers.

### Unit 3 Water Technology:

Introduction, Hardness of water: Temporary and Permanent hardness; Equivalents of Calcium Carbonate, units of hardness, Disadvantage of hard water, Boiler troubles, Scale and sludge formation in boilers and their disadvantage, Boiler corrosion, Caustic embrittlement, Priming and foaming, water softening methods: Permutit process, De-ionization process, Lime-soda process.

### Unit 4: Environmental pollution and its impact:

Environment and Atmosphere; Kinds of pollution; Air pollution: Greenhouse effect, Acid rains and global warming; Noise pollution; Water and Solid waste pollution: Industrial effluents and wastes, Ground water pollution, Lead pollution, Fluoride pollution; Radiation and chemical toxicology.

### Unit 5 Pollution Cleanup:

Prevention and control of air pollution: Source correction, Collection of pollutants, Cooling, Treatment; Prevention and control of water pollution: Stabilization of the ecosystem, Reutilization and Recycling of waste, Removal of Pollutants; Solid waste management: Collection, Disposal, etc.; Bioremediation: Introduction, Phytoremediation.

# CESN-101 A

## Chemical Thermodynamics

**Course Description:** This course provides an in-depth understanding of chemical thermodynamics, focusing on the laws of thermodynamics, thermodynamic properties, phase and chemical equilibria, and the thermodynamics of solutions. It is designed for students, covering both fundamental and advanced topics.

### Unit 1: Basic Concepts of Thermodynamics

Thermodynamic Systems and Processes: Definition of system, surroundings, and boundaries, Types of systems: isolated, closed, and open systems, Thermodynamic processes: isothermal, adiabatic, isobaric, and isochoric processes, State and path functions (internal energy, work, heat)

Zeroth Law of Thermodynamics: Concept of thermal equilibrium, Temperature and its measurement

First Law of Thermodynamics: Concept of internal energy (U) and enthalpy (H), Mathematical form of the first law:  $\Delta U = q + w$ , Work done in various processes (PV work, electrical work), Specific heat capacities ( $C_p$  and  $C_v$ ) and their relation

Application of the First Law: Internal energy changes in ideal and real gases, Joule-Thomson effect, Joule-Thomson coefficient, inversion temperature

### Unit 2: Second Law of Thermodynamics and Entropy

Second Law of Thermodynamics: Limitations of the first law, Concepts of heat engines and refrigerators, Carnot cycle and its efficiency

Entropy (S): Definition of entropy and its physical significance, Entropy changes in reversible and irreversible processes, Entropy of the universe and the second law

Applications of the Second Law: Clausius inequality, Entropy change in mixing of gases, Free expansion of gases and its relation to entropy

Third Law of Thermodynamics: Nernst heat theorem, Absolute entropy and its significance

### Unit 3: Thermodynamic Potentials and Equilibrium

Thermodynamic Potentials: Definitions of thermodynamic potentials (Gibbs free energy, Helmholtz free energy, Enthalpy, Internal energy), Maxwell relations and their applications, Gibbs-Helmholtz equation and its significance

Criteria for Spontaneity: Conditions for equilibrium and spontaneity ( $\Delta G < 0$  for spontaneous processes), Phase equilibrium and phase rule, Le Chatelier's principle and its applications

Chemical Equilibrium: Law of mass action and equilibrium constant, Temperature dependence of equilibrium constant (Van't Hoff equation), Relation between free energy and equilibrium constant,

Phase Equilibria:Phase diagrams for one-component systems (water and sulfur), Clausius-Clapeyron equation and its applications

#### **Unit 4: Thermodynamics of Solutions**

Ideal and Non-Ideal Solutions:Raoult's law and deviations from ideal behavior, Henry's law and its applications, Activity, activity coefficient, and their significance

Thermodynamics of Mixing:Partial molar quantities (partial molar volume, partial molar Gibbs free energy), Gibbs-Duhem equation, Chemical potential and its variation with temperature and pressure

Colligative Properties:Lowering of vapor pressure, elevation of boiling point, depression of freezing point, Osmotic pressure and its applications in determining molecular weight

Applications in Electrolyte Solutions:Thermodynamic properties of electrolytes, Debye-Hückel theory of ion-ion interactions

#### **Recommended Books:**

1. "Thermodynamics: An Engineering Approach" by Yunus A. Çengel and Michael A. Boles (2021)
2. "Introduction to Chemical Engineering Thermodynamics" by J.M. Smith, H.C. Van Ness, and M.M. Abbott (2017)
3. "Chemical Thermodynamics: Advanced Applications" by J. Bevan Ott and Juliana Boerio-Goates (2019)
4. "Modern Thermodynamics: From Heat Engines to Dissipative Structures" by DilipKondepudi and Ilya Prigogine (2014)
5. "Molecular Driving Forces: Statistical Thermodynamics in Biology, Chemistry, Physics, and Nanoscience" by Ken A. Dill and Sarina Bromberg (2018)

## **CESN-101 B**

### **Chemical Kinetics**

**Course Description:** This course focuses on the study of the rates of chemical reactions and the factors influencing them. Topics include reaction mechanisms, theories of reaction rates, and advanced concepts in kinetics. The aim is to equip students with a thorough understanding of both the theoretical and practical aspects of chemical kinetics.

#### **Unit 1: Fundamentals of Chemical Kinetics**

Basic Concepts: Definition of reaction rate and rate laws, Order and molecularity of a reaction, Rate constant and its units for different orders of reactions, Elementary and complex reactions  
Integrated Rate Equations: Zero-order, first-order, second-order reactions, Half-life period for different orders of reactions, Determination of order of reaction using integrated rate laws  
Experimental Methods of Studying Kinetics: Methods of determining reaction rates (flow, stopped-flow, relaxation methods), Spectroscopic methods, electrical methods, and pressure measurement

#### **Unit 2: Theories of Reaction Rates**

Collision Theory: Basic postulates of collision theory, Effective collisions and activation energy, Dependence of rate on temperature and concentration  
Transition State Theory (TST): Concept of activated complex, Energy profiles of reactions, Eyring equation and its applications  
Arrhenius Equation: Temperature dependence of reaction rates, Interpretation of Arrhenius parameters ( $A$  and  $E_a$ ), Determination of activation energy  
Comparative Study of Collision and Transition State Theories: Merits and limitations of both theories

#### **Unit 3: Reaction Mechanisms**

Reaction Mechanisms: Elementary steps and their importance in mechanisms, Steady-state approximation and rate-determining step theory  
Unimolecular and Bimolecular Reactions: Lindemann-Hinshelwood mechanism for unimolecular reactions, Chain reactions:  $H_2-Br_2$  reaction and decomposition of acetaldehyde  
Catalysis and Reaction Mechanism: Homogeneous and heterogeneous catalysis  
Enzyme catalysis: Michaelis-Menten mechanism, Role of catalysts in altering reaction pathways

#### **Unit 4: Complex Reactions and Kinetics in Solutions**

Complex Reactions: Parallel, consecutive, and reversible reactions, Analysis of complex reaction mechanisms, Chain reactions and explosion limits (e.g., hydrogen-oxygen reaction)

Reactions in Solutions: Factors influencing reaction rates in solution (solvent effect, ionic strength), Diffusion-controlled and activation-controlled reactions

Kinetics of fast reactions in solutions: relaxation methods, flash photolysis

Kinetics of Polymerization: Free-radical polymerization kinetics, Chain initiation, propagation, and termination

### **Recommended Books:**

1. "Chemical Kinetics and Reaction Dynamics" by Paul L. Houston (2020)
2. "Essentials of Chemical Kinetics" by C. Kalidas and V. Rajaram (2019)
3. "Chemical Kinetics: From Molecular Structure to Chemical Reactivity" by Luis Arnaut, Sebastiao Jose Formosinho, and Hugh Burrows (2018)
4. "Reaction Kinetics: Principles and Applications in Organic and Biological Chemistry" by Keith J. Laidler (2018)
5. "Chemical Reaction Engineering and Kinetics" by Jorge Ancheyta (2021)

## **CESN-101 C**

### **Environmental Chemistry**

**Course Description:** This course provides an understanding of chemical processes occurring in the environment, including the atmosphere, hydrosphere, lithosphere, and biosphere. It focuses on the chemistry of pollutants, environmental degradation, and sustainable practices for environmental protection.

#### **Unit 1: Fundamentals of Environmental Chemistry**

Introduction to Environmental Chemistry: Definition, scope, and importance of environmental chemistry, Segments of the environment: atmosphere, hydrosphere, lithosphere, and biosphere, Chemical composition of air, water, and soil  
Environmental Cycles: Biogeochemical cycles (carbon, nitrogen, sulfur, phosphorus cycles), Role of microorganisms in biogeochemical cycles  
Concepts of Green Chemistry: Principles of green chemistry and sustainability, Environmental impact of chemical processes and industrial activities, green solvents, catalysts, and alternative energy sources

#### **Unit 2: Atmospheric Chemistry**

Structure and Composition of Atmosphere: Layers of the atmosphere: troposphere, stratosphere, mesosphere, thermosphere, Composition and chemical reactions in the atmosphere  
Air Pollution and Global Warming: Primary and secondary pollutants (SO<sub>x</sub>, NO<sub>x</sub>, CO, particulate matter, VOCs), Greenhouse gases and their effects on global warming, Photochemical smog, acid rain, and ozone depletion  
Monitoring and Control of Air Pollution: Air quality standards and monitoring techniques (AQI, particulate matter sensors), Control measures: scrubbers, electrostatic precipitators, catalytic converters

#### **Unit 3: Water Chemistry and Pollution**

Water Quality Parameters: Physical parameters (temperature, color, turbidity), Chemical parameters (pH, dissolved oxygen, BOD, COD, alkalinity, hardness), Biological parameters (coliform bacteria, microbial contamination)  
Water Pollution: Sources of water pollution (domestic, industrial, agricultural), Heavy metals in water (lead, mercury, cadmium, arsenic) and their toxicity, Eutrophication and its effects on aquatic ecosystems  
Water Treatment and Purification: Primary, secondary, and tertiary treatment of wastewater  
Methods of water purification: filtration, coagulation, flocculation, sedimentation, disinfection (chlorination, UV treatment), Desalination and reverse osmosis techniques

## **Unit 4: Soil Chemistry and Waste Management**

Soil Composition and Chemistry: Composition of soil: minerals, organic matter, water, air, Soil properties: pH, cation exchange capacity, nutrient availability, Soil pollutants: pesticides, heavy metals, industrial wastes

Soil Pollution: Sources of soil contamination: fertilizers, pesticides, industrial discharge, Effects of soil pollution on plant growth and food safety, Remediation techniques: bioremediation, phytoremediation, chemical methods

Solid Waste Management: Types of solid waste: municipal, hazardous, biomedical

Waste management practices: recycling, composting, incineration, landfills, Hazardous waste management and disposal

### **Recommended Books:**

1. "Environmental Chemistry: A Global Perspective" by Gary W. vanLoon and Stephen J. Duffy (2021)
2. "Environmental Chemistry" by Stanley E. Manahan (2022)
3. "Principles of Environmental Chemistry" by James Girard (2020)
4. "Introduction to Environmental Chemistry" by Julian E. Andrews, Peter Brimblecombe, and Tim D. Jickells (2020)
5. "Environmental Chemistry: Fundamentals" by Ronald A. Hites and Jonathan D. Raff (2021)

## **CESN-101 D**

### **Natural Resource Management**

**Course Description:** This course focuses on the sustainable management of natural resources such as water, soil, forests, and minerals. It covers the principles of conservation, management strategies, the socio-economic implications of resource use, and the role of policy and governance in resource management.

#### **Unit 1: Introduction to Natural Resources**

Definition and Classification of Natural Resources: Renewable and non-renewable resources  
Biotic and abiotic resources, Resource availability, scarcity, and carrying capacity  
Global and National Resource Distribution: Geographical distribution of resources (water, forests, minerals), Resource consumption patterns: global vs. local scenarios, Depletion and degradation of natural resources  
Principles of Sustainable Resource Management: Sustainability concepts and sustainable development goals (SDGs), The role of science, technology, and innovation in resource management

#### **Unit 2: Water Resource Management**

Water Resources: Types of water resources: surface water, groundwater, glaciers, oceans, Hydrological cycle and water balance, Freshwater availability and demand  
Water Pollution and Scarcity: Sources and types of water pollution (industrial, agricultural, domestic), Impact of water pollution on ecosystems and human health, Global water scarcity and strategies to combat it  
Water Conservation and Management: Rainwater harvesting, groundwater recharge, watershed management, Irrigation management techniques  
Policies for sustainable water resource management: National Water Policy, Integrated Water, Resource Management (IWRM)

#### **Unit 3: Forest Resource Management**

Importance of Forests: Forest ecosystems and their role in maintaining biodiversity, Forest resources and their economic, ecological, and social significance  
Deforestation and Forest Degradation: Causes of deforestation (agriculture, urbanization, logging), Impacts of deforestation on climate, biodiversity, and indigenous communities  
Forest Conservation and Sustainable Management: Afforestation, reforestation, and agroforestry, Forest certification programs (FSC) and sustainable logging practices, Community-based Forest management and Joint Forest Management (JFM)

#### **Unit 4: Soil and Mineral Resource Management**

Soil Resources:Types of soils, soil formation, and soil profiles, Soil fertility and its importance in agriculture, Soil erosion, desertification, and degradation

Soil Conservation Techniques:Soil conservation methods: contour plowing, terracing, crop rotation, Integrated soil management practices, Policies for sustainable agriculture and soil conservation

Mineral Resources:Types of mineral resources: metallic and non-metallic mineralsGlobal distribution of minerals and mining activities

Environmental impacts of mining: pollution, habitat destruction, land degradation

Sustainable Mining Practices:Techniques for reducing environmental impact of mining (e.g., rehabilitation, reforestation), Waste management in mining (tailings and their treatment),

Responsible mining initiatives and policies

### **Recommended Books:**

1. "Sustainable Resource Management: Global Trends, Visions, and Policies" by Stefan Brinzeu and AnkeSchandl (2021)
2. "Natural Resource and Environmental Economics" by Roger Perman, Yue Ma, and Michael Common (2020)
3. "Natural Resource Conservation: Management for a Sustainable Future" by Daniel D. Chiras and John P. Reganold (2021)
4. "Natural Resource Management: Principles and Practices" by B.W. Pandey (2020)
5. "Water Resources Management: Principles, Challenges and Solutions" by Neil S. Grigg (2020)

**Unit – I**

**Essential Grammar:** Basic Clause/Sentence Patterns, Correct Usage of Different Word-Classes, Articles, Tense, Syntactic Concord, Prepositions, Transformation, Synthesis, Graded Syntactic Structures.

**Unit – II**

**Essential Vocabulary:** Basic words, Synonyms, Antonyms, Homophones, One-Word Substitutes, Idioms and Phrases, Word-formation-**Suffix and Prefix**, Technical Vocabulary.

**Linguistic Skills:** Listening, Speaking, Reading, and Writing (Activities to be Selected by the Teacher).**Strategies for Active Listening, Introduction to Phonetics-Monophthongs, Diphthongs and Consonant sound symbols. Newspaper reading and Precis Writing, SQ3R technique of Reading& Comprehension Passage.**

**Unit – III**

**Language Through Literature:** Non-Fiction &/or Fiction, Verse, and Play  
Bacon's *Essays* (Selection) and/or Lamb's *Tales from Shakespeare* (Selection)  
Keats' *The Eve of St Agnes/ Ode To Autumn/Ode to A Nightingale*  
Tagore's *Chitra/ Gitanjali(Lyric 1-5)*

**Unit – IV**

**Speaking Professionally:** Job Interviews, Group-Discussions, **Difference between GD and Debate**, Public Speaking, Argumentative Skills, Role-Plays, Presentation Skills, **Significance of Body Language**

**Reference Books :**

## **English Communication**

### **CPCN-101 A**

Units: 1

Introduction: Theory of Communication, Types and modes of Communication Language of Communication: - Verbal and Non-verbal (Spoken and Written) - Personal, Social and Business - Barriers and Strategies - Intra Personal, Inter Personal and Group Communication

Unit 2

Listening Skills- Listening to others, Listening short Lectures and Videos, Types of Listening, How to improve our listening skills?

Unit: 3

Speaking Skills: - Monologue - Dialogue - Group Discussion - Effective Communication/ Mis-Communication - Interview - Public Speech

Unit 4

Reading and Understanding - Close Reading - Comprehension - Summary Paraphrasing - Analysis and Interpretation - Translation(from Indian language to English and vice-versa) Literary/Knowledge Texts

Unit 5

Writing Skills - Documenting - Report Writing - Making notes - Letter Writing

## **English**

**Sub Code: CPCN-101 B**

Unit: 1

Basic Essential Grammar: Parts of Speech, Tenses, Sentence Pattern, Correct Usage of different word classes, Syntax Concord, Transformation, Syntheses, Articles, Prepositions

Unit 2

Vocabulary: Synonyms, Antonyms, Homophones, Homonyms, One word substitution, Idiom and Phrases, Word Formation, Words often confused, Technical Vocabulary

Unit: 3

Linguistic Skills-Listening skills, Speaking Skills, Reading Skills, Writing Skills (Activities also done selected by teacher)

Unit 4

Professional Speaking- Group Discussion, Debate, Public Speaking, Job Interview, Role Plays, Presentation Skills

Unit 5

Writing Skills - Documenting - Report Writing - Making notes - Letter Writing, Proposal Writing, Paragraph Writing

## **Technical Communication**

**Sub Code: CPCN-101 C**

Unit: 1

Grammar rules -articles, tenses, auxiliary verbs (primary & modal) prepositions, subject-verb agreement, pronoun-antecedent agreement, discourse markers and sentence linkers  
General Reading and Listening comprehension – rearrangement & organization of sentences

Unit 2

Different kinds of written documents: Definitions- descriptions- instructions-recommendations- user manuals – reports – proposals, writing formal Letters, punctuation  
Scientific Reading & Listening Comprehension

Unit: 3

Technical paper writing: documentation style – document editing – proof reading – Organizing and formatting, Modifiers, phrasal verbs, tone and style, graphical representation  
Reading and listening comprehension of technical documents

Unit 4

Professional Speaking- Group Discussion, Debate, Public Speaking, Job Interview, Role Plays, Presentation Skills

Unit 5

Phonetics- International Phonetic Alphabet, Phonemes, Allophones, Phonetics Transcription, Organ of speech.

## **Human Values, De-addiction and Traffic Rules**

### **CPCN-101 D**

#### **Unit: 1 Course Introduction - Need, Basic Guidelines, Content and Process for Value Education**

- Understanding the need, basic guidelines, content and process for Value Education
- Self-Exploration– content and process; ‘Natural Acceptance’ and Experiential Validation- as the mechanism for self-exploration
- Continuous Happiness and Prosperity- A look at basic Human Aspirations
- Right understanding, Relationship and Physical Facilities- the basic requirements for fulfillment of aspirations of every human being with their correct priority
- Method to fulfill the above human aspirations: understanding and living in harmony at various levels

#### **Unit 2 Understanding Harmony in the Human Being - Harmony in Myself!**

- Understanding human being as a co-existence of the sentient ‘I’ and the material ‘Body’  
Understanding the needs of Self (‘I’) and ‘Body’ - Sukh and Suvidha
- Understanding the Body as an instrument of ‘I’ (I being the doer, seer and enjoyer)
- Understanding the characteristics and activities of ‘I’ and harmony in ‘I’
- Understanding the harmony of I with the Body: Sanyam and Swasthya; correct appraisal of Physical needs, meaning of Prosperity in detail
- Programs to ensure Sanyam and Swasthya

#### **Unit: 3 Understanding Harmony in the Family and Society- Harmony in Human Relationship**

- Understanding harmony in the Family- the basic unit of human interaction
- Understanding values in human-human relationship; meaning of Nyaya and program for its fulfillment to ensure Ubhay-tripti; Trust (Vishwas) and Respect (Samman) as the foundational values of relationship
- Understanding the meaning of Vishwas; Difference between intention and competence 16.  
Understanding the meaning of Samman, Difference between respect and differentiation; the other salient values in relationship
- Understanding the harmony in the society (society being an extension of family): Samadhan, Samridhi, Abhay, Sah-astitva as comprehensive Human Goals
- Visualizing a universal harmonious order in society- Undivided Society (Akhand Samaj), Universal Order (Sarvabhaum Vyawastha) - from family to world family!

#### **Unit 4 Understanding Harmony in the Nature and Existence - Whole existence as Co-existence**

- Understanding the harmony in the Nature
- Interconnectedness and mutual fulfillment among the four orders of nature recyclability and self-regulation in nature
- Understanding Existence as Co-existence (Sah-astitva) of mutually interacting units in all-pervasive space
- Holistic perception of harmony at all levels of existence

#### **Unit 5 Implications of the above Holistic Understanding of Harmony on Professional Ethics**

- Natural acceptance of human values
- Definitiveness of Ethical Human Conduct
- Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order

**COURSE OUTCOMES**

	<b>Course Outcome (CO)</b>
At the end of this course, the students should be able to:	
CO 1	Study and practice on machine tools and their operations
CO 2	Practice on manufacturing of components using workshop trades including fitting, carpentry, foundry and welding
CO 3	Identify and apply suitable tools for machining processes including turning, facing, thread cutting and tapping
CO 4	Welding and soldering operations
CO 5	Apply basic electrical engineering knowledge for house wiring practice

**LIST OF EXPERIMENTS****Machine shop:**

- Study of machine tools in particular Lathe machine
- Demonstration of different operations on Lathe machine
- Practice of Facing, Plane Turning, step turning, taper turning, knurling and parting.
- Study of Quick return mechanism of Shaper.

**Fitting shop:**

- Preparation of T-Shape Work piece as per the given specifications.
- Preparation of U-Shape Work piece which contains: Filing, Sawing, Drilling, Grinding.
- Practice marking operations.

**Carpentry:**

- Study of Carpentry Tools, Equipment and different joints.
- Practice of Cross Half lap joint, Half lap Dovetail joint and Mortise Tenon Joint

**Welding:**

- Instruction of BI standards and reading of welding drawings.

- Butt Joint

- Lap Joint

### **Smithy**

- Sharpening any arc and edge.

- Preparing small arc and edge,

- Repair of agricultural implements and power plough, use of power hammer etc.

### **Text Books:**

1. Raghuwanshi B.S., Workshop Technology Vol. I & II, DhanpathRai& Sons.
2. Kannaiah P. and Narayana K.L., Workshop Manual, 2nd Edn, Scitech publishers.
3. John K.C., Mechanical Workshop Practice. 2nd Edn. PHI 2010.
4. JeyapoovanT.andPranitha S., Engineering Practices Lab Manual, 3rd Edn. Vikas Pub.2008.

### □ Basic Drawing Operations

- Objective: Familiarize with basic drawing tools.
- Activities:
  - Draw a line using two endpoints.
  - Draw a circle given a center and radius.
  - Draw a rectangle with specified coordinates.

### □ Transformations

- Objective: Apply geometric transformations.
- Activities:
  - Implement translation of shapes (move by dx, dy).
  - Implement rotation of shapes around a point.
  - Implement scaling of shapes (increase/decrease size).

### □ Drawing 2D Shapes

- Objective: Create various 2D shapes.
- Activities:
  - Draw a triangle given three vertices.
  - Draw a polygon by specifying the number of vertices and their coordinates.

### □ Basic CAD Commands

- Objective: Understand basic CAD functionalities.
- Activities:
  - Draw an arc using center, radius, start angle, and end angle.
  - Implement a Bezier curve using control points.

### □ Parametric Equations for Curves

- Objective: Use parametric equations to draw curves.
- Activities:
  - Draw a parametric curve (e.g., a sine wave).
  - Visualize parametric equations in 2D space.

### □ 3D Projections

- Objective: Understand 3D object representation.
- Activities:
  - Create isometric projections of simple shapes.
  - Draw orthographic views (front, top, side) of 3D objects.

### □ Sectional Views

- Objective: Learn to create sectional views.
- Activities:
  - Generate a sectional view of a given solid object.
  - Illustrate the differences between full and half sections.

#### □ Dimensioning Techniques

- Objective: Apply dimensioning standards.
- Activities:
  - Add linear and angular dimensions to a drawing.
  - Practice dimensioning for clarity and accuracy.

#### □ Rendering Techniques

- Objective: Enhance drawings with rendering techniques.
- Activities:
  - Apply shading to 2D shapes.
  - Use textures and gradients for better visual representation.

#### □ CAD Software Basics

- Objective: Introduction to CAD software tools.
- Activities:
  - Create a simple project using CAD software.
  - Familiarize with layers, commands, and saving/exporting drawings.

## COMMUNICATION LAB

CPCN- 151

L

T P C

0 0 2 1

**The Language Lab focuses on the production and practice of sounds of language and familiarizes the students with the use of English in everyday situations both in formal and informal contexts.**

**Syllabus:**English Language and Communication Skills Lab (ELCS) shall have two parts:

**a. Computer Assisted Language Learning (CALL) Lab**

**b. Interactive Communication Skills (ICS) Lab**

**Listening Skills**

**Objectives 1.** To enable students develop their listening skills so that they may appreciate its role in the LSRW skills approach to language and improve their pronunciation.

2. To equip students with necessary training in listening so that they can comprehend the speech of people of different backgrounds and regions.

Students should be given practice in listening to the sounds of the language, to be able to recognize them and find the distinction between different sounds, to be able to mark stress and recognize and use the right intonation in sentences.

- Listening for general content
- Listening to fill up information
- Intensive listening
- Listening for specific information

**Speaking Skills**

**Objectives 1.** To involve students in speaking activities in various contexts

2. To enable students express themselves fluently and appropriately in social and professional contexts •

Oral practice: Just a Minute (JAM) Sessions

- Describing objects/situations/people
- Role play – Individual/Group activities

**Exercise – I**

**CALL Lab:**

Understand: Listening Skill- Its importance – Purpose- Process- Types- Barriers of Listening. Practice: Introduction to Phonetics – Speech Sounds – Vowels and Consonants.

### **ICS Lab:**

Understand: Communication at Work Place- Spoken vs. Written language. Practice: Ice-Breaking Activity and JAM Session- Situational Dialogues – Greetings – Taking Leave – Introducing Oneself and Others.

### **Exercise – II**

#### **CALL Lab:**

Understand: Structure of Syllables – Word Stress and Rhythm– Weak Forms and Strong Forms in Context.

Practice: Basic Rules of Word Accent - Stress Shift - Weak Forms and Strong Forms in Context.

### **ICS Lab:**

Understand: Features of Good Conversation – Non-verbal Communication. Practice: Situational Dialogues – Role-Play- Expressions in Various Situations –Making Requests and Seeking Permissions - Telephone Etiquette.

### **Exercise - III**

#### **CALL Lab:**

Understand: Intonation-Errors in Pronunciation-the Influence of Mother Tongue (MTI).

Practice: Common Indian Variants in Pronunciation – Differences in British and American Pronunciation.

### **ICS Lab:**

Understand: How to make Formal Presentations. Practice: Formal Presentations.

### **Exercise – IV**

#### **CALL Lab:**

Understand: Listening for General Details. Practice: Listening Comprehension Tests.

### **ICS Lab:**

Understand: Public Speaking – Exposure to Structured Talks. Practice: Making a Short Speech – Extempore.

### **Exercise – V**

#### **CALL Lab:**

Understand: Listening for Specific Details. Practice: Listening Comprehension Tests.

**ICS Lab:**

Understand: Interview Skills. Practice: Mock Interviews.

**Minimum Requirement of infrastructural facilities for ELCS Lab:****1. Computer Assisted Language Learning (CALL) Lab:**

The Computer Assisted Language Learning Lab has to accommodate 40 students with 40 systems, with one Master Console, LAN facility and English language learning software for self- study by students.

**System Requirement (Hardware component):**

Computer network with LAN facility (minimum 40 systems with multimedia) with the following specifications:

- i) Computers with Suitable Configuration
- ii) High Fidelity Headphones

**2. Interactive Communication Skills (ICS) Lab:****The Interactive Communication Skills Lab:**

A Spacious room with movable chairs and audio-visual aids with a Public-Address System, a LCD and a projector etc.

## ENGLISH COMMUNICATION LAB

### CPCN-151 A

1. Develop interactive quizzes or flashcards to enhance vocabulary through definitions, synonyms, and antonyms.
2. Create listening exercises using audio clips followed by questions to assess understanding and retention.
3. Implement a program for students to record, analyze, and improve their speeches based on feedback.
4. Design a workshop that allows students to practice and present topics using visual aids and presentation software.
5. Create a platform for conducting group discussions on various topics, focusing on turn-taking and effective communication.
6. Develop a program that provides writing prompts and feedback on grammar, structure, and style.
7. Implement role-playing exercises to simulate real-life situations and improve conversational skills and confidence.
8. Create an application that helps students practice pronunciation through audio playback and comparison.
9. Design a set of reading passages followed by comprehension questions to enhance critical reading skills.
10. Implement a digital journal for students to reflect on their communication experiences and receive peer feedback.

## ENGLISH LAB

### CPCN-151 B

- 1) Develop a program that identifies and corrects grammatical errors in written text.
- 2) Create an application with quizzes and games to help users expand their vocabulary.
- 3) Implement audio-based comprehension exercises that include questions to test understanding.
- 4) Design a tool that records speeches and provides feedback on pace, tone, and clarity.
- 5) Develop a program that presents reading passages followed by comprehension questions.
- 6) Create an application that allows users to practice pronunciation and receive feedback using audio samples.
- 7) Implement a tool that provides creative writing prompts to stimulate writing practice.
- 8) Design a platform for virtual group discussions where participants can practice speaking and listening skills.
- 9) Develop a program that guides users through creating and delivering effective presentations.
- 10) Create a platform for students to share their writing and receive constructive feedback from peers.

## TECHNICAL COMMUNICATION LAB

### CPCN-151 C

- Writing Technical Reports
  - Focus on structure, clarity, and audience.
- Creating User Manuals
  - Emphasize step-by-step instructions and usability.
- Developing Proposals
  - Learn to draft persuasive and structured proposals.
- Designing Presentations
  - Use of visuals and effective delivery techniques.
- Conducting Oral Communication Workshops
  - Improve verbal skills through practice and feedback.
- Practicing Resume and Cover Letter Writing
  - Tailor documents for job applications.
- Engaging in Peer Review Sessions
  - Provide and receive constructive feedback on documents.
- Utilizing Visual Aids Effectively
  - Incorporate charts, graphs, and images to enhance communication.
- Exploring Digital Communication Tools
  - Familiarization with software for documentation and collaboration.
- Analyzing Case Studies in Technical Communication
  - Examine real-world examples to identify best practices.

## HUMAN VALUES, DEADDICTION AND TRAFFIC RULES

### CPCN-151 D

1. Workshops on Ethics and Morality
  - Discuss fundamental ethical principles and moral dilemmas.
2. Community Service Projects
  - Engage in activities promoting social responsibility and compassion.
3. Conflict Resolution Training
  - Teach effective communication and mediation skills.
4. Empathy Development Sessions
  - Activities to foster understanding and empathy towards others.
5. Cultural Awareness Programs
  - Explore diversity and promote respect for different cultures.

### Addiction Awareness Programs

1. Substance Abuse Education
  - Provide information on the effects of drugs and alcohol.
2. Support Group Facilitation
  - Create safe spaces for sharing experiences and recovery stories.
3. Stress Management Workshops
  - Teach techniques for coping with stress without resorting to substances.
4. Healthy Lifestyle Promotion
  - Encourage activities like exercise and hobbies as alternatives to addictive behaviors.
5. Guest Lectures from Addiction Experts
  - Invite professionals to discuss prevention and treatment strategies.

### Traffic Rules Programs

1. Road Safety Workshops
  - Educate on traffic laws and safe driving practices.
2. Mock Traffic Situations
  - Simulate real-life scenarios to practice safe behavior.
3. Pedestrian Safety Campaigns
  - Promote awareness of pedestrian rights and safety tips.
4. Bicycle and Motorcycle Safety Training
  - Teach specific rules and safety measures for non-vehicle commuters.
5. Community Awareness Drives
  - Organize events to highlight the importance of following traffic rules.

## MATHEMATICS-II

CMAM-102

Cr. L T P

4 3 1 0

**Unit-I** **10**

**Integral Calculus:** Double and triple integrals, change of order of integration, Change of variables; Gamma, Beta functions and their properties, Dirichlet's integral; Applications to area and volume.

**Unit-II** **08**

**Vector Calculus:**

**Vectors Differentiation:** Gradient, Divergence, Curl and their physical meaning; Differential operators and their identities.

**Vector Integration:** Line and surface integrals; Green's Theorem in a plane; Gauss's Divergence theorem and Stokes's theorem and their applications.

**Unit-III** **06**

**Fourier Series & Fourier Transform:** Trigonometric Fourier series, Half range series, Harmonic analysis; Fourier Transform: Definition, Fourier sine and cosine transforms, Fourier integral formula and applications.

**Unit-IV** **10**

**Laplace Transform:** Laplace transform, Existence theorem, Properties of Laplace Transform, Laplace transform of derivative and integrals, Unit step function, Laplace transform of periodic function, Inverse Laplace transform, Convolution theorem. Application of Laplace Transform to solve ordinary differential equation.

**Unit-V** **06**

**Z-Transform:** Definition of Z-transform of elementary functions; Shifting theorems, Convolution theorem, Initial and Final value theorems; Inverse of Z-transform; Application to solution of difference equations.

**Reference Books :**

1. Thomas, G. and R.L. Finney. *Calculus and Analytical Geometry*. 6<sup>th</sup> Edition. Addison Wesley/Narosa, 1998.
2. Grewal, B.S. *Engineering Mathematics*. 39<sup>th</sup> Edition. Khanna Publishers, 2005.
3. Prasad, C. *Mathematics for Engineers*. 19<sup>th</sup> Edition. Prasad Mudralaya.

# Differential Equations

## CMAN-102 A

### **Unit 1: Introduction to Differential Equations**

This unit covers the definitions and basic concepts of differential equations, distinguishing between ordinary and partial differential equations, as well as exploring their order and degree. It also addresses initial and boundary value problems.

### **Unit 2: First-Order Differential Equations**

In this unit, students will learn about the various types of first-order differential equations, including separable, homogeneous, and linear equations. It also includes methods such as exact equations and integrating factors, along with applications of first-order equations in real-world scenarios.

### **Unit 3: Higher-Order Differential Equations**

This unit focuses on linear differential equations of higher order with constant coefficients. Students will study methods for solving these equations, including the method of undetermined coefficients and variation of parameters, as well as exploring non-homogeneous equations and their applications.

### **Unit 4: Systems of Differential Equations**

Students will be introduced to systems of first-order differential equations, learning techniques for solving linear systems. This unit also includes phase plane analysis and the stability of equilibrium points.

### **Unit 5: Laplace Transforms**

This unit covers the definition and properties of the Laplace transform, along with the inverse Laplace transform and its applications. Students will learn how to solve ordinary differential equations using Laplace transforms.

## Probability and Statistics

### CMAN-102 B

#### **Unit 1: Introduction to Probability**

This unit introduces the fundamental concepts of probability, including sample spaces, events, and the basic rules of probability. It covers conditional probability and independence, along with applications of the counting principles.

#### **Unit 2: Random Variables and Probability Distributions**

In this unit, students learn about random variables and their types—discrete and continuous. The unit covers important probability distributions such as binomial, Poisson, and normal distributions, including their properties and applications.

#### **Unit 3: Expectation and Variance**

This unit focuses on the concepts of expectation and variance for random variables. Students will learn how to calculate expected values, variance, and standard deviation for various probability distributions, along with properties of linear combinations of random variables.

#### **Unit 4: Sampling Distributions and Estimation**

Students will explore the concept of sampling distributions, the Central Limit Theorem, and point estimation. This unit covers properties of estimators, methods of estimation, and confidence intervals for population parameters.

#### **Unit 5: Hypothesis Testing**

In this unit, students learn the fundamentals of hypothesis testing, including formulating null and alternative hypotheses. The unit covers Type I and Type II errors, test statistics, p-values, and conducting hypothesis tests for means and proportions.

## Mathematical Logic

CMAN-102 C

### **Unit 1: Introduction to Mathematical Logic**

This unit covers the fundamental concepts of mathematical logic, including syntax and semantics of formal languages, as well as the distinction between propositional logic and first-order logic. Students will explore the role of logic in mathematics and computer science.

### **Unit 2: Propositional Logic**

In this unit, students learn about propositional variables, logical connectives, and truth tables. The unit includes methods for evaluating logical expressions and techniques for proving logical equivalences, including De Morgan's laws and distributive laws.

### **Unit 3: First-Order Logic**

This unit introduces the syntax and semantics of first-order logic, including predicates, quantifiers, and the structure of first-order sentences. Students will learn how to express mathematical statements using first-order logic and explore the concepts of interpretation and validity.

### **Unit 4: Proof Techniques**

Students will study various proof techniques, including direct proofs, indirect proofs, proof by contradiction, and proof by induction. The unit emphasizes the importance of rigorous reasoning and clarity in mathematical arguments.

### **Unit 5: Set Theory and Relations**

This unit covers the basics of set theory, including operations on sets, relations, and functions. Students will learn about properties of relations, including equivalence relations and partial orders, and their relevance to logic.

## Differential Geometry

### CMAN-102 D

#### **Unit 1: Introduction to Differential Geometry**

This unit introduces the basic concepts and motivation behind differential geometry, covering the historical context and its applications in various fields such as physics and engineering. Students will learn about curves and surfaces, along with essential definitions and examples.

#### **Unit 2: Curves in Euclidean Space**

In this unit, students explore the properties of curves, including arc length, curvature, and torsion. The unit covers parameterizations of curves, the Frenet-Serret formulas, and the classification of curves based on their geometric properties.

#### **Unit 3: Surfaces in Euclidean Space**

This unit focuses on the study of surfaces, including definitions, parameterizations, and local properties. Students will learn about tangent planes, normal vectors, and the first and second fundamental forms, along with examples of standard surfaces.

#### **Unit 4: Metric and Curvature on Surfaces**

Students will explore the concepts of intrinsic and extrinsic geometry, including the definitions of Gaussian curvature and mean curvature. The unit covers important theorems, such as the Gauss-Bonnet theorem, and applications of curvature in understanding surface geometry.

#### **Unit 5: Differential Forms and Exterior Calculus**

In this unit, students are introduced to differential forms, their properties, and applications. The unit covers the exterior derivative, Stokes' theorem, and the concept of integration on manifolds, emphasizing the geometric interpretation of these concepts.

**UNIT-I :Relativistic Mechanics**

Inertial and non inertial frames, Galilean transformation equation, Einstein's postulates, Length contraction and time dilation, Addition of velocities, Mass energy equivalence. Lorentz transformation equation, Variation of mass with velocity.

**UNIT-II : Laser and Wave optics**

Spontaneous and stimulated emission of radiation, Einstein's coefficients, construction and working of Ruby, He- Ne lasers. Application of lasers.

Interference of light, Biprism experiment, displacement of fringes, Newtons ring, Polarization, Phenomena of double refraction, Nicol prism, Production and analysis of plane, circular and elliptical polarized light, specific rotation, Optical activity.

**-III : Wave Mechanics**

Introduction to wave particle duality, de Broglie matter waves, phase and group velocities, Heisenberg's uncertainty principle and its applications, Wave function characteristics and significance, Time dependent and time independent Schrodinger's wave equations, Particle in one dimensional rigid box.

**UNIT- IV : Superconductivity and Nanomaterials**

Temperature dependence of resistivity, Effect of magnetic field (Meissner effect), isotope effect, London's equation, Type I and Type II superconductor, Temperature dependence of critical field, BCS theory, High temperature superconductors, Application of superconductors.

Introduction to nanomaterials, Basic principles of nano-science and technology, structure, properties and uses of carbon nanotubes, some application of nanomaterials.

**UNIT- V : Electromagnetics**

Maxwell's equations (integral and differential forms), Equation of continuity, Transverse nature of EM waves, EM- wave propagation and its propagation in free space, Poynting vector. Gradient, Divergence and Curl, Statement of gauss divergence and stokes theorems and useful vector identities.

# CLASSICAL MECHANICS

## CPHN -102 A

### **Unit 1: Introduction to Classical Mechanics**

This unit introduces the fundamental concepts of classical mechanics, including the historical development of the field and the importance of mechanics in physics. Students will learn about the basic principles of motion and the laws governing classical systems.

### **Unit 2: Kinematics of Particles**

In this unit, students explore the motion of particles in one and two dimensions. Topics include displacement, velocity, acceleration, and the equations of motion. The unit also covers projectile motion and circular motion.

### **Unit 3: Dynamics of Particles**

This unit focuses on the forces acting on particles and the application of Newton's laws of motion. Students will study concepts such as mass, weight, friction, and the relationship between force and acceleration.

### **Unit 4: Work and Energy**

Students will learn about the work-energy principle, the concept of kinetic and potential energy, and the conservation of mechanical energy. This unit also covers power and the work done by non-conservative forces.

### **Unit 5: Systems of Particles and Rigid Body Dynamics**

This unit examines the dynamics of systems of particles, including center of mass and linear momentum. Students will also study rigid body motion, moments of inertia, and the rotation of rigid bodies about fixed axes.

# ELECTROMAGNETIC THEORY

## CPHN -102 B

### Unit 1: Introduction to Electromagnetic Theory

This unit introduces the fundamental concepts of electromagnetism, including historical perspectives and the significance of electromagnetic theory in physics. Students will learn about the basic electromagnetic phenomena and the scope of the subject.

### Unit 2: Electrostatics

In this unit, students will explore the principles of electrostatics, including Coulomb's law, electric fields, and electric potential. The unit covers Gauss's law, electric field lines, and the concept of dielectric materials.

### Unit 3: Magnetostatics

This unit focuses on the study of magnetic fields and forces. Students will learn about the Biot-Savart law, Ampère's law, and the concept of magnetic flux. The unit also covers the properties of magnetic materials and their applications.

### Unit 4: Electromagnetic Induction

Students will investigate the principles of electromagnetic induction, including Faraday's law and Lenz's law. This unit covers the concepts of self-inductance and mutual inductance, as well as applications in electrical circuits.

### Unit 5: Maxwell's Equations

In this unit, students will study Maxwell's equations and their significance in electromagnetic theory. The unit covers the integral and differential forms of these equations, along with boundary conditions and their implications for electric and magnetic fields.

# QUANTUM MECHANICS

## CPHN -102 C

### **Unit 1: Introduction to Quantum Mechanics**

This unit introduces the fundamental concepts of quantum mechanics, including its historical development and the limitations of classical mechanics. Students will explore the basic principles and significance of quantum theory in modern physics.

### **Unit 2: Wave-Particle Duality**

In this unit, students will study the dual nature of matter and light, focusing on experiments such as the double-slit experiment. The unit covers the concept of wave functions and the implications of wave-particle duality in quantum mechanics.

### **Unit 3: Quantum States and Operators**

This unit covers the mathematical formulation of quantum mechanics, including the concepts of quantum states, state vectors, and operators. Students will learn about observables, commutation relations, and the role of Hermitian operators in measurements.

### **Unit 4: The Schrödinger Equation**

Students will explore the time-dependent and time-independent Schrödinger equations, their physical significance, and applications to various quantum systems. The unit includes solving the Schrödinger equation for simple potentials and boundary conditions.

### **Unit 5: Quantum Mechanics of One-Dimensional Systems**

This unit focuses on one-dimensional quantum systems, including the particle in a box, harmonic oscillator, and the potential barrier. Students will study the solutions to these systems and their physical interpretations.

## SOLID STATE PHYSICS

### CPHN -102 D

#### **Unit 1: Introduction to Solid State Physics**

This unit provides an overview of solid state physics, including its significance, basic concepts, and the classification of solids. Students will learn about crystal structures and the importance of symmetry in solid materials.

#### **Unit 2: Crystal Lattices and Structures**

In this unit, students will study the concept of crystal lattices, unit cells, and the various types of crystal structures, such as face-centered cubic, body-centered cubic, and hexagonal close-packed. The unit covers lattice parameters and the calculation of atomic packing fractions.

#### **Unit 3: X-ray Diffraction**

This unit focuses on the principles of X-ray diffraction and its applications in determining crystal structures. Students will learn about Bragg's law, diffraction patterns, and methods for analyzing crystal structures using X-ray techniques.

#### **Unit 4: Phonons and Thermal Properties**

Students will explore the concept of phonons, their role in lattice vibrations, and their significance in thermal properties of solids. The unit covers specific heat, thermal conductivity, and the Debye model of heat capacity.

#### **Unit 5: Band Theory of Solids**

In this unit, students will learn about the electronic band structure of solids, including the concepts of conduction bands, valence bands, and band gaps. The unit discusses conductors, semiconductors, and insulators, along with their electronic properties.

# COMPUTER FUNDAMENTALS AND PROGRAMMING USING C

CCSN-102

Cr. L T P  
4 3 1 0

## Unit-I

**Computer System:** Basics of computer systems, history, types, capability and limitations of computer systems, Concept of assembler, compiler, interpreter, loader and linker. Generation of Computers.

**Hardware Organization:** Anatomy of a digital computer, CPU, Memory, processor, I/O Devices. **Memory Units:** Hierarchy, primary memory, cache; Auxiliary storage

## Unit-II

**Number System:** Introduction to Number Systems-Types-Decimal, Binary, Octal, Hexadecimal; Conversion from one number system to other; Binary arithmetic operations; Representation of Negative Numbers; 1's complement and 2's complement, BCD code, ASCII code

**Computer Fundamentals-**Introduction of Operating system, Basics of computer networks, Introduction of software

**Idea of Algorithm:** Representation of Algorithm, Flowchart, Pseudo code with examples, From algorithms to programs, source code.

## Unit-III

**Programming Basics:** Structure of C program, writing and executing the first C program, Syntax and logical errors in compilation, object and executable code. Components of C language. Standard I/O in C, Fundamental data types, Variables and memory locations, Storage classes.

**Arithmetic expressions and precedence :** Operators and expression using numeric and relational operators, mixed operands, type conversion, logical operators, bit operations, assignment operator, operator precedence and associativity.

## Unit-IV

**Conditional Branching:** Applying if and switch statements, nesting if and else, use of break and default with switch.

**Iteration and loops:** use of while, do while and for loops, multiple loop variables, use of break and continue statements.

**Functions:** Introduction, types of functions, Defining a Function, Function Declarations, Calling a Function , Passing parameters to functions, call by value, call by reference, recursive functions.

## Unit-V

**Arrays:** Array notation and representation, manipulating array elements, using multi-dimensional arrays. Character arrays and strings, Structure, union, enumerated data types, Array of structures, Passing arrays to functions.

**Character Arrays and Strings:** Declaring and Initializing String Variables, Reading Strings from Terminal, Writing Strings to Screen, Arithmetic Operations on Characters, String-handling Functions, Example Programs (with and without using built-in string functions)

**Pointers:** Introduction, declaration, applications, Introduction to dynamic memory allocation (malloc, calloc, realloc, free)

**File handling:** File I/O functions

**Structures:** Introduction, Defining a structure, declaring structure variables, accessing structure members, structure initialization, array of structures

**TEXT & REFERENCE BOOKS:**

1. Fundamentals of computers and programming with C, A. K. Sharma, Dhanpat Rai Publications, Daryaganj New Delhi
2. The C Programming Language by Dennis M Ritchie, Brian W. Kernigham, 1988, PHI.
3. C Programming – A modern approach by K.N. King, 1996, WW Norton & Co.
4. Information technology, Dennis P. Curtin, Kim Foley, Kunal Sen, Cathleen Morin, 1998, TMH

## CEEN-102 BASIC ELECTRICAL ENGINEERING

**Network Fundamentals:** Voltage and current sources, concept of linearity, unilateral and bilateral elements. Kirchoff's laws, Mesh and node analysis of D.C. networks; Transient analysis: RL & RC circuits; Network theorems: Thevenin's theorem, Norton's theorem, Superposition theorem, Maximum power theorem, Star-delta transformation.

### Unit-II

**Steady State Analysis of Single Phase AC Circuits:** Representation of Sinusoidal waveforms – Average and effective values, Form and peak factors. Analysis of single phase AC Circuits consisting R-L-C combination (Series and Parallel) Apparent, active & reactive power, Power factor. Concept of Resonance in series & parallel circuits, bandwidth and quality factor. Three phase balanced circuits, voltage and current relations in star and delta connections.

### Unit-III

**Transformers:** Magnetic Circuit, Analogy with electrical circuits, Calculation for series, parallel and series parallel magnetic circuits, Eddy current and Hysteresis losses.

Single Phase Transformer: Basic constructional features and operating principle. Ideal and practical transformer, equivalent circuit, losses in transformers, regulation and efficiency.

### Unit-IV

**Electrical Machines:** Principle of operation and constructional features of DC machine, Emf and torque equation, Armature reaction, Types of D.C. motors starting and speed control of D.C. motors, Machines:

Principle of operation of single phase motor and methods of starting of single phase motor.

Three phase induction motor operating principle.

Constructional features, Synchronous generator, Basic principle of operation, Emf equation, Constructional features.

### Unit-V

**Measurement of Electrical Quantities:** Measurement of voltage current power and energy moving iron instruments. Measurement of 3 phase power, Accuracy class of meters.

### Unit-VI

**Electrical Installations:** Introduction of Switch Fuse Unit (SFU), MCB, ELCB, MCCB, ACB. Types of Wires, Cables and Bus-bars. Fundamentals of earthing and lightning protection. Types of Batteries.

# CPCN- 102 Technical Communication

## CPCN-102

Cr. L T P  
3 2 1 0

### Unit – I

**Basics of Technical Communication:** Meaning, Elements, Process, Origin, Scope and Significance, Forms, Channels & Media of Communication, Barriers to Communication, Organisation and Style in Technical Communication, Non-Verbal Communication. **The flow of Communication: Downward; upward, Lateral or Horizontal; Barriers to Communication**

**Technical Reports:** Nature & Significance, Types, Formats of Reports, Structure of Formal Reports: Project Report, Dissertation and Thesis, Strategies for Writing.

**Technical Articles:** Nature & Significance, Types, Elements, Research Methods, Writing Strategies.

**Technical Proposals:** Nature & Significance, Types, Structure of a Formal Proposal, Tips for Writing.

### Unit – II

**Guidelines for Effective Writing:** Requisites of Good Sentence Writing; Elements of a Paragraph, Requisites of Impeccable Paragraph Writing: Unity, Coherence and Logical Order; Development of Paragraphs. **Mechanics of Writing: Modifiers, phrasal verbs, tone and style, graphical representation**

**Specific Writing:** Note-Making; Summarising & Paraphrasing; Referencing; Professional Memos; e-Mails; e-Writing.

### Unit – III

**Professional Correspondence:** Letter Writing Skills; Form & Structure; Writing Personal & Official Letters, **Technical paper writing: documentation style – document editing – proof reading – Organising and formatting** Quotations, Supply Orders, Complaint and Adjustment Letters, Minutes for Meeting, Designing Resume/CV/Bio-Data, Job Application, Follow-up Letters, **E. Mail Writing.**

### Unit – IV

**Basics of Phonetics:** **Kinesics: Definitions; importance; Features of Body Language; Voice Modulation: Quality, Pitch; Rhythm; intonation; Pronunciation; Articulation; stress & accent; Linguistic features of voice control:** International Phonetic Alphabet, Phonemes, Allophones, Phonetic Transcription, Organs of Speech, Places and Manners of Articulation, Syllable, Stress, Rhythm, Intonation, **Weak Forms.**

## **CPCN-102 B**

## **Presentation Skills**

### Unit 1: Essential Grammar

Application of tenses, Auxiliaries- correct usage and importance informal communication, Business Vocabulary - Vocabulary exercises through web-base Applications, Written Communication

### Unit 2: Written Communication Skills

Email writing- Formal and Informal email writing structure, Inquiry letters, Instruction letters, complaint letters, Routine business letters, Sales Letters etc. Technical writing, Essay writing, Paragraph writing.

### Unit 3: Leader's Role, Responsibilities And Skill Required:

Understanding good Leadership Learning the difference between Leadership and Management, Gaining insight

into your Patterns, Beliefs and Rules, Defining Qualities and Strengths of leadership, Determining how well you perceive what's going on around you, interpersonal Skills and

Communication Skills, Learning about Commitment and How to Move Things Forward,

Making Key Decisions, Handling Your and Other People's Stress, Empowering, Motivating

and Inspiring Others, Leading by example, effective feedback. Problem Solving Skill:3: Writing Skills

### Unit 4: Corporate business etiquettes

Corporate grooming & dressing, etiquettes in social & office Setting-Understand the importance of professional behaviour at the work place, Understand and Implement etiquettes in workplace, presenting oneself with finesse and making others comfortable in a business setting. Importance of first impression, Grooming, Wardrobe, Introduction to Ethics in engineering and ethical reasoning, rights and responsibilities Diversity and Inclusion Part 2: Socio-Cultural and Cross-Cultural

### Reference Books:

Herta A. Murphy, Effective Business Communication

Lehman, Dufrene, Sinha BCOM, Cengage Learning

**Unit 1:**

Pulse Digital Modulation: Elements of digital communication systems, advantages of digital communication systems, Elements of PCM: Sampling, Quantization & Coding, Quantization error, Companding in PCM systems. Differential PCM systems (DPCM). Time Division Multiplexing & Demultiplexing. Delta Modulation: Delta modulation, its draw backs, adaptive delta modulation, comparison of PCM and DM systems, Noise in PCM and DM systems. Illustrative Problems.

**Unit 2:**

Digital Modulation Techniques: Introduction, ASK modulator, Coherent and Non-Coherent ASK detector, FSK modulator, Spectrum of FSK, coherent reception, non-coherent detection of FSK. BPSK transmitter, Coherent reception of BPSK, DPSK, QPSK. Data Transmission: Base band signal receiver, probability of error, The optimum filter, Matched filter, probability of error using matched filter. Optimum filter using correlator. Probability of error of ASK, FSK, BPSK and QPSK. Illustrative Problems

**Unit 3:**

Information Theory: Discrete messages, Concept of amount of information and its properties. Average information, Entropy and its properties. Information rate, Mutual information and its properties, Illustrative Problems. Source Coding: Introduction, Advantages, Hartley Shannon's theorem, bandwidth – S/N trade off, Shannon-Fano coding, Huffman coding, Illustrative Problems

**Unit 4:**

Linear Block Codes: Introduction, Matrix description of Linear Block codes, Error detection and error correction capabilities of linear block codes, Hamming codes. Cyclic Codes: Encoding, Syndrome Calculation, Decoding's

**Unit 5:**

Convolution Codes: Introduction, encoding of convolution codes, time domain approach, transform domain approach. Graphical approach: State, Tree and Trellis diagram. Decoding using Viterbi algorithm Illustrative Problems

**Reference Books:**

## Engg. Physics Lab.

### CPHM-152

1. Measurement of wavelength of monochromatic light by Newton's rings
2. Measurement of the specific rotation of cane sugar solution using Biquartzpolarimeter
3. Measurement of wavelength of spectral lines using plane transmission grating
4. Measurement of the specific resistance of the material of a given wire using Carey Foster Bridge
5. Study of the variation of magnetic field along the axis of current carrying coil and then to estimate the radius of the coil
6. Calibration of the given voltmeter and ammeter with a potentiometer
7. Measurement of the resistivity and energy band gap of a semiconductor material (four probe)
8. Study of Hall effect and determination of Hall coefficient and carrier density of a given semiconductor material
9. Measurement of acceleration due to gravity by compound pendulum
10. Measurement of electro-chemical equivalent (ECE) of copper using Helmholtz galvanometer
11. Measurement of Planck's constant 'h' by measuring radiation in a fixed spectral range
12. Measurement of wavelength of He-Ne Laser using a narrow slit (Diffraction pattern)
13. Measurement of the dielectric constant of different solids

### Reference Books :

1. Jain, R.K., DarakhshanSahar and D. Mishra. *Engineering Physics Practical Manual*. Shobhit University Publication, 2009.

## CLASSICAL MECHANICS LAB

### CPHN-152 A

#### List of Experiments:

- 1) Measurement of acceleration due to gravity using a simple pendulum.
- 2) Study of projectile motion using a projectile launcher.
- 3) Analysis of collisions using a ballistic pendulum.
- 4) Investigation of harmonic motion with a spring-mass system.
- 5) Determination of the moment of inertia using a rotational apparatus.
- 6) Study of the conservation of energy with a mechanical energy experiment.
- 7) Measurement of the coefficient of friction using an inclined plane.
- 8) Analysis of motion using a ticker tape timer.
- 9) Experiment to study the motion of a body under uniform circular motion.
- 10) Examination of the principles of linear momentum using a dynamics cart.
- 11) Investigation of damped harmonic motion with a damped oscillator setup.
- 12) Measurement of the gravitational force using a torsion balance.
- 13) Study of the laws of motion using a dynamic cart and track.
- 14) Experiment to analyze the motion of a pendulum with varying lengths.
- 15) Determination of the center of mass of a system of particles.
- 16) Investigation of rolling motion and its relation to translational motion.
- 17) Measurement of the energy loss during inelastic collisions.
- 18) Study of the oscillations of a compound pendulum.
- 19) Analysis of the effects of air resistance on falling objects.
- 20) Experiment to verify Kepler's laws using a planetary motion setup.
- 21) Investigation of the principles of energy transfer in a spring system.

## ELECTROMAGNETIC THEORY LAB

### CPHN-152 B

#### List of Experiments:

- 1) Measurement of electric field strength using a parallel plate capacitor.
- 2) Determination of capacitance of various capacitors.
- 3) Study of magnetic field around a current-carrying conductor using a magnetic field sensor.
- 4) Investigation of Faraday's law of electromagnetic induction using coils and magnets.
- 5) Measurement of resistance of different materials using a Wheatstone bridge.
- 6) Analysis of resonance in an LC circuit.
- 7) Experiment to determine magnetic field strength using a solenoid.
- 8) Study of the Hall effect in semiconductors.
- 9) Investigation of electromagnetic waves using antennas and oscilloscopes.
- 10) Measurement of the dielectric constant of various materials.
- 11) Determination of the characteristics of a transformer.
- 12) Analysis of the behavior of RLC circuits.
- 13) Experiment to observe the phenomenon of self-inductance and mutual inductance.
- 14) Study of the principles of rectification using diodes.
- 15) Measurement of the frequency response of an RLC circuit.

## QUANTUM MECHANICS LAB

### CPHN-152 C

#### List of Experiments:

1. Measurement of Planck's constant using a photoelectric effect experiment.
2. Determination of the energy levels of hydrogen using the Balmer series.
3. Experiment to observe electron diffraction patterns.
4. Study of the Stern-Gerlach experiment to investigate spin states.
5. Measurement of the energy levels of a quantum harmonic oscillator.
6. Investigation of the Compton Effect using X-rays.
7. Experiment to demonstrate quantum tunneling using a tunneling microscope.
8. Analysis of the characteristics of semiconductor diodes.
9. Measurement of the properties of lasers and their quantum aspects.
10. Study of the effects of temperature on the resistance of superconductors.
11. Experiment to observe the double-slit interference pattern with single photons.
12. Determination of the energy distribution of thermal photons.
13. Investigation of the Rydberg formula for hydrogen-like atoms.
14. Measurement of Zeeman Effect in a magnetic field.
15. Study of quantum entanglement using polarization filters.
16. Analysis of wave-particle duality through various experiments.
17. Experiment to investigate the effect of temperature on quantum states in solids.

## SOLID STATE PHYSICS LAB

### CPHN-152 D

#### List of Experiments:

1. Measurement of lattice parameters using X-ray diffraction.
2. Study of crystal structure using a polarizing microscope.
3. Determination of the thermal conductivity of a solid material.
4. Measurement of specific heat capacity of solids using the calorimetric method.
5. Investigation of electrical conductivity in different materials.
6. Analysis of the Hall effect in semiconductor samples.
7. Measurement of the band gap energy of semiconductors using a four-probe method.
8. Study of the magnetic properties of materials using a vibrating sample magnetometer.
9. Measurement of dielectric constant and loss tangent of materials.
10. Investigation of the characteristics of p-n junction diodes.
11. Determination of the resistivity of materials at varying temperatures.
12. Study of ferromagnetic hysteresis using a magnetometer.
13. Measurement of the phonon dispersion relation using inelastic neutron scattering.
14. Analysis of the temperature dependence of resistivity in metals and semiconductors.
15. Study of piezoelectric properties in certain crystals.
16. Measurement of the sound velocity in solids using ultrasonic methods.
17. Investigation of the mechanical properties of materials through stress-strain tests.
18. Study of the optical properties of semiconductors using a spectrophotometer.
19. Measurement of the thermal expansion of solid materials.
20. Investigation of defects in crystals using etch pit techniques.

# COMPUTER PROGRAMMING USING C LAB.

CCSN 152

Cr. L T P

1 00 2

1. Introduction of DOS Commands, Windows and C.
2. Writing Simple Batch Program.
3. Programming using 'C' Language involving in uses of following constructs of 'C'
4. Print "Hello, World!" to the console.
5. Read two integers and print their sum.
6. Calculate the factorial of a given number using recursion.
7. Determine if a number is prime.
8. Print the Fibonacci series up to a specified term.
9. Read a string and print it in reverse order.
10. Check if a given string is a palindrome.
11. Implement bubble sort to sort an array of integers.
12. Perform addition of two matrices.
13. Use the Euclidean algorithm to find the GCD of two numbers.
14. Convert temperatures between Celsius and Fahrenheit.
15. Count the number of vowels and consonants in a string.

Simple Input Output Functions, Arithmetic/Logical & Relational Operators, Sequence Control, Decision Control, Iteration, Arrays Single/Multi dimensional(Numeric/Character), Functions (Call by value/Call by reference), Recursive functions, Structures, Pointers, Library functions, File streams.

## Reference Books :

1. Sharma, A.K. *Fundamentals of Computers and Programming with C*. DhanpatRai Publications, New Delhi, 2005.
2. Sharma, Divya. *Lab. Manual: Fundamentals of Computers and Programming with C*, Shobhit University Publication, Meerut.

## BASIC ELECTRICAL ENGINEERING LAB

**CEEN 152**

*Cr. L T P*  
**1 0 0 2**

1. Verify the KCL
2. Verify the KVL
3. Short Circuit and Open Circuit
4. Study of Energy meter
5. Verification Thevenin Theorem
6. Verification of Norton theorem
7. Verification of superposition theorem
8. V-I Characteristics of PN Junction Diode
9. Study the half wave rectifier.
10. Study the full wave rectifier.

## **CIRCUIT THEORY LAB**

### **CEEN-152A**

- 1) Measurement of voltage, current, and resistance using a multimeter.
- 2) Analysis of series and parallel circuits using resistors.
- 3) Study of Ohm's law and its verification through experiments.
- 4) Investigation of Kirchhoff's voltage and current laws in circuit analysis.
- 5) Measurement of the characteristics of a diode.
- 6) Study of transistor characteristics and biasing configurations.
- 7) Experiment to analyze the behavior of RL circuits.
- 8) Measurement of capacitance using an RC circuit.
- 9) Study of the frequency response of an RLC circuit.
- 10) Analysis of AC and DC circuits using an oscilloscope.
- 11) Investigation of phase shift in RC and RL circuits.
- 12) Measurement of power in AC circuits using a wattmeter.
- 13) Study of the charging and discharging of a capacitor.
- 14) Analysis of resonance in RLC circuits.
- 15) Experiment to determine the time constant of an RC circuit.
- 16) Measurement of the input and output characteristics of a common-emitter amplifier.
- 17) Study of filter circuits: low-pass, high-pass, and band-pass filters.
- 18) Investigation of the use of breadboards for circuit prototyping.
- 19) Measurement of inductance using a series RLC circuit.
- 20) Study of the operation of a Wheatstone bridge.
- 21) Experiment to analyze the response of a feedback amplifier.

## **ELECTROMAGNETISM LAB**

### **CEEN-152B**

1. Measurement of electric field strength using a parallel plate capacitor.
2. Investigation of electrostatic potential using an electroscope.
3. Study of magnetic field lines using iron filings and a magnet.
4. Measurement of the resistance of different materials using a multimeter.
5. Analysis of the magnetic field around a current-carrying conductor using a compass.
6. Experiment to demonstrate Faraday's law of electromagnetic induction.
7. Measurement of the capacitance of capacitors in series and parallel configurations.
8. Study of the properties of solenoids and their magnetic fields.
9. Investigation of the Hall effect in semiconductor materials.
10. Measurement of the permeability of free space using a solenoid.
11. Study of Lenz's law using a coil and a falling magnet.
12. Experiment to determine the characteristics of a transformer.
13. Measurement of the dielectric constant of various materials.
14. Analysis of the behavior of RC and RL circuits.
15. Study of electromagnetic waves using a dipole antenna.
16. Investigation of resonance in RLC circuits.
17. Measurement of the speed of electromagnetic waves in different media.
18. Study of electric fields using field line patterns and potential plots.
19. Investigation of capacitive and inductive reactance in AC circuits.
20. Measurement of the magnetic field strength using a Gauss meter.
21. Experiment to analyze the effect of frequency on inductive and capacitive reactance.

## DIGITAL ELECTRONICS LAB

### CEEN-152 C

1. Study of basic logic gates: AND, OR, NOT, NAND, NOR, and XOR.
2. Construction and analysis of combinational circuits using logic gates.
3. Implementation of a half adder and full adder circuit.
4. Design and testing of a 4-bit binary adder/subtractor using full adders.
5. Construction of a 4-to-1 multiplexer and demultiplexer.
6. Implementation of a 2-bit binary comparator.
7. Design of a 7-segment display decoder using logic gates.
8. Analysis of flip-flops: SR, D, JK, and T flip-flops.
9. Construction of a 4-bit shift register and its operations.
10. Design and simulation of synchronous and asynchronous counters.
11. Study of digital-to-analog converters (DAC) and their applications.
12. Implementation of an analog-to-digital converter (ADC) circuit.
13. Experiment to analyze timing diagrams of digital circuits.
14. Design of a binary counter using flip-flops.
15. Construction of a state machine using flip-flops and logic gates.
16. Study of memory devices: RAM and ROM, and their applications.
17. Implementation of a priority encoder circuit.
18. Analysis of combinational and sequential logic circuit behaviors.
19. Simulation of digital circuits using software tools like Logisim or Multisim.
20. Study of noise margins and signal integrity in digital circuits.
21. Experiment to implement and analyze a basic ALU (Arithmetic Logic Unit).

## **ELECTRICAL MEASUREMENTS AND INSTRUMENTATION LAB**

### **CEEN-152 D**

1. Measurement of voltage using a digital multimeter.
2. Measurement of current using a clamp meter.
3. Determination of resistance using a Wheatstone bridge.
4. Calibration of an ammeter and voltmeter using standard references.
5. Measurement of power in an AC circuit using a wattmeter.
6. Study of the characteristics of different types of electrical instruments.
7. Measurement of frequency using a frequency counter.
8. Determination of the phase angle in an AC circuit using an oscilloscope.
9. Experiment to measure the insulation resistance of cables.
10. Analysis of a potentiometer for voltage measurement.
11. Measurement of temperature using thermocouples and RTDs.
12. Study of the operation of an LCR meter for inductance and capacitance measurement.
13. Measurement of capacitance using a capacitance meter.
14. Experiment to analyze the response of a digital oscilloscope.
15. Measurement of power factor in an AC circuit.
16. Study of various transducers and their applications in measurements.
17. Experiment to measure the Earth resistance using an Earth tester.
18. Analysis of load characteristics of different electrical machines.
19. Measurement of magnetic field strength using a Gauss meter.
20. Experiment to evaluate the performance of a signal generator.
21. Study of data acquisition systems and their applications in instrumentation.

**Unit - I**

Introduction: Basic Terminology, Elementary Data Organization, Algorithm, Efficiency of an Algorithm, Time and Space Complexity, Asymptotic notations: Big-Oh, Time-Space trade-off. Abstract Data Types (ADT), Arrays: Definition, Single and Multidimensional Arrays, Representation of Arrays: Row Major Order, and Column Major Order, Application of arrays, Sparse Matrices and their representations.

Linked lists: Array Implementation and Dynamic **Implementation of Singly Linked Lists, Doubly Linked List, Circularly Linked List**, Operations on a Linked List. Insertion, Deletion, Traversal, **Polynomial Representation and Addition**, Generalized Linked List.

**UNIT - II**

Stacks: Abstract Data Type, Primitive Stack operations: Push & Pop, Array and Linked Implementation of Stack in C, Application of stack: Prefix and Postfix Expressions, **Evaluation of postfix expression, Recursion, Tower of Hanoi Problem**, Simulating Recursion, Principles of recursion, Tail recursion, Removal of recursion Queues, Operations on Queue: Create, Add, Delete, Full and Empty, Circular queues, Array and linked implementation of queues in C, **Dequeue and Priority Queue**.

**UNIT – III**

Trees: Basic terminology, Binary Trees, Binary Tree Representation: **Array Representation and Dynamic Representation, Complete Binary Tree, Algebraic Expressions, Extended Binary Trees, Array and Linked Representation of Binary trees, Tree Traversal algorithms: Inorder, Preorder and Postorder, Threaded Binary trees, Traversing Threaded Binary trees, Huffman algorithm.**

Search Trees: Binary Search Trees (BST), Insertion and Deletion in BST, HEAP (Max and min heap), Heap Implementation, Insertion and Deletion Operations, AVL trees, Introduction to m-way Search Trees, B Trees & B+ Trees.

**UNIT – IV**

Graphs: Terminology, Sequential and linked Representations of Graphs: Adjacency Matrices, Adjacency List, Adjacency Multi list, Graph Traversal: **Depth First Search and Breadth First Search, Connected Component, Spanning Trees, Minimum Cost Spanning Trees: Prims and Kruskal algorithm. Transitive Closure and Shortest Path algorithm: Warshal Algorithm and Dijkstra Algorithm.**

**UNIT - V**

Searching: Sequential search, Binary Search, Comparison and Analysis Internal Sorting: Insertion Sort, Selection, Bubble Sort, Quick Sort, **Two Way Merge Sort, Heap Sort, Radix Sort**, Practical consideration for Internal Sorting.

Complexity of Search Algorithm

Hashing Hash Function, Collision Resolution Strategies.

Storage Management: Garbage Collection and Compaction.

**Text Books:**

1. Horowitz and Sahani, "Fundamentals of data Structures", Galgotia Publication Pvt. Ltd., New Delhi.
2. R. Kruse et al, "Data Structures and Program Design in C", Pearson Education Asia, Delhi- 2002
3. A. M. Tenenbaum, "Data Structures using C & C++", Prentice-Hall of India Pvt. Ltd., New Delhi.
4. K Loudon, "Mastering Algorithms with C", Shroff Publisher & Distributors Pvt. Ltd.
5. Bruno R Preiss, "Data Structures and Algorithms with Object Oriented Design Pattern in C++", Jhon Wiley & Sons, Inc.
6. Adam Drozdek, "Data Structures and Algorithms in C++", Thomson Asia Pvt. Ltd.(Singapore)

**Unit- I Introduction:**

An overview of database management system, database system Vs file system, Database system concepts and architecture, data models schema and instances, data independence and database language and interfaces, Data definitions language, DML, Overall Database Structure. Data Modeling using the Entity Relationship Model: ER model concepts, notation for ER diagram, mapping constraints, keys, Concepts of Super Key, candidate key, primary key, Generalization, aggregation, reduction of an ER diagrams to tables, extended ER model, relationships of higher degree.

**Unit- II Relational data Model and Language:**

Relational data model concepts, CODD's Rules, integrity and constraints, entity integrity, referential integrity, Keys constraints, Domain constraints, relational algebra, relational calculus, tuple and domain calculus. **Introduction on SQL:** Characteristics of SQL, advantage of SQL. SQL data type and literals. Types of SQL commands. SQL operators and their procedure. Tables, views and indexes. Queries and sub queries. Aggregate functions. Insert, update and delete operations, Joins, Unions, Intersection, Minus, Cursors, Triggers, Procedures in SQL/PL SQL

**Unit- III Data Base Design & Normalization:**

Functional dependencies, normal forms, first, second, third normal forms, BCNF, inclusion dependences, loss less join decompositions, normalization using FD, MVD, and JDs, alternative approaches to database design.

**Unit- IV Transaction Processing Concepts:**

Transaction system, Testing of serializability, Serializability of schedules, conflict & view serializable schedule, recoverability, **Recovery from transaction failures**, log based recovery, checkpoints, deadlock handling.

**Unit- V Concurrency Control Techniques:**

Concurrency control and recovery system: Concurrency control, lock based protocols, time-stamp based protocols, validation based protocols, multiple granularity. Recovery system - failure classification, storage structure, recovery and atomicity, **log-based recovery**, shadow paging, buffer management, failure with loss of non-volatile storage, advanced recovery techniques, remote backup systems. Data Storage and Indexes - file organizations, primary, secondary index structures, various index structures - hash-based, dynamic hashing techniques, multi-level indexes, B+ trees.

# JAVA PROGRAMMING

CCSN-207

Cr. L T P

4 3 1 0

**COURSE OBJECTIVES:** The objectives of this course are to:

1. Understand Object Oriented Programming concepts and basic characteristics of Java.
2. Know the principles of packages, inheritance and interfaces.
3. Define exceptions and use I/O streams.
4. Develop a java application with threads and generics classes
5. Design and build simple Graphical User Interfaces.

**COURSE OUTCOMES:** On successful completion of the course, the student will be able to:

1. Write Java programs with properly designed constants, variables, objects, methods and reusability functionality
2. Learn how and where to implement interface and exception-handling concepts.
3. Write multi-threaded programming concepts for concurrency control based applications.
4. Construct GUI based JAVA enterprise applications
5. Develop web applications using JDBC, RMI and Servlet methodologies.

## Unit – I

**Introduction to Java:** Overview of Java, Keywords, constants, variables and Data Types, Operators and Expressions, Decision Making, Branching and Looping, Jump statements: break, continue, return.

**Introducing classes, objects and methods,** constructors, class inheritance. Inheritance types, super keyword, preventing inheritance: final classes and methods.

**Arrays and String:** Creating an array, one and two dimensional arrays, string array and methods.

**Packages and interfaces:** Extending Interfaces, CLASSPATH, Access protection. Interfaces-defining an interface, implementing interfaces.

## Unit – II

**Exception handling** - Fundamentals of exception handling, Exception types, Uncaught exceptions, using try and catch, multiple catch clauses, nested try statements, throw, throws and finally, built- in exceptions, creating own exception sub classes.

**Multithreading-** Differences between thread-based multitasking and process-based multitasking, Java thread model, creating threads, thread priorities, synchronizing threads, inter thread communication.

## Unit – III

**Input/Output Programming:** Basics, Streams, Byte and Character Stream, predefined streams, Reading and writing from console and files.

**The Collection Framework:** collection interfaces, collection classes(ArrayList, LinkedList, Hash set), Accessing a Collection via an Iterator, Vector, More utility class

#### **Unit – IV**

Working with windows, Graphics and Text, using AWT controls, Button, Label, TextField Understanding Layout Managers, Flow Layout, Border Layout, Grid Layout, Card Layout, Grid Bag Layout and Menus.

**GUI Programming with Swing** – Introduction, limitations of AWT, components, containers.

**Event Handling:** Event Classes, Listener Interfaces, Handling mouse and keyboard events, Adapter classes, Inner classes, Anonymous Inner classes. A Simple AWT Application

#### **Unit – V**

**Applets** – Applets and HTML, Security Issues, Applets and Applications, passing parameters to applets. Creating a Swing Applet, Painting in Swing, A Paint example, Exploring Swing Controls- JLabel and Image Icon, JText Field, **Beans:** Introduction to Java Beans and Servlets.

**Database Connectivity JDBC architecture, establishing connectivity and working with connection interface, connecting to a database, working with statements, creating and executing SQL statements, working with Result Set**

#### **Course Outcomes:**

- An understanding of the principles and practice of object oriented analysis and design in the construction of robust, maintainable programs which satisfy their requirements;
- A competence to design, write, compile, test and execute straightforward programs using a high level language;
- An appreciation of the principles of object oriented programming;
- An awareness of the need for a professional approach to design and the importance of good documentation to the finished programs.
- Be able to implement, compile, test and run Java programs comprising more than one class, to address a particular software problem.
- Demonstrate the ability to use simple data structures like arrays in a Java program.
- Be able to make use of members of classes found in the Java API (such as the Math class)

## OPERATING SYSTEMS (UNIXPROGRAMMING)

CCSN-205

L T P 3 1 0

### UNIT - I: Introduction to Operating System:

Operating Systems Objectives and functions, Evolution of Operating Systems - Simple Batch, Multi programmed, time shared, Personal Computer, Parallel, Distributed Systems, Real-Time Systems, Operating System services, user OS Interface, System Calls, Types of System Calls, System Programs.

### UNIT - II: Process and CPU Scheduling :-

Process concepts - The Process, Process State, Process Control Block, Threads, Process Scheduling - Scheduling Queues, Preemptive Scheduling, Scheduling Criteria, Scheduling algorithms, Multiple-Processor Scheduling, Real-Time Scheduling, Thread scheduling - Process Synchronization, The Critical section Problem, Reader's Writer's Problem, Dining Philosopher Problem, Semaphores, and Classic Problems of Synchronization.

### UNIT - III: Memory Management and Virtual Memory :

Logical & physical Address Space, Swapping, Contiguous Allocation, Paging, Structure of Page Table, Segmentation, Segmentation with Paging, Virtual Memory, Demand Paging, Performance of Demanding Paging, Page Replacement Algorithms, Allocation of Frames, Thrashing.

### UNIT - IV: I/O System :-

**I/O SYSTEM:** Mass storage structure - overview of mass storage structure, disk structure, disk attachment, disk scheduling algorithms, swap space management, stable storage implementation, tertiary storage structure.

**I/O:** Hardware, application I/O interface, kernel I/O subsystem, transforming I/O requests to hardware operations, streams, performance.

### UNIT - V: Deadlocks -:

System Model, Deadlock Characterization, Methods for Handling Deadlocks, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection and Recovery from Deadlock. Banker's Algorithm

Protection - System Protection, Goals of Protection, Principles of Protection, Domain of Protection, Access Matrix, Implementation of Access Matrix, Access Control, Revocation of Access Rights.

### TEXT BOOKS:

1. Operating System Principles, Abraham Silberchatz, Peter B. Galvin, Greg Gagne 8th Edition, Wiley Student Edition.
2. Operating systems - Internals and Design Principles, W. Stallings, 6th Edition, Pearson.

8. Operating Systems in depth, T. W. Doeppner, Wiley.

## DISCRETE MATHEMATICS

CCSN-209

CR L-T-P

4- 3-1-0

### Unit-I: Set Theory, Relations, and Functions (10 topics)

Sets: definition, countable/uncountable, Venn diagrams, power set, Relations: definition, types, composition, equivalence relation, partial ordering, Functions: definition, types, one-to-one, onto, inverse, composition, Theorem Proving Techniques: mathematical induction, pigeonhole principle, proof by contradiction.

### Unit-II: Propositional Logic (10 topics)

Propositions, logic operators, First-order predicate logic, Truth tables, tautologies, arguments, Contradictions, logical implications, equivalence, Predicates, universal/existential quantifiers. 1. Probability: definitions, axioms, properties, Random Variables: definitions, types, Probability Distributions: Bernoulli, Binomial, Conditional Probability and Independence,

### Unit-III: Posets, Hasse Diagrams, and Lattices (12 topics)

Permutations and Combinations, Recurrence Relations, Generating Functions, Ordered sets, Hasse diagrams, Isomorphic ordered sets, well-ordered sets, Lattices: properties, bounded, complemented, Boolean Algebra: basic definitions, sum/product forms, Logic gates, Karnaugh maps.

### Unit-IV: Algebraic Structures (10 topics)

Number Theory: divisibility, primality, Congruences: definitions, properties, Groups: definition, properties, types (Semi Group, Monoid, Abelian), Subgroup, cyclic groups, cosets, factor group, Permutation groups, Normal subgroup, Homomorphism and isomorphism of groups, Rings and fields.

### Unit-V: Graphs and Combinatorics (10 topics)

Recurrence Relations, generating functions, Graphs: simple, multi, terminology, Representation, Bipartite, Regular, Planar, connected, Euler graphs, Hamiltonian path/circuits, Adjacency/Incidence Matrices, Graph coloring, Tree: definition, rooted, properties, binary search.

### Reference Books:

## MATHMATICS

CCSN-209 A

L T P 31

2

### UNIT-I

Introduction, Elementary row and column transformations, Rank of matrix, Linear dependence, Consistency of linear system of equations, characteristic equation, CaleyHamilton Theorem, Eigen values and eigen vectors, Diagonalisation, Complex and unitary matrices

### UNIT-II

nth derivative, Leibnitz theorem, Partial differentiation, Euler's theorem, Curve tracing, Change of variables, Expansion of function of several variables..

### UNIT-III

Jacobian, Approximation of errors, Extrema of functions of several variables, Lagrange's method of multipliers (Simple applications)

### UNIT-IV

Double and triple integrals, Change of order of the Integration, Change of variables, Beta and Gamma functions, Application to area and volume, Dirichlet's integral and its applications.

### UNIT-V

Point functions, Gradient, divergence and curl of a vector and their physical interpretations, Line, Surface and Volume integrals, Green's, Stoke's and Gauss divergence theorems.

### References:

## BASICS MATHEMATICS

CCSN-209 B

L T P 31 2

### UNIT-I

Numbers, HCF & LCM, Decimal Fractions, Simplification, Square and Cube roots, Average, Problems on numbers, Problems on Ages, Surds and Indices, Percentage, Profit and Loss

### UNIT-II

Ratio and Proportion, Partnership, Chain rule, Time and work, Pipes and cisterns, Time and distance, Problems on trains, Boats and streams.

### UNIT-III

Number system and basic Arithmetic, Algebra, Trigonometry, Geometry and Cartesian, Geometry, Calculus- Differential and Integral, Matrix Algebra, Probability and Statistics.

### UNIT-IV

Double and triple integrals, Change of order of the Integration, Change of variables, Beta and Gamma functions, Application to area and volume, Dirichlet's integral and its applications.

### UNIT-V

Point functions, Gradient, divergence and Time and work, Pipes and cisterns, Time and distance, Problems on trains, Boats and streams, Simple and Compound interest, Miscellaneous curl of a vector and their physical interpretations, Line, Surface and Volume integrals, Green's, Stoke's and Gauss divergence theorems.

### References:

4. Piskunov, M. . Differential and Integral Calculus, Peace Pub.

## Mathematics-I

### (CCSN 209 C)

#### Unit – 1

Differential Calculus -1: determination of nth order derivatives of Standard functions - Problems. Leibnitz's theorem (without proof) - problems. Polar Curves - angle between the radius vector and tangent, angle between two curves, Pedal equation of polar curves. Derivative of arc length - Cartesian, Parametric and Polar forms (without proof) - problems. Curvature and Radius of Curvature – Cartesian, Parametric, Polar and Pedal forms (without proof) –problems

#### Unit -2

Differential Calculus -2 Taylor's and Maclaurin's theorems for function of one variable(statement only)- problems. Evaluation of Indeterminate forms. Partial derivatives – Definition and simple problems, Euler's theorem(without proof) – problems, total derivatives, partial differentiation of composite functions-problems. Definition and evaluation of Jacobians

#### Unit – 3

Vector Calculus: Derivative of vector valued functions, Velocity, Acceleration and related problems, Scalar and Vector point functions. Definition of Gradient, Divergence and Curl-problems. Solenoidal and Irrotational vector fields. Vector identities -  $\text{div}(\phi A)$ ,  $\text{curl}(\phi A)$ ,  $\text{curl}(\text{grad } \phi)$ ,  $\text{div}(\text{curl } A)$ .

#### Unit - 4

Differential Equations ; Solution of first order and first degree differential equations – Exact, reducible to exact and Bernoulli's differential equations .Orthogonal trajectories in Cartesian and polar form. Simple problems on Newton's law of cooling.

#### Unit - 5

Linear Algebra Rank of a matrix by elementary transformations, solution of system of linear equations - Gauss-elimination method, Gauss –Jordan method and Gauss-Seidel method Eigen values and Eigen vectors, Rayleigh's power method to find the largest Eigen value and the corresponding Eigen vector. Linear transformation, diagonalisation of a square matrix .  
Reduction of Quadratic form to Canonical form.

## **Advance Applied Mathematics**

### **(CCSN 209 D)**

#### Unit – I

Complex Analysis: Analytic function, Cauchy-Riemann equations, Complex integration: Line integral in the complex plane, Cauchy's integral theorem, Cauchy's integral formula, Derivatives of analytic functions, Taylor's series, Maclaurin's series, Laurent's series, Singularities and zeros.

#### Unit – II

Complex Analysis: Residue integration method, evaluation of real integrals Numerical Methods: Errors of numerical results, error propagation,., Lagrange Interpolation, Newton divided difference interpolation, Newton's forward and backward interpolation, Spline interpolation.

#### Unit - III

Numerical Methods: Numerical integration: The trapezoidal rule, The Simpson's rules, Gauss Integration formulas. Solution of ordinary differential equation: Euler's method, Improvement of Euler's method, Runge-Kutta methods, multistep methods, Methods for system and higher order ordinary differential equations.

#### Unit - IV

Probability Theory and Its Applications: Probability, Random variables, Probability distributions, Mean and variance; Features of Probability Distribution: Binomial, Poisson, Uniform and Normal distribution, Distribution of several random variables.

#### Unit – V

Statistical Techniques and Its Applications: Scope of Statistics, Random sampling, Sampling Distribution, Correlation analysis, Regression Analysis, Fitting Straight Lines, Estimation of Parameters, Statistical Hypothesis.

**CBSN-201 VALUE EDUCATION, HUMAN RIGHTS AND LEGISLATIVE PROCEDURE**

**UNIT – I :** Concept of Human Values, Value Education Towards Personal Development Aim of education and value education; Evolution of value oriented education; Concept of Human values; types of values; Components of value education.

Personal Development: Self-analysis and introspection; sensitization towards gender equality, physically challenged, intellectually challenged. Respect to - age, experience, maturity, family members, neighbors, co-workers.

**UNIT – II :** Value Education Towards National and Global Development National and International Values: Constitutional or national values - Democracy, socialism, secularism, equality, justice, liberty, freedom and fraternity. Social Values - Pity and probity, self-control, universal brotherhood. Professional Values - Knowledge thirst, sincerity in profession, regularity, punctuality and faith. Religious Values - Tolerance, wisdom, character. Aesthetic values - Love and appreciation of literature and fine arts and respect for the same. National Integration and international understanding.

**UNIT – III :** Environment and Ecological balance – interdependence of all beings – living and non-living. The binding of man and nature – Environment conservation and enrichment.

**UNIT - IV :** Therapeutic Measures Control of the mind through a. Simplified physical exercise b. Meditation – Objectives, types, effect on body, mind and soul c. Yoga – Objectives, Types, Asanas d. Activities: (i) Moralization of Desires (ii) Neutralization of Anger (iii) Eradication of Worries (iv) Benefits of Blessings

**UNIT; V :** Human Rights 1. Concept of Human Rights – Indian and International Perspectives a. Evolution of Human Rights b. Definitions under Indian and International documents

2. Broad classification of Human Rights and Relevant Constitutional Provisions. a. Right to Life, Liberty and Dignity b. Right to Equality c. Right against Exploitation d. Cultural and Educational Rights e. Economic Rights f. Political Rights g. Social Rights

3. Human Rights of Women and Children a. Social Practice and Constitutional Safeguards (i) Female Foeticide and Infanticide (ii) Physical assault and harassment (iii) Domestic violence (iv) Conditions of Working Women

4. Institutions for Implementation a. Human Rights Commission b. Judiciary

5. Violations and Redressal a. Violation by State b. Violation by Individuals c. Nuclear Weapons and terrorism d. Safeguards.

## Humanities and Science

### (CBSN 201 A)

#### Unit I

Atomic and molecular structure Schrodinger equation. Particle in a box solutions and their applications for simple sample. Molecular orbitals of diatomic molecules . Energy level diagrams of diatomic. Pi-molecular orbitals of butadiene and benzene and aromaticity. Crystal field theory and the energy level diagrams for transition metal ions and their magnetic properties. Band structure of solids and the role of doping on band structures.

#### Unit II

Spectroscopic techniques and applications Principles of spectroscopy and selection rules. Electronic spectroscopy. Fluorescence and its applications in medicine. Vibrational and rotational spectroscopy of diatomic molecules. Applications. Nuclear magnetic resonance and magnetic resonance imaging, surface characterisation techniques. Diffraction and scattering

#### Unit III

Intermolecular forces and potential energy surfaces Ionic, dipolar and van Der Waals interactions. Equations of state of real gases and critical phenomena.

#### Unit IV

Use of free energy in chemical equilibria First and second laws of thermodynamics and thermodynamic functions: energy, entropy and free energy. Estimations of entropy and free energies. Free energy and emf. Cell potentials, the Nernst equation and applications. Acid base, oxidation reduction and solubility equilibria. Water chemistry. Corrosion. Use of free energy considerations in metallurgy through Ellingham diagrams.

#### Unit V

Periodic properties Effective nuclear charge, penetration of orbitals, variations of s, p, d and f orbital energies of atoms in the periodic table, electronic configurations, atomic and ionic sizes, ionization energies, electron affinity and electronegativity, polarizability, oxidation states, coordination numbers and geometries, hard soft acids and bases, molecular geometries

## **Public Policy**

**(CBSN 201B)**

### **Unit-I**

Introduction of Public Policy: Definition, Nature, Scope and Importance of Public Policy, Evolution of Public Policy and Policy Sciences, Public Policy and Public Administration. Approaches to Public Policy Analysis: The Process Approach, The Logical Positivist Approach, The Phenomenological Approach, The Participatory Approach and Normative Approach

### **Unit-II**

Theories and Process of Public Policy Making: Theories and Models of Policy Making, Perspectives of Policy Making Process, Institutions of Policy Making.

### **Unit-III**

Policy Implementation and Evaluation: Concept of Policy Implementation, Techniques of Policy Implementation, Concept of Policy Evaluation, Constraints of Public Policy Evaluation

### **Unit-IV**

Introduction of Governance: Definitions, Issues and Controversies, Reinventing Government, Reforming Institutions: The State, Market and Public domain. State and Governance: Origin and types of State, Democratic State and Democratic Administration, Neo-Liberalism and Rolling Back State and Governance as Government.

### **Unit-V**

Citizen and Techniques of Governance: Rule of Law and Human Rights, Accountability, Participation, Representation. Techniques of Governance: Openness and Transparency, Citizen Charter, Social Audit. Emerging Trends in Public and Private Governance: An Overview, Market, Civil Society, Information and Communication Technology

## **Leaders for Global Operations**

**(CBSN 201C)**

### UNIT –I

Introduction to Operations Management - Process Planning - Plant Location - Plant Lay out - Introduction to Production Planning.

### UNIT –II

Stages of Development of Operations Research- Applications of Operations Research Limitations of Operations Research- Introduction to Linear Programming- Graphical Method- Simplex Method - Duality.

### UNIT-III

Transportation Problem- Assignment Problem - Inventory Control - Introduction to Inventory Management - Basic Deterministic Models - Purchase Models - Manufacturing Models with and without Shortages.

### UNIT-IV

Shortest Path Problem - Minimum Spanning Tree Problem - CPM/PERT - Crashing of a Project Network.

### UNIT- V

Game Theory- Two Person Zero-sum Games -Graphical Solution of (2 x n) and (m x 2) Games - LP Approach to Game Theory - Goal programming - Formulations - Introduction to Queuing Theory - Basic Waiting Line Models: (M/M/1):(GD/a/a), (M/M/C):GD/a/a).

## PERL PROGRAMMING

CCSN-211

### Course Outcomes:

At the end of the course student will be able to

CO1: To identify basic perl constructs and to outline perl debugging commands.

CO2: To create and design simple perl programs with the available perl

CO3: pre-defined functions.

CO4: To demonstrate perl subroutines and perl references

CO5: To Apply Data Structures on perl programs and perl formats.

CO6: To install HTTP server and to design and execute perl programs CO5: through CGI.

### UNIT-I

(10 Lectures)

Introduction to perl# ! , Basic I/O, Variables variables& Backslash Interpolation, Scalar/list control operators, operator procedure, if unless, loops, loop control.

Debugging perl scripts Debugging commands, Debugger customization, Unattended execution, Debugging support, the perl profiler.

### UNIT-II

(10 Lectures)

Built in Function Perl functions by category, Perl functions in alphabetical order. Regular expressions Pattern Matching, operators, Meta character and meta symbols. Character classes, quantifiers, Pointers, capturing & clustering, Alternation, staying in control.

### UNIT-III

(10 Lectures)

Subroutines Syntax, Semantics, parsing references, prototypes, subroutine attributes. Formats Format variables, footers. References Creating References, using hard references, symbolic references, Braces, Brackets and Quotes.

### UNIT-IV

(10 Lectures)

Data Structure Arrays of Arrays, Hashes of arrays, Arrays of Hashes, Hashes of Hashes, Hashing as function , Elaborate records, Hashes of functions. CGI Programming CGI Basic, Forms, Methods.

### UNIT-V

(10 Lectures)

Here Docs, More CGI Emailing, Cookies, File uploading, E-mail.

### TEXT BOOKS

1. Tom Christiansen, Brian D Foy, Larry Wall, Jon Orwant, *Programming Perl*, O'Reily, 3rd Edition, 2010.

Scott Guelich, *CGI Programming with Perl*, O'Reily, et al., SPD publication , 2nd Edition , 2008.

## INTRODUCTION TO SOFT COMPUTING

CCSN-213

### UNIT - I INTRODUCTION TO SOFT COMPUTING 9

Concept of computing systems. "Soft" computing versus "Hard" computing, characteristics of Soft computing, Some applications of Soft computing techniques.

### UNIT - II FUZZY LOGIC 12

Fuzzy sets, logic operations, and relations; Fuzzy decision-making; fuzzy inference systems; design steps in fuzzy logic controller; application of fuzzy logic controller in Electrical engineering.

### UNIT III – NEURAL NETWORKS 12

Basic concepts and major classes of neural networks, supervised and unsupervised learning, Single-layer perceptron, Multi-layer perceptron, Back Propagation Neural network, Recurrent neural networks, support vector machine, Application of neural network modelling / control problems in Electrical engineering

### UNIT – IV OPTIMIZATION TECHNIQUES: 12

Genetic algorithms, Evolutionary Algorithm, Simulated Annealing, Ant colony optimization - Applications to Electrical engineering problems.

#### TEXT BOOKS

1. George J.Klir and Bo Yuan, Fuzzy sets and Fuzzy Logic, Second Edition, PHI, 2006.
2. J.M.Zurada, Introduction to artificial neural systems, Jaico Publishing House, 2006
3. D.E. Goldberg, Genetic algorithms in search, optimization, and machine learning, Addison-Wesley.

# MATLAB Programming For Engineers

CCSN-215

## Unit I

Introduction to MATLAB; Basics of MATLAB: windows - input & output - platform dependence - file types - general commands

## Unit II

Script Files; Function files: Functions – Sub functions; Global Variables, Loops, Branches and control-flow

## Unit III

Tutorials: Basics - Creating and working with arrays - Creating and Printing simple plots - Creating, saving and executing a script - Creating and executing a function file - Working with arrays and matrices - Importing and Exporting data - Files and Directories - Publishing reports

## Unit IV

Graphics; Plotting simple graphs; Basic 2D plots: Style Options – Labels, title and legend –

Axis Control, zoom in and zoom out – Using plot editor - Overlay plots – Specialized 2D Plots; Examples: fplot – semilogx – semilogy – loglog – fill – bar – barh – area – pie – hist – stem – stairs – compass – comet – pcolor; subplots

## Unit V

3D plots; View: view(2) and view(3) with examples; Mesh and surface plots; Examples:

plot3 – fill3 – surf – surfc -surf1 – meshz – waterfall – pie3 – stem3

## REFERENCES

1. Getting started with MATLAB- RudraPratap, Oxford University Press.
2. Mastering MATLAB 7- Duane Hanselma and Bruce Littlefield, Pearson Education.
3. Understanding MATLAB- S N Alam, I K International Publishing House.
4. Programming in MATLAB- Patel and Mittal, Pearson Education India
5. Web resource: [www.mathworks.com](http://www.mathworks.com)

1. Implement insertion, deletion, and display functions for a singly linked list.
2. Create a program to perform insertions and deletions in a doubly linked list.
3. Use arrays to implement a stack with push, pop, and display operations.
4. Create a queue using arrays, including enqueue, dequeue, and display functions.
5. Implement a circular queue with necessary operations.
6. Implement a stack using a linked list and perform standard operations.
7. Create a BST with functions for insertion, deletion, and traversal (in-order, pre-order, post-order).
8. Use adjacency list and matrix to represent a graph, including a function to add edges.
9. Implement DFS for graph traversal.
10. Create a program to perform BFS on a graph.
11. Implement a simple hash table with collision handling using chaining.
12. Create a max-heap and implement insert and delete operations.
13. Implement basic sorting algorithms (Bubble, Selection, Insertion).
14. Write a program to perform merge sort on an array.
15. Create a dynamic array that can grow and shrink in size, with functions for insertion and deletion.

**List of Experiments:**

1. Introduction SQL-SQL\*Plus
2. Road way travels E-R Diagrams
3. Various Data Types
4. Tables
5. My SQL Installation
6. DDL and DML Commands with Examples
7. Key Constrains-Normalization
8. Aggregate functions
9. Joins
10. Views
11. Index
12. PL/ SQL
13. Exception handling
14. Triggers
15. Cursors
16. Subprograms-procedure PL/ SQL
17. Functions of PL/ SQL

- 1) A simple program that prints "Hello, World!" to the console.
- 2) Implement a basic calculator that performs addition, subtraction, multiplication, and division.
- 3) Write a program to calculate the factorial of a number using both iterative and recursive methods.
- 4) Create a program to check if a given string is a palindrome.
- 5) Generate and display the Fibonacci series up to a specified number of terms.
- 6) Implement bubble sort, selection sort, and insertion sort algorithms for an array of integers.
- 7) Write a program to perform linear search on an array.
- 8) Implement binary search on a sorted array.
- 9) Create a program that performs various string operations (substring, concatenation, length, etc.).
- 10) Implement a singly linked list with methods for insertion, deletion, and traversal.
- 11) Create a stack using arrays with push, pop, and display operations.
- 12) Implement a queue using linked lists with enqueue, dequeue, and display operations.
- 13) Create a binary tree and implement in-order, pre-order, and post-order traversal methods.
- 14) Demonstrate the use of HashMap for storing and retrieving key-value pairs.
- 15) Write a program to read from a file and display its contents on the console.

**UNIT I: Introduction to C++:** History of C and C++, Overview of Procedural Programming and Object-Orientation Programming, Compiling and Executing Simple Programs in C++.

**Data Types, Variables, Constants, Operators and Basic I/O:** Declaring, Defining and Initializing Variables, Scope of Variables, Constants, Keywords, Data Types, Casting of Data Types, Operators (Arithmetic, Logical and Bitwise), Character I/O (getc, getchar, putc, putcharc), Formatted and Console I/O (printf(), scanf(), cin, cout), Using Basic Header Files (stdio.h, iostream.h, conio.hetc).

**UNIT II: Expressions, Conditional Statements and Iterative Statements:** Operators in C++, Conditional Statements (if construct, switch-case construct), Understanding syntax and utility of Iterative Statements (while, do-while, and for loops), Use of break and continue in Loops, Using Nested Statements (Conditional as well as Iterative)

**UNIT III: Functions:** Utility of functions, Call, Functions returning value, void functions, Inline Functions, Return data type of functions, Functions parameters, Declaration and Definition of Functions, Command Line Arguments/Parameters in Functions, Functions with variable number of Arguments, virtual function.

**Arrays:** Creating and Using One Dimensional Arrays- ( Declaring and Defining an Array, Initializing an Array, Accessing individual elements in an Array, Manipulating array elements using loops, use various types of arrays (integer, float and character arrays / Strings).

Two-dimensional Arrays- (Declaring, Defining and Initializing Two Dimensional Array, Working with Rows and Columns), Introduction to Multi-dimensional arrays

**Derived Data Types (Structures and Unions), Pointers and References in C++,**

**Memory Allocation in C++:** static and dynamic memory allocation, use of new and delete operators, storage of variables in static and dynamic memory allocation.

**UNIT IV: File I/O, Preprocessor Directives:** Opening and closing a file (use of fstream header file, ifstream, ofstream and fstream classes), Reading and writing Text Files, Using put(), get(), read() and write() functions, Random access in files, Understanding the Preprocessor Directives (#include, #define, #error, #if, #else, #elif, #endif, #ifdef, #ifndef and #undef), Macros. **Using Classes in C++:** Principles of Object-Oriented Programming, Defining & Using Classes, Class Constructors, Function overloading in classes, Class level variable and local variable, Objects as parameters, Specifying the Protected and Private Access, Overview of Template classes and their use.

**UNIT V: Overview of Function Overloading and Operator Overloading**

Need of Overloading functions and operators, Overloading functions by number and type of arguments, looking at an operator as a function call, Overloading Operators (including assignment operators, unary operators), friend function in C++.

**Inheritance, Polymorphism and Exception Handling**

Inheritance, types of inheritance, Polymorphism (compile time and run time), Basics Exceptional Handling (using catch and throw, multiple catch statements), Catching all exceptions, Restricting exceptions, Rethrowing exceptions.

**Reference Books**

1. HerbtzSchildt, "C++: The Complete Reference", Fourth Edition, McGraw Hill.2003

**Unit- I**

**Introduction:** Basics of Algorithms, Characteristics of Algorithms, pseudo code for expressing algorithms, performance analysis-space complexity, time complexity, asymptotic notation- big (O) notation, omega notation, theta notation.

**Unit- II**

**DIVIDE AND CONQUER:** General method, applications-analysis of binary search, quick sort, merge sort, AND OR Graphs.

**GREEDY METHOD:** General method, Applications-job sequencing with deadlines, Fractional knapsack problem, minimum cost spanning trees, Single source shortest path problem.

**Unit- III**

**GRAPHS (Algorithm and Analysis):** Breadth first search and traversal, Depth first search and traversal, spanning trees, connected components and bi-connected components, Articulation points. **DYNAMIC PROGRAMMING:** General method, applications - optimal binary search trees, 0/1 knapsack problem, All pairs shortest path problem, Travelling sales person problem, Reliability design.

**Unit- IV**

**BACKTRACKING:** General method, Applications- n-queen problem, Sum of subsets problem, Graph coloring and Hamiltonian cycles. **BRANCH AND BOUND:** General method, applications - travelling sales person problem, 0/1 knapsack problem- LC branch and bound solution, FIFO branch and bound solution.

**Unit- V**

**NP-HARD AND NP-COMPLETE PROBLEMS:** Basic concepts, non-deterministic algorithms, NP-hard and NP-complete classes, Cook's theorem

**Text books:**

- 1) Thomas H. Cormen, Charles E. Leiserson and Ronald L. Rivest, "Introduction to Algorithms", Printice Hall of India.
- 2) E. Horowitz & S Sahni, "Fundamentals of Computer Algorithms",
- 3) Aho, Hopcraft, Ullman, "The Design and Analysis of Computer Algorithms" Pearson Education, 2008.

## Internet and Web Technology

CCSN- 206

Cr L T P 4 3 1

2

### Unit 1

Introduction web: WWW, History, Protocols, Creating website for individual and corporate, Identification of objects, Cyber Laws, Web team, Communication, Quality assurance, Search Engine, Designing strategies, Database to web applications.

### Unit 2

HTML: History of HTML, Header, HTML Tags: concept of Tag, types of HTML tags, structure of HTML program, Text formatting through HTML: Paragraph breaks, line breaks, background and BGcolor attributes, Emphasizing material in a web page: Heading styles, drawing lines, text styles, Text styles and other text effects-centering, spacing, controlling font size & color, Lists: Using unordered, ordered, definition lists Adding Graphics To HTML Documents: Using Image tag, attributes of Image tag, changing width & height of image, tables, linking documents, Forms,

### Unit 3

Cascade Style Sheets: introduction to CSS, Need for CSS, basic syntax and structure, using CSS, font attributes, color and background attributes, text attributes, border attributes, margin related attributes, list attributes Using class and span tag, External Style Sheets, Creating Divs with ID style, Creating Tag& Class style, creating borders, Navigation links, creating effects with CSS.

### Unit 4

JavaScript: Introduction, Variables, Conditional statements, Operators, Popup box, Functions, Loops, Strings, Events, JavaScript and HTML, JavaScript Object Oriented Programming, use of JavaScript in web pages. Understand JavaScript event model, Variable declaration, Operators, Control Statements, Error Handling, Understanding arrays, Function Declaration, Built In Functions, Standard Date and Time Functions, Working with Objects, Call method in JavaScript.

### Unit 5

Introduction to PHP, Syntax, Common PHP Script Elements, Variables, String, Operators, If...Else, Switch, Arrays, Looping, Functions, Forms, \$\_GET, \$\_POST, Date, Include, Error, Exception, Filter, Working With Forms, Processing Forms, Form Validation

### Reference Books:

- 1) Ivan Bayross“ HTML, DHTML and JavaScript ”, Prentice Hall Inc., 3<sup>rd</sup> Edition, 2003.
- 2) Uttam K. Roy, “Web Technologies ”, Oxford, 1<sup>st</sup> Edition 2010.
- 3) TanweerAlam, “Internet and Java Programming ”, Khanna Book Publication, 1st Edition, 2010.

**UNIT I**

Introduction - History of Computer Networking and the Internet, Goals and Applications of Networks, Network structure and architecture, The Layered Architecture: Protocol Layering, The OSI Reference Model and the TCP/IP protocol, Network Topology Design – Delay Analysis, Back Bone Design, Local Access Network Design, Physical Layer Transmission Media, Switching methods.

**UNIT II**

**Data Link Layer:** Communication at the Data Link Layer; Nodes and Links, Examples of Data Link layer protocols.

**Design Issues:** Framing techniques: Byte Oriented and Bit Oriented Protocols; Error Control: Error Detection and Correction; Sliding Window Flow Control Protocols.

Media Access Control: Aloha, CSMA, CSMA/CD, CSMA/CA; Collision free protocols with Controlled Access; Limited Contention Protocols; Channelization: FDMA, TDMA, CDMA; Wavelength Division Multiple access for Fiber-Optic Data Communication.

**IEEE LAN standards:** Ethernet (Physical specifications, Encoding, Frame Format & MAC protocol); Token Ring and FDDI, Introduction to Wireless Networks: IEEE 802.11 Wireless LAN

**UNIT III**

**Network Layer:** Services, Routing Algorithms: Shortest path Routing, Flooding, Distance Vector Routing, Link State Routing, Hierarchical Routing.

**Network layer in TCP/IP:** Basic characteristics of IP protocol; addressing and header format of IPv4 ; IPv6: Major goals& features.

**Congestion Control & Quality of Service:** General Principals; Congestion control in Virtual – Circuit Subnets; Congestion Control in Datagram Subnets: Choke packets, Load Shedding; Random Early Detection, Jitter Control; Over provisioning, Buffering, Traffic Shaping, Leaky bucket, token bucket, Resource Reservation, Admission Control, Packet Scheduling.

**UNIT IV**

Transport Layer: Transport Layer - Design issues, connection management, session Layer-Design issues, remote procedure call. Presentation Layer-Design issues, Datacompression techniques, cryptography - TCP - Window Management.

**UNIT V**

**Application Layer:** Application Layer: File Transfer, Access and Management, Virtual Terminals, Other application. Example Networks - Internet and Public Networks.

Application Layer Protocols: The Web and http: Persistent and Non- persistent connections, http message format, cookies, proxy server, Email: smtp, mail message formats, mail access protocols: pop3, imap, MIME DNS: Service

**Text Books:**

- 1.Computer Networks, by Andrew S Tanenbaum, PHI. (2010)
- 2.Data and Computer Communications , by Walliam Stallings, PHI. (2002)

**Reference Books:**

- 1.Data Communications, Computer networking on OSI , by Fred Halsall, Addison Wesley Publishing Co.1998

2. Computer Networking -A Top-Down Approach Featuring the Internet , James F. Kurose and Keith W. Ross , Addison Wesley Publishing Co. 2004
3. Computer Networks: Protocols standards and interfaces , by Uyles Black, Prentice Hall.2002
4. Data communication & Networks , by Behrou A. Forouzan, Tata McGraw Hill. 2002

**COURSE OBJECTIVES:** The objectives of this course are to:

1. Introduce the student to the concepts of theory of computation in computer science.
2. Acquire insights into the relationship among formal languages, formal grammars, and automata.
3. Learn to design automata and Turing machine.

**COURSE OUTCOMES:** On successful completion of the course, the student will be able to: 1. Apply the knowledge of automata theory, grammars & regular expressions for solving the problem.

2. Analyze the give automata, regular expression & grammar to know the language it represents.
3. Design Automata & Grammar for pattern recognition and syntax checking.
4. Distinguish between decidability and un-decidability of problems.
5. Identify limitations of some computational models and possible methods of proving them.

**UNIT I:**

Introduction; Alphabets, Strings and Languages; Automata and Grammars, Deterministic finite Automata (DFA)-Formal Definition, Simplified notation: State transition graph, Transition table, Language of DFA, Nondeterministic finite Automata (NFA), NFA with epsilon transition, Language of NFA, Equivalence of NFA and DFA, Minimization of Finite Automata, Distinguishing one string from other, Myhill-Nerode Theorem

**UNIT II:**

Regular expression (RE) , Definition, Operators of regular expression and their precedence, Algebraic laws for Regular expressions, Kleen's Theorem, Regular expression to FA, DFA to Regular expression, Arden Theorem, Non Regular Languages, Pumping Lemma for regular Languages . Application of Pumping Lemma, Closure properties of Regular Languages, Decision properties of Regular Languages, FA with output: Moore and Mealy machine, Equivalence of Moore and Mealy Machine, Applications and Limitation of FA, Chomsky Hierarchy.

**UNIT III:**

Context Free Languages – Leftmost and rightmost derivation, parsing and ambiguity, ambiguity in grammar and languages, normal forms

Context free grammar (CFG) and Context Free Languages (CFL): Definition, Examples, Derivation Derivation trees, Ambiguity in Grammar, Inherent ambiguity, Ambiguous to Unambiguous CFG, Useless symbols, Simplification of CFGs, Normal forms for CFGs: CNF and GNF.

**UNIT IV:**

Pushdown Automata – NDPDA, DPDA, context free languages and PDA, comparison of deterministic and non-deterministic versions, closure properties, pumping lemma for CFL, Acceptance by Final state, Acceptance by empty stack, Deterministic PDA, Equivalence of PDA and CFG, CFG to PDA and PDA to CFG, closure properties of CFLs.

**UNIT V:**

Turing machines (TM): Basic model, definition and representation, Instantaneous Description, Language acceptance by TM, Variants of Turing Machine, TM as Computer of Integer functions, Universal TM, Church's Thesis, Recursive and recursively enumerable languages, Halting problem, Introduction to Decidability, Undecidable problems about TMs. Post

correspondence problem (PCP), Modified PCP, Other Undecidable Problems Introduction to recursive function theory.

**Textbooks:**

1. An Introduction to Formal Languages and Automata, by Peter Linz, Third Edition, Narosa Publishers (1998)
2. Hopcroft, Ullman, "Introduction to Automata Theory, Languages and Computation", Pearson Education

6. Papadimitrou, C. and Lewis, C.L., "Elements of the Theory of Computation", PHI Learning Private Limited, Delhi India.
7. K.Krithivasan and R.Rama; Introduction to Formal Languages, Automata Theory and Computation, Pearson Education.
8. Harry R. Lewis and Christos H. Papadimitriou, Elements of the theory of Computation, Second Edition, Prentice-Hall of India Pvt. Ltd.
9. Micheal Sipser, "Introduction of the Theory and Computation", Thomson Learning.

## NANO SCIENCES

### CCSN 212

#### UNIT I

**Introduction to Nanotechnology:** Introduction, definition, history, effects of nanoscience and nanotechnology in different fields.

**Properties of nanomaterials:** Size and shape and based properties, colour, melting point, density of states, band gap and magnetism.

#### UNIT II

**Nanoparticles synthesis:** Top down and bottom-up approach, colloids, emulsions, micelles, polymers, mechanical attrition and high energy ball milling.

#### UNIT III

**Nanomaterials characterization:** Scanning electron microscopy, Transmission electron microscopy, Fourier transform infrared spectroscopy, Energy dispersive spectroscopy, Atomic force microscopy, X-ray diffraction, Dynamic light scattering, UV-Vis spectrophotometer.

#### UNIT IV

**Fabrication:** Lithography, chemical vapor deposition, physical vapor deposition, sol-gel synthesis, molecular self-assembly, crystal growth, epitaxy, etching, masking.

#### UNIT V

**Applications of nanotechnology in chemical industry:** Catalysis, fuel cells, drug delivery and diagnostics, coatings, nanocomposite polymers, fluid inks, dyes, block copolymers, dendrimers, carbon nanotubes applications.

#### Text Books:

1. Nanoscale materials in Chemistry, K.J. Klabunde, Wiley, 2001.
2. Introduction to Nanotechnology, C.P. Poole Jr. and F.J.Owens, Wiley, 2003.
3. Nanotechnology, M. A. Ratner and D. Ratner, Pearson, 2003.
4. The Chemistry of Nanomaterials: Synthesis, Properties and Applications, C.N.R Rao, Achim Müller, A. K. Cheetham, Wiley, 2004.

#### References:

1. Hand book of Nanostructured Materials and Nanotechnology, H. Nalwa, Vol. 1 to 5, Academic Press, 1999.
2. Hand book of Nanotechnology, B. Bhusan, Springer, 2004.
3. Nanomaterials, Nanotechnologies and Design: An Introduction for Engineers and Architects, D. Schodek, P. Ferreira, M.F. Ashby, 2009.

Unit -1 Fundamentals of Technical Communication: Technical Communication: Features; Distinction between General and Technical Communication; Language as a tool of Communication; Dimensions of Communication: Reading & comprehension; Technical writing: sentences; Paragraph; Technical style: Definition, types & Methods; The flow of Communication: Downward; upward, Lateral or Horizontal; Barriers to Communication.

Unit - II Forms of Technical Communication: Technical Report: Definition & importance; Thesis/Project writing: structure & importance; synopsis writing: Methods; Technical research Paper writing: Methods & style; Seminar & Conference paper writing; Key-Note Speech: Introduction & Summarization; Expert Technical Lecture: Theme clarity; Analysis & Findings; 7 Cs of effective business writing: concreteness, completeness, clarity, conciseness, courtesy, correctness, consideration.

Unit - III Technical Presentation: Strategies & Techniques Presentation: Forms; interpersonal Communication; Class room presentation; style; method; Individual conferencing: essentials: Public Speaking: method; Techniques: Clarity of substance; emotion; Humour; **Modes of Presentation**; Overcoming Stage Fear: Confident speaking; Audience Analysis & retention of audience interest; Methods of Presentation: Interpersonal; Impersonal; Audience Participation: Quizzes & Interjections.

Unit - IV Technical Communication Skills: Interview skills; Group Discussion: Objective & Method; Seminar/Conferences Presentation skills: Focus; Content; Style; Argumentation skills: Devices: Analysis; Cohesion & Emphasis; Critical thinking; Nuances: Exposition narration & Description; effective business communication competence: Grammatical; **Discourse competence: combination of expression & conclusion**; **Socio-linguistic competence: Strategic competence**: Solution of communication problems with verbal and non verbal means.

Unit - V Kinesics & Voice Dynamics: Kinesics: Definitions; importance; Features of Body Language; Voice Modulation: Quality, Pitch; Rhythm; intonation; Pronunciation; **Articulation; stress & accent**; **Linguistic features of voice control: Vowel & Consonant Sounds**. Reference Books

1. Technical Communication – Principles and Practices by Meenakshi Raman & Sangeeta Sharma, Oxford Univ. Press, 2007, New Delhi.
2. Business Correspondence and Report Writing by Prof. R.C. Sharma & Krishna Mohan, Tata McGraw Hill & Co. Ltd., 2001, New Delhi.
3. Practical Communication: Process and Practice by L.U.B. Pandey; A.I.T.B.S. Publications India Ltd.; Krishan Nagar, 2014, Delhi.
4. Modern Technical Writing by Sherman, Theodore A (et.al); Apprentice Hall; New Jersey; U.S.
5. A Text Book of Scientific and Technical Writing by S.D. Sharma; Vikas Publication, Delhi.
6. Skills for Effective Business Communication by Michael Murphy, Harvard University, U.S.
7. Business Communication for Managers by Payal Mehra, Pearson Publication, Delhi.

### Course Outcomes

1. Students will be enabled to understand the nature and objective of Technical Communication relevant for the work place as Engineers.
2. Students will utilize the technical writing for the purposes of Technical Communication and its exposure in various dimensions.
3. Students would imbibe inputs by presentation skills to enhance confidence in face of diverse audience.
4. Technical communication skills will create a vast know-how of the application of the learning to promote their technical competence.
5. It would enable them to evaluate their efficacy as fluent & efficient communicators by learning the voice-dynamics.

# BUSINESS COMMUNICATION

CBSN-202A

L T P Credits

3 1 0 4

## Unit 1: Nature of Communication:

Process of Communication, Types of Communication (verbal & Non Verbal), Importance of Communication, Different forms of Communication Barriers to Communication Causes, Linguistic Barriers, Psychological Barriers, Interpersonal Barriers, Cultural Barriers, Physical Barriers, Organizational Barriers

## Unit 2 Business Correspondence:

Letter Writing, presentation, Inviting quotations, Sending quotations, Placing orders, Inviting tenders, Sales letters, claim & adjustment letters and social correspondence, Memorandum, Inter-office Memo, Notices, Agenda, Minutes, Job application letter, preparing the Resume.

## Unit 3 Report Writing:

Business reports, Types, Characteristics, Importance, Elements of structure, Process of writing, Order of writing, the final draft, and check lists for reports.

## Unit 4 Vocabulary:

Words often confused, Words often misspelt, common errors in English.

## Unit 5 Oral Presentation:

Importance, Characteristics, Presentation Plan, Power point presentation, Visual aids.

## Suggested Readings:

1. Bovee, and Thill, Business Communication Today, Pearson Education
2. Lesikar, R.V. & Flatley, M.E. Kathryn Rentz; Business Communication Making Connections in Digital World, 11th ed., McGraw Hill Education.
3. Shirley Taylor, Communication for Business, Pearson Education
4. Locker and Kaczmarek, Business Communication: Building Critical Skills, TMH
5. LeenaSen, Communication Skills, PHI Learning

## Technical Writing

CBSN-202B

L T P Credits

3 1 0 4

### Unit 1

What is technical writing? Difference between technical writing and other forms of writing. Qualities and qualifications of technical writers.

### Unit 2

End products of technical writing. Professionals involved - project manager/editor, writers, graphic artists; liaison with product engineers/scientists and clients.

### Unit 3

Roles and responsibilities of writers, editors/project managers. 7 Cs of effective writing: Document formats – **hard and soft copy versions designs.**

### Unit 4

Principles of technical writing; styles in technical writing; clarity, precision, **coherence and logical sequence in writing.**

### Unit 5

Stages of Technical writing. Document development process, Technical documentation, Planning, Tools, architecture, templates, content development, **technical reviews, editorial reviews. Quality control.**

### Books for References

1. Technical writing style by – Dan Jones , Sam Dragga
2. Handbook of Technical writing by- Walter.E.ollu -1976
3. Technical Writing by- Serena Henning
4. Technical writing process by – Kieran Morgan and SanjaSpejic -2015
5. A guide to Technical writing by – T.A. Rickard

## INTERCULTURAL COMMUNICATION

CBSN-202C

L T P Credits

3 1 0 4

### Objectives:

This course introduces you to the fundamental principles and issues of intercultural communication from an interdisciplinary perspective. It proposes to develop a perception of and appreciation for different cultural perspectives and values.

### UNIT-I

Language and Culture - studying culture and communication - **Various Definitions of Culture** - basic approaches to the concept of culture - Communication and Culture - Intercultural communication: Interaction in a Diverse World - historic overview of the field - the academic field of intercultural communication - "Culture" in the Field of Intercultural Communication - **Three Principles of Interculturalism** - DMIS: Denial - Defense - Minimization.

### UNIT-II

Identity - Racial identity - Ethnic identity - Cultural identity; Plurality of Identity; Properties of Cultural Identity - Individual - relational and communal identity; Social and Cultural Identities - Gender identities - Age identities - Spiritual identity - Class identity - National identity - Regional identity - Personal identity; Stereotypes - **Cultural Diversity in Perception: Alternative Views of Reality.**

### UNIT-III

Verbal and nonverbal communication (including conversation styles, politeness, and expectations related to time and space) - low and high context communication processing - communication styles - **cultural speaking rules Politeness-perception,** interpretation and evaluation; nonverbal communication; Proxemics - Contact/low contact - Kinesics - Gestures, facial expressions, body language, eye contact; artifacts - Clothing, artifacts, living environments.

## UNIT-IV

Cultural values and communication-Cross-cultural Studies-Individualism and collectivism-Hierarchy and power distance; Intercultural Studies-Intercultural encounters and adaptation-Encounters and emotions-Culture Shock-Intercultural adaptation-U-curve model-honeymoon period-crisis period-adjustment period-acculturation period-W-curve model-Stress-Adaptation-Growth-emigrant assignment cycle.

## UNIT-V

Intercultural competence-Intercultural Competent Person-intercultural sensitivity-Milton Bennett's developmental model of intercultural sensitivity-Acceptance, Adaptation and Integration Measurement of Intercultural Sensitivity; Theory to practice-Cultural influences on context-the business setting, the educational setting and the healthcare setting.

1	Write a program to print HELLO WORLD in C++.
2	Write a program to add two numbers using C++.
3	Write a program to Swap two numbers using C++.
4	Write a program to Find Simple Interest in C++.
5	Write a program to Check Even or Odd Integers using if and else in C++.
6	Write a program to create object and class in C++.
7	Write a program to achieve compile time polymorphism in C++.
8	Write a program to using single inheritance in ++.
9	Write a program to using multiple Inheritances in C++.
10	Write a program to using virtual function in C++.
11	Write a program to create parameterized constructor in C++.
12	Write a program to using friend function in C++.
13	Write a program to create function overriding in C++.
14	Write a program to print matrix in C++.
15	Write a program to print addition of a single dimensional array in C++

## DESIGN AND ANALYSIS OF ALGORITHMS LAB

### CCSN-254

LIST OF EXPERIMENTS: (Any 12 experiments from the following list to be performed)

1. Implement Selection sort and find how many steps are required to sort 10 elements.
2. Implement and Analysis factorial of a number program using iterative and recursive methods.
3. Implement Insertion Sort and analyses the time complexity.
4. Given two strings, find the minimum number of edits required to convert one string to another.
5. Write a program to find the Greatest Common Divisor of two numbers using recursion and find how many steps are required to execute it.
6. Sort a given set of elements using the quick sort method and determine the time required to sort the elements. Repeat the experiment for different values of n (the number of elements in the list to be sorted) and plot a graph of the time taken versus n. The elements can be read from a file or can be generated using the random number generator.
7. Write a program to check whether a given graph is connected or not using the DFS method.
8. Apply Greedy method to compress the given data using Huffman encoding.
9. Implement fractional knapsack problem using Greedy Strategy.
10. Implement minimum spanning tree using Prim's algorithm and analyses its time complexity.
11. Apply dynamic programming methodology to implement 0/1 Knapsack problem.
12. Solve the longest common subsequence problem using dynamic programming.
13. Find the length of the longest subsequence in a given array of integers such that all elements of the subsequence are sorted in strictly ascending order.
14. Apply dynamic programming methodology to find all pairs shortest path of a directed graph using Floyd's algorithm.
15. Implement matrix chain multiplication and find the optimal sequence of parentheses.

## INTERNET AND WEB TECHNOLOGY LAB

### CCSN-256

1. Create a simple webpage using HTML to display a personal profile, including text, images, and links.
2. Develop a webpage that uses CSS to style elements such as headings, paragraphs, and lists. Implement a navigation bar and footer.
3. Write a JavaScript program to validate user input in an HTML form, ensuring that required fields are filled out correctly.
4. Design a webpage that adapts to different screen sizes using CSS media queries. Test it on various devices or emulators.
5. Create a webpage that uses AJAX to fetch data from a public API and display it dynamically without reloading the page.
6. Build a webpage that dynamically updates its content using JavaScript. For example, create a simple to-do list where users can add and remove items.
7. Develop a web application that integrates with a third-party API, such as a weather API, to display current weather information based on user input.
8. Implement a web application that uses localStorage or sessionStorage to save user preferences or a simple note-taking feature.
9. Create a simple PHP application that connects to a MySQL database, allowing users to insert, update, and delete records.
10. Develop a web application that includes user registration and login functionality using PHP and a database.
11. Build a basic CMS that allows users to create, edit, and delete blog posts, using PHP and MySQL.
12. Create a simple chat application using WebSockets to enable real-time communication between users.
13. Develop a web application that allows users to upload images, storing them on a server and displaying them on the site.
14. Design an e-commerce product page using HTML, CSS, and JavaScript, including features like product descriptions, images, and a shopping cart.
15. Build a simple single-page application using a JavaScript framework (like React or Vue) that allows users to navigate between different views without refreshing the page.

UNIT-I

Introduction: Definition and scope of operations research (OR), Necessity of operation research in industry .phases of OR study. Linear Programming: Two variable Linear Programming model and Graphical method of solution

Unit-II

Game Theory: uses of game theory ,some applications and examples payoffs, characteristic of game theory ,Two person zero-sum game ,Pure and Mixed strategies, Saddle point and its existence.

Unit-III

Queuing Theory in operation research , Two phase method, Dual Simplex method, special cases of Linear Programming, duality, Dual Simplex algorithm.

UNIT-IV

Transportation Problems: Types of transportation problems, mathematical models, transportation algorithms, Assignment: Allocation and assignment problems and models, **processing of job through machines.**

UNIT-V

Network Techniques: Shortest path model, minimum spanning Tree Problem, Max-Flow problem and Min-cost problem. Project Management: **Phases of project management, guidelines for network construction, CPM and PERT.**

# SOFTWARE ENGINEERING

CCSN-301

Cr L-T-P  
4 3- 1-0

**COURSE OBJECTIVES:** The objectives of this course are to

1. Learn and understand the principles of Software Engineering.
2. Learn methods of capturing, specifying, visualizing, and analyzing software requirements.
3. Apply Design and Testing principles to S/W project development.
4. Understand project management through life cycle of the project.

**COURSE OUTCOMES:** On successful completion of the course, the student will be able to

1. Identify appropriate software design model based on requirement analysis.
2. Formulate Software Requirements Specification (SRS) reports for the real world application.
3. Translate a specification into a design and identify the components to build the architecture.
4. Plan a software engineering process to account for quality issues and non-functional requirements.
5. Estimate the work to be done, resources required and the schedule for a software project plan.

**UNIT – I- Introduction to Software Engineering:** Introduction, software applications, importance of software evolution of software, Software Components, Software Characteristics, Software Crisis & myths, Software Engineering paradigms, Software Engineering Processes, Similarity and Differences from Conventional Engineering Processes, Software Quality Attributes. Software Development Life Cycle (SDLC) Models: Water Fall Model, Prototype Model, RAD model, Spiral Model, Evolutionary Development Models, Iterative Enhancement Models.

## UNIT - II

**Software Requirement Specifications (SRS):** Requirement Engineering Process: Elicitation, Analysis, Documentation, Review and Management of User Needs, Feasibility Study, Information Modelling, Data Flow Diagrams, Entity Relationship Diagrams, Decision Tables, SRS Document, IEEE Standards for SRS. Software Quality Assurance (SQA): Verification and Validation, SQA Plans, Software Quality Frameworks, ISO 9000 Models, SEI-CMM Model.

## UNIT - III

**Software Design:** Basic Concept of Software Design, Architectural Design, Low Level Design: Modularization, Design Structure Charts, Pseudo Codes, Flow Charts, Coupling and Cohesion Measures, Design Strategies: Function Oriented Design, Object Oriented Design, Top-Down and Bottom-Up Design. Software Measurement and Metrics: Various Size Oriented Measures: Halstead's Software Science, Function Point (FP) Based Measures, Cyclomatic Complexity Measures: Control Flow Graphs.

## UNIT - IV

**software testing strategies:** Testing Objectives, Unit Testing, Integration Testing, Acceptance Testing, Regression Testing, Top-Down and Bottom-Up Testing Strategies: Structural Testing (white box), Functional Testing (black box testing), validation testing, system testing, debugging, Alpha and Beta Testing of Products.

## UNIT - V

**Software Reliability and Software Project Management:** fault avoidance and tolerance, exception handling, defensive programming. Software Maintenance: maintenance characteristics, maintainability, maintenance tasks, maintenance side effects. CASE: introduction, levels of case,

architecture, case building blocks, objectives, case repository, characteristics of case tools, categories, Estimation of Various Parameters such as Cost, Efforts, Schedule/Duration, Constructive Cost Models (COCOMO), Resource Allocation Models, Software Risk Analysis and Management.

# COMPILER DESIGN

CCSN303

Cr L-T-P

4 3- 1- 0

## Unit - I

Introduction to Compiler: Phases and passes, Bootstrapping, Finite state machines and regular expressions and their applications to lexical analysis, Optimization of DFA-Based Pattern Matchers

Implementation of lexical analyzers, lexical-analyzer generator, LEX compiler, Formal grammars

and their application to syntax analysis, BNF notation, ambiguity, YACC. The syntactic specification of programming languages: Context free grammars, **derivation and parse trees**, capabilities of CFG.

## Unit – II

Basic Parsing Techniques: Parsers, Shift reduce parsing, operator precedence parsing, top down parsing, predictive parsers Automatic Construction of efficient Parsers: LR parsers, the canonical Collection of LR(0) items, constructing SLR parsing tables, constructing Canonical LR parsing tables, Constructing LALR parsing tables, using ambiguous grammars, an automatic parser generator, implementation of LR parsing tables.

## Unit - III

Syntax-directed Translation: Syntax-directed Translation schemes, Implementation of Syntax-directed Translators, Intermediate code, postfix notation, Parse trees & syntax trees, three address

code, quadruple & triples, translation of assignment statements, Boolean expressions, statements that alter the flow of control, postfix translation, translation with a top down parser. More about translation: Array references in arithmetic expressions, procedures call, **declarations and case statements**.

## Unit - IV

Symbol Tables: Data structure for symbols tables, representing scope information. Run-Time Administration: Implementation of simple stack allocation scheme, storage allocation in block structured language. Error Detection & Recovery: Lexical Phase errors, syntactic phase errors semantic errors.

Intermediate Code Generation Different Intermediate Forms - Abstract Syntax tree, Polish Notation, 3 address code, Implementation of 3 address code-Quadruple, Triples and Indirect triples

## Unit - V

Code Generation: Design Issues, the Target Language. Addresses in the Target Code, Basic Blocks and Flow Graphs, Optimization of Basic Blocks, Code Generator. Code optimization: Machine-Independent Optimizations, Loop optimization, **DAG representation of basic blocks, value numbers and algebraic laws, Global Data-Flow analysis**.

## OBJECT ORIENTED ANALYSIS AND DESIGN

CCSN-305

Cr L-T-P 4 3-1-0

### Unit – I

Object Modeling: Objects and classes, links and association, generalization and inheritance, aggregation, abstract class and abstract function, inheritance and multiple inheritance, Meta data.

### Unit – II

Dynamic Modeling: Events and states, operations, nested state diagrams, advanced dynamic modeling concepts, sample dynamic model.

### Unit – III

Functional Modeling: Data flow diagram, specifying operations, a sample functional model. OMT (object modeling techniques) methodologies, examples and case studies to demonstrate methodologies, comparisons of methodologies, SA/SD, JSD.

### Unit – IV

Java Programming: Introduction, Operator, Data types, Variables, Methods & Classes, Static methods, Static block, Interfaces, final method and classes, Multithread Programming, Thread life cycle, I/O, Java Applet. Java Library: String Handling, Input/Output exploring Java.io, Networking, Applets classes, Event Handling, Introduction to AWT, Working with window, Graphics, AWT Controls, Layout Manager and Menus, Images, AWT Basics, Event Handling, AWT Button, AWT Label, AWT TextField, AWT TextArea, AWT Checkbox.

### Unit – V

Software Development using Java: Java Beans, Java Swing, java Servlets, Servlets Basic Concepts, JSP, Features of JSP, creating simple JSP page, Application of java, Dynamic Billboard Applet, Image Menu: An image based menu, Lavatron Applets, Scrabblets, JDBC, Brief functioning of upper layer E-mail and their applications.

### Text Books:

# CRYPTOGRAPHY AND INFORMATION SECURITY

CCSN-307

Cr L-T-P  
4 3-1-0

## Unit - I

**Security Concepts:** Introduction, The need for security, Security approaches, Principles of security, Types of Security attacks, Security services, Security Mechanisms, A model for Network Security .

**Cryptography Concepts and Techniques:** Introduction, plain text and cipher text, substitution techniques, transposition techniques, encryption and decryption, symmetric and asymmetric key cryptography, stenography, key range and key size, possible types of attacks.

## Unit - II

**Symmetric key Ciphers:** Block Cipher principles, DES, AES, Blowfish, RC5, IDEA, Block cipher operation, Stream ciphers.

**Asymmetric key Ciphers:** Principles of public key cryptosystems, RSA algorithm, Diffie-Hellman Key Exchange and Knapsack Algorithm.

## Unit - III

**Cryptographic Hash Functions:** Message Authentication, Secure hash algorithm(SHA-512)

**Message Authentication Codes:** Authentication requirements.

**Digital signatures Key Management and Distribution:** Symmetric Key Distribution Using Symmetric & Asymmetric Encryption, Distribution of Public Keys, Kerberos, X.509 Authentication Service, Public – Key Infrastructure.

## Unit - IV

**Transport-level Security:** Web security considerations, Secure Socket Layer and Transport Layer Security, HTTPS, Secure Shell (SSH)

**Wireless Network Security:** Wireless Security, Mobile Device Security, IEEE 802.11 Wireless LAN, IEEE 802.11i Wireless LAN Security

## Unit - V

**E-Mail Security:** Pretty Good Privacy, S/MIME

**IP Security:** IP Security overview, IP Security architecture, Authentication Header, Encapsulating security payload, Combining security associations, Internet Key Exchange.

**Case Studies on Cryptography and security:** Secure Multiparty Calculation, Virtual Elections, Single sign On, Secure Inter-branch Payment Transactions, Cross site Scripting Vulnerability.

# INTERNET WEB PROGRAMMING

## CCSN 309

### Unit 1: Introduction to Web Development

This unit introduces the fundamentals of web development, including an overview of the web's architecture. Students will learn about the roles of clients and servers, the basics of HTTP, and the difference between static and dynamic web pages.

### Unit 2: HTML and CSS

In this unit, students will explore HTML for structuring web content and CSS for styling it. They will learn to create semantic HTML documents, apply CSS styles, and understand the box model, layout techniques, and responsive design principles.

### Unit 3: JavaScript Basics

This unit focuses on JavaScript as the programming language of the web. Students will learn about variables, data types, functions, control structures, and the Document Object Model (DOM). They will practice manipulating HTML elements and responding to user events.

### Unit 4: Advanced JavaScript and AJAX

Building on the basics, this unit covers more advanced JavaScript concepts, including asynchronous programming, callbacks, and promises. Students will learn about AJAX for making asynchronous requests to servers, enabling dynamic content updates without reloading the page.

### Unit 5: Introduction to Front-End Frameworks

In this unit, students will be introduced to popular front-end frameworks such as React, Angular, or Vue.js. They will learn about component-based architecture, state management, and how to create interactive user interfaces.

# GRAPH THEORY

CCSN 311

## UNIT 1

**Introduction:** Graphs, Sub-graphs, Regular graph, Adjacency and incidence matrices, Finite and infinite graph, Incidence and degree, Isolated vertex, Pendent vertex and null graph, **Turan's theorem.**

## UNIT 2

**Paths and Circuits:** Isomorphism, Walk, Cycle, Paths and circuits, Simple and proper circuit, Connected and disconnected graph, Euler graphs, Operations on graphs, Hamiltonian paths and circuits, Bipartite graph, Berge theorem, Hall's theorem, Edge connectivity, Blocks, Menger's theorem.

**Trees and Fundamental Circuits:** Trees, Properties of tree, Pendant vertices in a tree, Distance and centers in a tree, Spanning tree, Cayley's Formula, Minimal spanning tree, Prim and Kruskal's algorithm, Matrix Tree theorem, Dijkstra's Shortest Path Algorithm, Floyd-Warshall algorithm, Huffman's Coding Algorithm, Depth-first and breath first algorithm.

## UNIT 3

**Cuts sets and cut-vertices:** Cut sets, Properties of cutset, all cut sets in a graph, 1-isomorphism, 2isomorphism.

**Planar graph and dual graphs:** Planar graphs, Homoeomorphic graph, Kuratowski's Two Graphs, Different representation of a planar graph, Tutte's f-factor theorem, Detection of planarity, Geometric dual, Combinatorial dual.

## UNIT 4

**Coloring, Covering and Partitioning:** Chromatic number, Chromatic Partitioning, Chromatic Polynomial, Covering, Four colour conjecture, Five-colour theorem, Dirac Theorem, **Brooks theorem, Vizing theorem.**

## UNIT 5

**Directed Graphs:** Directed graph, Diagraph and binary relations, Directed Paths, Euler diagraphs, **Acyclic digraphs, Topological sorting, Warshall's algorithm,** Bellman-Ford algorithm, Ramsey theorems.

### Recommended Books:

# COMPUTER VISION

CUCS 341

## UNIT 1

**Overview of computer vision and its applications:** Image Formation and Representation: Imaging geometry, radiometry, digitization, cameras and Projections, rigid and affine transformation

## UNIT 2

**Image Processing:** Pixel transforms, color transforms, histogram processing, histogram equalization, filtering, convolution, Fourier transformation and its applications in sharpening, **blurring and noise removal**

## UNIT 3

**Feature detection:** edge detection, corner detection, line and curve detection, active contours, SIFT and HOG descriptors, shape context descriptors, Morphological operations

**Segmentation:** Active contours, split & merge, watershed, region splitting, region merging, graph-based segmentation, mean shift and model finding, Normalized cut

## UNIT 4

**Camera calibration:** camera models; intrinsic and extrinsic parameters; radial lens distortion; direct parameter calibration; camera parameters from projection matrices; orthographic, **weak perspective, affine, and perspective camera models.**

**Motion representation:** the motion field of rigid objects; motion parallax; optical flow, the image brightness constancy equation, affine flow; differential techniques; feature-based techniques; regularization and robust estimation

## UNIT 5

**Motion tracking:** statistical filtering; iterated estimation; observability and linear systems; **the Kalman filter**

**Object recognition and shape representation:** alignment, appearance-based methods, invariants, image eigenspaces

2. Computer Vision: Algorithms and Applications, R. Szeliski, Springer, 2011.
3. Introductory techniques for 3D computer vision, E. Trucco and A. Verri, Prentice Hall, 1998.

## ROBOTICS AND AUTOMATION

### CUCS 343

#### Unit 1: Introduction to Robotics

This unit covers the fundamental concepts of robotics, including an overview of its applications across various industries. Students will explore the historical development of robotics, different types of robots, and the basic components that make up robotic systems.

#### Unit 2: Robotics Kinematics

In this unit, students will learn about kinematics and its significance in robotics. The focus will be on forward and inverse kinematics, the use of homogeneous transformation matrices, and methods for representing position and orientation in three-dimensional space.

#### Unit 3: Robot Dynamics

This unit delves into the principles of dynamics as applied to robotic systems. Students will study Newton-Euler and Lagrangian methods for dynamic modeling, gaining insights into the behavior of robotic manipulators through simulation.

#### Unit 4: Control Systems for Robotics

Students will be introduced to control theory, emphasizing feedback and feedforward control mechanisms. The unit will cover PID control in robotic applications as well as advanced control strategies such as adaptive and robust control.

#### Unit 5: Sensors and Perception

This unit focuses on the various types of sensors utilized in robotics. Students will learn about sensor fusion techniques, vision systems, image processing, and the role of lidar and other spatial perception technologies in enhancing robotic functionality.

## HUMAN COMPUTER INTERACTION

### CUCS 347

#### UNIT I

Introduction: Importance of user Interface – definition, importance of good design. Benefits of good design. A brief history of Screen design. The graphical user interface – popularity of graphics, the concept of direct manipulation, graphical system, Characteristics, Web user – Interface popularity, characteristics- Principles of user interface.

#### UNIT II

Design process – Human interaction with computers, importance of human characteristics human consideration, Human interaction speeds, understanding business junctions. Screen Designing: Design goals – Screen planning and purpose, organizing screen elements, ordering of screen data and content – screen navigation and flow – Visually pleasing composition – amount of information – focus and emphasis – presentation information simply and meaningfully – information retrieval on web – statistical graphics – Technological consideration in interface design.

#### UNIT III

Windows – New and Navigation schemes selection of window, selection of devices based and screen- based controls. Components – text and messages, Icons and increases – Multimedia, colors, uses problems, choosing colors.

#### UNIT IV

HCI in the software process, The software life cycle Usability engineering Iterative design and prototyping Design Focus: Prototyping in practice Design rationale Design rules Principles to support usability Standards Golden rules and heuristics HCI patterns Evaluation techniques, Goals of evaluation, Evaluation through expert analysis, Evaluation through user participation, Choosing an evaluation method. Universal design, Universal design principles Multi-modal interaction

#### UNIT V

Cognitive models Goal and task hierarchies Design Focus: GOMS saves money Linguistic models The challenge of display-based systems Physical and device models Cognitive architectures Ubiquitous computing and augmented realities Ubiquitous computing applications research Design Focus: Ambient Wood – augmenting the physical Virtual and augmented reality Design Focus: Shared experience Design Focus: Applications of augmented reality Information and data visualization Design Focus: Getting the size right.

**TEXT BOOKS:** 1. The essential guide to user interface design, Wilbert O Galitz, Wiley Dream Tech. Units 1, 2, 3 2. Human – Computer Interaction. Alan Dix, Janet Finckay, Gregory, Abowd, Russell Bealg, Pearson Education Units 4,5

**REFERENCE BOOKS:** 1. Designing the user interface. 3rd Edition Ben Shneidermann, Pearson Education Asia. 2. Interaction Design Prece, Rogers, Sharps. Wiley Dreamtech. 3. User Interface Design, Soren Lauesen , Pearson Education. 4. Human –Computer Interaction, D. R. Olsen, Cengage Learning. 5. Human –Computer Interaction, Smith - Atakan, Cengage Learning.

**Unit - I**

Introduction to Cloud Computing: Evolution and History of Cloud Computing, Why Cloud Computing is Becoming Highly Important, Features of Cloud Computing, Advantages of Cloud Computing, Characteristics of Cloud Computing, Limitations of Cloud Computing. Cloud Computing Applications, Cloud Technologies, Security Risks of Cloud Computing **Cloud Service Provider Companies**.

**Unit - II**

Cloud Models and Types: Deployment Models, Service Models. Layers and Types of Cloud, Components of Cloud Computing, Cloud Computing Service Providers, Software as a Service (SaaS): Software as a Service, Evolution of SaaS, Brief Introductory part of Software as a Service, Characteristics of SaaS, Services Provided by SaaS, Advantages/ Disadvantages of SaaS, SaaS Providers and their services.

**Unit -III**

Platform as a Service (PaaS): Introduction to PaaS, Advantages of PaaS, Disadvantages of PaaS, Evolution of PaaS, PaaS Service Providers- Amazon AWS, Google App Engine, Force.com, PaaS Application Framework, PaaS Operator Verbs, PaaS Developer Verbs, Challenges of PaaS

**Unit -IV**

Infrastructure as a Service (IaaS): Evolution, IaaS Architecture- Advantages and Disadvantages of Infrastructure as a Service, IaaS Providers, IaaS Architecture, Advantages and Disadvantages of Infrastructure as a Service Data in Cloud: Evolution of Network Storage in Cloud, Data as a Service, **Database as a Service, Cloud Based Data Storage**, Advantages and Limitations of Cloud Based Storage Solution, Cloud Based Data Storage Service Providers

**Unit - V**

Virtualization: Introduction to Virtualization and its Technical Evolution, History of Virtualization, Types of Virtual Machines, Advantages of Virtualization, Components of Virtualization, Types of Virtualization, Cloud Hypervisor,

Infrastructure Security Network level security, Host level security, Application level security. Data privacy and security Issues. Access Control and **Authentication in cloud computing**.

# ENERGY STUDIES

**CBSN-301**

**Cr L-T-P**

**2 2-0-0**

UNIT 1: Energy Sources - Fossil fuels, Nuclear fuels, hydel, solar, wind and bio fuels in India, Energy conservation, Nuclear energy through fission and fusion processes.

UNIT 2: Energy Conversion- Energy conversion from source to utility, Solar, Nuclear, Geothermal, Tide and Wind Energies.

UNIT 3: Global Energy Scenario- Role of energy in economic development and social transformation, Overall energy demand, availability and consumption, Depletion of energy resources and its impact on economy, **Non proliferation of nuclear energy.** International energy policies of G-8, G-20, OPEC and European Union countries.

UNIT 4: Indian Energy Scenario- Commercial and noncommercial forms of energy, Utilization pattern in the past, present and also future prediction, **Sector wise energy consumption.**

UNIT 5: Energy Policy: Energy policy issues at global level, national level and state level, Energy conservation act 2001, Electricity act 2003, Energy pricing and its impact on global variations.

## **Course Outcomes:**

At the end of this course, students will demonstrate the ability to

1. Understanding Energy Sources
2. Energy Conversion Processes
3. Global Energy Dynamics
4. Indian Energy Landscape
5. Energy Policy and Regulation
6. Sustainability and Conservation
7. Research and Communication Skills
8. Critical Thinking and Problem Solving

## **Text Books:**

1. Jose Goldenberg, Thomas Johanson, and Reddy, A.K.N., Energy for Sustainable World, WileyEastern, 2005.

2. TEDDY Year Book, The Energy Research Institute (TERI), 2011

# SUPPLY CHAIN MANAGEMENT

## CBSN-301A

### UNIT 1

#### **Introduction**

Introduction, Generic Types of supply chain, Various Definitions and Implications, Major Drivers of Supply chain.

#### **Strategic Decisions- in Supply Chain Management**

Introduction, Business Strategy, Core Competencies in Supply Chain, **Strategic SC Decisions**, Customer Relationship Management Strategy, Supplier Relationship Management Strategy

#### **Source of Management in Supply Chain**

Introduction, Elements of Strategic Sourcing, **A Collaborative Perspective**, Development of Partnership.

### UNIT 2

#### **Inventory Management in Supply Chain**

Introduction, Types of Inventory, Supply/ Demand Uncertainties, Inventory costs, Selective Inventory Control, Vendor Manage Inventory system, Inventory Performance Measure

#### **Logistics In Supply Chain Management**

Introduction, Strategy, Transportation Selection, Trade-off, Models for Transportation and Distribution, Third Party Logistics,, **Overview of Indian Infrastructure for Transportation**

### UNIT 3

#### **Information Technology in Supply Chain**

Introduction, Types of IT Solutions like Electronic Data Inter change (EDI), Intranet/ Extranet, Data Mining/ Data Warehousing and Data Marts, E-Commerce, E- Procurement, Bar Coding Technology.

#### **Information System in Supply Chain**

Introduction, Computer Based Information Systems, Computer Models and Perceptions about ERP, ERP & SCM

#### **Application of Mathematical Modeling in Supply Chain**

Introduction, Modeling, Consideration in Modeling SCM System, **Structuring the Logistic chain, Concept of Modeling.**

### UNIT 4

#### **Reverse Supply Chain**

Introduction, Reverse Supply Chain v/s Forward Supply Chain, Types of Reverse Flows, Issues in Management of Reverse Supply Chain, Reverse Supply Chain for Food items, Reverse

Logistic and Environment Impact.

#### **Integration & Collaborative Supply Chain**

Introduction, Evolution of collaborative SCM, Efficient Customer response, Collaboration at various levels, **Imperatives for Successful Integrative Supply Chains.**

## **UNIT 5**

### **Agile Supply Chain**

Introduction, Source of Variability, Characteristics of Agile Supply Chain, Achieving Agility in Supply Chain.

### **Cases of Supply Chain**

Cases of Supply Chain like, News Paper Supply Chain, Book Publishing, Mumbai Dabbawala, Disaster management, **Organic Food, Fast Food.**

### **Text Books & Reference Books:**

1 Supply Chain Management Theories & Practices, R. P. Mohanty, S. G. Deshmukh, Dreamtech Press, 19-A, Anari Road, Daryaganj, New Delhi

2 Supply Chain Management Strategy, Planning & Operation by Sunil Chopra, Peter Meindl

3 Total Supply Chain Management by Ron Basu, J. Nevan Wright

4 Supply Chain Management, Chopra, Pearson

5 Logistics Engineering and Management, Blanchard, pearson

# TRANSPORTATION

## CBSN-301B

### UNIT 1

Introduction to Transportation Engineering, Classification of roads, Typical cross sections of roads in urban and rural area, Requirements and factors controlling alignment of roads  
Introduction to geometric design of highways, Design controls and criteria, Design of highway cross section elements, Design of horizontal alignment - Stopping sight distance, Overtaking sight distance, super elevation, transition curve, length and shift of transition curve, **extra widening. Vertical alignment (introduction only)**

### UNIT 2

Introduction to highway materials, Desirable properties and testing of road aggregates, bituminous materials and sub grade soil. Introduction of flexible and rigid pavements, **Factors influencing the design of flexible pavements, Design** of flexible pavements by CBR method and IRC 37: 2018. Construction of bituminous pavements

### UNIT 3

Introduction to traffic engineering, Traffic characteristics, Capacity and Level of Service, Design Speed, Traffic surveys, Types of road intersections, **Traffic control devices (introduction only), Design of isolated signals by Webster's method.**

### UNIT 4

Railway Engineering - Component parts of a railway track - functions, concept of Gauges, coning of wheels, cant deficiency, compensation of gradients Tunnel Engineering: Tunnel – sections, tunnel surveying - alignment, transferring centre grade into tunnel. Harbours – classification, features, requirements. Break waters - necessity and functions, classification. Docks – **Functions and types - dry docks, wet docks ( Introduction only)**

### UNIT 5

Introduction to Airport Engineering, Components of airport, selection of site for airport. Runway orientation, basic runway length and corrections required, **Taxiways and aprons**

#### Text Books

1. Khanna, S.K. and Justo C.E.G., Highway Engineering, Nem Chand & Bros., 20152. Kadiyali, L. R. and N.B Lal, Principles and Practices of Highway Engineering, KhannaPublishers, 20133. Khanna, S. K. and Arora. M. G., Airport Planning and Design, Nemchand& Bros4. Mundrey J. S, Railway Track Engineering, Tata McGraw Hill, 2009

# Environment And Sustainability

CBSN-301 C

## UNIT 1

**Ecosystem:** Structure of ecosystem, Biotic & Abiotic components, Aquatic (Lentic and Lotic) and terrestrial ecosystem. Global warming - Causes, effects, GreenHouse Effect, Ozone depletion.

## UNIT 2

**Air Pollution:** Air pollution, Natural and manmade sources of air pollution, Effects of air pollution. Air Pollutants and Types. Control of air pollutants by Cyclone separator and Electrostatic Precipitator, Air (prevention and control of pollution) act 1981.

Noise Pollution: Noise pollution: sources of pollution, measurement of pollution level, Effects and Control of Noise pollution, Noise pollution (Regulation and Control) Rules, 2000.

## UNIT 3

**Water and Soil Pollution:** Water pollution and Sources of water pollution, Types of water pollutants, Characteristics of water pollutants, control measures of water pollution.. Definition and list unit operations in water and WasteWater Treatment process, Water (prevention and control of pollution) act 1974, Water conservation – Importance of Rain Water Harvesting. Soil pollution, Causes, Effects and Preventive measures of Soil Pollution due to Excessive use of Fertilizers, Pesticides and Insecticides.

## UNIT 4

**Renewable sources of Energy:** Solar Energy: Basics of Solar energy. Definition and advantages of advanced solar collectors. Solar water heater and Solar stills and their uses. Biomass: Overview of biomass as energy source. Thermal characteristics of biomass as fuel. Wind energy: Current status and future prospects of wind energy. Wind energy in India. Need of new Energy sources, Different type's new energy sources. Environmental benefits of New Energy Sources- Hydrogen energy, Ocean energy resources, Tidal energy conversion.

## UNIT 5

**Solid Waste Management and Environmental:** Solid waste generation, Sources and characteristics of Municipal solid waste, Solid Waste Management rules 2016- 3R in SWM. E-Waste generation, Sources and characteristics, E waste management rules 2016 Plastic Waste generation, Sources and characteristics, Recycled plastic rules 2016 Importance of Environment (protection) act 1986 Occupational health and safety measures.

**List of Experiments:**

1. To prepare problem statement for any project.
2. Create a problem statement for an online learning platform.
3. Develop an understanding and Software Requirements Specification (SRS).
4. To draw a sample Entity Relationship Diagram for library management system.
5. To prepare DataFlow Diagram Online shopping management system.
6. To prepare the student / university management system Use Case Diagram
7. To draw a sample activity diagram for enterprise architectural modeling.
8. To draw a sample Class diagram for seminar.
9. To draw a Sequence Diagram for Online Shopping Checkout Process
10. To draw a Component Diagram for Library Management System.
11. To draw a Deployment Diagram for University Management System.
12. Develop a testing strategy for an online banking application.
13. Create a presentation that explains each phase of the SDLC with examples.

## COMPILER DESIGN LAB

### CCSN-353

1. Create a lexer using Lex/Flex to tokenize input source code and print tokens with types.
2. Build a recursive descent parser or use Yacc/Bison to parse a grammar and display parse trees for valid inputs.
3. Implement a semantic checker that traverses the parse tree to identify type mismatches and undeclared variables.
4. Develop a module that converts the parse tree to intermediate representation (e.g., three-address code).
5. Apply optimization techniques like constant folding and dead code elimination to the intermediate code.
6. Create a generator that translates intermediate code into assembly language for a specified target architecture.
7. Implement error detection and reporting for lexical, syntax, and semantic errors with meaningful messages.
8. Use ANTLR or LLVM to construct a complete compiler from grammar definitions to code generation.
9. Measure compilation time and memory usage, and evaluate the efficiency of the generated code.
10. Develop a mini compiler for a simple language combining all components: lexer, parser, semantic analyzer, optimizer, and code generator.

## OBJECT ORIENTED ANALYSIS AND DESIGN LAB

### CCSN-355

1. Design a class diagram for a simple system (e.g., library management) using UML notation.
2. Implement a program to create objects of defined classes and initialize their attributes.
3. Write a program demonstrating method overloading in one class and method overriding in a subclass.
4. Develop a class that uses private and public access modifiers to encapsulate data and provide getter/setter methods.
5. Create a base class and derive multiple subclasses, demonstrating the use of inherited properties and methods.
6. Implement a program that uses both compile-time (method overloading) and runtime (method overriding) polymorphism.
7. Design an interface and an abstract class, then implement classes that adhere to these definitions.
8. Write a program to illustrate the differences between composition and aggregation through class relationships.
9. Implement a design pattern (e.g., Singleton, Factory) in a sample application to demonstrate its utility.
10. Create use case and sequence diagrams for a given scenario to illustrate interactions and functionality.

# Computer Graphics

CCSN 302

L T P 4 0 2

## Unit – I

**Fundamentals of Computer Graphics:** Introduction, Area and Applications of computer Graphics, Graphical Input-Output Devices, Random scan displays, Raster scan displays. Cathode Ray Tube

**Graphics Primitives:** Algorithms for drawing various output primitives - Line, Circle, arcs & sectors, Polygon: Polygon Representation, Entering polygons, Boundary Fill & Flood Fill algorithm

## Unit – II

**Two Dimensional Transformations:** Introduction, Types of Transformation : Translation, Rotation, Scaling, Shear, Reflection, Homogenous coordinate system, Composite transformations.

## Unit – III

**Viewing & Clipping 2-D:** 2D Windowing, Window to View port transformation, Line Clipping Algorithms : Cohen Sutherland, Liang Barsky Line clipping algorithms, Polygon clipping algorithm : Sutherland Hodgeman,

## Unit – IV

**Three Dimensional Transformation :** 3-D geometry primitives, transformations. Viewing & Clipping: 3-D Viewing, Projections : Parallel and Perspective projections.

**Curves & Surfaces:** Curved Lines & surfaces, Interpolation & Approximation splines, Parametric & Geometric Continuity conditions, Bezier Curves & surfaces, B-spline curves & surfaces.

## Unit – V

**Illumination & Visible Surface Detection Methods:** : Classification of visible surface detection algorithms, Depth buffer method, Scan-line method, Depth-Sorting method, Subdivision Algorithm.

**Illumination Models & Surface Rendering:** Light sources, Light and Color, Phong Model, Surface Rendering methods, Basic Ray tracing algorithm.

### Text Books:

1. Donald D Hearn, M. Pauline Baker, “Computer Graphics, C version”, 2nd Edition, Pearson Education (1997).
2. James D. Foley, Andries van Dam, Steven K. Feiner, John F. Hughes, “Computer Graphics: Principles & Practice in C”, 2nd Edition, Addison Wesley Longman (1995).

### Reference Books:

1. Donald Hearn and M Pauline Baker, “Computer Graphics with OpenGL”, Pearson education, 2004.
2. Zhigang Xiang, Roy A Plastock, “Computer Graphics”, Schaums Outline, TMH(2007).

3. Dave Shreiner, Mason Woo, Jackie Neider, Tom Davis, “OpenGL Programming Guide: The Official Guide to Learning OpenGL” (2013).

**UNIT I**

**Data Warehousing and Business Analysis:** - Data warehousing Components –Building a Data warehouse –Data Warehouse Architecture – DBMS Schemas for Decision Support – Data Extraction, Cleanup, and Transformation Tools –Metadata – reporting – Query tools and Applications – Online Analytical Processing (OLAP) – OLAP and Multidimensional Data Analysis.

**UNIT II**

Data Mining: - Data Mining Functionalities – Data Preprocessing – Data Cleaning – Data Integration and Transformation – Data Reduction – Data Discretization and Concept Hierarchy Generation- Architecture of A Typical Data Mining Systems- **Classification Of Data Mining Systems.**

Association Rule Mining: - Efficient and Scalable Frequent Item set Mining Methods – Mining Various Kinds of Association Rules – Association Mining to Correlation Analysis – Constraint-Based Association Mining.

**UNIT III**

Classification and Prediction: - Issues Regarding Classification and Prediction – Classification by Decision Tree Introduction – Bayesian Classification – Rule Based Classification – Classification by Back propagation – Support Vector Machines – Associative Classification – Lazy Learners – Other Classification Methods – Prediction – Accuracy and Error Measures – Evaluating the Accuracy of a Classifier or Predictor – **Ensemble Methods – Model Section..**

**UNIT IV**

Cluster Analysis: - Types of Data in Cluster Analysis – A Categorization of Major Clustering Methods – Partitioning Methods – Hierarchical methods – Density-Based Methods – Grid-Based Methods – Model-Based Clustering Methods – Clustering High-Dimensional Data – Constraint-Based Cluster Analysis – Outlier Analysis.

**UNIT V**

**Mining Object, Spatial, Multimedia, Text and Web Data:**

**Multidimensional Analysis and Descriptive Mining of Complex Data Objects – Spatial Data Mining – Multimedia Data Mining – Text Mining – Mining the World Wide Web.**

**TEXT BOOKS**

1. J. Han and M. Kamber, “Data Mining: Concepts and Techniques”, Harcourt India /Morgan Kauffman, 2001. (UNITs 1 to IV)
2. Alex Berson and Stephen J. Smith, “Data Warehousing, Data mining and OLAP”, Tata McGraw-Hill, 2004. (UNIT V)

**REFERENCES**

# MOBILE COMPUTING

CCSN-306

Cr. L T P  
4 3 1 0

## UNIT I: Introduction To Mobile Computing

Mobile Communications and Computing, Mobile Computing, novel applications, limitations, and architecture.

GSM : Mobile services, System architecture, Radio interface, Protocols, Localization and calling, Handover, Security, and New data services.

## UNIT II: Cellular Concept And System Design Fundamentals

Introduction to wireless communication: Evolution of mobile communications, mobile radio systems- Examples, trends in cellular radio and personal communications. Cellular Concept: Frequency reuse, channel assignment, hand off, Interference and system capacity, tracking and grade of service, Improving Coverage and capacity in Cellular systems. SDMA, FDMA, TDMA, CDMA.

## UNIT III: Mobile Radio Propagation

Free space propagation model, reflection, diffraction, scattering, link budget design, Outdoor Propagation models, Indoor propagation models, Small scale Multipath propagation, Impulse model, Small scale Multipath measurements, parameters of Mobile multipath channels, types of small scale fading, statistical models for multipath fading channels.

## UNIT IV: Medium Access Control

(Ad Hoc networks, localization, MAC issues, Routing protocols, global state routing (GSR), Destination sequenced distance vector routing (DSDV), Dynamic source routing (DSR), Ad Hoc on demand distance vector routing (AODV), Temporary ordered routing algorithm (TORA), QoS in Ad Hoc Networks, applications.

## UNIT V: Wireless Lan Standards

Wireless Networking, Wireless LAN Overview: MAC issues, IEEE 802.11, Blue Tooth, Wireless multiple access protocols, TCP over wireless, Wireless applications, data broadcasting, Mobile IP, WAP: Architecture, protocol stack, application environment, applications

# KNOWLEDGE MANAGEMENT & EXPERT SYSTEM

CCSN-308

Cr. L T P  
4 3 1 0

## Unit - I

Introduction to knowledge Management Distinction between data, information & knowledge. Concept of knowledge creation, Intellectual Capital Creation, Human Capital, Customer Capital and Organizational Capital. History of KM, Importance of KM, Information Management to Knowledge Management, K M Cycle, Industrial Economy to Knowledge Economy

## Unit-II

Socio-cultural aspects & organizational aspects Tacit & Explicit knowledge & Knowledge Organization. Knowledge Storage and Distribution, KM tools, Data warehouse, Data mining, knowledge management evaluation & Valuation of Knowledge. Mechanics of Knowledge Management–Tools and Technologies, Communities of Practice and Knowledge conversion, **The knowledge Management Matrix.**

## Unit-III

Social Nature of Knowledge, Social Network Analysis, Obstacles to knowledge sharing, Organizational learning & Social Capital. Knowledge Application – Individual level, Group level & Organization Level.

## Unit – IV

Km Team–Roles & Responsibilities, Political issues in KM, Ethics in KM, Strategies issues in Knowledge Management, Future of Knowledge Management. Expert System Existing Expert Systems (DENDRAL, MYCIN), Architecture of expert system, Features of Expert system, Genetic algorithm, Fuzzy logic, Neural Networks, Intelligent Agents, Meta Knowledge, Expertise Transfer, Self-Explaining System, User and expert systems.

## Unit-V

KM Strategy, Knowledge audit, GAP Analysis, Road Map, KM Metrics, Balance Score Card. KM Tools – Knowledge Capture & Creation tools, Knowledge sharing & Dissemination Tools, Knowledge Acquisition & Application tools. K-Initiative, K-Strategic issues in knowledge management, K-Commerce

# SOFTWARE PROJECT MANAGEMENT

CUCS-342

Cr. L T P  
4 3 1 0

**COURSE OBJECTIVES:** The objectives of the course are to:

1. Introduce the primary important concepts of project management related to managing software development projects.
2. Become familiar with the different activities involved in Software Project Management
3. Know how to successfully plan and implement a software project management activity, and to complete a specific project in time with the available budget.

**COURSE OUTCOMES:** Upon completion of this course, the students will be able to

1. Identify the different project contexts and suggest an appropriate management strategy.
2. Practice the role of professional ethics in successful software development.
3. Identify and describe the key phases of project management.
4. Determine an appropriate project management approach through an evaluation of the business context and scope of the project
5. Manage the people and control the defects.

## Unit – I

Introduction and Software Project Planning, Fundamentals of Software Project Management (SPM), Need Identification, Vision and Scope document, Project Management Cycle, SPM Objectives, Management Spectrum, SPM Framework, Software Project Planning, Planning Objectives, Project Plan, Types of project plan, Managing Human Resource and Technical Resource, Structure of a Software Project Management Plan, Software project estimation, Estimation methods, Estimation models, Costing and pricing of projects, Decision process.

## Unit – II

### Project Organization and Scheduling

Project Elements, Work Breakdown Structure (WBS), Types of WBS, Functions, Activities and Tasks, Project Life Cycle and Product Life Cycle, Ways to Organize Personnel, Project schedule, Scheduling Objectives, Building the project schedule, Scheduling terminology and techniques, Network Diagrams: PERT, CPM, Bar Charts: Milestone Charts, Gantt Charts (SPI), Interpretation of Earned Value Indicators, Error Tracking, Software Reviews, Types of Review: Inspections, Deskchecks, Walkthroughs, Code Reviews, Pair Programming.

## Unit - III

### Project Monitoring and Control

Dimensions of Project Monitoring & Control, Earned Value Analysis, Earned Value Indicators: Budgeted Cost for Work Scheduled (BCWS), Cost Variance (CV), Schedule Variance (SV), Cost Performance Index (CPI), Schedule Performance Index (SPI), Interpretation of Earned Value Indicators, Error Tracking, Software Reviews, Types of Review: Inspections, Desk checks, Walkthroughs, Code Reviews, Pair Programming.

## Unit – IV

### Software Quality Assurance and Testing

Testing Objectives, Testing Principles, Test Plans, Test Cases, Types of Testing, Levels of Testing, Test Strategies, Program Correctness, Program Verification & validation, Testing Automation & Testing Tools, Concept of Software Quality, Software Quality Attributes, Software Quality Metrics and

**Indicators**, The SEI Capability Maturity Model CMM), SQA Activities, Formal SQA Approaches: Proof of correctness, Statistical quality assurance, Cleanroom process.

Unit – V

Project Management and Project Management Tools

Software Configuration Management: Software Configuration Items and tasks, Baselines, Plan for Change, Change Control, Change Requests Management, Version Control, Risk Management: Risks and risk types, Risk Breakdown Structure (RBS), Risk Management Process: Risk issues in Software Development and Implementation, Identification of Risks , Resolving and Avoiding risks, Tools and Methods for Identifying Risk Management. Cost Benefit Analysis, Software Project Management Tools: CASE Tools, Planning and Scheduling Tools, MS-Project.

# MICROWAVE ENGINEERING

## CUCS 344

### Unit 1: Introduction to Microwave Engineering

This unit introduces the fundamental concepts of microwave engineering, defining microwaves and their applications in modern technology. Students will explore the characteristics of microwave signals, the frequency range of microwaves, and the importance of microwave engineering in telecommunications, radar, and medical devices.

### Unit 2: Microwave Transmission Lines

In this unit, students will study the principles of microwave transmission lines, including their types and characteristics. The unit will cover the concept of impedance, standing wave ratio (SWR), and the analysis of transmission line parameters. Students will also learn about microstrip and stripline technology.

### Unit 3: Microwave Components and Devices

This unit focuses on the various components and devices used in microwave engineering. Students will learn about passive components such as waveguides, couplers, and filters, as well as active devices like microwave amplifiers, oscillators, and mixers. The principles of operation and design considerations for these components will be discussed.

### Unit 4: Microwave Measurement Techniques

Students will explore microwave measurement techniques in this unit. The unit will cover methods for measuring power, voltage standing wave ratio (VSWR), frequency, and attenuation. Students will learn about the use of vector network analyzers and spectrum analyzers in microwave testing.

### Unit 5: Microwave Circuit Design

This unit delves into the principles of microwave circuit design. Students will study design methodologies for amplifiers, oscillators, and filters, focusing on techniques for achieving stability and performance at microwave frequencies. The unit will include design software tools for simulation and analysis.

## SUPPLY CHAIN MANAGEMENT-PLANNING

### CUCS 346

#### Unit 1: Introduction to Supply Chain Management

This unit introduces the fundamental concepts of supply chain management, emphasizing its importance in modern business operations. Students will explore the key components of a supply chain, the roles of various stakeholders, and the impact of effective supply chain planning on organizational performance.

#### Unit 2: Demand Forecasting

In this unit, students will study the techniques and methodologies used for demand forecasting. The unit will cover qualitative and quantitative forecasting methods, including time series analysis and causal models. **Students will learn how to analyze historical data and market trends to make informed predictions about future demand.**

#### Unit 3: Inventory Management

This unit focuses on inventory management strategies within the supply chain. Students will learn about different types of inventory, inventory control systems, and the Economic Order Quantity (EOQ) model. The unit will also address the challenges of inventory management, including stockouts, overstocking, and **the impact of lead times.**

#### Unit 4: Production Planning and Scheduling

Students will explore the principles of production planning and scheduling in this unit. The unit will cover strategies for capacity planning, master production scheduling, and **materials requirements planning (MRP)**. Students will learn about the importance of aligning production schedules with demand forecasts to optimize resource utilization.

#### Unit 5: Supply Chain Network Design

In this unit, students will learn about the design and optimization of supply chain networks. The unit will cover factors influencing network design, including facility location, **transportation modes, and distribution strategies.** Students will study models and tools used for network optimization and decision-making.

## SOFTWARE TESTING

### CUCS 348

#### Unit 1: Introduction to Software Testing

This unit introduces the fundamental concepts of software testing, defining its purpose and importance in the software development lifecycle. Students will explore the goals of testing, the difference between verification and validation, and the various levels of testing from unit to system testing.

#### Unit 2: Testing Principles and Strategies

In this unit, students will learn about the core principles of software testing. The unit will cover fundamental testing strategies, including black-box testing, white-box testing, and grey-box testing. Students will understand how to select appropriate testing strategies based on project requirements.

#### Unit 3: Test Planning and Design

This unit focuses on the process of test planning and design. Students will learn how to create effective test plans, define test objectives, and identify test cases. The unit will also cover techniques for test design, including equivalence partitioning, boundary value analysis, and decision table testing.

#### Unit 4: Test Execution and Defect Reporting

Students will explore the test execution process in this unit. The unit will cover the execution of test cases, the use of test management tools, and the process of logging and reporting defects. Students will learn how to document test results and communicate effectively with development teams.

#### Unit 5: Automated Testing

In this unit, students will examine automated testing methods and tools. The unit will cover the benefits and challenges of automation, scripting for automated tests, and the use of popular testing frameworks such as Selenium and JUnit. Students will also learn about continuous integration and its role in automated testing.

## Unit 1: Introduction to Environmental Studies

- Multidisciplinary nature of environmental studies;
- Scope and importance; Concept of sustainability and sustainable development.

## Unit 2: Ecosystems

- Ecosystem: Structure & function of ecosystem;
- Forest ecosystem, Aquatic ecosystems, Desert ecosystem
- Energy flow in an ecosystem: food chains, food webs and ecological succession.

## Unit 3: Natural Resources: Renewable and Non-renewable Resources

- Land resources; Land degradation, soil erosion and desertification.
- Deforestation: Causes and impacts due to mining, dam building on environment, forests, biodiversity and tribal populations.
- Water: Use and over-exploitation of surface and ground water, floods, droughts, water conflicts.
- Energy resources: Renewable and non-renewable energy sources, use of alternate energy sources, growing energy needs.

## Unit 4: Biodiversity and Conservation

- Biodiversity & Levels of biodiversity; Biogeographic zones of India; Biodiversity patterns and global biodiversity hot spots.
- India as a mega-biodiversity nation; Endangered and endemic species of India
- Threats to biodiversity
- Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.
- Importance of biodiversity services

## Unit 5: Environmental Pollution

- Environmental pollution: types, causes, effects and controls; Air, water, soil and noise pollution human health risks
- Solid waste management: Control measures of urban and industrial waste.

## Unit 6: Environmental Policies &amp; Practices

- Climate change, global warming, ozone layer depletion, acid rain and impacts on human communities and agriculture
- Disaster management: floods, earthquake, cyclones and landslides.
- Environmental movements
- Environment Laws: Environment Protection Act; Air (Prevention & Control of Pollution) Act; Water Conservation (Prevention and control of Pollution) Act; Wildlife Protection Act; Forest Conservation, Environmental communication and public awareness.

# Environmental Science

## CBSN-302A

Unit I: Concept and scope of Environmental Science; Environmental Science as a multidisciplinary subject; Nature, Man & Society; Introduction to natural resources and its depletion, life support system.

Unit II: Introduction to the Earth Systems: Composition, structure and evolution of lithosphere, hydrosphere and atmosphere; Geological time scale and **Past records of life.**

Unit III Chemical potential, acid base reaction, solubility of gases in water, the carbonate system, Classification of elements, **Chemical speciation**, Redox Potential, Concept of pH, Eh and their variations in water.

Unit IV: Fundamental concept of genetics: Concept of nucleic acids, replication, transcription, translation, operon concept; Fundamental concept of microbes: Microbial growth, kinetics, stress response and control; **Fundamental concept of statistical hypothesis testing: Mean, mode, median, concept of p- Value, t- test and chi- square test, ANOVA.**

# NATURAL RESOURCE MANAGEMENT

## CBSN-302 B

### Unit 1: Introduction to Natural Resource Management

This unit introduces the concept of natural resource management, highlighting its significance in sustainable development. Students will explore different types of natural resources, including renewable and non-renewable resources, and discuss the relationship between natural resources and human well-being.

### Unit 2: Ecosystem Services and Biodiversity

In this unit, students will learn about ecosystem services and their role in supporting life on Earth. The unit will cover the importance of biodiversity, the threats it faces, and strategies for conservation. Students will explore how healthy ecosystems contribute to natural resource management.

### Unit 3: Water Resource Management

This unit focuses on the management of freshwater resources, including rivers, lakes, and groundwater. Students will examine water conservation techniques, the challenges of water scarcity, and integrated water resource management (IWRM). Topics such as watershed management and water quality assessment will also be covered.

### Unit 4: Soil and Land Management

In this unit, students will explore soil conservation and land management practices. The unit will cover soil types, erosion control methods, land use planning, and sustainable agricultural practices. The impact of land degradation and strategies for rehabilitation will also be discussed.

### Unit 5: Forest and Wildlife Management

This unit addresses the management of forest resources and wildlife conservation. Students will learn about sustainable forestry practices, the role of forests in carbon sequestration, and the importance of protecting wildlife habitats. Topics such as community-based forest management will also be explored.

## POLLUTION CONTROL

### CBSN-302C

#### Unit 1: Introduction to Pollution

This unit provides an overview of pollution, defining its types and sources. Students will learn about the environmental and health impacts of pollution, as well as the importance of pollution control in achieving sustainable development.

#### Unit 2: Air Pollution

In this unit, students will explore the sources and types of air pollutants, including particulate matter, nitrogen oxides, and volatile organic compounds. The unit will cover the effects of air pollution on human health and the environment, along with strategies for monitoring and controlling air quality.

#### Unit 3: Water Pollution

This unit focuses on the causes and effects of water pollution, examining pollutants such as heavy metals, nutrients, and pathogens. Students will study the methods for assessing water quality and the technologies used for water treatment and pollution prevention.

#### Unit 4: Soil Pollution

Students will learn about soil contamination in this unit, including sources such as industrial waste, agricultural chemicals, and landfill leachate. The unit will cover the impacts of soil pollution on ecosystems and human health, as well as remediation techniques and sustainable land management practices.

#### Unit 5: Noise Pollution

This unit addresses the sources and effects of noise pollution on communities and wildlife. Students will explore noise measurement methods, regulatory standards, and noise control strategies, including urban planning and sound insulation techniques.

## COMPUTER GRAPHICS LAB

### CCSN-352

1. Implement a program to draw basic shapes like lines, circles, and rectangles using a graphics library (e.g., OpenGL, SDL).
2. Create a program that demonstrates 2D transformations such as translation, rotation, and scaling on shapes.
3. Implement line clipping algorithms (e.g., Cohen-Sutherland or Liang-Barsky) to clip lines within a defined viewport.
4. Write a program that implements polygon filling algorithms (e.g., scan-line filling or flood fill) to color enclosed areas.
5. Develop a program to draw and manipulate Bézier curves using control points.
6. Create a program that renders simple 3D objects (e.g., cubes, spheres) and applies basic lighting effects.
7. Implement a program that demonstrates 3D transformations including translation, rotation, and scaling on 3D models.
8. Write a program to apply textures to 3D objects and demonstrate different texture filtering techniques.
9. Create a simple animation program that moves an object across the screen using keyframe interpolation.
10. Implement a program that simulates shadows in a 3D scene using shadow mapping or ray tracing techniques.

## DATA WAREHOUSING & DATA MINING LAB

### CCSN-354

1. Create a star or snowflake schema for a given business scenario using a database management system.
2. Develop an Extract, Transform, Load (ETL) process to populate a data warehouse from multiple data sources.
3. Implement Online Analytical Processing (OLAP) operations such as slicing, dicing, and drilling down on a data cube.
4. Write a program to clean a dataset by removing duplicates, handling missing values, and standardizing formats.
5. Implement the Apriori algorithm to discover frequent itemsets and generate association rules from transaction data.
6. Develop a program to apply clustering algorithms (e.g., K-means or DBSCAN) on a dataset and visualize the clusters.
7. Create a program that implements a decision tree algorithm for classification tasks and visualizes the tree structure.
8. Write a program to perform linear regression analysis on a dataset and evaluate the model's performance.
9. Develop a program to visualize data mining results using charts, graphs, or dashboards with tools like Matplotlib or Tableau.
10. Implement a predictive model using machine learning techniques to forecast future trends based on historical data.

## MINI PROJECT

### CCSN-356

1. Develop a console or web-based application for managing book inventory, user registrations, and transactions.
2. Create an e-commerce website that allows users to browse products, add to cart, and complete purchases.
3. Implement a system to manage patient records, appointments, and billing within a hospital environment.
4. Develop a program that stores and manages student data, including enrollment, grades, and attendance.
5. Create a personal finance application that allows users to track expenses, categorize them, and generate reports.
6. Build an application that fetches weather data from an API and displays current conditions and forecasts.
7. Implement a real-time chat application using sockets that enables users to send messages to each other.
8. Develop a task management application that allows users to create, update, and prioritize tasks.
9. Create a quiz platform that presents questions to users, records their responses, and provides instant feedback.
10. Build a dashboard that aggregates social media feeds and allows users to interact with their accounts from one interface.

## EMBEDDED COMPUTING SYSTEMS

### CCSN 310

#### Unit 1: Introduction to Embedded Systems

This unit introduces the fundamental concepts of embedded systems, defining what they are and their significance in modern technology. Students will explore the various types of embedded systems and their applications across different industries, as well as the basic components that make up an embedded system.

#### Unit 2: Microcontrollers and Microprocessors

In this unit, students will learn about the architecture and functioning of microcontrollers and microprocessors. The unit will cover different types of microcontrollers, their internal components, and how they differ from general-purpose processors. Practical examples of microcontroller applications will be discussed.

#### Unit 3: Programming Embedded Systems

This unit focuses on programming techniques for embedded systems. Students will learn about programming languages commonly used in embedded development, such as C and C++. The unit will also cover development environments, debugging techniques, and best practices for writing efficient embedded code.

#### Unit 4: Real-Time Operating Systems (RTOS)

Students will explore the principles of real-time operating systems in this unit. The unit will cover the characteristics of RTOS, task scheduling, inter-process communication, and resource management. Practical examples of RTOS in embedded applications will be provided.

#### Unit 5: Interfacing and Communication Protocols

This unit examines the various interfacing techniques and communication protocols used in embedded systems. Students will learn about digital and analog interfacing, as well as protocols such as UART, SPI, I2C, and CAN. Hands-on examples will illustrate how to implement these protocols in projects.

## SIMULATION AND MODELING

### CCSN 312

#### Unit 1: Introduction to Simulation and Modeling

This unit introduces the fundamental concepts of simulation and modeling, defining their significance in various fields such as engineering, science, and economics. Students will explore the types of models, the modeling process, and the applications of simulation in **problem-solving and decision-making.**

#### Unit 2: Types of Models

In this unit, students will learn about different types of models, including physical, mathematical, and computational models. The unit will cover deterministic versus stochastic models, continuous versus discrete models, and **the advantages and limitations of each type.**

#### Unit 3: Simulation Methodologies

This unit focuses on various simulation methodologies, including discrete-event simulation, system dynamics, and agent-based modeling. Students will explore the characteristics of each methodology **and how to choose the appropriate one for specific applications.**

#### Unit 4: Statistical Concepts for Simulation

Students will study the statistical concepts essential for simulation in this unit. The unit will cover probability distributions, random number generation, and statistical analysis techniques. Emphasis will be placed on the role of statistics in validating and interpreting simulation results.

#### Unit 5: Simulation Software Tools

In this unit, students will become familiar with various simulation software **tools commonly used in industry and research.** The unit will provide hands-on experience with tools such as **MATLAB, Simulink, AnyLogic, or Arena, focusing** on their features and applications.

# APPROXIMATION OF ALGORITHMS

CCSN 314

## Unit 1: Introduction to Approximation Algorithms

This unit introduces the concepts of approximation algorithms, defining their purpose and significance in solving NP-hard problems. Students will explore the challenges posed by computational complexity and the need for approximate solutions in practical applications.

## Unit 2: Complexity Classes and NP-Hard Problems

In this unit, students will learn about complexity classes, particularly focusing on NP, NP-hard, and NP-complete problems. The unit will cover fundamental concepts such as polynomial-time reductions and **the implications of these classifications for algorithm design.**

## Unit 3: Performance Metrics for Approximation Algorithms

This unit focuses on the metrics used to evaluate the performance of approximation algorithms. Students will learn about approximation ratios, worst-case guarantees, and the concept of efficiency in relation to exact solutions. **The trade-offs between accuracy and computational efficiency will also be discussed.**

## Unit 4: Greedy Algorithms

In this unit, students will explore greedy algorithms as a fundamental approach to approximation. The unit will cover classic problems that can be solved using greedy techniques, including the Knapsack problem and Minimum Spanning Tree. **Students will analyze the performance of greedy algorithms in these contexts.**

## Unit 5: Dynamic Programming and Approximation

Students will study how dynamic programming can be leveraged to develop approximation algorithms in this unit. The unit will examine problems like the Subset Sum and Longest Common Subsequence, **focusing on how dynamic programming techniques can lead to effective approximations.**

# ARTIFICIAL INTELLIGENCE

CCSN-401

Cr L-T-P

4 3- 1-0

## Unit - I

**Introduction:** Introduction to Artificial Intelligence, History, Importance of AI, and goal. AI programming techniques; Introduction to Intelligent Agents: Agents and environments. Game Playing: Minimax search, Mini-Max algorithm, Search algorithms: Informed search, Uninformed search, Hill Climbing, Depth first search, Best first search, A\*, And or graph.

## Unit - II

**Processing and understanding Natural Languages:** Natural Language processing: Steps in NLP, Applications of Natural Languages, Components of NLP, Understanding Natural Languages: Machine Translation (MT), Automated Reasoning, Question Answering, Speech Recognition: Types of Speech Recognition, Applications of Speech Recognition, , Production Rules: parsing techniques: Rules of parsing, Top down parsing, Bottom up parsing, Transformational grammars, **Context free grammar, Transition networks, Fillmore's grammars, Shanks Conceptual Dependency.**

## Unit - III

**Knowledge Representation:** Graphs, Frames structures and related structures, Semantic Nets and predicate logic, Scripts, Frames, inheritance, Introduction to PROLOG, Knowledge Based systems, Inference engine, Forward deductions and backward deductions, Scientific Analysis, **Medical Diagnosis Financial Analysis**

## Unit - IV

**Expert System** – Introduction, Basic concepts, Existing Expert Systems (DENDRAL, MYCIN), Architecture of expert system, how expert systems works, problem areas addressed by expert systems, Features of Expert system, Genetic algorithm, Fuzzy logic, Neural Networks, Intelligent Agents, **Meta Knowledge, Expertise Transfer, Self Explaining System, User and expert systems.**

## Unit - V

**Pattern Recognition** Introduction to Pattern Recognition, Structured Description, Symbolic Description, Machine perception, Line Finding, Interception, Semantic & Model, **Object Identification, visual perception,.**

### Reference Books :

2. Stuart Russell and Peter Norvig, "*Artificial Intelligence: A Modern Approach.*", Prentice Hall, Third Edition, 2010.
3. Elaine Rich, Kevin Knight and ShivashankarB.Nair, "*Artificial Intelligence*", Tata McGraw-Hill, Third edition, 2009.

# DISTRIBUTED COMPUTING SYSTEMS

CCSN-403

Cr. L T P  
4 3 1 0

## Unit-I

Characterization of Distributed Systems: Introduction, Examples of distributed Systems, Resource sharing and the Web Challenges. Architectural models, Fundamental Models. Theoretical Foundation for Distributed System: Limitation of Distributed system, absence of global clock, shared memory, Logical clocks, Lamport's & vectors logical clocks. Concepts in Message Passing Systems: causal order, total order, total causal order, Techniques for Message Ordering, Causal ordering of messages, **global state, termination detection.**

## Unit-II

Time and Global States: Introduction, Clocks Events and Process States, Synchronizing Physical Clocks, Logical Time and Logical Clocks, Global States, Distributed Debugging. Coordination and Agreement: Introduction, Distributed Mutual Exclusion, Elections, Multicast Communication, **Consensus and Related Problems**

## Unit-III

Agreement Protocols: Introduction, System models, classification of Agreement Problem, Byzantine agreement problem, Consensus problem, Interactive consistency Problem, Solution to Byzantine Agreement problem, Application of Agreement problem, Atomic Commit in Distributed Database system. Distributed Resource Management: Issues in distributed File Systems, Mechanism for building distributed file systems, Design issues in Distributed Shared Memory, **Algorithm for Implementation of Distributed Shared Memory.**

## Unit-IV

Inter Process Communication: Introduction, The API for the Internet Protocols, External Data Representation and Marshalling, Client-Server Communication, Group Communication, Case Study: **IPC in UNIX.** Distributed Objects and Remote Invocation: Introduction, **Communication between Distributed Objects, Remote Procedure Call, Events and Notifications, Case Study: JAVA RMI.**

## Unit -V

Transactions and Concurrency Control: Transactions, Nested transactions, Locks, Optimistic Concurrency control, Timestamp ordering, Comparison of methods for concurrency control. Distributed Transactions: Flat and nested distributed transactions, Atomic Commit protocols, Concurrency control in distributed transactions, Distributed deadlocks, Transaction recovery. Replication: **System model and group communication, Fault - tolerant services, highly available services, Transactions with replicated data.**

## ADVANCED COMPUTER SYSTEM ARCHITECTURE

CCSN-405

Cr L-T-P

4 3- 1-0

### Unit - I

Parallel computer model: Evolution of computer architecture, system performance attributes, Multiprocessors and Multicomputer: shared memory multiprocessors and distributed memory multicomputer, Vector supercomputers, Program and network properties: conditions of parallelism: Data and Resource Dependences, Bernstein's Conditions, program partitioning and scheduling, program flow mechanism, System Interconnect Architectures.

### Unit – II

Principles of scalable performance: Performance metrics and measures: parallelism profile in programs, harmonic mean performance, efficiency utilization and quality, standard performance measure, Parallel Processing Applications: scalability of parallel algorithms, Speedup performance laws: Amdahl's law for fixed workload, Gustafson's law for scaled problems, Memory bounded speedup model.

### Unit – III

Processor and Memory hierarchy: Advanced processor technology: Design Space of Processors, Instruction set Architectures, CISC Scalar Processors, RISC Scalar Processors, superscalar and vector processor: Superscalar Processors, The VLIW Architecture, Vector and Symbolic Processors. Memory hierarchy technology: Hierarchical Memory Technology, Inclusion, Coherence, and Locality, Memory Capacity Planning, virtual memory technology.

### Unit – IV

Bus, cache and shared memory: Backplane bus system: bus specification, addressing and timing protocol, arbitration, transaction, and interrupt, cache memory organization: addressing models, direct mapping and associative caches, set-associative and sector cache, shared memory organization: Interleaved memory organization.

### Unit – V

Pipelining: Linear pipeline processors: Asynchronous and Synchronous Models, Clocking and Timing Control, Speedup, Efficiency and Throughput. Nonlinear pipeline processors: Reservation and Latency Analysis, Instruction pipeline design.

# DIGITAL IMAGE PROCESSING

CCSN-407

## UNIT I DIGITAL IMAGE FUNDAMENTALS

Digital Image Representation – Fundamental steps in Image Processing)– Elements of Visual Perception – Image Sensing and Acquisition – Image Sampling and Quantization – Relationships between pixels - colour models.

## UNIT II IMAGE ENHANCEMENT

Spatial Domain: Gray level transformations – Histogram processing – Basics of Spatial Filtering– Smoothing and Sharpening Spatial Filtering – Frequency Domain: 2D Fourier Transform – Smoothing and Sharpening frequency domain filters

## UNIT III IMAGE RESTORATION AND SEGMENTATION

Noise models – Mean Filters – Order Statistics – Adaptive filters – Band reject Filters – Band pass Filters – Notch Filters – Optimum Notch Filtering – Inverse Filtering – Wiener filtering. Segmentation: Edge detection Edge Linking and Boundary detection – **Region based segmentation- Morphological processing- erosion and dilation.**

## UNIT IV IMAGE COMPRESSION AND REPRESENTATION

Compression: Fundamentals – Image Compression models – Error Free Compression – Lossy compression– Image Compression standards

## UNIT V IMAGE REPRESENTATION AND RECOGNITION

Boundary representation – Chain Code – Polygonal approximation, signature, boundary segments – Boundary description – Shape number – Fourier Descriptor, moments- Regional Descriptors – **Topological feature, Texture - Patterns and Pattern classes - Recognition based on matching.**

## MULTIMEDIA COMPUTING

**CCSN-409**

### **Unit 1: Introduction**

Global Structure of Multimedia; Multimedia Application; Medium; Multimedia System and Properties; Characteristics of a Multimedia System; Challenges for Multimedia Systems; Components of a Multimedia System

### **Unit 2: Sound /Audio System**

Concepts of Sound System; Music and Speech; Speech Generation; **Speech Analysis; Speech Transmission**

### **Unit 3: Images and Graphics**

Digital Image Representation; Image and graphics Format; Image Synthesis, analysis and Transmission

### **Unit 4: Video and Animation**

Video Signal Representation; Computer Video Format; Computer-Based animation; Animation Language; Methods of Controlling Animation; Display of Animation; **Transmission of Animation**

### **Unit 5: Data Compression**

Storage Space; Coding Requirements; Source, Entropy and Hybrid Coding; Lossy Sequential DCT-based Mode; **Expanded Lossy DCT-based Mode; JPEG and MPEG**

### **Recommended Books:**

1. Multimedia: Computing, Communications and Applications, Ralf Steinmetz and Klara Nahrstedt, Pearson Education Asia
2. Multimedia Communications, Applications, Networks, Protocols and Standards, Fred Halsall, Pearson Education Asia
3. Multimedia Systems, John F. Koegel Buford, Pearson Education Asia

## PATTERN RECOGNITION

### CCSN-411

#### UNIT-1

Basics of Probability, Random Processes and Linear Algebra: Probability: independence of events, conditional and joint probability, Bayes' theorem; Random Processes: Stationary and nonstationary processes, Expectation, Autocorrelation, Cross-Correlation, spectra; Linear Algebra: Inner product, outer product, inverses, eigen values, eigen vectors; Bayes Decision Theory

#### UNIT-2

Bayes Decision Theory: Minimum-error-rate classification, Classifiers, Discriminant functions, Decision surfaces, Normal density and discriminant functions, discrete features

#### UNIT-3

Parameter Estimation Methods: Maximum-Likelihood estimation: Gaussian case; Maximum a Posteriori estimation; Bayesian estimation: Gaussian case

#### UNIT-4

Unsupervised learning and clustering: Criterion functions for clustering; Algorithms for clustering: K-Means, Hierarchical and other methods; Cluster validation; Gaussian mixture models; Expectation-Maximization method for parameter estimation; Maximum entropy estimation

#### UNIT-5

Sequential Pattern Recognition: Hidden Markov Models (HMMs); Discrete HMMs; Continuous HMMs

#### Text Books:

C.M.Bishop, Pattern Recognition and Machine Learning, Springer, 2006:

# C# PROGRAMMING

CCSN-413

## Unit 1: Introduction to C#

Explore the fundamentals of C# as a programming language. Understand its origins, features, and its role within the .NET framework. Learn about the development environment, including Visual Studio, and how to set up projects.

## Unit 2: Basic Syntax and Data Types

Delve into C# syntax, including variables, constants, and data types. Examine how to declare and initialize variables, use built-in data types, and understand the concept of type conversion and type safety.

## Unit 3: Control Structures

Study control flow statements in C#, including conditional statements like if, else, and switch, as well as looping constructs such as for, while, and do-while. Analyze how to control program execution and manage decision-making processes.

## Unit 4: Methods and Parameters

Learn about the definition and invocation of methods in C#. Explore method parameters, return types, method overloading, and the concept of optional parameters. Understand the importance of methods in structuring code.

## Unit 5: Object-Oriented Programming Concepts

Examine the principles of object-oriented programming (OOP) as applied in C#. Discuss classes, objects, inheritance, polymorphism, encapsulation, and abstraction. Analyze how these concepts contribute to code reusability and organization.

## Python Programming

(CCSN-415)

### Unit - I

**Introduction To Python Programming:** Importance of Python, Installing and working with Python in Windows, Using Python as calculator, Comments, How to define main function in Python The concept of data types - Variables, Arithmetic Operators and Expressions String manipulations - Subscript Operator, Indexing, Slicing a string, Converting strings to numbers and vice versa, split function Control flow - if statements, for and while loops, nested loops, range() function, break and continue statements, pass statements, **Functions** Built-In Functions, Commonly Used Modules, Function Definition and Calling the Function, The return Statement and void Function, Scope and Lifetime of Variables, Default Parameters, Keyword Arguments, **\*args and \*\*kwargs, Command Line Arguments.**

### Unit - II

**Data Structures in Python:Lists** - Basic list operations, Replacing, inserting, removing an element; Searching and sorting a list, Methods of list objects, List and nested list Comprehensions  
**Strings**, Creating and Storing Strings, Basic String Operations, Accessing Characters in String by Index Number, String Slicing and Joining, String Methods, **Formatting Strings.**

### Unit- III

**Dictionaries**, Creating Dictionary, Accessing and Modifying key: value Pairs in Dictionaries, Built-In Functions Used on Dictionaries, Dictionary Methods, The del Statement, **Tuples and Sets**, Creating Tuples, Basic Tuple Operations, Indexing and Slicing in Tuples, Built-In Functions Used on Tuples, Relation between Tuples and Lists, Relation between Tuples and Dictionaries, Tuple Methods, Using zip() Function, Sets, Set Methods, Traversing of Sets, Frozen set.

### Unit - IV

**File and Exception Handling in Python** - Reading keyboard input, opening and closing file, Read, Write and Append mode, Create and Read a text file, Looping over a file object, Writing on a file, with statements, splitting lines in a text file, Renaming and Deleting files. Exception Handling - Exceptions, Why use exceptions, Raising an exception, try and except, try, except and else clause; try and finally **Regular Expressions in Python:** Regular Expressions - re module, Searching a string (match and search), Finding a string (findall), Break string into substrings (split), **Replace part of a string (sub)**

## **Unit - V**

**Object-Oriented Programming**, Classes and Objects, Creating Classes in Python, Creating Objects in Python, The Constructor Method, Classes with Multiple Objects, Class Attributes versus Data Attributes, Encapsulation, Inheritance, The Polymorphism.

### **TEXT BOOK**

Gowrishankar S, Veena A, "Introduction to Python Programming", 1st Edition, CRC Press/Taylor & Francis, 2018. ISBN-13: 978-0815394372

### **REFERENCE BOOKS / WEBLINKS:**

## Client Server Computing

### CUCS-441

#### Unit 1

Client Server System Concepts – Introduction – Concepts – Client Server Architecture – Two-Tier Architecture – Three-Tier Architecture – N-Tier Architecture – N-Tier vs 2-Tier Architecture – Case Study of N-Tier Architecture – Client Server Models – Gartner Classification – Middleware – Characteristics and types of Server – File Server – Database Server – Communication Server – Object Server – Groupware Server – Transaction Server – Characteristics and types of Clients – Thin Client – Fat Client.

#### Unit 2

Components of Client Server Computing – Client – Role of the Client – Client Services – Request for Service – Components of Client Server Computing – Server – Role of the Server – Server Functionality in detail – Components of Client Server Applications – Connectivity – OSI – Communications Interface Technology.

#### Unit 3

Client Server System Architecture – Client Server Building Blocks – Hardware – Client Hardware – Server Hardware – Client Server Building Blocks – Software – Client Server Systems Development Methodology – Project Management – Architecture Definition – Systems Development Environment – Middleware – Types of Middleware – DCE, MOM, TP – Monitors – ODBC – Design Overview of ODBC – ODBC Architecture – Components – Applications – Driver Managers – Database Drivers – ODBC Data Sources – Network Operating System – Base Services – External Services.

#### Unit 4

SQL Database Servers – Server Architecture – Multithread Architecture – Hybrid Architecture – Stored Procedures – Triggers – Client Server Transaction Processing – Rules of Client Server Transaction Processing – Transaction Models – Chained and Nested Transactions – Transaction Management Standards – Data Warehousing – Warehousing Techniques – Data Mining.

#### Unit 5

Client Server Protocols – RPC – IPC – Recent Trends – Intranet – Extranet – Internet – CORBA.

#### Text Books

1. Robert Orfali, Dan Harkey and Jerri Edwards: Essential Client/Server Survival Guide, John Wiley & Sons Inc 1996

#### Reference

## NEURAL NETWORK

CUCS-443

### **UNIT -I Introduction to Artificial Neural Networks :**

Introduction, Artificial Neural Networks, Historical Development of Neural Networks, Biological Neural Networks, Comparison Between them and the Computer, Comparison Between Artificial and Biological Neural Network Basic Building Blocks of Artificial Neural Networks, **Artificial Neural Network (ANN) terminologies.**

### **UNIT - II Fundamental Models of Artificial Neural Networks :**

Introduction, McCulloch - Pitts Neuron Model, Learning Rules, Hebbian Learning Rule Perceptron Learning Rule, Delta Learning Rule (Widrow-Hoff Rule or Least Mean Square(LMS)Rule, Competitive Learning Rule, Out Star Learning, Boltzmann Based Learning, Hebb Net. Perceptron Networks : Introduction, Single Layer Perceptron, **Brief Introduction to Multilayer Perceptron Networks.**

### **UNIT - III Adaline and Madaline Networks:**

Introduction, Adaline, Madaline. Associative Memory Networks: Introduction, Algorithms for Pattern Association, **Hetero Associative Memory Neural Networks, Auto Associative Memory Network, Bi-directional Associative Memory.**

### **UNIT – IV Feedback Networks:**

Introduction, Discrete Hopfiled Net, Continuous Hopfiled Net, Relation between BAM and Hopfiled Nets. Feed Forward Networks: **Introduction, Back Propagation Network (BPN), Radial Basis Function Network (RBFN).**

### **UNIT – V Self Organizing Feature Map :**

Introduction, Methods Used for Determining the Winner, Kohonen Self Organizing Feature Maps, Learning Vector Quantization (LVQ),Max Net, Maxican Hat, Hamming Net

**Adaptive Resonance Theory :** Introduction, ART Fundamentals, ART 1, ART2

# Engineering System Modelling and Simulation

## CUCS - 445

### Unit 1: Introduction to System Modelling

Explore the fundamental concepts of systems and their modeling. Understand the definitions and types of systems, the importance of modeling in engineering, and the relationship between real-world systems and their representations.

### Unit 2: Mathematical Foundations

Delve into the mathematical tools used in system modeling, including linear algebra, calculus, and differential equations. Learn how these mathematical concepts are applied to describe dynamic systems and their behavior.

### Unit 3: System Dynamics

Study the principles of system dynamics, focusing on feedback loops, time delays, and system stability. Analyze dynamic systems using block diagrams and stock-and-flow diagrams to visualize system interactions.

### Unit 4: Control Systems

Examine the fundamentals of control theory as it applies to system modeling. Discuss open-loop and closed-loop systems, stability analysis, and the design of control strategies to achieve desired system behavior.

### Unit 5: Discrete Event Simulation

Learn about discrete event simulation techniques and their applications. Understand the components of discrete event systems, including events, state variables, and queues, and explore simulation modeling tools and methodologies.

**Unit I: Computer Arithmetic and Errors**

Errors, Types of error, Floating-point representation, Significant digits and precision, , Associative and Distributive Laws in Floating Point arithmetic, Error propagation and Numerical Instability.

**Unit II: Nonlinear Equations and Linear Systems**

Bisection method, Secant method, Regula-Falsi method, Newton-Raphson method for nonlinear systems, Gauss-elimination method with and without partial pivoting, LU decomposition and Cholesky decomposition, Iterative methods for linear systems: Jacobi, Gauss-Jordan and Gauss-Seidel methods.

**Unit III: Interpolation and Approximation**

Lagrange's interpolation formula, Newton's divided difference formula, Piecewise polynomial interpolation: Linear, Quadratic, and Cubic spline, Least Squares Approximation, Orthogonal polynomials: Legendre and Chebyshev

**Unit IV: Numerical Differentiation and Integration**

Finite difference operators: forward, backward, and central differences, Richardson extrapolation, Numerical integration: Trapezoidal rule, Simpson's rule, and Romberg integration, Gaussian quadrature: Gauss-Legendre and Gauss-Hermite, Monte Carlo methods for integration,

**Unit V: Ordinary Differential Equations**

Euler's method, Modified Euler's methods: Heun and Mid-point methods, Runge-Kutta methods: 2nd and 4th order, Multi-step methods: Adams-Bashforth and Adams-Moulton, Finite difference methods for ODEs: explicit and implicit schemes.

## **CBSN-401 Law for Engineers**

### **Module 1A:**

Constitutional Law covering the Preamble; Fundamental Rights, Judicial Activism including Equality and Social Justice; Directive principles of State policy; Fundamental Duties; Emergency provisions – kinds, legal requirements and legal effects; (5 Lectures)

### **Module 1B:**

Human Rights and Public International Law covering Human Rights in International Law-Theoretical foundation, UN Mechanism and specialized agencies, (UNICEF, UNESCO, WHO, ILO, FAO, etc.);

International NGOs – Amnesty International, Human Rights Watch, Greenpeace Foundation; Enforcement of Human Rights in India including Supreme Court, High Courts, Public International Law covering: Customs, Treaties, State territories including Recognition of States and governments, Law of Sea; (5 Lectures)

### **Module 2A:**

General Principles of Contract under Indian Contract Act, 1872 covering General principles of contract – Sec. 1 to 75 of Indian Contract Act and including Government. as contracting party, Kinds of government contracts (4 Lectures)

### **Module 2B:**

Arbitration, Conciliation and ADR system covering Arbitration – meaning, scope and types, Arbitration tribunal – appointment, challenge, Distinction between conciliation, negotiation, mediation and arbitration, (5 Lectures)

### **Module 3A:**

Law relating to Intellectual property covering Introduction – meaning of intellectual property, main forms of IP, Copyright, Trademarks, Patents and Designs, Secrets; Other new forms such as plant varieties and geographical indications; International instruments on IP – Berne convention, TRIPS, Paris convention and international organizations relating IPRs, WIPO, WTO etc; Law relating to Copyright in India, including Historical evolution of Copy Rights Act, 1957, Law relating to Trademarks under Trademark Act, 1999; Law relating to Patents under Patents Act, 1970, Patent protection for computer programs, Duration of patents – law and policy considerations, Infringement and related remedies; (8 Lectures)

### **Module 3B:**

Right to Information Act, 2005 covering, Evolution and concept; Practice and procedures; Official Secret Act, 1923; Indian Evidence Act, 1872; Information Technology – legislation and procedures, Cyber crimes – issues and investigations; (3 Lectures)

### **Module 4A:**

Labour Laws, covering Industrial Disputes Act, 1947; Collective bargaining; Workmen's Compensation Act, 1923; (3 Lectures)

### **Module 4B:**

Corporate Law, covering Meaning of corporation; Law relating to companies, public and private (Companies Act, 1956) general provisions; FEMA 1999, collaboration agreements for technology transfer; Corporate liability, civil and criminal; (4 Lectures)

#### **Module 4C:**

Election provisions under Indian Constitution (Art.324–329); Superintendence, directions and control of elections to be vested in Election Commission; Prohibition as to ineligibility for inclusion in electoral roll on ground of religion, race, caste or sex; Power of parliament to make provisions with respect to elections to legislatures; Bar to interference by courts in electoral matters; Offences relating to elections under IPC1860 ( Sec.171-A to 171-I). (4 Lectures)

#### **Module 5:**

Gender Studies, covering Meaning of gender, international perspective and national perspective; Laws relating women in India; Judicial approach and responses Vishaka V/s State of Rajasthan 1997 SC; Rights enforcement mechanism in India; Landmark judicial decisions of Supreme Court relating to women; (4 Lectures)

## INTELLECTUAL PROPERTY RIGHTS

### CBSN-401 A

#### Unit-1

INTRODUCTION TO IPR: Meaning of property, Origin, Nature, Meaning of Intellectual Property Rights Introduction to TRIPS and WTO.

Kinds of Intellectual property rights—Copy Right, Patent, Trade Mark, Trade Secret and trade dress, Design, Layout Design, Geographical Indication, **Plant Varieties and Traditional Knowledge**.

#### Unit-2

PATENT RIGHTS AND COPY RIGHTS— Origin, Meaning of Patent, Types, Inventions which are not patentable, Registration Procedure, Rights and Duties of Patentee, Assignment and licence , Restoration of lapsed Patents, Surrender and Revocation of Patents, Infringement, Remedies & Penalties. – 6 hours  
COPY RIGHT—Origin, Definition &Types of Copy Right, Registration procedure, **Assignment &licence, Terms of Copy Right, Piracy, Infringement, Remedies, Copy rights with special reference to software.**

#### Unit-3

TRADE MARKS— Origin, Meaning & Nature of Trade Marks, Types, Registration of Trade Marks, Infringement & Remedies, Offences relating to Trade Marks, Passing Off, Penalties. Domain Names on cyber space.

#### Unit-4

DESIGN- Meaning, Definition, Object, Registration of Design, Cancellation of Registration, International convention on design, functions of Design. Semiconductor Integrated circuits and **layout design Act-2000.**

#### Unit-5

BASIC TENENTS OF INFORMATION TECHNOLOGY ACT-2000 – IT Act - Introduction  
E-Commerce and legal provisions E- Governance and legal provisions Digital signature and **Electronic Signature.**

#### Course outcomes:

The students once they complete their academic projects, they get awareness of acquiring the patent

They also learn to have copyright for their innovative works.

They also get the knowledge of plagiarism in their innovations which can be questioned legally.

#### TEXT BOOKS:

1. Intellectual Property Rights and the Law, Gogia Law Agency, by Dr. G.B. Reddy
2. Law relating to Intellectual Property, Universal Law Publishing Co, by Dr. B.L.Wadehra
3. IPR by P. Narayanan
4. Law of Intellectual Property, Asian Law House, Dr.S.R. Myneni

**Unit 1: Introduction to Employment Law**

In this unit, students will be introduced to the fundamental concepts of Employment Law, including its definition and significance in contemporary society. The historical evolution of labor laws will be explored, starting from the Industrial Revolution and highlighting key legislative milestones such as the Fair Labor Standards Act and the National Labor Relations Act.

**Unit 2: Employment Contracts**

The focus of this unit will be on employment contracts, which are essential to the employment relationship. Students will explore the different types of employment contracts, including written, oral, and implied agreements. Emphasis will be placed on the key elements that constitute a valid employment contract, such as offer, acceptance, consideration, and essential terms like job duties and compensation.

**Unit 3: Employment Rights and Obligations**

In this unit, students will delve into the rights of employees and the corresponding obligations of employers. The discussion will include employees' rights to fair wages, benefits, and safe working conditions, as well as protections against retaliation for exercising these rights. The unit will provide an overview of the legal framework governing minimum wage laws and overtime regulations under the Fair Labor Standards Act.

**Unit 4: Discrimination in the Workplace**

This unit will address the critical issue of discrimination in the workplace. Students will learn about various types of discrimination based on protected classes, including race, gender, age, disability, and religion. The legal framework surrounding discrimination, particularly Title VII of the Civil Rights Act, the Americans with Disabilities Act, and the Age Discrimination in Employment Act, will be thoroughly examined.

**Unit 5: Health and Safety Regulations**

In this unit, students will study the Occupational Safety and Health Act (OSHA) and its implications for workplace safety. The unit will cover employer responsibilities regarding safety protocols and training, as well as the rights of employees to a safe work environment. Students will learn about the right to refuse unsafe work and the protections available for whistleblowers who report safety violations.

## **Dispute Resolution And Litigation**

### **CBSN 401-C**

#### **UNIT-1. INTRODUCTION:**

Evolution of mediation/conciliation as a mode of settlement of disputes, distinction between arbitration, mediation, conciliation, negotiation.

Nature, Scope, Limitations and necessity of alternative models of disputes resolution

Introduction of ADRMs in the Indian Legal System

What is Alternative Dispute Resolution Methods?

Advantages of ADRMs over the Conventional Adjudicatory System

Dispute Resolution at grass root level, LokAdalats, NyayaPanchayath, Legal Aid, Preventive and Strategic legal aid.

International Perspective/International Scenario

#### **UNIT-2. ARBITRATION: [ARBITRATION AND CONCILIATION ACT, 1996]**

Origin and Development of Arbitration

Meaning, features, theories and types of arbitration

Arbitration Agreement – Formation, essentials, validity, rule of severability, parties to arbitration agreement.

Arbitral Tribunal – Structure, Powers, Functions and Jurisdiction

“Fast Track” arbitration

Arbitration proceedings

#### **UNIT-3. CONCILIATION: [ARBITRATION AND CONCILIATION ACT, 1996]**

Meaning, features and modes and techniques of Conciliation

Appointment and role of conciliators

Conciliation proceedings – submission of statements – communication between conciliator and parties, suggestions for settlement – confidentiality of information – Admissibility of evidence in other proceedings, Termination of conciliation proceedings; costs and deposits.

Contractual provisions about conciliation

Difference between Arbitration and Conciliation

#### **UNIT-4. MEDIATION**

What is Mediation?

Characteristics of Mediation, Essential Elements of Mediation,

Advantages/ Benefits of Mediation,

What Kinds of Cases Can Be / Cannot Be Mediated?

Convening for Mediation, Guidelines to the Parties and Mediator, Training of the Mediator.

#### **UNIT-5. NEGOTIATION**

Eight Pillars of Negotiation Wisdom, Qualities of a Good Negotiator, Various phases in Negotiation, disadvantages of Negotiation and Setting the Stage for Productive Negotiations  
Certain Specific Titles in the Negotiation Process, Alternative Paths.  
Practical Approach towards Concepts – Mixed Motive Exchange, Winner’s Curse, and Interest based Bargaining, Negotiation ‘Dance’, BATNA, WATNA, MALATNA  
Integrative Negotiation & Distributive Negotiation

**Suggested Readings:**

G. K. Kwatra-The New Arbitration & Conciliation Law of India, ICA, 1998.

Gabrielle Kaufmann- Online Dispute Resolution: Challenges for Contemporary Justice, Kohler & Thomas Wolters Kluwer, UK Schultz.

“Law & Practice of Alternative Dispute Resolution in India – A Detailed Analysis”, by Anirban Chakraborty; 2016 Edition, LexisNexis, Gurgaon.

Madabhushi Sridhar – Alternative Dispute Resolution, Butterworth Lexis Nexis, (Reprint 2010) 1st edition.

O. P. Malhotra & Indu Malhotra, The Law and Practice of Arbitration and Conciliation, 3rd ed. (2014).

## **Environmental law**

### **CBSN-401 D**

#### **UNIT-1**

Basic Concepts in Environmental Law. An introduction to the legal system; Constitution, Acts, Rules, Regulations; Indian Judiciary, Doctrine of precedents, judicial review, Writ petitions, PIL—liberalization of the rule of locus standi, Judicial activism. Introduction to environmental laws in India; Constitutional provisions, Stockholm conference; Bhopal gas tragedy; Rio conference. General principles in Environmental law: Precautionary principle; Polluter pays principle; Sustainable development; Public trust doctrine. Overview of legislations and basic concepts.

#### **UNIT-2**

Forest, Wildlife and Biodiversity related laws Evolution and Jurisprudence of Forest and Wildlife laws; Colonial forest policies; Forest policies after independence Statutory framework on Forests, Wildlife and Biodiversity: IFA, 1927; WLPA, 1972; FCA, 1980; Biological Diversity Act, 2002; Forest Rights Act, 2006.

Strategies for conservation—Project Tiger, Elephant, Rhino, Modulew leopard

#### **UNIT-3**

Air, Water and Marine Laws National Water Policy and some state policies Laws relating to prevention of pollution, access and management of water and institutional mechanism: Water Act, 1974; Water Cess Act, 1977, EPA, 1986. Pollution Control Boards Ground water and law Judicial remedies and procedures Marine laws of India; Coastal zone regulations. Legal framework on Air pollution: Air Act, 1981; EPA, 1986

#### **UNIT-4**

Environment protection laws and large Projects Legal framework on environment protection- Environment Protection Act as the framework legislation—strength and weaknesses; EIA; National Green tribunal The courts infrastructure projects

#### **UNIT-5**

Hazardous Substances and Activities Legal framework: EPA and rules made thereunder; PLI Act, 199 Principles of strict and absolute liability

#### **Suggested readings**

## ARTIFICIAL INTELLIGENCE LAB (CCSN-451)

### Course Objectives: This course is designed to:

1. Explore the methods of implementing algorithms using artificial intelligence techniques
2. Illustrate search algorithms
3. Demonstrate building of intelligent agents

### List of Experiments:

1. Write a program to implement DFS
2. Write a program to implement BFS
3. Write a Program to find the solution for travelling salesman Problem
4. Write a program to implement Simulated Annealing Algorithm
5. Write a program to find the solution for wampus world problem
6. Write a program to implement 8 puzzle problem
7. Write a program to implement Towers of Hanoi problem
8. Write a program to implement A\* Algorithm
9. Write a program to implement Hill Climbing Algorithm
10. Build a bot which provides all the information related to you in college.
11. Build a virtual assistant for Wikipedia using Wolfram Alpha and Python
12. The following is a function that counts the number of times a string occurs in another string:

## **DISTRIBUTED COMPUTING SYSTEMS LAB (CCSN-453)**

### **EXPERIMENT-1**

Implement concurrent echo client-server application

### **EXPERIMENT-2**

Implement concurrent day-time client-server application.

### **EXPERIMENT-3**

Configure following options on server socket and tests them: SO\_KEEPALIVE, SO\_LINGER, SO\_SNDBUF, SO\_RCVBUF, TCP\_NODELAY

### **EXPERIMENT-4**

Incrementing a counter in shared memory.

### **EXPERIMENT-5**

Create CORBA based server-client application

### **EXPERIMENT-6**

Design XML Schema and XML instance document

### **EXPERIMENT-7**

WSDL based: Implement ArithmeticService that implements add, and subtract operations / Java based: Implement TrigonometricService that implements sin, and cos operations.

### **EXPERIMENT-8**

Configuring reliability and security options

### **EXPERIMENT-9**

Monitor SOAP request and response packets. Analyze parts of it and compare them with the operations (java functions) headers.

### **EXPERIMENT-10**

Design and test BPEL module that composes ArithmeticService and TrigonometricService.

### **EXPERIMENT-11**

Test open source ESB using web service. LABWORK BEYOND CURRICULA

### **EXPERIMENT-12**

Implementing Publish/Subscribe Paradigm using Web Services, ESB and JMS

### **EXPERIMENT-13**

Implementing Stateful grid services using Globus WS-Core-4.0.3

## Seminar and Group Discussion

### CCSN-481

- **Educational technology**

A common topic at Decamps, this includes practical examples of using modern tools in the classroom and how to solve problems that technology can cause.

- **Current events**

Students can track current events and create a news show or podcast about them.

- **Artificial intelligence**

Seminars can help you learn about responsible **AI development and deployment**, and build a professional network.

- **Case studies and debates**

These activities can help students engage with the material and develop communication, critical analysis, and teamwork skills.

- **Classroom management**

This includes strategies and techniques for creating a learning environment that reduces disruptions.

- **Global issues in education and research**

This can include topics such as the impact of crisis on education, **ethical issues in education, and technology in teaching and learning.**

- **Psychology**

This includes core areas such as biological, cognitive, **developmental, social, and individual differences.**

## **INTERNSHIP AND Report Presentation**

### **CCSN-462**

#### **Unit 1: Introduction to Internship**

This unit introduces the concept of internships, highlighting their importance in bridging the gap between academic learning and practical experience. Students will explore the goals of internships, types of internships available, and **the expectations from both interns and organizations.**

#### **Unit 2: Preparing for the Internship**

In this unit, students will learn how to prepare for their internship experience. Topics will include resume writing, crafting cover letters, interview preparation, and professional networking. The unit will also cover the importance of setting clear learning objectives for the internship.

#### **Unit 3: Workplace Skills and Professionalism**

This unit focuses on essential workplace skills and professionalism. Students will learn about effective communication, teamwork, time management, and problem-solving in a professional environment. The unit will emphasize the importance of ethical behavior and **adaptability in the workplace.**

#### **Unit 4: Intern Responsibilities and Learning Outcomes**

**Students will explore their responsibilities during the internship in this unit. The unit will cover how to identify key tasks, contribute to team projects, and seek feedback. Students will learn to document their learning experiences and the skills they develop throughout the internship.**

#### **Unit 5: Project Development and Implementation**

In this unit, students will engage in project development related to their internship roles. They will learn how to define project goals, plan and execute tasks, and assess progress. The unit will also emphasize the importance of collaboration with supervisors and colleagues.

**Shobhit University, Gangoh**

(Established by UP Shobhit University Act No. 3, 2012)

**School of School of Engineering and Technology**

**Ordinances, Regulations & Syllabus**

For

**Bachelor of Engineering, Four Year Programme**

**Semester System**

(w.e.f. session 2013-14)

**Approved and adopted in the year 2015 (5<sup>th</sup> Meeting, Board of Studies)**

## **Programme Educational Objectives (PEOs)**

**PEO 1** Graduates will acquire a strong foundation in engineering principles, enabling them to design, develop, and implement innovative solutions to complex engineering problems across various industries.

**PEO 2** Graduates will develop the ability to apply critical thinking, problem-solving skills, and engineering techniques to analyze, evaluate, and resolve real-world challenges in their chosen engineering discipline.

**PEO 3** Graduates will gain hands-on experience in using modern engineering tools, software, and technologies, enabling them to effectively design, model, and optimize engineering systems and processes.

**PEO 4** Graduates will demonstrate the ability to work collaboratively in multidisciplinary teams, manage engineering projects, and communicate technical information effectively to both technical and non-technical stakeholders.

**PEO 5** Graduates will adhere to professional and ethical standards, ensuring their engineering solutions are socially responsible, environmentally sustainable, and aligned with industry best practices and regulatory requirements.

**PEO 6** Graduates will develop leadership and management skills, preparing them to take on roles of responsibility in both technical and managerial aspects of engineering projects.

**PEO 7** Graduates will engage in lifelong learning and stay current with emerging technologies, ensuring continuous professional growth and adaptability to the evolving engineering landscape.

**PEO 8** Graduates will contribute to the betterment of society by creating innovative solutions that address societal challenges, promote sustainable development, and enhance the quality of life globally.

## **Programme Specific Objectives (PSO's)**

**PSO 1** To equip students with a solid foundation in core engineering concepts, preparing them to design, analyze, and develop solutions for complex technical challenges in various fields.

**PSO 2** To develop proficiency in modern engineering tools, techniques, and technologies, enabling students to effectively design, model, and optimize engineering systems and processes across diverse applications.

**PSO 3** To enhance problem-solving skills, encouraging students to apply engineering principles and critical thinking to develop innovative and sustainable solutions for real-world challenges in their discipline.

**PSO 4** To foster a strong understanding of professional ethics, environmental sustainability, and social responsibility, ensuring students create engineering solutions that are both technically sound and socially beneficial.

**PSO 5** To provide hands-on experience through laboratory work, internships, and projects, helping students gain practical exposure to the application of engineering concepts in real-world scenarios.

**PSO 6** To nurture teamwork, leadership, and communication skills, preparing students to effectively collaborate in multidisciplinary teams, manage engineering projects, and communicate complex ideas to diverse audiences.

**PSO 7** To ensure students develop a global perspective on engineering practices, preparing them to adapt and innovate in response to technological advancements and the needs of a rapidly changing world.

**PSO 8** To foster lifelong learning habits, ensuring students remain adaptable and stay updated with the latest trends, technologies, and advancements in their engineering field throughout their careers.

## **Programme Outcome Objectives (POO's)**

**POO 1** Graduates will have a strong foundation in engineering fundamentals, enabling them to apply core principles and methodologies to solve real-world engineering problems across various disciplines.

**POO 2** Graduates will possess the ability to analyze complex engineering systems, design innovative solutions, and optimize processes while considering technical, environmental, and societal constraints.

**POO 3** Graduates will be proficient in using modern engineering tools, software, and technologies to model, simulate, and solve engineering problems, ensuring efficient and effective system designs.

**POO 4** Graduates will develop critical thinking, problem-solving, and decision-making skills to address engineering challenges, ensuring that solutions are feasible, sustainable, and aligned with industry standards.

**POO 5** Graduates will demonstrate the ability to work effectively in multidisciplinary teams, manage projects, and communicate technical information clearly to diverse audiences, both within and outside of engineering fields.

**POO 6** Graduates will adhere to ethical, professional, and legal standards in engineering practice, ensuring their solutions positively impact society, the environment, and the global engineering community.

**POO 7** Graduates will be capable of undertaking independent research, applying engineering principles to explore new solutions, and contributing to advancements in technology and engineering practices.

**POO 8** Graduates will have strong leadership and interpersonal skills, enabling them to manage engineering projects, lead teams, and coordinate with stakeholders to achieve desired outcomes.

**POO 9** Graduates will demonstrate an understanding of sustainability, applying green engineering principles to minimize the environmental impact of their designs and promote socially responsible engineering practices.

**POO 10** Graduates will embrace lifelong learning, continuously updating their knowledge and skills to stay relevant with evolving technologies, methodologies, and trends in engineering, ensuring professional growth throughout their careers.

## Mathematics-I

CMAM-101

Cr. L T P

4 3 1 0

### Unit-I

**Functions of Several Variables:** Limit continuity and differentiability of functions of two variables; Euler's theorem, Tangent plane and normal, Change of variables, Chain rule; Jacobians, Taylor's Theorem for two variables; Extrema of functions of two or more variables, Lagrange's method of undetermined multipliers.

### Unit-II

**Ordinary Differential Equations:** Solution of linear differential equations with constant coefficients, Euler-Cauchy equations, Solution of second order differential equations by change of dependent and independent variables; Method of variation of parameters for second order differential equations.

### Unit-III

**Numerical Solution of ODE:** Picard's method, Taylor's series, Euler method & Modified Euler method.

**Infinite Series:** Convergence of infinite series; Comparison test, Ratio test, Root test, Logarithmic test, De Morgan's test, Cauchy integral test.

### Unit-IV

**Solution in Series:** Solution in series of second order linear differential equations with polynomial coefficients; Bessel and Legendre equations and their series solutions; Properties of Bessel functions and Legendre polynomials.

### Unit-V

**Matrix Algebra:** Rank of a matrix, Inverse of a matrix by elementary operations; Solution of linear simultaneous equations and their numerical solutions by Gauss elimination and Gauss-Seidel methods, Eigenvalues and Eigenvectors of matrices by Cayley-Hamilton theorem; Diagonalisation of matrices; Orthogonal, Hermetian, Skew-Hermetian, Normal and Unitary matrices and their elementary properties; Quadratic forms.

**Reference Books :**

## Statistical Techniques in Computer Science

CMAN-101 A

CREDIT L T P

4 3 1 0

### Course Objectives:

- To understand the fundamental concepts of statistics and their application in computer science.
- To analyze and interpret data using statistical methods.
- To apply statistical techniques in various areas such as machine learning, data mining, and software engineering.

### Unit 1: Introduction to Statistics and Probability Theory

Definition and scope of statistics, Types of data: qualitative vs. quantitative, Levels of measurement: nominal, ordinal, interval, ratio, Descriptive statistics: measures of central tendency (mean, median, mode) and dispersion (variance, standard deviation, range), Basic concepts of probability, Conditional probability and Bayes' theorem, Random variables and probability distributions, Discrete distributions: binomial, Poisson, Continuous distributions: normal, exponential, uniform

### Unit 2: Inferential Statistics

Sampling methods and sampling distributions, Estimation: point estimation and confidence intervals, Hypothesis testing: types of errors, significance levels, p-values, t-tests, chi-square tests, and ANOVA, Simple linear regression: assumptions, estimation, and interpretation, Multiple linear regression: model building and evaluation, Correlation coefficients: Pearson's and Spearman's, Application of regression analysis in predictive modeling

### Unit 3: Non-parametric Methods

Introduction to non-parametric tests, Mann-Whitney U test, Wilcoxon signed-rank test, Kruskal-Wallis test, Applications in real-world scenarios, Control charts and process capability, Six Sigma principles, Applications in software testing and performance evaluation

### Unit 4: Statistical Techniques in Machine Learning

Role of statistics in machine learning algorithms, Feature selection and dimensionality reduction techniques, Evaluation metrics for classification and regression models, Cross-validation techniques

### Unit 5: Data Visualization and Interpretation

Importance of data visualization, Tools for data visualization (e.g., Matplotlib, Seaborn, Tableau)  
Techniques for effective presentation of statistical findings

# MATHEMATICAL FOUNDATION OF COMPUTER SCIENCE I

**CMAN-101B**

**CREDIT L T P**

**4 3 1 0**

## **1. Set Theory**

Basics of sets, subsets, power sets, Operations on sets: union, intersection, difference, Cartesian products, Applications in database theory, Propositional logic: propositions, logical connectives, Truth tables, logical equivalences Predicate logic: predicates, quantifiers Proof techniques: direct proof, contradiction, induction

## **2. Functions and Relations**

Definitions of functions: one-to-one, onto, bijections, Composition and inverse of functions, Relations: properties, equivalence relations, partial orders, Applications of relations in computer science

## **4. Graphs and Trees**

Basic definitions: vertices, edges, degrees, Types of graphs: directed, undirected, weighted, Graph representations: adjacency matrix, adjacency list, Trees: binary trees, traversal algorithms (pre-order, in-order, post-order), Divisibility, prime numbers, and GCD, Modular arithmetic, Applications in cryptography.

## **5. Combinatorics**

Basic counting principles: permutations and combinations, The pigeonhole principle, Binomial coefficients and the binomial theorem, Applications in algorithm analysis, Basic concepts: sample space, events, probability axioms, Random variables and expected value, Discrete and continuous probability distributions

### **Suggested Textbooks:**

- "Discrete Mathematics and Its Applications" by Kenneth H. Rosen
- "Discrete Mathematics" by Richard Johnsonbaugh
- "Mathematics for Computer Science" by Eric Lehman, F. Thomson Leighton, and Albert R. Meyer (available online)

## APPLIED MATHEMATICS I

**CMAN-101C**

**CREDIT L T P**

**4 3 1 0**

### **Unit 1: Calculus and Differential Equations**

This unit focuses on the fundamentals of differential calculus, integration techniques, and first-order differential equations. The topics include limits, continuity, differentiability, techniques of integration, and solving linear differential equations. Applications to real-world problems in physics and engineering are explored.

### **Unit 2: Linear Algebra and Matrix Theory**

This unit covers the basics of matrix operations, systems of linear equations, and vector spaces. Topics include matrix inversion, determinants, eigenvalues, eigenvectors, and diagonalization. The focus is on the application of linear algebra to solving systems of linear equations and analyzing transformations.

### **Unit 3: Vector Calculus and Applications**

In this unit, the primary concepts of vector fields, gradient, divergence, and curl are studied. Theorems like Green's Theorem, Stokes' Theorem, and Gauss's Divergence Theorem are discussed, with applications to fluid dynamics, electromagnetism, and other fields requiring spatial analysis.

### **Unit 4: Probability and Statistics**

This unit introduces basic concepts in probability theory, including conditional probability, random variables, and probability distributions. Key statistical methods, such as hypothesis testing, estimation, and regression analysis, are also covered, along with their applications in data analysis and decision-making processes.

### **Unit 5: Fourier Analysis and Partial Differential Equations**

The final unit explores Fourier series and Fourier transforms, including their applications to solving partial differential equations. The focus is on classical problems in heat conduction, wave propagation, and diffusion. Methods for solving linear partial differential equations and their real-world applications are also discussed.

## ADVANCED APPLIED MATHEMATICS I

CMAN-101 D

### **Unit 1: Advanced Calculus and Multivariable Analysis**

This unit explores advanced topics in multivariable calculus, including partial derivatives, multiple integrals, and vector-valued functions. The theory behind gradients, directional derivatives, and the application of Green's, Stokes', and Gauss's Theorems in higher dimensions is emphasized. It also delves into the concept of higher-order derivatives and the method of Lagrange multipliers.

### **Unit 2: Ordinary and Partial Differential Equations**

Focusing on advanced techniques for solving both ordinary and partial differential equations, this unit includes methods like separation of variables, integral transforms, and the use of Green's function. The theory behind second-order linear differential equations, boundary value problems, and the classification of partial differential equations is also covered.

### **Unit 3: Complex Analysis and its Applications**

This unit examines complex variable theory, focusing on analytic functions, contour integration, residue calculus, and conformal mappings. Applications to fluid dynamics, electrostatics, and potential theory are explored. The unit also includes advanced topics such as Riemann surfaces and complex mappings.

### **Unit 4: Functional Analysis and Operator Theory**

This unit introduces the concepts of normed vector spaces, Banach and Hilbert spaces, and continuous linear operators. The theory of spectral decomposition, compact operators, and Fourier series in function spaces is covered, as well as the application of these concepts in solving integral and differential equations.

### **Unit 5: Advanced Probability, Stochastic Processes, and Statistical Methods**

The final unit delves into advanced probability theory, including stochastic processes, Markov chains, Brownian motion, and applications to queuing theory and reliability analysis. The unit also includes multivariate statistical methods, estimation theory, and large-sample theory, with applications in statistical inference and machine learning.

**UNIT-I**

Two Dimensional Force Systems: Basic concepts, Laws of motion, Principle of Transmissibility of forces, Resultant of a force system, Simplest Resultant of Two dimensional concurrent and Non-concurrent Force systems, Lami's Theorem, Distributed force system, Free body diagrams, Types of supports- Support reactions for beams with different types of loading-Concentrated.

**UNIT-II**

Beam: Introduction, Shear force and Bending Moment, Shear force and Bending Moment Diagrams for Statically Determinate Beams

Trusses: Introduction, Method of Joints and Method of Sections.

**UNIT-III**

Kinematics of Rigid Body: Introduction, Plane Rectilinear Motion of Rigid Body, Plane Curvilinear Motion of Rigid Body, Velocity and Acceleration under Translation and Rotational Motion, Relative Velocity. Translation and Rotational Motion, Relative Velocity.

Friction: Introduction, Laws of Coulomb Friction, Equilibrium of Bodies involving Dry-friction,

**UNIT-IV**

Centroid and Moment of Inertia: Centroid of plane, curve, area and composite bodies, Moment of inertia of plane area, Parallel Axes Theorem, Perpendicular axes theorems, Mass Moment of Inertia

Vibration: Definitions, concepts. Simple harmonic motion. Free vibrations. Simple, compound and torsional pendulum - Numerical problems

**UNIT-V**

Surveying: Introduction to Surveying

## **Introduction to Engineering Mechanics**

**CMEN-101 A**

**Cr. L T P**

4 3 1  
0

### **Unit 1: Fundamentals of Engineering Mechanics**

This unit introduces the basic concepts of engineering mechanics, including the study of forces, moments, and equilibrium. It covers the vector representation of forces, the principle of static equilibrium, and the concepts of force systems. The unit also discusses the role of engineering mechanics in understanding the behavior of structures and mechanical systems.

### **Unit 2: Force Systems and Equilibrium**

In this unit, the emphasis is on analyzing different types of force systems, including concurrent, parallel, and general force systems. The unit focuses on the conditions of equilibrium, both in two and three dimensions, and the application of these principles to solve static problems in engineering.

### **Unit 3: Properties of Areas and Centroid**

This unit deals with the determination of the centroid and the moment of inertia of various geometric shapes. It covers the calculation of the first and second moments of area and their significance in structural analysis. Applications to the design of beams and other structural elements are also included.

### **Unit 4: Friction and Dynamics of Particles**

Friction is introduced as a force that opposes motion, and the unit covers the principles of static and kinetic friction, as well as their applications in machines and structures. The unit also includes the study of particle dynamics, including the motion of particles under the influence of forces and the application of Newton's laws in dynamic analysis.

### **Unit 5: Kinematics and Kinetics of Rigid Bodies**

This unit explores the motion of rigid bodies, including the concepts of displacement, velocity, and acceleration. The unit covers the kinematics of rigid body motion, both in planar and three-dimensional spaces. The kinetics section addresses the forces and moments responsible for the motion of rigid bodies, and the application of Newton's laws of motion and work-energy principles.

### **Suggested Books:**

CMEN-101 B

### Material Science and Engineering

Cr. L T P

4 3 1 0

#### Unit 1: Introduction to Materials Science and Engineering

This unit introduces the fundamental concepts of materials science, including the classification of materials, their properties, and their relationship with structure. The unit covers atomic structure, bonding in solids, and the role of crystallography in understanding material behavior. It provides an overview of the basic types of materials used in engineering, such as metals, ceramics, polymers, and composites.

#### Unit 2: Atomic and Crystal Structure of Materials

Focusing on the atomic and microscopic level, this unit explores the different types of crystal structures, the concept of unit cells, and crystallographic planes. The unit also delves into the principles of crystal defects, dislocations, and their impact on the mechanical properties of materials. The understanding of the relationship between crystal structure and material properties is emphasized.

#### Unit 3: Mechanical Properties of Materials

This unit deals with the mechanical behavior of materials under various loading conditions. Topics include stress, strain, and the different types of mechanical properties, such as tensile strength, hardness, ductility, and toughness. The unit also covers the behavior of materials under cyclic loading, fatigue, and fracture mechanics, as well as the principles behind material selection for different engineering applications.

#### Unit 4: Phase Diagrams and Heat Treatment of Materials

The unit provides a comprehensive study of phase diagrams, including binary phase diagrams and their application to materials design and processing. Topics include phase transformations, eutectic systems, and the relationship between microstructure and properties. The heat treatment processes, such as annealing, quenching, and tempering, are discussed in detail, focusing on their effect on the mechanical properties and microstructure of metals and alloys.

#### Unit 5: Materials Processing and Failure Analysis

This unit covers the various methods of material processing, such as casting, forging, welding, and additive manufacturing, and their impact on material properties. The unit also addresses the principles of

materials failure, including the causes of failure due to mechanical, thermal, and environmental factors. Failure analysis techniques, including fracture mechanics and corrosion analysis, are explored to understand how materials fail in real-world applications.

### **Suggested Books:**

1. **Materials Science and Engineering: An Introduction** by William D. Callister Jr.
2. **Materials Science and Engineering** by V. Raghavan

### **Reference Books:**

1. **Fundamentals of Materials Science and Engineering** by William D. Callister Jr. and David G. Rethwisch
2. **Mechanical Behavior of Materials** by Thomas H. Courtney

# **Dynamics of Machinery**

**CMEN-101 C**

## **Unit 1: Introduction to Dynamics**

**4 3 1 0**

- Definition and Importance of Dynamics in Machinery
- Types of Mechanisms: Kinematic Pairs, Chains, and Mechanisms
- Kinematic Analysis: Velocity and Acceleration Analysis

## **Unit 2: Kinematics of Machinery**

- Types of Motion: Linear and Rotational Motion
- Instantaneous Center of Rotation
- Analysis of Simple Mechanisms: Four-Bar Chain, Slider Crank Mechanism

## **Unit 3: Dynamics of Machinery**

- Forces in Mechanisms: Analysis of Forces and Couples
- Dynamic Equilibrium: Inertia Forces and their Applications
- Cam and Follower Mechanisms: Types and Applications

## **Unit 4: Balancing of Machinery**

- Need for Balancing: Static and Dynamic Balancing
- Balancing of Rotating Masses: Single and Multiple Rotating Bodies
- Application of Balancing to Crank and Slotted Link Mechanisms

## **Unit 5: Vibration Analysis**

- Types of Vibrations: Free and Forced Vibrations
- Natural Frequency and Damping
- Vibration Isolation and Control
- Applications of Vibration Analysis in Machinery

**Suggested Books:**

1. **Theory of Machines and Mechanisms** by G. K. Gupta
2. **Mechanism and Machine Theory** by A. G. Ambekar

**Reference Books:**

1. **Machine Design: An Integrated Approach** by Robert L. Norton
2. **Dynamics of Machinery** by J. B. Rao and R. V. Dukkipati

# THERMODYNAMICS

## CMEN-101 D

### Unit 1: Introduction to Thermodynamics

This unit introduces the basic concepts of thermodynamics, including the laws of thermodynamics, energy, and the system-environment relationship. Topics include the classification of systems, properties, and state functions. The unit also covers the concepts of work, heat, and the energy balance in various thermodynamic processes.

### Unit 2: First Law of Thermodynamics and Applications

Focusing on the first law of thermodynamics, this unit explores the principle of energy conservation, including internal energy, heat, and work. Applications to engineering systems, such as the analysis of closed and open systems, are discussed. The unit also covers specific heat, thermodynamic processes, and cyclic processes in engines and refrigerators.

### Unit 3: Second Law of Thermodynamics and Entropy

This unit delves into the second law of thermodynamics, focusing on entropy and its significance in understanding irreversible processes. The unit includes the concept of entropy change, the Clausius and Kelvin-Planck statements, and the Carnot cycle. The laws are applied to real-world systems, including heat engines and refrigeration cycles, and the limitations imposed by the second law.

### Unit 4: Thermodynamic Properties of Pure Substances

This unit focuses on the thermodynamic behavior of pure substances, including phase changes and the use of property tables and Mollier diagrams. Topics include the P-V, T-S, and H-S diagrams and the application of these properties to real-world thermodynamic cycles such as Rankine and Brayton cycles. The unit emphasizes the calculation of work and heat in different phases of the substance.

### Unit 5: Power Cycles and Refrigeration Cycles

The final unit explores the working principles of various thermodynamic cycles, including the Rankine, Otto, Diesel, and Brayton cycles. The unit also covers refrigeration cycles, including the vapor-compression cycle and absorption refrigeration systems. Efficiency and performance analysis of these cycles are discussed, along with methods for improving cycle efficiency and minimizing losses in practical systems.

## FUNDAMENTALS OF ELECTRONICS

P	Cr.	L	T
CECN-101	4	3	1
0			

### Unit1:

*Electronics and Semiconductor:* Electronics: Application, History, Components, Voltage Source and Current Source, Classification of Solids, Forbidden Energy Gap, Insulator, Conductor, and Semiconductor: Types.

### Unit 2:

*Diodes and Applications* covering, Semiconductor Diode – Diode, Operation, Forward Bias, Reverse Bias, Drift and Diffusion, Ideal versus Practical, Resistance Levels, Diode Equivalent Circuits, Load Line Analysis; Half Wave and Full Wave Rectifiers with and without Filters; Breakdown Mechanisms, Zener Diode – Operation and Applications;

### Unit 3:

*Transistor Characteristics* covering, Bipolar Junction Transistor (BJT) – Construction, Operation, Amplifying Action, Common Base, Common Emitter and Common Collector Configurations, Operating Point, Voltage Divider Bias Configuration

### Unit 4:

*Operational Amplifiers and Applications* covering, Introduction to Op-Amp, Differential Amplifier Configurations, CMRR, PSRR, Slew Rate; Block Diagram, Pin Configuration of 741 Op-Amp, Characteristics of Ideal Op-Amp, Concept of Virtual Ground; Op-Amp Applications – Inverting, Non-Inverting, Summing and Difference Amplifiers, Voltage Follower, Comparator, Differentiator, Integrator;

### Unit 5:

*Basic Digital Electronics* covering, Binary Number Systems and Codes; Basic Logic Gates and Truth Tables, Boolean Algebra, De Morgan's Theorems, Logic Circuits.

# **Introduction to Electronics**

**CECN-101 A**

## **Unit 1: Fundamentals of Electronics**

This unit introduces the basic concepts of electricity, including voltage, current, resistance, and Ohm's Law. Students will learn about the fundamental circuit components such as resistors, capacitors, inductors, diodes, and transistors, along with an overview of integrated circuits.

## **Unit 2: Circuit Analysis Techniques**

In this unit, students will explore Ohm's and Kirchhoff's Laws, focusing on the analysis of series and parallel circuits. They will study Thevenin's and Norton's theorems for circuit simplification, as well as techniques for analyzing both AC and DC circuits, including the use of phasors and impedance.

## **Unit 3: Semiconductor Devices**

This unit covers the essential semiconductor devices, starting with diodes and their applications, such as PN junctions, Zener diodes, and rectifiers. Students will then delve into transistors, including bipolar junction transistors (BJTs) and field-effect transistors (FETs), learning about their configurations and characteristics. The unit will conclude with an introduction to operational amplifiers and their basic principles and applications.

## **Unit 4: Digital Electronics**

In this unit, students will examine number systems and codes, including binary, octal, decimal, and hexadecimal systems, as well as ASCII and BCD codes. The unit will cover basic logic gates such as AND, OR, NOT, NAND, NOR, and XOR, along with Boolean algebra for simplifying logic expressions. Students will learn to design combinational and sequential logic circuits, including adders, multiplexers, and flip-flops.

## **Unit 5: Introduction to Circuit Design and Testing**

The final unit introduces basic circuit design principles, emphasizing hands-on experience with breadboarding and circuit simulation tools. Students will learn testing and troubleshooting techniques using multimeters, oscilloscopes, and signal generators. The unit will also cover safety practices and best methods for handling electronic components and tools.

## **Course Objectives**

Students will gain a foundational understanding of electronics, develop skills in circuit analysis and design, and acquire practical experience in testing and troubleshooting electronic circuits.

## Recommended Textbooks

Key texts for this course include "Electronics Fundamentals: A Systems Approach" by Neil Storey, "Digital Design" by M. Morris Mano, and "Microelectronic Circuits" by Adel S. Sedra and Kenneth C. Smith.

## OPERATIONAL AMPLIFIERS AND THEIR APPLICATIONS

### CECN-101 B

**Unit 1: Introduction to Operational Amplifiers** This unit covers the basic concepts of operational amplifiers, including their structure, ideal and practical characteristics, and the significance of feedback in amplifier circuits. Students will learn about the different types of operational amplifiers and their key parameters.

**Unit 2: Basic Operational Amplifier Configurations** In this unit, students will explore various configurations of operational amplifiers, such as inverting and non-inverting amplifiers. The analysis of these configurations, including gain calculations and frequency response, will be emphasized.

**Unit 3: Advanced Applications of Operational Amplifiers** This unit delves into advanced applications, including integrators, differentiators, and active filters. Students will learn how to design and analyze these circuits for specific applications in signal processing.

**Unit 4: Practical Considerations in Op-Amp Circuits** Focusing on real-world applications, this unit addresses practical issues such as power supply considerations, input/output impedance, and noise. Students will also learn about the limitations of operational amplifiers and how to mitigate these effects in circuit design.

**Unit 5: Specialized Op-Amp Configurations** Students will study specialized configurations such as comparators, oscillators, and voltage followers. This unit emphasizes the unique characteristics and applications of these configurations in various electronic systems.

# DIGITAL SIGNAL PROCESSING

CECN-101 C

**Unit 1: Introduction to Digital Signal Processing** This unit provides an overview of digital signal processing, including the fundamental concepts of signals and systems. Students will explore the differences between analog and digital signals, the sampling theorem, and quantization processes.

**Unit 2: Discrete-Time Signals and Systems** In this unit, students will learn about discrete-time signals, their representation, and the mathematical tools used to analyze them. The focus will be on linear time-invariant (LTI) systems, convolution, and the properties of discrete-time systems.

**Unit 3: Fourier Analysis of Discrete-Time Signals** This unit covers the Fourier analysis of discrete-time signals, including the Discrete-Time Fourier Transform (DTFT) and the Discrete Fourier Transform (DFT). Students will study the Fast Fourier Transform (FFT) algorithm and its applications in signal analysis.

**Unit 4: Z-Transform and Its Applications** Students will explore the Z-transform as a tool for analyzing discrete-time systems. This unit includes the properties of the Z-transform, inverse Z-transform, and applications in system stability and frequency response analysis.

**Unit 5: Digital Filter Design** This unit focuses on the design and implementation of digital filters, including both Finite Impulse Response (FIR) and Infinite Impulse Response (IIR) filters. Students will learn about filter specifications, design techniques, and performance evaluation.

# EMBEDDED SYSTEMS

## CECN-101 D

### **Unit 1: Introduction to Embedded Systems**

Overview of embedded systems, characteristics, and applications. Comparison with general-purpose computing systems. Components of embedded systems including hardware and software.

### **Unit 2: Microcontrollers and Microprocessors**

Architecture and organization of microcontrollers and microprocessors. Instruction sets and addressing modes. Programming concepts and development tools for embedded applications.

### **Unit 3: Embedded System Design**

Design methodologies for embedded systems. System design life cycle. Hardware/software co-design and integration. Real-time operating systems (RTOS) and their role in embedded systems.

### **Unit 4: Interfacing and Communication**

Techniques for interfacing various peripherals (sensors, actuators, displays). Communication protocols (I2C, SPI, UART, CAN) and their applications in embedded systems.

### **Unit 5: Embedded Software Development**

Software development life cycle in embedded systems. Programming languages commonly used (C, C++, assembly). Tools for debugging and testing embedded software.

## CESN-101      Engineering Chemistry and Environmental Studies

	Cr.	L	T
P	4	3	1 0

### Unit 1: Fuels:

Introduction, Classification of fuels, Calorific value, Bomb Calorimeter, Theoretical Calculation of Calorific value of a fuel, Coal, Classification of coal by rank, Analysis of coal, Biomass, Biogas, Biodiesel: Definition, Types.

### Unit 2 Polymers:

Introduction, Nomenclature of polymers, Functionality, Types of Polymerization, Synthetic Fibres, Ion-exchange resins, Rubbers (Elastomers), Vulcanization of rubber, Synthetic rubbers or elastomers, Application of rubber.

### Unit 3 Water Technology:

Introduction, Hardness of water: Temporary and Permanent hardness; Equivalents of Calcium Carbonate, units of hardness, Disadvantage of hard water, Scale and sludge formation in boilers and their disadvantage, Boiler corrosion, Caustic embrittlement, Priming and foaming, water softening methods: Permutitprocess, De-ionization process.

### Unit 4:Environmental pollution and its impact:

Environment and Atmosphere; Kinds of pollution; Air pollution: Greenhouse effect, Acid rains and global warming; Noise pollution; Water and Solid waste pollution: Industrial effluents and wastes, Ground water pollution, Marine pollution, Lead pollution, Fluoride pollution; Radiation and chemical toxicology.

### Unit 5 Pollution Cleanup:

Prevention and control of air pollution: Source correction, Collection of pollutants, Cooling, Treatment; Stabilisation of the ecosystem, Reutilisation and Recycling of waste, Removal of Pollutants; Solid waste management: Collection, Disposal, etc.; Bioremediation: Introduction, Phytoremediation.

# Introduction to Engineering Chemistry

## CESN-101 A

### **Unit 1: Basic Concepts of Chemistry**

This unit covers fundamental concepts, including atomic structure, periodic properties, and chemical bonding. It introduces molecular geometry and the principles of stoichiometry, along with discussions on states of matter and thermodynamics relevant to chemical processes.

### **Unit 2: Chemical Thermodynamics**

Focuses on the laws of thermodynamics, concepts of enthalpy, entropy, and Gibbs free energy. The unit explores the principles of chemical equilibria, including equilibrium constants and Le Chatelier's principle, as well as applications in engineering processes.

### **Unit 3: Kinetics and Reaction Mechanisms**

This unit examines the rates of chemical reactions, factors affecting reaction rates, and the Arrhenius equation. It also delves into reaction mechanisms, including elementary reactions and complex reaction pathways, with applications to industrial processes.

### **Unit 4: Electrochemistry**

Covers the principles of electrochemical cells, standard electrode potentials, and Nernst equation. The unit explores applications of electrochemistry in batteries, fuel cells, and corrosion, along with methods of corrosion prevention and control.

### **Unit 5: Materials Chemistry**

Focuses on the chemistry of materials, including metals, polymers, ceramics, and composites. It discusses properties, synthesis, and applications of various materials, as well as the principles of material selection in engineering applications.

# CHEMICAL THERMODYNAMICS

## CESN-101 B

**Unit 1: Introduction to Thermodynamics** Overview of thermodynamic principles; definitions of systems, surroundings, and the universe; types of systems (open, closed, isolated); thermodynamic processes and state functions.

**Unit 2: Laws of Thermodynamics** First law of thermodynamics: internal energy, work, and heat; applications of the first law; enthalpy and its significance. Second law of thermodynamics: concepts of spontaneity and equilibrium; Carnot cycle; efficiency of heat engines; introduction to entropy.

**Unit 3: Thermodynamic Properties and State Functions** Extensive and intensive properties; thermodynamic potentials: Gibbs free energy and Helmholtz free energy; relationships between different thermodynamic properties; Maxwell's relations.

**Unit 4: Phase Equilibria and Phase Diagrams** Concepts of phase, phase transitions, and phase equilibrium; Clausius-Clapeyron equation; phase diagrams for pure substances and binary mixtures; applications of phase rule.

**Unit 5: Chemical Reactions and Thermodynamics** Gibbs free energy change and spontaneity of reactions; standard state and standard enthalpy of formation; Hess's law; calculation of equilibrium constants and their relation to Gibbs free energy.

# **MATERIALS SCIENCE AND ENGINEERING**

## **CESN-101 C**

### **Unit 1: Introduction to Materials Science**

Overview of materials science and engineering. Classification of materials: metals, ceramics, polymers, and composites. The importance of materials in engineering applications. Structure-property relationships and the role of atomic structure in material behavior.

### **Unit 2: Atomic Structure and Bonding**

Atomic models and crystal structures. Types of bonding: ionic, covalent, metallic, and van der Waals. Crystallography basics, including unit cells, lattice parameters, and Miller indices. Defects in solids and their effects on material properties.

### **Unit 3: Thermodynamics of Materials**

Fundamental thermodynamic principles as applied to materials. Phase diagrams and phase transformations. Gibbs free energy and its significance in phase stability. Concepts of equilibrium and non-equilibrium phase transformations.

### **Unit 4: Mechanical Properties of Materials**

Stress-strain relationships and mechanical testing methods. Elastic and plastic deformation. Hardness, toughness, ductility, and fatigue. Overview of failure mechanisms and the role of microstructure in mechanical properties.

### **Unit 5: Materials Processing and Fabrication**

Overview of various processing techniques for different materials. Techniques such as casting, forging, welding, and additive manufacturing. The influence of processing on microstructure and properties. Quality control and material selection in fabrication.

# GREEN CHEMISTRY AND SUSTAINABLE PRACTICES

## CESN-101 D

### **Unit 1: Introduction to Green Chemistry**

This unit provides an introduction to the principles and concepts of green chemistry. It covers the basic philosophy of green chemistry, emphasizing the design of chemical processes that are environmentally benign, economically viable, and energy-efficient. The unit also explores the role of green chemistry in sustainability and its application to the reduction of hazardous substances in chemical products and processes.

### **Unit 2: Green Chemistry Principles and Practices**

In this unit, the core principles of green chemistry are examined in detail, including the design of safer chemicals, the use of renewable resources, and the minimization of waste. Topics such as atom economy, the reduction of toxicity, and energy efficiency in chemical reactions are discussed. Practical examples and case studies illustrating the application of these principles in industrial and laboratory settings are also included.

### **Unit 3: Sustainable Materials and Alternative Energy Sources**

This unit explores the use of sustainable materials in green chemistry and their role in reducing environmental impact. It covers the development and use of biodegradable materials, renewable raw materials, and the role of green chemistry in waste minimization and recycling. Additionally, the unit investigates alternative energy sources, including solar, wind, and biofuels, and their integration into sustainable chemical practices.

### **Unit 4: Environmental Impact of Chemical Processes**

This unit focuses on assessing the environmental impact of chemical processes. Topics include life-cycle analysis, carbon footprint, green solvents, and the concept of "green engineering." The unit also discusses the importance of reducing the environmental footprint of chemical processes through cleaner production technologies, waste treatment methods, and pollution prevention techniques.

### **Unit 5: Green Synthesis and Industrial Applications**

This unit covers the principles and methods of green synthesis, focusing on the design of chemical reactions that minimize environmental and economic costs. Topics include catalytic processes, solvent-free reactions, biocatalysis, and the use of renewable feedstocks in industrial processes. The unit also explores real-world applications in pharmaceuticals, agrochemicals, and materials production, illustrating the integration of green chemistry into industrial practices.

## Presentation and communication skills

CPCN-101

T	P	Cr.	L
		3	3
			0
			0

### Unit – I

**Essential Grammar:** Basic Clause/Sentence Patterns, Correct Usage of Different Word-Classes, Articles, Tense, Syntactic Concord, Prepositions, Transformation, Synthesis, Graded Syntactic Structures.

### Unit – II

**Essential Vocabulary:** Basic words, Synonyms, Antonyms, Homophones, One-Word Substitutes, Idioms and Phrases, Word-formation, Technical Vocabulary.

**Linguistic Skills:** Listening, Speaking, Reading, and Writing (Activities to be Selected by the Teacher).

### Unit – III

**Language Through Literature:** Non-Fiction &/or Fiction, Verse, and Play  
Bacon's *Essays* (Selection) and/or Lamb's *Tales from Shakespeare* (Selection)  
Keats' *The Eve of St Agnes*  
Tagore's *Chitra*

### Unit – IV

**Speaking Professionally:** Job Interviews, Group-Discussions, Public Speaking, Argumentative Skills, Role-Plays, Presentation Skill.

# INTRODUCTION TO COMMUNICATION SKILLS

## CPCN-101 A

### **Unit 1: Foundations of Communication**

This unit covers the fundamental concepts of communication, including the definition, importance, and types of communication. Students will explore verbal and non-verbal communication, the communication process, and barriers to effective communication.

### **Unit 2: Interpersonal Communication**

Focusing on one-on-one interactions, this unit emphasizes the skills needed for effective interpersonal communication. Topics include active listening, empathy, and building rapport. Students will practice techniques to enhance personal interactions in various contexts.

### **Unit 3: Group Communication**

In this unit, students will learn about communication dynamics within groups. It covers group roles, decision-making processes, and conflict resolution strategies. The importance of collaboration and teamwork in achieving common goals will also be highlighted.

### **Unit 4: Public Speaking**

This unit introduces the principles of public speaking. Students will learn how to prepare, structure, and deliver effective presentations. Techniques for engaging an audience, managing anxiety, and using visual aids will also be discussed.

### **Unit 5: Written Communication**

Focusing on written forms of communication, this unit covers various types of writing, including emails, reports, and proposals. Emphasis will be placed on clarity, conciseness, and appropriate tone. Students will practice drafting and revising written documents.

# INTERPERSONAL COMMUNICATION

## CPCN-101 B

### **Unit 1: Introduction to Interpersonal Communication**

This unit covers the foundational concepts of interpersonal communication, including definitions, significance, and the role it plays in personal and professional contexts. Students will explore the basic elements of communication, such as sender, message, channel, receiver, feedback, and noise.

### **Unit 2: Theories and Models of Communication**

This unit delves into various theories and models that explain interpersonal communication processes. Students will examine classical and contemporary theories, including the Shannon-Weaver model, Schramm's model, and Barnlund's transactional model, discussing their relevance and application in real-world scenarios.

### **Unit 3: Verbal and Nonverbal Communication**

In this unit, students will explore the intricacies of verbal communication, including language use, tone, and context. The unit will also emphasize nonverbal communication, covering body language, facial expressions, eye contact, and other nonverbal cues, and how these elements influence interactions.

### **Unit 4: Listening Skills**

This unit focuses on the importance of listening as a key component of effective interpersonal communication. Students will learn different types of listening, barriers to effective listening, and strategies to enhance their listening skills, fostering better understanding and rapport in conversations.

### **Unit 5: Interpersonal Relationships**

Students will examine the dynamics of interpersonal relationships, including stages of relationship development, maintenance, and dissolution. The unit will explore concepts such as trust, intimacy, and conflict, emphasizing the role of communication in shaping and sustaining relationships.

# TECHNICAL WRITING

## CPCN-101 C

### **Unit 1: Introduction to Technical Writing**

This unit introduces the fundamentals of technical writing, focusing on its definition, purpose, and significance in various fields. Students will explore the characteristics of effective technical documents and the differences between technical writing and other forms of writing. Emphasis will be placed on understanding the audience and tailoring content to meet their needs.

### **Unit 2: Research and Information Gathering**

In this unit, students will learn methods for conducting effective research and gathering information relevant to their writing projects. Techniques for identifying credible sources, evaluating information, and organizing research will be covered. Students will practice synthesizing data and extracting key points to support their writing.

### **Unit 3: Document Design and Formatting**

This unit focuses on the principles of document design, including layout, typography, and visual elements. Students will learn how to create visually appealing and user-friendly documents. Topics such as the use of headings, lists, tables, and graphics will be discussed to enhance readability and comprehension.

### **Unit 4: Writing for Different Audiences**

Here, students will explore the importance of audience analysis in technical writing. They will learn how to adjust tone, style, and complexity based on the target audience, whether they are experts in the field or laypersons. Practical exercises will help students develop strategies for effective communication.

### **Unit 5: Technical Reports and Proposals**

This unit covers the structure and components of technical reports and proposals. Students will learn how to write clear and concise reports, including executive summaries, methodology, findings, and recommendations. The unit will also address the essential elements of proposals, focusing on persuasive writing techniques.

# COMMUNICATION IN DIGITAL MEDIA

## CPCN-101 D

### **Unit 1: Introduction to Digital Media and Communication**

This unit introduces the concept of digital media, exploring its evolution and impact on communication in the modern world. It covers the different forms of digital media, including social media, blogs, podcasts, websites, and online video platforms. The unit also discusses the role of digital communication in shaping public discourse, personal interactions, and professional practices.

### **Unit 2: Digital Communication Tools and Platforms**

This unit focuses on the various digital tools and platforms used for communication in the digital age. It covers the functionality, features, and best practices for using social media platforms, messaging apps, email, and collaborative tools. The unit also highlights emerging digital communication technologies such as virtual reality, augmented reality, and artificial intelligence in communication.

### **Unit 3: Content Creation and Digital Storytelling**

In this unit, students learn about creating engaging content for digital media, including text, images, audio, and video. Topics include writing for the web, designing multimedia presentations, and the principles of digital storytelling. The unit explores how to craft compelling narratives that resonate with online audiences and effectively convey messages across different digital platforms.

### **Unit 4: Digital Media Ethics and Online Behavior**

This unit addresses the ethical considerations of digital communication. It covers topics such as privacy, intellectual property, digital identity, and the challenges of misinformation and online security. The unit also discusses responsible online behavior, including the impact of digital media on mental health, cyberbullying, and the role of digital media in shaping societal norms and values.

### **Unit 5: Digital Media Strategy and Analytics**

This unit focuses on the strategic use of digital media for communication purposes. It covers the planning and execution of digital media campaigns, with an emphasis on targeting specific audiences and achieving measurable outcomes. The unit also explores digital media analytics, including data collection, interpretation, and the use of analytics tools to evaluate the effectiveness of digital communication strategies.

## ENGG. WORKSHOP PRACTICE

**CMEN-151**

**Cr. L T P**

**1 0 0 2**

### **Sr No. Experiment**

1. To obtain required diameters (steps) on a cylindrical work piece with the given lengths.
2. To perform tapering and knurling operation on a cylindrical work piece of given length.
3. To make a single v-butt joint, using the given mild steel pieces by arc welding.
4. To make a double lap joint, using the given mild steel pieces by arc welding.
5. To make a T-lap joint from the given reaper of size 50 x 35 x 250 mm.
6. To make a mortise and tenon joint from the given reaper of size 50 x 35 x 250 mm.
7. To file the given Mild Steel piece in to a square shape of 48 mm side from original dimension of 50 mm.
8. To make V- fit from the given two MS plates after drilling and Tapping operations.
9. To prepare a sheet metal tray using galvanized sheet.
10. To prepare lap and single cover butt joints using sheet and rivets.

**CMEM 153**

**ENGG. GRAPHICS LAB.**

Cr. L T P

1 0 02

1. Draw Basic Geometric Entities.
2. Draw complicated Drawings using basic geometric entities.
3. Drawing using Trim operation
4. Drawing using Pattern operation
5. Drawing using Chamfer and Fillet operation
6. Draw 3D model of a Table
7. Draw 3D model of a Chair

## COMMUNICATION LAB.

**CPCN-151**

**C-L-T-P**

**1- 0- 0-2**

1. Phonemes of English: Practising English Sounds
2. Stress in Speech: Practising the Accentual Patterns in English
3. Rhythm in Speech: Practising Strong and Weak-forms of Words
4. Intonation in Speech: Practising Patterns of Tones in English
5. Conversational Skills: Situational Dialogues, Telephonic Conversations
6. Reading Comprehension: Reading Newspapers/Magazines or Online/Offline Texts
7. Listening Comprehension: Comprehending Online/Offline Audio or Video

### **Reference Books :**

## **INTERPERSONAL COMMUNICATION**

### **CPCN-151 B**

1. Build comfort among participants through icebreaker games.
2. Practice clarity and expression in role-playing scenarios.
3. Engage in group discussions focusing on articulation and tone.
4. Develop awareness of non-verbal cues with charades.
5. Interpret body language in observational exercises using videos.
6. Conduct paired listening exercises with summarization.
7. Participate in listening circles to practice attentive listening.
8. Role-play emotional scenarios to discuss appropriate responses.
9. Reflect on personal emotional triggers and management techniques.
10. Simulate conflict scenarios to practice negotiation skills.
11. Analyze real-life conflicts and brainstorm resolutions in groups.
12. Engage in trust-building exercises, such as trust falls.
13. Practice introducing oneself in networking simulations.
14. Discuss cultural norms and their impact on communication.
15. Analyze case studies of communication breakdowns in diverse settings.
16. Provide constructive feedback in practice sessions.
17. Reflect on personal experiences with feedback through journaling.
18. Collaborate on group projects that require effective communication.
19. Simulate mock interviews or networking events for professional practice

## **TECHNICAL WRITING**

### **CPCN-151 C**

1. Understand the purpose and audience of technical documents.
2. Analyze examples of technical writing for clarity and structure.
3. Practice writing clear and concise instructions for a specific task.
4. Create a user manual for a hypothetical product.
5. Develop an informative report based on research findings.
6. Collaborate in groups to write and edit a project proposal.
7. Use visual aids (charts, graphs, diagrams) to enhance written content.
8. Conduct peer reviews of technical documents for feedback.
9. Practice writing executive summaries for longer reports.
10. Create and present a technical presentation based on written content.
11. Familiarize with citation styles and ethical considerations in technical writing.
12. Learn to format documents for consistency and professionalism.

13. Write a press release for a new product or service launch.
14. Create a troubleshooting guide for common technical issues.
15. Develop a technical specification document for a project.
16. Simulate real-world scenarios to practice writing under deadlines.
17. Engage in exercises on adapting content for different audiences and formats.

## **COMMUNICATION IN DIGITAL MEDIA**

### **CPCN-151 D**

1. Explore the role of digital media in modern communication.
2. Analyze different digital platforms and their unique communication styles.
3. Practice crafting effective messages for various social media channels.
4. Engage in discussions about digital etiquette and professionalism online.
5. Create and edit multimedia content (images, videos, infographics).
6. Experiment with storytelling techniques using digital formats.
7. Conduct a case study on successful digital communication campaigns.
8. Simulate crisis communication strategies using digital platforms.
9. Develop a personal brand strategy for online presence.
10. Practice writing clear and engaging blog posts or articles.
11. Analyze audience engagement metrics for digital content.
12. Create a podcast episode or audio content on a relevant topic.
13. Collaborate on a group project to develop a digital marketing plan.
14. Learn about SEO best practices and apply them to content creation.
15. Explore tools for visual communication (e.g., Canva, Adobe Spark).
16. Conduct peer reviews of digital content for clarity and impact.
17. Reflect on the challenges and opportunities of digital communication.

## MATHEMATICS-II

### CMAM-102

	P	Cr.	L	T
0		4	3	1

**Unit-I** **10**

**Integral Calculus:** Double and triple integrals, Change of order of integration, Change of variables; Gamma, Beta functions, Dirichlet's integral; Applications (Evaluation of surface area, volume, centre of gravity, moment of inertia).

**Unit-II** **08**

**Vector Calculus:** Differentiation of vectors; Gradient, Divergence, Curl and their physical meaning; Differential operators and their identities; Line and surface integrals; Green's Theorem in a plane; Gauss's Divergence theorem and Stokes's theorem and their applications.

**Unit-III** **06**

**Fourier Series & Fourier Transform:** Trigonometric Fourier series, Half range series, Harmonic analysis; Fourier Transform: Definition, Fourier sine and cosine transforms, Fourier integral formula and applications.

**Unit-IV** **10**

**Laplace Transform:** Definition, Shifting theorems, Transform of derivatives, Differentiation and integration of transforms, Heaviside unit step function and Dirac delta function; Solution of ordinary differential equations in problems of mechanics, Electric circuits and bending of beams using Laplace transform.

**Unit-V** **06**

**Z-Transform:** Definition of Z-transform of elementary functions; Shifting theorems, Convolution theorem, Initial and Final value theorems; Application to solution of difference equations.

# STATISTICAL TECHNIQUES IN COMPUTER SCIENCE II

## CMAN-102 A

### **Unit 1: Introduction to Advanced Statistical Concepts**

An overview of foundational statistical concepts, including a review of probability distributions, random variables, and key theorems essential for advanced analysis.

### **Unit 2: Inferential Statistics and Hypothesis Testing**

Exploration of statistical inference techniques, focusing on hypothesis testing, confidence intervals, and the application of t-tests, chi-square tests, and z-tests.

### **Unit 3: Regression Analysis**

In-depth study of linear and multiple regression models, examining parameter estimation, diagnostics, and the interpretation of results. Introduction to regularization techniques such as Lasso and Ridge regression.

### **Unit 4: Analysis of Variance (ANOVA)**

Understanding the principles of ANOVA, including one-way and two-way ANOVA, and their applications in comparing multiple groups and experimental designs.

### **Unit 5: Non-Parametric Methods**

Exploration of non-parametric statistical methods, including the Wilcoxon rank-sum test, Kruskal-Wallis test, and their use in situations where traditional assumptions may not hold.

# MATHEMATICAL FOUNDATION OF COMPUTER SCIENCE II

CMAN-102 B

## **Unit 1: Discrete Structures**

An exploration of discrete mathematics, focusing on topics such as sets, relations, functions, and combinatorial structures that form the basis of computer science.

## **Unit 2: Graph Theory**

Study of graph concepts, including types of graphs, graph traversal algorithms, connectivity, and applications of graphs in computer networks and data structures.

## **Unit 3: Logic and Proof Techniques**

Introduction to propositional and predicate logic, methods of proof including direct, indirect, and contradiction proofs, as well as mathematical induction.

## **Unit 4: Number Theory**

Examination of number theory concepts, including divisibility, prime numbers, modular arithmetic, and their applications in cryptography and algorithms.

## **Unit 5: Algebraic Structures**

Overview of algebraic systems such as groups, rings, and fields, emphasizing their relevance to coding theory and error detection.

# APPLIED MATHEMATICS II

CMAN-102 C

## **Unit 1: Differential Equations**

Introduction to ordinary differential equations, methods of solving first and second-order equations, and applications in modeling physical systems.

## **Unit 2: Partial Differential Equations**

Study of partial differential equations, their classification, and techniques for solving heat, wave, and Laplace equations, with real-world applications.

## **Unit 3: Linear Algebra**

Exploration of vector spaces, linear transformations, eigenvalues, eigenvectors, and matrix theory, emphasizing applications in computer graphics and engineering.

## **Unit 4: Numerical Methods**

Introduction to numerical analysis techniques, including numerical solutions of equations, interpolation, numerical integration, and error analysis.

## **Unit 5: Optimization Techniques**

Examination of optimization methods, including linear programming, the simplex method, and applications in resource allocation and decision-making.

## **ADVANCED APPLIED MATHEMATICS II**

### **CMAN-102 D**

#### **Unit 1: Advanced Linear Algebra and Matrix Theory**

This unit covers advanced topics in linear algebra, focusing on the theory and application of vector spaces, linear transformations, and advanced matrix techniques. Topics include spectral theory, the Jordan canonical form, singular value decomposition, and applications to solving large systems of equations. The unit also explores the use of matrix factorizations in computational methods and their importance in numerical analysis.

#### **Unit 2: Advanced Ordinary Differential Equations**

Focusing on higher-order ordinary differential equations, this unit examines methods for solving linear and nonlinear differential equations, including series solutions and special functions. Topics include boundary value problems, Sturm-Liouville theory, and the use of Green's functions in solving linear differential equations. The unit also discusses stability analysis, perturbation methods, and applications to mechanical and electrical systems.

#### **Unit 3: Partial Differential Equations and Fourier Analysis**

This unit introduces advanced techniques for solving partial differential equations, including the method of separation of variables, the Fourier transform, and the Laplace transform. Topics include the wave equation, heat equation, and Poisson's equation, along with their applications in physics and engineering. The unit also covers Fourier series and Fourier transforms, with an emphasis on their role in solving boundary value problems in various coordinate systems.

#### **Unit 4: Complex Analysis and Its Applications**

The focus of this unit is on advanced concepts in complex analysis, including the study of complex functions, analytic functions, and contour integration. Topics include residue theory, conformal mapping, and the use of the Cauchy-Riemann equations. The unit explores applications of complex analysis to potential theory, fluid dynamics, and electromagnetic theory, as well as its role in solving real-world engineering problems.

#### **Unit 5: Probability Theory, Stochastic Processes, and Statistical Modeling**

This unit delves into advanced probability theory, including random variables, expectation, variance, and covariance. It explores the theory of stochastic processes, including Markov chains, Poisson processes, and Brownian motion. The unit also includes an introduction to statistical modeling, hypothesis testing, regression analysis, and the use of probabilistic models in decision theory, reliability analysis, and machine learning.

CPHN-102

ENGINEERING PHYSICS

Cr. L T P

4 3 1 0

**UNIT-I :Relativistic Mechanics**

Inertial and non inertial frames, Galilean transformation equation, Einstein's postulates, Length contraction and time dilation, Lorentz transformation equation, Variation of mass with velocity.

**UNIT-II : Laser and Wave optics**

Spontaneous and stimulated emission of radiation, Einstein's coefficients, construction and working of Ruby, He- Ne lasers. Application of lasers.

Interference of light, Biprism experiment, Polarization, Phenomena of double refraction, Nicol prism, Production and analysis of plane, circular and elliptical polarized light, specific rotation, Optical activity.

**-III : Wave Mechanics**

Introduction to wave particle duality, de Broglie matter waves, phase and group velocities, Heisenberg's uncertainty principle and its applications, Wave function characteristics and significance. Particle in one dimensional rigid box.

**UNIT- IV : Superconductivity and Nanomaterials**

Temperature dependence of resistivity, Effect of magnetic field (Meissner effect), isotope effect, London's equation, Temperature dependence of critical field, BCS theory, High temperature superconductors, Application of superconductors.

Introduction to nanomaterials,

**UNIT- V : Electromagnetics**

Maxwell's equations (integral and differential forms), Equation of continuity, Transverse nature of EM waves, EM- wave propagation and its propagation in free space, Poynting vector. Statement of Gauss divergence and Stokes theorems and useful vector identities.

**Reference Books :**

# INTRODUCTION TO ENGINEERING PHYSICS

CPHN -102 A

## **Unit 1: Classical Mechanics**

This unit covers the fundamental principles of classical mechanics, including kinematics, dynamics, and the laws of motion. Students will explore concepts such as force, energy, work, and momentum, along with the application of Newton's laws in various physical scenarios.

## **Unit 2: Thermodynamics**

This unit introduces the principles of thermodynamics, focusing on the laws of thermodynamics, heat transfer, and the behavior of gases. Topics include thermal properties of matter, heat engines, refrigeration cycles, and entropy, emphasizing real-world applications in engineering.

## **Unit 3: Waves and Oscillations**

In this unit, students will study the nature of waves and oscillatory motion. Key topics include simple harmonic motion, wave properties, sound waves, and wave interference. The unit also explores practical applications of these concepts in engineering systems and technologies.

## **Unit 4: Optics**

This unit focuses on the behavior of light and its interaction with matter. Topics include reflection, refraction, lenses, optical instruments, and wave optics. Students will learn about the principles behind imaging systems and the application of optical technologies in engineering.

## **Unit 5: Electromagnetism**

This unit introduces the fundamental concepts of electromagnetism, covering electric fields, magnetic fields, and their interactions. Students will explore Maxwell's equations, electromagnetic waves, and applications in electrical engineering, including circuit analysis and electromagnetic devices.

# ELECTROMAGNETISM

CPHN -102 B

## **Unit 1: Introduction to Electromagnetism**

This unit provides an introduction to the fundamental concepts of electromagnetism, focusing on the relationship between electricity and magnetism. Topics include Coulomb's law, electric fields, electric potential, and the concept of the electrostatic force. The unit also introduces the basics of electric charge, electric flux, and Gauss's law, setting the stage for the study of electromagnetism in both static and dynamic contexts.

## **Unit 2: Electrostatics and Electric Fields**

In this unit, the theory of electrostatics is explored in greater detail. The unit covers the behavior of electric fields, electric potential, and their interaction with charged particles. It includes a deeper analysis of Gauss's law, capacitors and dielectric materials, and the concept of energy stored in electric fields.

## **Unit 3: Magnetostatics and Magnetic Fields**

This unit focuses on the study of magnetic fields and their interaction with electric currents. Topics include Biot-Savart law, Ampère's law, magnetic field due to steady currents, and the magnetic properties of materials.

## **Unit 4: Electromagnetic Induction and Maxwell's Equations**

In this unit, electromagnetic induction and its applications are studied in detail. Topics include Faraday's law of induction, Lenz's law, self-induction, and mutual induction. The unit also introduces Maxwell's equations, which describe the behavior of electric and magnetic fields in a unified framework.

## **Unit 5: Electromagnetic Waves and Radiation**

This unit covers the propagation of electromagnetic waves, focusing on wave equations, waveguides, and transmission lines. The unit examines the nature of electromagnetic radiation, including the characteristics of plane waves in free space, energy transfer, and Poynting's theorem.

# **MATERIALS SCIENCE AND ENGINEERING**

CPHN -102 C

## **Unit 1: Introduction to Materials Science**

This unit covers the fundamental concepts of materials science and engineering, including the classification of materials into metals, ceramics, polymers, and composites, as well as an overview of the relationships between structure and properties.

## **Unit 2: Atomic Structure and Bonding**

This unit focuses on the atomic structure of materials, the periodic table, and the various types of atomic bonding such as ionic, covalent, metallic, and van der Waals forces. It explores how these bonding types influence material properties.

## **Unit 3: Crystal Structure and Defects**

In this unit, students learn about different crystal systems, lattice structures, and unit cells, along with concepts of packing efficiency. The unit also examines defects in crystals, including point, line, and surface defects.

## **Unit 4: Mechanical Properties of Materials**

This unit addresses the mechanical properties of materials, including stress, strain, and the methods used for mechanical testing. Topics include elastic and plastic deformation, hardness, toughness, ductility, and brittleness.

## **Unit 5: Phase Diagrams and Phase Transformations**

Students will study phase diagrams, including the lever rule and phase equilibrium. This unit also covers processes such as solidification, diffusion, and phase transformations in solids.

# WAVES AND VIBRATIONS

## CPHN -102 D

### **Unit 1: Introduction to Waves and Vibrations**

This unit covers the basic principles of waves and vibrations, including wave properties like amplitude, frequency, and velocity. It introduces different types of waves—mechanical, electromagnetic, longitudinal, and transverse—and explores wave propagation and superposition.

### **Unit 2: Simple Harmonic Motion (SHM)**

Focusing on SHM, this unit examines oscillatory motion, the mathematical description of SHM, and its applications in systems like mass-spring and pendulum oscillators. It also discusses energy conservation in harmonic motion.

### **Unit 3: Wave Equations and Solutions**

This unit addresses the wave equation, its solutions, and wave behavior. It covers wave propagation, reflection, refraction, diffraction, and interference, along with standing and traveling waves and their normal modes.

### **Unit 4: Forced Oscillations and Resonance**

Exploring forced oscillations, this unit looks at the response of systems to external periodic forces, resonance phenomena, and damping. It also examines real-world applications of resonance in mechanical and electrical systems.

### **Unit 5: Nonlinear Waves and Solitons**

This unit introduces nonlinear wave phenomena, focusing on solitons and their mathematical description. It explores the stability of soliton solutions and their applications in various fields like fluid dynamics and optics.

# COMPUTER FUNDAMENTALS AND PROGRAMMING USING C

CCSN-102

Cr. L T P

4 3 1 0

## Unit-I

**Computer System:** Basics of computer systems, history, types, capability and limitations of computer systems, Concept of assembler, compiler, interpreter, loader and linker. Generation of Computers.

**Hardware Organization:** Anatomy of a digital computer, CPU, Memory, processor, I/O Devices. **Memory Units:** Hierarchy, primary memory, cache; Auxiliary storage

## Unit-II

**Number System:** Introduction to Number Systems-Types-Decimal, Binary, Octal, Hexadecimal; Conversion from one number system to other; Binary arithmetic operations; Representation of Negative Numbers.

**Computer Fundamentals-** Introduction of Operating system, Basics of computer networks, Introduction of software.

**Idea of Algorithm:** Representation of Algorithm, Flowchart, From algorithms to programs, source code.

## Unit-III

**Programming Basics:** Structure of C program, writing and executing the first C program, Syntax and logical errors in compilation, object and executable code. Components of C language. Standard I/O in C, Fundamental data types, Storage classes.

**Arithmetic expressions and precedence :** Operators and expression using numeric and relational operators, mixed operands, type conversion, logical operators, bit operations, assignment operator, operator precedence and associativity.

## Unit-IV

**Conditional Branching:** Applying if and switch statements, nesting if and else, use of break and default with switch.

**Iteration and loops:** use of while, do while and for loops.

**Functions:** Introduction, types of functions, Defining a Function, Function Declarations, Calling a Function , Passing parameters to functions, call by value, call by reference, recursive functions.

## Unit-V

**Arrays:** Array notation and representation, manipulating array elements, using multi-dimensional arrays. Character arrays and strings, Structure, union, enumerated data types, Array of structures, Passing arrays to functions.

**Pointers:** Introduction, declaration, applications, Introduction to dynamic memory allocation (malloc, calloc, realloc, free)

**File handling:** File I/O functions

**TEXT & REFERENCE BOOKS:**

# **INTRODUCTION TO ELECTRICAL ENGINEERING**

**CEEN-102 A**

## **Unit 1: Fundamentals of Electrical Engineering**

This unit covers the basic concepts of electrical engineering, including definitions of voltage, current, power, and energy. It introduces Ohm's Law, Kirchhoff's Laws, and the principles of series and parallel circuits. Students will learn about electrical units and measurements, circuit components, and basic electrical safety.

## **Unit 2: Circuit Analysis Techniques**

Students will explore various methods for analyzing electrical circuits, including mesh and nodal analysis. This unit also introduces theorems such as Thevenin's and Norton's theorems, and the concept of superposition in circuit analysis. Practical applications and problem-solving techniques will be emphasized.

## **Unit 3: AC and DC Circuit Theory**

This unit focuses on the differences between alternating current (AC) and direct current (DC) circuits. It includes the analysis of sinusoidal waveforms, phasors, and complex impedance. Students will also learn about AC power calculations, reactive components, and power factor correction.

## **Unit 4: Electrical Machines**

An overview of various electrical machines is provided in this unit, including transformers, DC motors, and AC motors. The principles of operation, efficiency, and applications of these machines will be discussed, along with introductory concepts of electromagnetic induction and magnetic circuits.

## **Unit 5: Control Systems**

This unit introduces the fundamentals of control systems, covering open-loop and closed-loop systems. Students will learn about system stability, transfer functions, and block diagrams. The unit will also touch on feedback control and its applications in electrical engineering.

# **ELECTRICAL MACHINES**

## **CEEN-102 B**

### **Unit 1: Introduction to Waves and Vibrations**

This unit covers the basic principles of waves and vibrations, including wave properties like amplitude, frequency, and velocity. It introduces different types of waves—mechanical, electromagnetic, longitudinal, and transverse—and explores wave propagation and superposition.

### **Unit 2: Simple Harmonic Motion (SHM)**

Focusing on SHM, this unit examines oscillatory motion, the mathematical description of SHM, and its applications in systems like mass-spring and pendulum oscillators. It also discusses energy conservation in harmonic motion.

### **Unit 3: Wave Equations and Solutions**

This unit addresses the wave equation, its solutions, and wave behavior. It covers wave propagation, reflection, refraction, diffraction, and interference, along with standing and traveling waves and their normal modes.

### **Unit 4: Forced Oscillations and Resonance**

Exploring forced oscillations, this unit looks at the response of systems to external periodic forces, resonance phenomena, and damping. It also examines real-world applications of resonance in mechanical and electrical systems.

### **Unit 5: Nonlinear Waves and Solitons**

This unit introduces nonlinear wave phenomena, focusing on solitons and their mathematical description. It explores the stability of soliton solutions and their applications in various fields like fluid dynamics and optics.

# **ELECTRICAL MEASUREMENTS AND INSTRUMENTATION**

**CEEN-102 C**

## **Unit 1: Introduction to Electrical Measurements**

This unit introduces the basic principles of electrical measurements, focusing on the need for accurate measurements in electrical systems. It covers the classification of electrical quantities, units of measurement, and the principles behind various types of electrical measuring instruments.

## **Unit 2: Measuring Instruments for Voltage, Current, and Resistance**

This unit explores the working principles and applications of instruments used to measure voltage, current, and resistance. It covers analog and digital voltmeters, ammeters, and ohmmeters, as well as their calibration, accuracy, and limitations in electrical circuits.

## **Unit 3: Power and Energy Measurement**

The unit focuses on the measurement of electrical power and energy. Topics include the operation of wattmeters, energy meters, and the measurement of both active and reactive power in AC circuits. It also discusses the methods for measuring power in three-phase systems.

## **Unit 4: Instrumentation for Frequency, Phase, and Power Factor Measurement**

This unit covers instruments used for measuring frequency, phase angle, and power factor in AC circuits. It includes the working principles and applications of frequency counters, phase meters, and power factor meters, along with methods for ensuring their accuracy.

## **Unit 5: Electrical Instrumentation in Industrial Applications**

The unit discusses advanced electrical instrumentation systems used in industrial settings, including transducers, data acquisition systems, and process control instrumentation. It explores the use of instruments for monitoring and controlling parameters such as temperature, pressure, flow, and level in industrial applications.

# **TRANSMISSION AND DISTRIBUTION SYSTEMS**

## **CEEN-102 D**

### **Unit 1: Introduction to Power Transmission and Distribution**

This unit introduces the basic concepts of power transmission and distribution systems, including their importance in delivering electrical power from generation sources to consumers. It covers the basic structure of transmission and distribution networks, the components involved, and the role of substations in power systems.

### **Unit 2: Transmission Lines and Their Performance**

This unit focuses on the design and performance of overhead transmission lines. Topics include the calculation of line parameters (resistance, inductance, and capacitance), line constants, and the effect of line length and load on voltage regulation and line losses. It also explores the types of transmission lines used and their practical considerations.

### **Unit 3: Power Flow and Voltage Control in Transmission Systems**

The unit covers the principles of power flow in transmission networks, including the factors that affect power transfer and voltage control. Topics include the calculation of power loss in transmission lines, voltage drop, and methods of controlling voltage through tap-changing transformers and reactive power compensation.

### **Unit 4: Substations and Distribution Systems**

This unit focuses on the role and design of substations in power systems, including the types of substations (e.g., step-up, step-down, and switching stations). It also covers the structure and operation of distribution systems, including the distribution of electrical power to residential, commercial, and industrial consumers, and discusses the types of distribution networks.

### **Unit 5: Protection and Maintenance of Transmission and Distribution Systems**

The unit addresses the protection and maintenance of transmission and distribution systems, focusing on the need for safety and reliability in power delivery. Topics include protective relays, circuit breakers, and fault detection methods. It also covers the maintenance practices for transmission lines and substations to ensure the uninterrupted flow of power.

# Technical Communication

## CPCN-102

Cr. L T P 3 2 1

### Unit – I

**Basics of Technical Communication:** Meaning, Elements, Process, Origin, Scope and Significance, Forms, Channels & Media of Communication, Barriers to Communication, Organisation and Style in Technical Communication, Non-Verbal Communication.

**Technical Reports:** Nature & Significance, Types, Formats of Reports, Structure of Formal Reports: Project Report, Dissertation and Thesis, Strategies for Writing.

**Technical Articles:** Nature & Significance, Types, Elements, Research Methods, Writing Strategies.

**Technical Proposals:** Nature & Significance, Types, Structure of a Formal Proposal, Tips for Writing.

### Unit – II

**Guidelines for Effective Writing:** Requisites of Good Sentence Writing; Elements of a Paragraph, Requisites of Impeccable Paragraph Writing: Unity, Coherence and Logical Order; Development of Paragraphs.

**Specific Writing:** Note-Making; Summarising & Paraphrasing; Referencing; Professional Memos; e-Mails; e-Writing.

### Unit – III

**Professional Correspondence:** Letter Writing Skills; Form & Structure; Writing Personal & Official Letters, Letters of Inquiry, Instruction Letters, Quotations, Supply Orders, Complaint and Adjustment Letters, Minutes for Meeting, Designing Resume/CV/Bio-Data, Job Application, Follow-up Letters.

### Unit – IV

**Basics of Phonetics:** International Phonetic Alphabet, Phonemes, Allophones, Phonetic Transcription, Organs of Speech, Places and Manners of Articulation, Syllable, Stress, Rhythm, Intonation.

# INTRODUCTION TO TECHNICAL COMMUNICATION

## CPCN-102 A

### **Unit 1: Fundamentals of Technical Communication**

Explore the principles of technical communication, its significance in various fields, and the role of the technical communicator. Understand the key characteristics of effective communication, including clarity, conciseness, and audience awareness.

### **Unit 2: Understanding Audiences and Contexts**

Investigate different audience types and their needs. Learn to analyze contexts, including cultural and organizational factors that influence communication. Develop skills for tailoring messages to specific audiences.

### **Unit 3: Research and Information Gathering**

Focus on effective research methodologies, including identifying credible sources, conducting interviews, and gathering data. Emphasize the importance of organizing information logically for clear communication.

### **Unit 4: Writing Techniques for Technical Documents**

Examine various writing styles and formats used in technical documents. Cover techniques for drafting, revising, and editing, as well as the importance of incorporating visuals and design elements to enhance readability.

### **Unit 5: Visual Communication and Design**

Learn the principles of visual communication, including the effective use of graphics, charts, and diagrams. Explore design fundamentals and tools that aid in creating visually appealing and informative documents.

# TECHNICAL DOCUMENTATION

## CPCN-102 B

### **Unit 1: Introduction to Technical Documentation**

This unit covers the fundamentals of technical documentation, including its purpose and significance in various industries. It explores different types of documentation such as user manuals, system documentation, and online help. Emphasis is placed on the role of technical writers and the skills required for effective communication.

### **Unit 2: Documentation Planning and Management**

In this unit, the focus is on the planning stages of technical documentation. Key topics include audience analysis, defining documentation goals, and creating project timelines. It also covers documentation management practices, including version control and collaboration tools.

### **Unit 3: Research and Information Gathering**

This unit emphasizes the importance of thorough research in technical writing. It includes strategies for gathering information from subject matter experts, conducting interviews, and utilizing existing documentation. Participants learn how to validate and organize information for clarity and accuracy.

### **Unit 4: Writing Techniques for Technical Documentation**

Here, the syllabus delves into writing techniques specific to technical documentation. Topics include clarity, conciseness, and coherence in writing. The unit also addresses the use of active voice, proper terminology, and the importance of audience-centric language.

### **Unit 5: Visual Elements in Technical Documentation**

This unit focuses on incorporating visual elements to enhance understanding. It covers the use of diagrams, charts, screenshots, and other graphics. Participants learn best practices for visual design and how to create effective visuals that complement text.

# TECHNICAL EDITING AND PROOFREADING

CPCN-102 C

## **Unit 1: Introduction to Technical Editing and Proofreading**

Overview of technical communication, the role of editing and proofreading, and the differences between these processes.

## **Unit 2: Editing Fundamentals**

Principles of effective editing, types of editing (substantive, copy editing, line editing), and the editing process.

## **Unit 3: Understanding Technical Documents**

Types of technical documents, audience analysis, and the importance of context in editing.

## **Unit 4: Grammar and Style**

Key grammar rules relevant to technical writing, style guides (APA, MLA, Chicago), and consistency in terminology.

## **Unit 5: Proofreading Techniques**

Strategies for effective proofreading, common errors to watch for, and tools and resources for proofreading.

# TECHNICAL RESEARCH AND ANALYSIS

CPCN-102 D

## **Unit 1: Introduction to Technical Research**

This unit introduces the concept of technical research, its importance in advancing technology and innovation, and the various types of research methodologies. It covers the basics of formulating research questions, hypothesis development, and the steps involved in conducting research, including literature review and data collection techniques.

## **Unit 2: Research Methodology and Data Collection**

This unit focuses on the methods used in technical research, including qualitative and quantitative research methodologies. Topics include sampling techniques, survey design, experimentation, and data collection tools. The unit also covers data management and the ethical considerations in research data handling.

## **Unit 3: Data Analysis Techniques**

This unit explores various data analysis techniques used in technical research, including statistical methods, data visualization, and interpretation of results. Topics include descriptive statistics, inferential statistics, regression analysis, and the use of software tools like MATLAB, SPSS, or Python for data analysis.

## **Unit 4: Technical Writing and Reporting**

This unit emphasizes the principles of technical writing and how to effectively communicate research findings. It covers the structure of research papers, technical reports, and academic articles, including abstract writing, literature reviews, methodology, results, discussions, and citations.

## **Unit 5: Presentation and Publication of Research Findings**

This unit covers the techniques for presenting research findings to both technical and non-technical audiences. Topics include preparing effective research presentations, poster sessions, and oral defense of research. The unit also explores the process of publishing research in journals and conferences, including peer review, submission guidelines, and ethical issues in publication.

## Engg. Physics Lab.

### CPHM-152

P	Cr.	L	T
	1	0	0

2

1. Measurement of wavelength of monochromatic light by Newton's rings
2. Measurement of the specific rotation of cane sugar solution using Biquartzpolarimeter
3. Measurement of wavelength of spectral lines using plane transmission grating
4. Measurement of the specific resistance of the material of a given wire using Carey Foster Bridge
5. Study of the variation of magnetic field along the axis of current carrying coil and then to estimate the radius of the coil
6. Calibration of the given voltmeter and ammeter with a potentiometer
7. Measurement of the resistivity and energy band gap of a semiconductor material (four probe)
8. Study of Hall effect and determination of Hall coefficient and carrier density of a given semiconductor material
9. Measurement of acceleration due to gravity by compound pendulum
10. Measurement of electro-chemical equivalent (ECE) of copper using Helmholtz galvanometer

#### Reference Books :

1. Jain, R.K., Darakhshan Sahar and D. Mishra. *Engineering Physics Practical Manual*. Shobhit University Publication, 2009.

# INTRODUCTION TO ENGINEERING PHYSICS LAB

CPHN-152A

1. Measurement of acceleration due to gravity using a simple pendulum.
2. Determination of Young's modulus using a cantilever beam.
3. Study of motion on an inclined plane.
4. Verification of the laws of reflection and refraction.
5. Measurement of wavelength using a diffraction grating.
6. Investigation of Hooke's Law with spring constant determination.
7. Analysis of LC circuits and resonance.
8. Measurement of thermal conductivity of a metal rod.
9. Study of charge and discharge in capacitors.
10. Exploration of the photoelectric effect.
11. Determination of the focal length of a lens using the lens formula.
12. Investigation of interference patterns using a double-slit experiment.
13. Measurement of the speed of sound in air.
14. Study of magnetic fields using a current-carrying coil.
15. Analysis of the Doppler effect with sound waves.
16. Measurement of the coefficient of friction on different surfaces.
17. Determination of specific heat capacity using a calorimeter.
18. Study of the behavior of waves in a stretched string.
19. Investigation of thermoelectric effects (Seebeck and Peltier).
20. Exploration of the behavior of light through optical fibers.

## ELECTROMAGNETISM LAB

CPHN-152B

1. Measurement of magnetic field strength using a Hall probe.
2. Investigation of Ampère's Law with current-carrying conductors.
3. Study of Faraday's Law of Electromagnetic Induction.
4. Determination of the resistance of a wire using Wheatstone bridge.
5. Analysis of magnetic field lines using iron filings and magnets.
6. Measurement of the inductance of coils using an LCR meter.
7. Study of the behavior of parallel plate capacitors.
8. Investigation of the force on a current-carrying conductor in a magnetic field.
9. Measurement of dielectric constants of various materials.
10. Analysis of electromagnetic waves using antennas.
11. Exploration of RLC circuit resonance and impedance.
12. Study of the magnetic hysteresis loop of materials.
13. Measurement of self-inductance using an RL circuit.
14. Investigation of the Biot-Savart Law with magnetic fields.
15. Study of capacitive reactance in AC circuits.
16. Analysis of the relationship between current and magnetic field in solenoids.
17. Measurement of electric field strength using a voltmeter.
18. Investigation of transformer operation and efficiency.
19. Study of electromagnetic interference (EMI) in circuits.
- 20.** Exploration of magnetic shielding using different materials.

## MATERIALS SCIENCE AND ENGINEERING LAB

### CPHN-152C

1. A program to input stress and strain values and calculate Young's Modulus.
2. A script to calculate thermal conductivity using Fourier's law based on temperature gradient and heat flow.
3. A program that takes in component compositions and temperature to plot a simple binary phase diagram.
4. A tool to compute the diffusion coefficient using Fick's laws based on concentration gradient.
5. A program to estimate the fatigue life of a material using S-N curves and input loading conditions.
6. A simulation of a tensile test where users can input material properties and loading rates to visualize stress-strain curves.
7. A program that suggests materials based on user-defined properties such as strength, weight, and corrosion resistance.
8. A tool to calculate the creep rate of materials at high temperatures and stresses over time.
9. A program that takes diameter of the indentation and applied load to calculate Brinell hardness number.
10. A script to calculate the corrosion rate based on weight loss and exposure time.
11. A program to calculate the effective modulus of a composite based on volume fractions and moduli of individual components.
12. A tool to compute the thermal expansion of materials based on temperature change and linear expansion coefficients.
13. A program to analyze impact test results and calculate the energy absorbed by a material during fracture.
14. A program that estimates recrystallization temperature based on grain size and deformation history.
15. A script to analyze XRD data and identify peaks corresponding to specific crystallographic planes.
16. A program to simulate the crack growth rate in materials under cyclic loading conditions.
17. A tool to calculate electrical conductivity based on resistivity and material dimensions.
18. A program that estimates the glass transition temperature of polymers based on molecular weight and structure.
19. A script that calculates thermal stresses in materials based on temperature changes and constraints.
20. A program to generate and plot load-deflection curves for beams under various loading conditions.

## WAVES AND VIBRATIONS LAB

### CPHN-152D

- 1) To study the motion of a simple pendulum and determine the acceleration due to gravity (g).
- 2) To determine the frequency of a tuning fork using a resonance tube.
- 3) To determine the speed of sound in air using the Doppler effect.
- 4) To study the vibration of a cantilever beam and calculate its natural frequency.
- 5) To observe the formation of standing waves on a string and determine the wavelength.
- 6) To study the longitudinal vibrations of a spring-mass system.
- 7) To determine the damping factor for a damped harmonic oscillator.
- 8) To investigate the relationship between frequency and amplitude in simple harmonic motion.
- 9) To study the superposition of waves using a ripple tank and observe interference patterns.
- 10) To determine the wave speed on a stretched string using a frequency generator.
- 11) To observe the phenomenon of resonance using a mechanical resonator.
- 12) To study the characteristics of forced oscillations and resonance in a spring-mass system.
- 13) To measure the time period of a simple pendulum for different lengths and plot the variation.
- 14) To calculate the speed of sound in a solid using the longitudinal wave method.
- 15) To study the vibration modes of a metal rod fixed at both ends.
- 16) To observe and measure the wave reflection and refraction using a slinky or spring.
- 17) To determine the frequency of a tuning fork by using a Helmholtz resonator.

- 18) To investigate the formation of beats in sound waves and calculate the beat frequency.
- 19) To determine the period of oscillation of a compound pendulum.
- 20) To study the motion of a driven damped harmonic oscillator and determine its quality factor.

## **COMPUTER PROGRAMMING USING C LAB.**

**CCSN 152**

<b>P</b>	<b>Cr.</b>	<b>L</b>	<b>T</b>
	<b>1</b>	<b>0</b>	<b>0</b>

**2**

- 1) Write a program to find the factorial of a given number using recursion.
- 2) Write a program to check whether a number is prime or not.
- 3) Write a program to reverse a given number using a loop.
- 4) Write a program to find the largest of three numbers using if-else statements.
- 5) Write a program to calculate the sum of digits of a given number.
- 6) Write a program to print the Fibonacci series up to a given term using iteration.
- 7) Write a program to check if a given string is a palindrome.
- 8) Write a program to find the greatest common divisor (GCD) of two numbers using Euclidean algorithm.
- 9) Write a program to perform matrix multiplication.
- 10) Write a program to sort an array of integers using bubble sort.
- 11) Write a program to implement a simple calculator that performs addition, subtraction, multiplication, and division.
- 12) Write a program to convert a given decimal number to binary.
- 13) Write a program to count the number of vowels and consonants in a string.

14) Write a program to find the length of a string without using the built-in strlen function.

15) Write a program to implement a simple linear search on an array of integers.

- 7. Verification of Norton theorem**
- 8. Verification of superposition theorem**

# INTRODUCTION TO ELECTRICAL ENGINEERING LAB

## CEEN-152A

1. A program to calculate the equivalent resistance of resistors in series and parallel configurations.
2. A script to analyze simple AC circuits using phasor representation and calculate voltage, current, and power.
3. A program that simulates the behavior of RC, RL, and RLC circuits under different frequency inputs.
4. A tool to perform node voltage analysis for a given electrical circuit and display results.
5. A program to calculate the power factor of an AC circuit based on voltage and current phase angles.
6. A script to design and simulate a basic operational amplifier circuit for inverting and non-inverting configurations.
7. A program that calculates the inductance of coils based on their physical dimensions and number of turns.
8. A tool to simulate a transformer and calculate turns ratio, voltage, and current on primary and secondary sides.
9. A program to determine the Thevenin equivalent circuit for a given linear circuit.
10. A script that performs load flow analysis for a simple electrical power system.
11. A program to simulate Kirchhoff's voltage and current laws in a network of resistors.
12. A tool to calculate the gain of a transistor amplifier circuit based on input and output voltages.
13. A program that analyzes a simple digital circuit and generates a truth table.
14. A script to calculate the energy consumption of electrical appliances over time based on power ratings.
15. A program that simulates the charging and discharging of a capacitor in an RC circuit.
16. A tool to design and analyze a basic filter circuit (low-pass, high-pass, band-pass).
17. A program that calculates the efficiency of a motor based on input and output power.
18. A script to visualize the waveform of a sinusoidal signal using Fourier series.

## **ELECTRICAL MACHINES LAB**

CEEN-152B

1. Write a program to calculate the efficiency of a transformer given input and output power.
2. Simulate the no-load test of a single-phase induction motor and calculate the power factor.
3. Create a program to determine the speed-torque characteristics of a DC motor.
4. Implement a function to analyze the performance of a squirrel-cage induction motor under varying load conditions.
5. Develop a program to perform the equivalent circuit analysis of a transformer.
6. Simulate the starting current of a three-phase induction motor.
7. Write a code to perform the speed control of a DC motor using PWM (Pulse Width Modulation).
8. Create a program to calculate the losses in a three-phase transformer under different loading conditions.
9. Simulate the vector control of an induction motor using MATLAB.
10. Implement a program to determine the slip of an induction motor at various load conditions.
11. Create a function to analyze the V-curves of a synchronous motor.
12. Write a program to perform load flow analysis in a power system.
13. Simulate the fault analysis of a synchronous generator during short-circuit conditions.
14. Develop a program to model the dynamics of a brushed DC motor.
15. Create a program to calculate the power factor correction required for a given load.
16. Simulate the effect of rotor resistance on the performance of an induction motor.
17. Write a code to perform the measurement of efficiency for different types of electrical machines.

18. Implement a program to analyze the thermal performance of electrical machines under steady-state conditions.
19. Create a function to simulate the harmonic analysis in a power system.
20. Develop a program to visualize the phasor diagrams of AC circuits with different loads

## **ELECTRICAL MEASUREMENTS AND INSTRUMENTATION LAB**

CEEN-152C

1. Calculate resistance using Ohm's Law based on input voltage and current values.
2. Compute real, reactive, and apparent power in AC circuits given voltage and current.
3. Decode resistor color bands to determine resistance values.
4. Measure and display capacitance using a microcontroller setup.
5. Design a voltage divider calculator for output voltage based on input voltage and resistor values.
6. Implement a frequency counter to measure the frequency of an input waveform.
7. Simulate an LCR meter to measure inductance, capacitance, and resistance.
8. Create a data logger that records and stores voltage and current measurements over time.
9. Develop an oscilloscope simulation to visualize waveforms in real-time.
10. Convert temperature readings from a sensor into a corresponding voltage output.
11. Build a digital multimeter emulator to replicate basic multimeter functionalities.
12. Measure phase angle between voltage and current waveforms using timing functions.
13. Analyze a Wheatstone bridge circuit to find an unknown resistance value.
14. Generate various waveform signals (sine, square, triangular) at different frequencies.
15. Interface with transducers and display data from various sensors (e.g., temperature, pressure).

16. Calculate electric field strength based on point charge and distance from the charge.
17. Compute inductive reactance using inductance and frequency values.
18. Calculate capacitive reactance from capacitance and frequency inputs.
19. Measure and display AC voltage using a microcontroller setup.
20. Simulate the behavior of a current transformer in a circuit to analyze current ratios.

## TRANSMISSION AND DISTRIBUTION SYSTEMS LAB

CEEN-152D

1. Calculate the voltage drop in a transmission line given the length, current, and resistance.
2. Simulate a three-phase load flow analysis using the Gauss-Seidel method.
3. Model a basic transformer and calculate its efficiency based on input and output parameters.
4. Implement a fault analysis program to identify the type and location of faults in a distribution system.
5. Create a program to optimize the placement of capacitors in a distribution network to reduce losses.
6. Simulate the impact of different loading conditions on the thermal rating of transmission lines.
7. Develop a program to calculate short-circuit currents in a power system using the symmetrical component method.
8. Analyze the impact of renewable energy sources on a distribution network's voltage profile.
9. Create a visualization tool for real-time monitoring of a transmission system's parameters.
10. Implement a program to evaluate the reliability of a distribution system using Monte Carlo simulation.
11. Calculate the economic dispatch of generation units in a power system to minimize cost.
12. Simulate a grid with renewable energy integration and assess its stability under varying conditions.
13. Develop a program to perform harmonic analysis of a power system with non-linear loads.
14. Model and analyze a radial distribution system using the backward/forward sweep method.
15. Implement a program to assess power factor correction requirements for industrial loads.
16. Create a tool to perform load forecasting based on historical data and weather patterns.
17. Simulate the operation of a smart grid with automated demand response features.
18. Analyze the impact of cable insulation types on transmission line performance.
19. Develop a program to assess the impact of electric vehicle charging on distribution networks.
20. Create a user interface for managing and visualizing distribution network assets and their conditions.

**Unit - I**

Introduction: Basic Terminology, Elementary Data Organization, Algorithm, Efficiency of an Algorithm, Time and Space Complexity, Asymptotic notations: Big-Oh, Time-Space trade-off. Abstract Data Types (ADT), Arrays: Definition, Single and Multidimensional Arrays, Representation of Arrays: Row Major Order, and Column Major Order, Application of arrays, Sparse Matrices and their representations.

Linked lists: Array Implementation and Dynamic Operations on a Linked List. Insertion, Deletion, Traversal, Generalized Linked List.

**UNIT - II**

Stacks: Abstract Data Type, Primitive Stack operations: Push & Pop, Array and Linked Implementation of Stack in C, Application of stack: Prefix and Postfix Expressions, Simulating Recursion, Principles of recursion, Tail recursion, Removal of recursion Queues, Operations on Queue: Create, Add, Delete, Full and Empty, Circular queues, Array and linked implementation of queues in C.

**UNIT – III**

Trees: Basic terminology, Binary Trees, Binary Tree Representation: Array Representation and Dynamic Representation, Complete Binary Tree, Algebraic Expressions, Extended Binary Trees, Array and Linked Representation of Binary trees, Tree Traversal algorithms: Inorder, Preorder and Postorder, Threaded Binary trees, Traversing Threaded Binary trees, Huffman algorithm.

**UNIT – IV**

Graphs: Terminology, Sequential and linked Representations of Graphs: Adjacency Matrices, Adjacency List, Adjacency Multi list, Graph Traversal : Minimum Cost Spanning Trees: Prims and Kruskal algorithm. Transitive Closure and Shortest Path algorithm: Warshal Algorithm and Dijkstra Algorithm, Introduction to Activity Networks.

**UNIT - V**

Searching: Sequential search, Binary Search, Comparison and Analysis Internal Sorting: Insertion Sort, Selection, Bubble Sort, Quick Sort, Practical consideration for Internal Sorting.

Search Trees: Binary Search Trees (BST), Insertion and Deletion in BST, Complexity of Search Algorithm, AVL trees, Introduction to m-way Search Trees, B Trees & B+ Trees.

Hashing Hash Function, Collision Resolution Strategies.

Storage Management: Garbage Collection and Compaction.

**Text Books:**

6. Adam Drozdek, "Data Structures and Algorithms in C++", Thomson Asia Pvt. Ltd.(Singapore)

**Unit- I Introduction:**

An overview of database management system, database system Vs file system, Database system concepts and architecture, data models schema and instances, data independence and database language and interfaces, Data definitions language, DML, Overall Database Structure. Data Modeling using the Entity Relationship Model, extended ER model, relationships of higher degree.

**Unit- II Relational data Model and Language:**

Relational data model concepts, integrity constraints: entity integrity, referential integrity, Keys constraints, Domain constraints, relational algebra, relational calculus, tuple and domain calculus, Introduction to SQL: Characteristics of SQL. Advantage of SQL. SQL data types and literals. Types of SQL commands. SQL operators and their procedure. Tables, views and indexes. Queries and sub queries. Aggregate functions. Insert, update and delete operations. Joins, Unions, Intersection, Minus, Cursors in SQL.

**Unit- III Data Base Design & Normalization:**

Functional dependencies, normal forms, first, second, third normal forms, BCNF, inclusion dependences, loss less join decompositions, normalization using FD, MVD, and JDs, alternative approaches to database design.

**Unit- IV Transaction Processing Concepts:**

Transaction system, Testing of serializability, Serializability of schedules, conflict & view serializable schedule, recoverability, Recovery from transaction failures, log based recovery, checkpoints, deadlock handling.

**Unit- V Concurrency Control Techniques:**

Concurrency control, locking Techniques for concurrency control, Time stamping protocols for concurrency control, validation based protocol, multiple granularity, Multi version schemes, Recovery with concurrent transaction.

**UNIT - I: Operating System Introduction:**

Operating Systems Objectives and functions, Computer System Architecture, OS Structure, OS Operations, Evolution of Operating Systems - Simple Batch, Multi programmed, time shared, Personal Computer, Parallel, Distributed Systems, Real-Time Systems, Special - Purpose Systems, Operating System services, user OS Interface, System Calls, Types of System Calls, System Programs, Operating System Design and Implementation, OS Structure, Virtual machines.

**UNIT - II: Process and CPU Scheduling :-**

Process concepts - The Process, Process State, Process Control Block, Threads, Process Scheduling - Scheduling Queues, Schedulers, Context Switch, Preemptive Scheduling, Dispatcher, Scheduling Criteria, Scheduling algorithms, Multiple-Processor Scheduling, Real-Time Scheduling, Thread scheduling, Case studies: Linux, Windows. Process Coordination - Process Synchronization, The Critical section Problem, Peterson's solution, Synchronization Hardware, Semaphores, and Classic Problems of Synchronization, Monitors, Case Studies: Linux, Windows.

**UNIT - III: Memory Management and Virtual Memory :**

Logical & physical Address Space, Swapping, Contiguous Allocation, Paging, Structure of Page Table. Segmentation, Segmentation with Paging, Virtual Memory, Demand Paging, Performance of Demanding Paging, Page Replacement Page Replacement Algorithms, Allocation of Frames, Thrashing.

**UNIT - IV: File System Interface :-**

The Concept of a File, Access methods, Directory Structure, File System Mounting, File Sharing, Protection, File System Implementation - File System Structure, File System Implementation, Allocation methods, Free-space Management, Directory Implementation, Efficiency and Performance.

Mass Storage Structure - Overview of Mass Storage Structure, Disk Structure, Disk Attachment, Disk Scheduling, Disk Management, Swap space Management.

**UNIT - V: Deadlocks -:**

System Model, Deadlock Characterization, Methods for Handling Deadlocks, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection and Recovery from Deadlock.

Protection - System Protection, Goals of Protection, Principles of Protection, Domain of Protection, Access Matrix, Implementation of Access Matrix, Access Control, Revocation of Access Rights, Capability-Based Systems, Language-Based Protection.

**TEXT BOOKS:**

1. Operating System Principles, Abraham Silberchatz, Peter B. Galvin, Greg Gagne 8th Edition, Wiley Student Edition.
2. Operating systems - Internals and Design Principles, W. Stallings, 6th Edition, Pearson.

# JAVA PROGRAMMING

CCSN-207

Cr. L T P

4 3 1 0

## Unit – I

Introduction to Java: Importance and features of Java, Keywords, constants, variables and Data Types, Operators and Expressions, Decision Making, Branching and Looping: if..else, switch,?: operator, while, do, for statements, labeled loops, jump statements: break, continue, return. Introducing classes, objects and methods: defining a class, adding variables and methods, creating objects, constructors, class inheritance. Arrays and String: Creating an array, one and two dimensional arrays, string array and methods, Classes: String and String Buffer classes, Wrapper classes: Basics types, using super, Multilevel hierarchy abstract and final classes, Object class, Packages and interfaces, Access protection, Extending Interfaces, packages.

## Unit – II

Exception Handling: Fundamentals exception types, uncaught exceptions, throw, throw, final, built in exception, creating your own exceptions, Multithreaded Programming: Fundamentals, Java thread model: priorities, synchronization, messaging, thread classes, Run able interface, inter thread Communication, suspending, resuming and stopping threads.

## Unit - III

Input/Output Programming: Basics, Streams, Byte and Character Stream, predefined streams, Reading and writing from console and files. . Networking: Basics, networking classes and interfaces, using java.net package, doing TCP/IP and Data-gram Programming

## Unit – IV

The Collection Framework: collection interfaces, collection classes(ArrayList, LinkedList, Hash set), Accessing a Collection via an Iterator, Vector, More utility class: StringTokenizer, Date.

## Unit – V

Event Handling: Different Mechanism, the Delegation Event Model, Event Classes, Listener Interfaces, Adapter and Inner Classes, Working with windows, Graphics and Text, using AWT controls, Layout managers and menus, Java Applet. Beans: Introduction to Java Beans and Swings, Servlets

## Reference Books:

1. Patrick Naughton and Herbertz Schildt, “*Java-2 the Complete Reference*”, TMH, 7<sup>th</sup> Edition, 2006.
2. E. Balaguruswamy, “*Programming with Java: A Primer*”, TMH, First Reprint, 2007.
3. Horstmann, “*Computing Concepts with Java 2 Essentials*”, John Wiley and sons inc, Third Edition, 2003.
4. Kathy Sierra, “*Head First Java*”, O’Rielly, Second Edition, February 2005.

**Unit 1: Differential Calculus**

Exploration of functions, limits, continuity, and differentiability, with applications of Mean Value Theorems, Taylor and Maclaurin series, partial differentiation, and optimization of multivariable functions.

**Unit 2: Integral Calculus**

Study of integration, including definite and indefinite integrals, and applications in calculating areas, volumes, and surfaces. Introduction to improper integrals, Beta and Gamma functions.

**Unit 3: Matrices**

Comprehensive study of matrices, including their types, properties, and rank. Analysis of systems of linear equations, eigenvalues, eigenvectors, and diagonalization.

**Unit 4: Vector Calculus**

Concepts of scalar and vector fields, with operations including gradient, divergence, and curl. Application of line, surface, and volume integrals, along with Green's, Stokes', and Gauss' theorems.

**Unit 5: Differential Equations**

Focus on ordinary differential equations of the first order and higher-order linear differential equations. Applications of differential equations in engineering contexts, with an introduction to partial differential equations.

**CCSN 209 B**

**Basic Mathematics I**

**Unit 1: Algebra**

Covers fundamental concepts in algebra, including expressions, equations, polynomials, factorization, and quadratic equations. Introduces inequalities and basic concepts of logarithms and exponents.

**Unit 2: Trigonometry**

Explores trigonometric ratios, identities, and equations. Examines the properties and applications of angles, the unit circle, and trigonometric functions, including inverse functions and their graphs.

**Unit 3: Coordinate Geometry**

Introduction to the Cartesian coordinate system, distance formula, and the equation of a line. Covers the slope, intercepts, and different forms of line equations, with applications in solving geometric problems.

**Unit 4: Calculus Basics**

Foundational concepts in calculus, focusing on limits, continuity, and the basics of differentiation and integration. Includes basic applications of derivatives and integrals in solving practical problems.

**Unit 5: Statistics and Probability**

Introduction to data representation, measures of central tendency, and measures of dispersion. Covers basic probability concepts, including probability rules, simple events, and introduction to combinatorics.

## **CCSN 209 C            STATISTICAL TECHNIQUES IN COMPUTER SCIENCE**

### **Unit 1: Descriptive Statistics**

Overview of data types, data collection, and summarization. Techniques for organizing and visualizing data, including frequency distributions, histograms, and scatter plots. Measures of central tendency, variability, skewness, and kurtosis.

### **Unit 2: Probability Theory**

Basic concepts of probability, conditional probability, and Bayes' theorem. Random variables, probability distributions, and expectations. Introduction to discrete and continuous distributions, including the binomial, Poisson, and normal distributions.

### **Unit 3: Statistical Inference**

Fundamentals of estimation and hypothesis testing. Confidence intervals for means and proportions, t-tests, chi-square tests, and ANOVA. Introduction to p-values, statistical significance, and decision-making based on hypothesis testing.

### **Unit 4: Regression Analysis**

Simple and multiple linear regression models, least squares estimation, and interpretation of regression coefficients. Assumptions of regression, diagnostic checks, and introduction to logistic regression for binary outcomes.

### **Unit 5: Machine Learning and Data Mining Applications**

Application of statistical techniques in supervised and unsupervised learning, including classification and clustering. Evaluation metrics for models, cross-validation, and introduction to decision trees, k-means clustering, and support vector machines.

**Unit 1: Basic Arithmetic**

Focuses on fundamental arithmetic operations, including addition, subtraction, multiplication, and division. Covers concepts of fractions, decimals, percentages, ratios, and proportions.

**Unit 2: Algebraic Expressions and Equations**

Introduces basic algebraic expressions, simplification, and evaluation. Covers linear equations, inequalities, and problem-solving techniques using algebraic methods.

**Unit 3: Geometry**

Explores basic geometric shapes and properties, including points, lines, angles, triangles, circles, and polygons. Covers concepts of perimeter, area, and volume for various shapes.

**Unit 4: Trigonometry Basics**

Introduction to trigonometric ratios and basic identities. Covers angle measurements, right-angled triangle properties, and applications of trigonometry in simple geometric problems.

**Unit 5: Statistics and Data Interpretation**

Introduction to data collection, organization, and representation using tables, charts, and graphs. Covers measures of central tendency, such as mean, median, and mode.

# DISCRETE MATHEMATICS

CCSN-209

CR L-T-P

4-3-1-0

## Unit-I

**Set :** Definition of sets, countable and uncountable sets, Venn Diagrams, Power set, Partition of sets, cardinality, inclusion-exclusion principles, proofs on some general identities on sets. **Relation**-Definition, types of relation, composition of relations, pictorial representation of relation, equivalence relation, partial ordering relation. **Function**-Definition, type of functions, one to one, into and onto function, inverse function, composition of functions, recursively defined functions. **Theorem Proving Techniques** mathematical induction, pigeonhole principle, proves by contradiction.

## Unit-II

**Algebraic Structures:** Definition, Properties, types: Semi Group, Monoid, Groups, Abelian group, properties of groups, Subgroup, cyclic groups, cosets, factor group, permutation groups, Normal subgroup, Homomorphism and isomorphism of groups, example and standard results, rings and fields.

## Unit-III

**Posets, Hasse Diagram and Lattices:** Introduction, ordered sets, Hasse diagram of partially ordered set, isomorphic ordered sets, well ordered set, properties of Lattices, bounded lattices and Complemented lattices. **Boolean Algebra** Basic definitions, sum of products and product of sums forms, Logic gates and Karnaugh maps.

## Unit-IV

**Propositional Logic:** Proposition, logic operators, first order predicate logic, truth tables, tautologies, arguments, contradictions, logical implications, logical equivalence, predicates, universal and existential quantifiers.

## Unit-V

**Graphs & Combinatorics:** Recurrence Relation, Generating function, simple graph, multi graph, graph terminology, representation of graphs, Bipartite, Regular, Planar and connected graphs, Euler graphs, Hamiltonian path and circuits, Adjacency and Incidence Matrices Graph coloring number, chromatic number, **Tree** Definition, Rooted tree, properties of trees, binary search tree, tree traversal.

## **VALUE EDUCATION,HUMAN RIGHTS AND LEGISLATIVE PROCEDURES**

**L T P 4 0 0**

### **CBSN-201**

#### **Unit-I: Course Introduction**

Need, Basic Guidelines, Content & Process for value education, Self-Exploration, Natural Acceptance & Experimental validation, Happiness & Prosperity.

#### **Unit-II:**

Understanding harmony in the human being, Understanding the need of self & Body (Sukh&Suvidha , Sanyam&Swasthya)

#### **Unit-III:**

Understanding harmony in the faculty & society, Harmony in human relationship

#### **Unit-IV:**

Understanding harmony in the nature and Existence

#### **Unit-V :**

Natural acceptance of human values, Definitiveness of ethical human conduct, Basis of human education.

#### **Text Books :**

1. B.P. Banerjee, 2005 Foundations of ethics and management.
2. B.L. Bajpai, 2004 Indian Ethos and modern management, New royal book co. Lucknow.  
Reprinted 2008

**Unit 1: Introduction to Personality Development** Understanding the concept and definition of personality, characteristics of a well-developed personality, factors influencing personality, and the importance of personality development in personal and professional life.

**Unit 2: Self-Awareness and Self-Analysis** Exploring self-awareness as a foundation for personality development, techniques for self-analysis, understanding strengths and weaknesses, and developing self-confidence and self-esteem.

**Unit 3: Communication Skills** Understanding effective communication, verbal and non-verbal communication, importance of active listening, barriers to communication, and building interpersonal communication skills.

**Unit 4: Goal Setting and Time Management** Introduction to goal setting, setting SMART goals, significance of time management in personality development, techniques to manage time effectively, and prioritization of tasks.

**Unit 5: Positive Thinking and Attitude Building** Understanding the power of positive thinking, building a positive attitude, overcoming negativity, strategies for developing an optimistic outlook, and how attitude impacts personal growth.

- Unit 1: Introduction to Behavioural Skills and Self-Perception** This unit introduces the concept of behavioural skills, the importance of developing such skills for personal and professional growth, and understanding self-perception. It explores how self-concept and perception influence behaviour and interaction with others.
- Unit 2: Emotional Intelligence and Self-Regulation** This unit covers the fundamentals of emotional intelligence, its components, and the role it plays in enhancing personal and social effectiveness. It includes self-regulation techniques, managing emotions in various situations, and the significance of empathy in building stronger relationships.
- Unit 3: Communication and Active Listening Skills** This unit focuses on developing strong communication skills, with an emphasis on active listening as a vital behavioural skill. It covers how to interpret non-verbal cues, understand communication barriers, and adapt communication styles to various social and professional settings.
- Unit 4: Conflict Resolution and Problem-Solving Techniques** This unit explores strategies for resolving conflicts in a constructive manner, understanding different conflict management styles, and effective problem-solving techniques. It highlights the importance of maintaining composure and logical thinking in difficult situations.
- Unit 5: Adaptability, Teamwork, and Leadership Behaviour** This unit emphasizes the importance of adaptability in dynamic environments, developing teamwork abilities, and understanding leadership behaviour. It covers how to foster collaboration, build trust among team members, and demonstrate leadership qualities in group settings to enhance collective performance.

**Unit 1: Basics of Grammar and Sentence Structure** This unit covers the foundational elements of English grammar, including parts of speech, sentence formation, subject-verb agreement, tenses, and basic punctuation. It emphasizes constructing correct and coherent sentences for effective communication.

**Unit 2: Vocabulary Building and Usage** This unit focuses on expanding vocabulary through synonyms, antonyms, idioms, and phrases. It includes practical exercises to enhance word usage, contextual understanding, and the application of new words in speaking and writing.

**Unit 3: Reading Comprehension and Analysis** This unit involves developing skills for reading and understanding various types of texts, such as passages, articles, and stories. It emphasizes techniques for skimming, scanning, and critical analysis, along with answering comprehension questions effectively.

**Unit 4: Writing Skills and Composition** This unit covers the basics of writing clear and coherent paragraphs, essays, and short compositions. It includes practices for writing formal and informal letters, emails, and other basic written communication, focusing on structure and clarity.

**Unit 5: Speaking and Listening Skills** This unit emphasizes improving pronunciation, fluency, and speaking confidence. It involves listening exercises for understanding spoken English in different contexts, building conversational skills, and participating in discussions, role-plays, and presentations to enhance oral communication proficiency.

**Unit 1: Introduction to Public Speaking**

This unit covers the fundamentals of public speaking, including its importance in personal and professional contexts. Students will explore different types of speeches, such as informative, persuasive, and special occasion speeches. The unit will also introduce key elements of effective communication, including audience analysis, purpose identification, and the role of ethics in public speaking.

**Unit 2: Speech Preparation**

In this unit, students will learn the process of preparing a speech. This includes selecting a topic, conducting research, organizing content logically, and crafting an outline. Emphasis will be placed on the importance of developing a strong thesis statement and using evidence effectively to support arguments. Additionally, students will practice writing introductions and conclusions that engage the audience.

**Unit 3: Delivery Techniques**

This unit focuses on the various delivery methods for speeches, including extemporaneous, memorized, and manuscript delivery. Students will learn about body language, vocal variety, and the use of pauses. Practical exercises will help students develop their delivery skills, emphasizing the importance of confidence, eye contact, and audience engagement.

**Unit 4: Use of Visual Aids**

Students will explore the role of visual aids in enhancing presentations. This unit will cover different types of visual aids, such as slides, charts, graphs, and props, and best practices for their effective use. Emphasis will be placed on how to create visually appealing slides that complement the spoken message rather than distract from it.

**Unit 5: Handling Questions and Feedback**

This unit addresses the importance of managing audience questions and feedback during and after a presentation. Students will learn strategies for anticipating questions, handling difficult audience members, and responding to feedback constructively. Role-playing exercises will allow students to practice these skills in a supportive environment.

1. Create, display, insert, delete, and search elements in an array.
2. Implement stack operations using arrays with push, pop, and display functions.
3. Create a stack using a linked list and perform push and pop operations.
4. Convert an infix expression to postfix using a stack.
5. Evaluate a given postfix expression using stack operations.
6. Implement queue operations using arrays including enqueue, dequeue, and display.
7. Create a dynamic queue using a linked list and implement enqueue and dequeue operations.
8. Implement a circular queue with functions for enqueue and dequeue.
9. Create and traverse a singly linked list with insert and delete operations.
10. Implement a doubly linked list with functions for inserting, deleting, and traversing nodes.
11. Create a circular linked list and perform insertion and deletion operations.
12. Search for an element using the binary search algorithm on a sorted array.
13. Search for an element using the linear search method in an array.
14. Create a binary tree and perform pre-order, in-order, and post-order traversals.
15. Implement a binary search tree (BST) with node insertion, searching, and tree traversal.
16. Represent a graph using an adjacency matrix and display the matrix.
17. Traverse a graph using the breadth-first search (BFS) algorithm.
18. Implement depth-first search (DFS) for graph traversal.
19. Use a linked list to represent and add two polynomials.
20. Sort an array using the merge sort algorithm.

1. HTML Basics
2. CSS Styling
3. JavaScript Basics
4. Responsive Web Design with Bootstrap
5. Creating a Simple Web Form
6. Validating Form Inputs with JavaScript
7. AJAX Requests with jQuery
8. Fetch API for Asynchronous Requests
9. JSON Data Handling
10. Introduction to PHP
11. Database Connectivity with MySQL
12. CRUD Operations in PHP
13. Using PHP Sessions
14. Implementing User Authentication
15. Creating RESTful APIs
16. Introduction to WordPress
17. Building a Simple Website with WordPress
18. Implementing Web Security Practices
19. Web Hosting and Deployment
- 20. Introduction to Content Management Systems (CMS)**

**CCSN-255****JAVA PROGRAMING LAB**

1. Hello World Program
2. Basic Calculator
3. Swap Two Numbers
4. Check Prime Number
5. Factorial of a Number
6. Fibonacci Series
7. Palindrome Checker
8. String Reversal
9. Array Sorting (Bubble Sort)
10. Linear Search in an Array
11. Binary Search in an Array
12. Implementing a Simple Class
13. Method Overloading
14. Exception Handling
15. File Handling (Read/Write)
16. Multi-threading Example
17. Creating a Simple GUI with Swing
18. Simple Java Swing Application
19. Database Connectivity (JDBC)
20. Building a Simple Web Application with Java Servlets

**UNIT I:**

**Introduction to C and C++:** History of C and C++, Overview of Procedural Programming and Object-Oriented Programming, Using main() function, Compiling and Executing Simple Programs in C++.

**Data Types, Variables, Constants, Operators and Basic I/O:** Declaring, Defining and Initializing Variables, Scope of Variables, Using Named Constants, Keywords, Data Types, Casting of Data Types, Operators (Arithmetic, Logical and Bitwise), Using Comments in programs, Character I/O (getc, getchar, putc, putchar), Formatted and Console I/O (printf(), scanf(), cin, cout), Using Basic Header Files (stdio.h, iostream.h, conio.h).

**UNIT II:**

**Expressions, Conditional Statements and Iterative Statements:** Simple Expressions in C++ (including Unary Operator Expressions, Binary Operator Expressions), Understanding Operators Precedence in Expressions, Conditional Statements (if construct, switch-case construct), Understanding syntax and utility of Iterative Statements (while, do-while, and for loops), Use of break and continue in Loops, Using Nested Statements (Conditional as well as Iterative)

**UNIT III:**

**Functions:** Utility of functions, Call by Value, Call by Reference, Functions returning value, Void functions, Inline Functions, Return data type of functions, Functions parameters, Differentiating between Declaration and Definition of Functions, Command Line Arguments/Parameters in Functions, Functions with variable number of Arguments.

**Arrays:** Creating and Using One Dimensional Arrays- ( Declaring and Defining an Array, Initializing an Array, Accessing individual elements in an Array, Manipulating array elements using loops, Use Various types of arrays (integer, float and character arrays / Strings).

Two-dimensional Arrays- (Declaring, Defining and Initializing Two Dimensional Array, Working with Rows and Columns), Introduction to Multi-dimensional arrays

**Derived Data Types (Structures and Unions), Pointers and References in C++,**

**Memory Allocation in C++ -** Differentiating between static and dynamic memory allocation, use of malloc, calloc and free functions, use of new and delete operators, storage of variables in static and dynamic memory allocation.

**UNIT IV:**

**File I/O, Preprocessor Directives:** Opening and closing a file (use of fstream header file, ifstream, ofstream and fstream classes), Reading and writing Text Files, Using put(), get(), read() and write() functions, Random access in files, Understanding the Preprocessor Directives (#include, #define, #error, #if, #else, #elif, #endif, #ifdef, #ifndef and #undef), Macros. **Using Classes in C++:** Principles of Object-Oriented Programming, Defining & Using Classes, Class Constructors, Constructor Overloading, Function overloading in classes, Class Variables & Functions, Objects as parameters, Specifying the Protected and Private Access, Copy Constructors, Overview of Template classes and their use.

**UNIT V:**

**Overview of Function Overloading and Operator Overloading**

Need of Overloading functions and operators, Overloading functions by number and type of arguments, Looking at an operator as a function call, Overloading Operators (including assignment operators, unary operators)

### **Inheritance, Polymorphism and Exception Handling**

Introduction to Inheritance (Multi-Level Inheritance, Multiple Inheritance), Polymorphism (Virtual Functions, Pure Virtual Functions), Basics Exceptional Handling (using catch and throw, multiple catch statements), Catching all exceptions, Restricting exceptions, Rethrowing exceptions.

**Unit- I**

**Introduction:** Algorithms, Analyzing algorithms, Complexity of algorithms, Growth of functions, Performance measurements, Sorting and order Statistics - Shell sort, Quick sort, Merge sort, Heap sort, Comparison of sorting algorithms, Sorting in linear time.

**Unit- II**

**Advanced Data Structures:** Red-Black Trees, B – trees, Binomial Heaps, Fibonacci Heaps.

**Unit- III**

**Divide and Conquer** with examples such as Sorting, Matrix Multiplication, Convex hull and Searching.

**Greedy methods** with examples such as Optimal Reliability Allocation, Knapsack, Minimum Spanning trees – Prim’s and Kruskal’s algorithms, Single source shortest paths - Dijkstra’s and Bellman Ford algorithms.

**Unit- IV**

**Dynamic programming** with examples such as Knapsack. All pair shortest paths – Warshal’s and Floyd’s algorithms, Resource allocation problem. Backtracking, Branch and Bound with examples such as Travelling Salesman Problem, Graph Coloring, n-Queen Problem, Hamiltonian Cycles and Sum of subsets.

**Unit- V**

Selected Topics: Algebraic Computation, Fast Fourier Transform, String Matching, Theory of NP-completeness, Approximation algorithms and Randomized algorithms.

- 2.Computer Networking -A Top-Down Approach Featuring the Internet , James F. Kurose and Keith W. Ross , Addison Wesley Publishing Co. 2004
- 3.Computer Networks: Protocols standards and interfaces , by Uyles Black, Prentice Hall.2002
- 4.Data communication & Networks , by Behrouz A. Forouzan, Tata McGraw Hill. 2002

**UNIT I:**

Introduction; Alphabets, Strings and Languages; Automata and Grammars, Deterministic finite Automata (DFA)-Formal Definition, Simplified notation: State transition graph, Transition table, Language of DFA, Nondeterministic finite Automata (NFA), NFA with epsilon transition, Language of NFA, Equivalence of NFA and DFA, Minimization of Finite Automata, Distinguishing one string from other, Myhill-Nerode Theorem

**UNIT II:**

Regular expression (RE) , Definition, Operators of regular expression and their precedence, Algebraic laws for Regular expressions, Regular expression to FA, DFA to Regular expression, Arden Theorem, Non Regular Languages, Pumping Lemma for regular Languages . Application of Pumping Lemma, Closure properties of Regular Languages, Decision properties of Regular Languages, FA with output: Moore and Mealy machine, Equivalence of Moore and Mealy Machine, Applications and Limitation of FA, Pumping lemma.

**UNIT III:**

Context Free Languages – Leftmost and rightmost derivation, parsing and ambiguity, ambiguity in grammar and languages, normal forms

Context free grammar (CFG) and Context Free Languages (CFL): Definition, Examples, Derivation Derivation trees, Ambiguity in Grammar, Inherent ambiguity, Ambiguous to Unambiguous CFG, Useless symbols, Simplification of CFGs, Normal forms for CFGs: CNF and GNF.

**UNIT IV:**

Pushdown Automata – NDPDA, DPDA, context free languages and PDA, comparison of deterministic and non-deterministic versions, closure properties, pumping lemma for CFL, Acceptance by Final state, Acceptance by empty stack, Deterministic PDA, Equivalence of PDA and CFG, CFG to PDA and PDA to CFG.

**UNIT V:**

Turing machines (TM): Basic model, definition and representation, Instantaneous Description, Language acceptance by TM, Variants of Turing Machine, TM as Computer of Integer functions, Universal TM, Church's Thesis, Recursive and recursively enumerable languages, Halting problem, Introduction to Decidability, Undecidable problems about TMs. Post correspondence problem (PCP), Modified PCP, Introduction to recursive function theory, Chomsky Hierarchy

**Textbooks:**

7. K.Krithivasan and R.Rama; Introduction to Formal Languages, Automata Theory and Computation, Pearson Education.

**Unit 1: Introduction to Nanosciences** This unit introduces the fundamental concepts of nanoscience, including definitions and significance of nanomaterials. It explores the historical development of nanotechnology, key terminology, and the differences between macro, micro, and nano scales. Students will also learn about the various classes of nanomaterials and their unique properties.

**Unit 2: Synthesis of Nanomaterials** In this unit, students will explore various methods for synthesizing nanomaterials, including top-down and bottom-up approaches. The unit will cover techniques such as chemical vapor deposition, sol-gel processes, electrospinning, and self-assembly. Emphasis will be placed on the advantages and limitations of each method, as well as their applications in different fields.

**Unit 3: Characterization Techniques** This unit focuses on the techniques used to characterize nanomaterials. Students will learn about methods such as transmission electron microscopy (TEM), scanning electron microscopy (SEM), atomic force microscopy (AFM), and X-ray diffraction (XRD). The unit will also cover spectroscopic techniques like Raman spectroscopy and UV-Vis spectroscopy, and their importance in analyzing the structural, chemical, and physical properties of nanomaterials.

**Unit 4: Properties of Nanomaterials** In this unit, students will investigate the unique properties of nanomaterials that differentiate them from bulk materials. This includes discussions on electrical, optical, thermal, and mechanical properties at the nanoscale. Students will explore phenomena such as quantum confinement and surface effects, as well as the implications of these properties for various applications.

**Unit 5: Applications of Nanotechnology** This unit covers the diverse applications of nanotechnology across various fields, including medicine, electronics, energy, and materials science. Students will study topics such as drug delivery systems, nanosensors, nanocomposites, and renewable energy solutions. Case studies highlighting current advancements and future trends in nanotechnology will be included.

**Unit 1: Fundamentals of Technical English**

This unit introduces the basic concepts of technical English, focusing on its significance in professional communication. It covers essential terminology, the role of technical English in various industries, and the differences between technical and general English.

**Unit 2: Reading and Comprehension Skills**

This unit emphasizes reading skills necessary for understanding technical documents. It includes strategies for skimming, scanning, and critical reading of technical texts, manuals, and reports. Students will practice comprehension exercises to enhance their ability to extract relevant information.

**Unit 3: Writing Technical Documents**

This unit focuses on the structure and format of various technical documents, such as reports, proposals, user manuals, and technical specifications. It covers the principles of clear and concise writing, the use of appropriate language, and the incorporation of visuals like charts and graphs to support written communication.

**Unit 4: Presentation and Speaking Skills**

This unit develops oral communication skills relevant to technical contexts. It includes techniques for effective presentations, including planning, organization, delivery, and the use of visual aids. Students will also practice public speaking and responding to questions in a professional setting.

**Unit 5: Collaborative Communication and Interpersonal Skills**

This unit addresses the importance of teamwork and interpersonal communication in technical fields. It covers skills for effective collaboration, including active listening, providing constructive feedback, and managing conflicts. It also explores the use of communication technologies for teamwork and project management.

**CBSN-202 A****Unit-1**

Communicative Grammar: Spotting the errors pertaining to parts of speech, nouns, pronouns, adjective, adverbs, preposition, conjunction, genders, infinitives, participles, form of tenses, use of articles ; Concord - grammatical concord, notional concord and the principle of proximity between subject and verb and other exceptional usages. Lexis: Idioms and phrases; Words often confused; One-Word Substitutes; Foreign Words (A selected list may be included for all the above components); Formation of words (suffixes, prefixes and derivatives).

**Unit-2**

Oral Communication:

Part-A: Introduction to principal components of spoken English – Word-stress patterns, Intonation, Weak forms in English

Part-B: Developing listening and speaking skills through various activities, such as (a) role play activities, (b) Practicing short dialogues (c) Group discussion (d) Debates (e) Speeches (f) Listening to news bulletins (g) Viewing and reviewing T.V. programs etc.

**Unit-3**

Written Communication: Developing reading and writing skills through such tasks/activities as developing outlines, key expressions, situations, slogan writing and theme building exercises Reading verbal and non-verbal texts-like cartoons, Graphs and tabulated data etc.

Technical Writing:

(a) Business Letters, Format of Business letters and Business letter writing-Fully-blocked layout may be used.

(b) E-mail writing

(c) Reports, Types of Reports and Format of Formal Reports

(d) Press Report Writing

**Unit-4**

(For Internal Evaluation Only):

Book Review – Herein the students will be required to read and submit a review of a book (Literary or non literary) of their own choice. This will be followed by a presentation of the same in the class

**Suggested Reading:**

Language in Use (Upper intermediate Level, Adrian Doff Christopher Jones, Cambridge University Press

Common Errors in English, Abul Hashem, Ramesh Publishing House, New Delhi.

Objective English, Tata Mc. Graw Hill Publishing Company Ltd., New Delhi.

Spoken English for India, R.K. Bansal & J.B. Harrison, Orient Longman, Delhi.

The sounds of English, Veena Kumar, Makaav Educational Software, New Delhi.

**CBSN-202 B****TECHNICAL PRESENTATION SKILLS****Unit 1: Introduction to Technical Presentations**

This unit provides an overview of technical presentations, emphasizing their purpose, importance, and key characteristics. It covers the components of an effective presentation and the role of technical communication in conveying complex information clearly and effectively.

**Unit 2: Planning and Structuring Presentations**

This unit focuses on the planning stage of presentations, including identifying the audience, defining objectives, and researching content. It addresses how to organize information logically, create outlines, and develop a clear structure that includes an introduction, body, and conclusion.

**Unit 3: Designing Visual Aids**

This unit explores the use of visual aids in presentations, such as slides, charts, graphs, and handouts. It discusses principles of effective design, including clarity, simplicity, and relevance. Students will learn how to create visually appealing materials that enhance understanding and retention.

**Unit 4: Delivery Techniques and Strategies**

This unit covers techniques for delivering technical presentations effectively. It includes vocal skills, body language, and engaging the audience. Strategies for managing anxiety and improving confidence in public speaking are also discussed, along with the importance of practice and feedback.

**Unit 5: Handling Questions and Feedback**

This unit focuses on interacting with the audience during and after a presentation. It addresses strategies for handling questions, managing discussions, and responding to feedback constructively. Students will learn techniques for maintaining control and fostering an interactive atmosphere during presentations.

**Unit 1: Introduction to User Manuals and Guides**

This unit provides an overview of user manuals and guides, their purpose, and significance in technical communication. It covers the different types of user documentation, the target audience, and the role of user manuals in enhancing user experience and product usability.

**Unit 2: Principles of User-Centered Design**

This unit focuses on the principles of user-centered design in the creation of manuals and guides. It discusses the importance of understanding user needs, preferences, and skills. Techniques for user research, persona development, and usability testing are explored to ensure documentation meets user expectations.

**Unit 3: Content Development and Organization**

This unit emphasizes the process of developing content for user manuals and guides. It covers techniques for gathering information, writing clear and concise instructions, and organizing content logically. It also addresses the importance of creating effective headings, subheadings, and lists to enhance readability.

**Unit 4: Visual Elements and Formatting**

This unit explores the use of visual elements in user manuals, including diagrams, screenshots, and illustrations. It discusses the principles of effective formatting, layout design, and the use of typography to improve the overall presentation of the document. Techniques for integrating visuals with text to enhance understanding are also covered.

**Unit 5: Review, Revision, and Maintenance**

This unit focuses on the importance of reviewing and revising user manuals and guides for accuracy and clarity. It discusses the processes for editing, proofreading, and incorporating user feedback. Additionally, it addresses strategies for maintaining and updating documentation to ensure it remains relevant and effective over time.

**Unit 1: Introduction to Business Communication**

In this unit, students will explore the significance of communication within the business environment. It will cover the various forms of communication, including verbal, non-verbal, written, and visual communication. The unit will address the barriers that can hinder effective communication and discuss strategies to overcome these obstacles. Additionally, the role of technology in facilitating business communication will be examined.

**Unit 2: Written Communication**

This unit focuses on the principles of written communication in a business context. Students will learn about the structure and format of essential business documents such as letters, emails, memos, and reports. The emphasis will be on techniques that promote clarity, conciseness, and coherence in writing. The importance of tone and style will also be highlighted, alongside guidelines for creating effective proposals and presentations.

**Unit 3: Oral Communication**

In this unit, students will gain insights into the fundamentals of effective speaking within a business setting. They will explore techniques for delivering engaging presentations and public speaking skills. The unit will address the significance of body language and voice modulation in communication, as well as strategies for conducting productive meetings and discussions.

**Unit 4: Interpersonal Communication**

This unit will delve into the nature of interpersonal communication and its critical role in business interactions. Students will develop skills in active listening and providing constructive feedback. The unit will also cover conflict resolution techniques and negotiation skills, emphasizing how to build and maintain professional relationships through effective communication.

**Unit 5: Business Communication in a Global Context**

Students will examine the challenges and strategies associated with cross-cultural communication in this unit. The importance of understanding diversity in communication styles and practices will be emphasized. The impact of globalization on business communication will also be discussed, along with ethical considerations and etiquette when communicating in an international business environment.

1. Class and Object Creation
2. Constructors and Destructors
3. Inheritance
4. Method Overriding
5. Abstract Classes and Pure Virtual Functions
6. Operator Overloading
7. Function Overloading
8. Friend Function
9. Static Members
10. Template Class
11. Exception Handling
12. File Handling
13. Virtual Destructors
14. Multiple Inheritance
15. Composition
16. Dynamic Memory Allocation
17. Linked List Implementation
18. Binary Tree Implementation
19. Polymorphism with Pointers
20. Real-World Example: Banking System

1. Bubble Sort
2. Selection Sort
3. Insertion Sort
4. Merge Sort
5. Quick Sort
6. Heap Sort
7. Counting Sort
8. Radix Sort
9. Binary Search
10. Linear Search
11. Depth-First Search (DFS)
12. Breadth-First Search (BFS)
13. Dijkstra's Algorithm
14. Prim's Algorithm
15. Kruskal's Algorithm
16. Floyd-Warshall Algorithm
17. Knapsack Problem (0/1 Knapsack)
18. Dynamic Programming - Longest Common Subsequence
19. Backtracking - N-Queens Problem
20. Greedy Algorithm - Activity Selection Problem

**CCSN-256****INTERNET AND WEB TECHNOLOGY LAB**

1. HTML Basics
2. CSS Styling
3. JavaScript Basics
4. Responsive Web Design with Bootstrap
5. Creating a Simple Web Form
6. Validating Form Inputs with JavaScript
7. AJAX Requests with jQuery
8. Fetch API for Asynchronous Requests
9. JSON Data Handling
10. Introduction to PHP
11. Database Connectivity with MySQL
12. CRUD Operations in PHP
13. Using PHP Sessions
14. Implementing User Authentication
15. Creating RESTful APIs
16. Introduction to WordPress
17. Building a Simple Website with WordPress
18. Implementing Web Security Practices
19. Web Hosting and Deployment
20. Introduction to Content Management Systems (CMS)

# SOFTWARE ENGINEERING

CCSN-301

Cr L-T-P  
4 3-1-0

## UNIT - I

**Introduction:** Introduction to Software Engineering, Software Components, Software Characteristics, Software Crisis, Software Engineering Processes, Similarity and Differences from Conventional Engineering Processes, Software Quality Attributes. Software Development Life Cycle (SDLC) Models: Water Fall Model, Prototype Model, Spiral Model, Evolutionary Development Models, Iterative Enhancement Models.

## UNIT - II

**Software Requirement Specifications (SRS):** Requirement Engineering Process: Elicitation, Analysis, Documentation, Review and Management of User Needs, Feasibility Study, Information Modelling, Data Flow Diagrams, Entity Relationship Diagrams, Decision Tables, SRS Document, IEEE Standards for SRS.

**Software Quality Assurance (SQA):** Verification and Validation, SQA Plans, Software Quality Frameworks, ISO 9000 Models, SEI-CMM Model.

## UNIT - III

**Software Design:** Basic Concept of Software Design, Architectural Design, Low Level Design: Modularization, Design Structure Charts, Pseudo Codes, Flow Charts, Coupling and Cohesion Measures, Design Strategies: Function Oriented Design, Object Oriented Design, Top-Down and Bottom-Up Design. Software Measurement and Metrics: Various Size Oriented Measures: Halstead's Software Science, Function Point (FP) Based Measures, Cyclomatic Complexity Measures: Control Flow Graphs.

## UNIT - IV

**Software Testing:** Testing Objectives, Unit Testing, Integration Testing, Acceptance Testing, Regression Testing, Testing for Functionality and Testing for Performance, Top-Down and Bottom-Up Testing Strategies: Test Drivers and Test Stubs, Structural Testing (White Box Testing), Functional Testing (Black Box Testing), Test Data Suit Preparation, Alpha and Beta Testing of Products.

Static Testing Strategies: Formal Technical Reviews (Peer Reviews), Walk Through, Code Inspection, Compliance with Design and Coding Standards.

## UNIT - V

**Software Maintenance and Software Project Management:** Software as an Evolutionary Entity, Need for Maintenance, Categories of Maintenance: Preventive, Corrective and Perfective Maintenance, Cost of Maintenance, Software Re- Engineering, Reverse Engineering. Software Configuration Management Activities, Change Control Process, Software Version Control, An Overview of CASE Tools. Estimation of Various Parameters such as Cost, Efforts, Schedule/Duration, Constructive Cost Models (COCOMO), Resource Allocation Models, Software Risk Analysis and Management.

## References:

# COMPILER DESIGN

CCSN303

Cr L-T-P

4 3-1-0

## Unit - I

Introduction to Compiler, Phases and passes, Bootstrapping, Finite state machines and regular expressions and their applications to lexical analysis, Optimization of DFA-Based Pattern Matchers implementation of lexical analyzers, lexical-analyzer generator, LEX compiler, Formal grammars and their application to syntax analysis, BNF notation, ambiguity, YACC. The syntactic specification of programming languages: Context free grammars, derivation and parse trees, capabilities of CFG.

## Unit – II

Basic Parsing Techniques: Parsers, Shift reduce parsing, operator precedence parsing, top down parsing, predictive parsers Automatic Construction of efficient Parsers: LR parsers, the canonical Collection of LR(0) items, constructing SLR parsing tables, constructing Canonical LR parsing tables, Constructing LALR parsing tables, using ambiguous grammars, an automatic parser generator, implementation of LR parsing tables.

## Unit - III

Syntax-directed Translation: Syntax-directed Translation schemes, Implementation of Syntax-directed Translators, Intermediate code, postfix notation, Parse trees & syntax trees, three address code, quadruple & triples, translation of assignment statements, Boolean expressions, statements that alter the flow of control, postfix translation, translation with a top down parser. More about translation: Array references in arithmetic expressions,

## Unit - IV

Symbol Tables: Data structure for symbols tables, representing scope information. Run-Time Administration: Implementation of simple stack allocation scheme, storage allocation in block structured language. Error Detection & Recovery: Lexical Phase errors, syntactic phase errors semantic errors.

## Unit - V

Code Generation: Design Issues, the Target Language. Addresses in the Target Code, Basic Blocks and Flow Graphs, Optimization of Basic Blocks, Code Generator. Code optimization: Machine-Independent Optimizations, Loop optimization, DAG representation of basic blocks, value numbers and algebraic laws, Global Data-Flow analysis.

## OBJECT ORIENTED ANALYSIS AND DESIGN

CCSN-305

Cr L-T-P

4 3-1-0

### Unit – I

Object Modeling: Objects and classes, links and association, generalization and inheritance, aggregation, abstract class, multiple inheritance, meta data, candidate keys, constraints.

### Unit – II

Dynamic Modeling: Events and states, operations, nested state diagrams and concurrency, advanced dynamic modeling concepts, a sample dynamic model.

### Unit – III

Functional Modeling: Data flow diagram, specifying operations, constraints, a sample functional model. OMT (object modeling techniques) methodologies, examples and case studies to demonstrate methodologies, comparisons of methodologies, SA/SD, JSD.

### Unit – IV

Java Programming: Introduction, Operator, Data types, Variables, Methods & Classes, Multithread

Programming, I/O, Java Applet.

Java Library: String Handling, Input/Output exploring Java.io, Networking, Applets classes, Event

Handling, Introduction to AWT, Working with window, Graphics, AWT Controls, Layout Manager and

Menus, Images, Additional packages.

### Unit – V

Software Development using Java:

Java Beans, Java Swing, Java Servlets, Migrating from C++ to java, Application of java, Dynamic

Billboard Applet, Image Menu: An image based menu, Lavatron Applets, Scrabblets, JDBC, Brief

functioning of upper layer E-mail and their applications.

## CRYPTOGRAPHY AND INFORMATION SECURITY

CCSN-307

Cr L-T-P

4 3-1-0

### Unit - I

**Introduction to the Concept of Security:** Introduction to Computer Security, Network Security, Cryptology & Cryptography, Introduction to Security attacks, Services and Mechanism. **Symmetric Key Encipherment:** Conventional encryption Model, Classical encryption techniques substitution ciphers & transposition ciphers, Cryptanalysis, Stereography, Stream & Block Ciphers

### Unit - II

**Block Ciphers:** Block Cipher Principals, Shannon's Theory of Confusion and Diffusion, Fiestal structure, DES, Strength of DES, Differential & Linear Cryptanalysis of DES, Block Cipher Modes of operation, Triple DES, IDEA encryption & Decryption, Strength of IDEA, Confidentiality using Conventional Encryption, Traffic confidentiality, key distribution, random number generation

### Unit - III

**Mathematics of Cryptography:** Introduction to Graph, Ring and Field, Prime and relative prime numbers, Modular Arithmetic, Fermat's & Euler's Theorem, Primality Testing, Euclid's Algorithm, Chinese remainder theorem, Discrete logarithms. **Asymmetric Key Encipherment:** Principals of public key cryptosystems, RSA Algorithms, Security of RSA, key management, Diffe- Hellman key exchange algorithm, Introductory idea if Elliptic curve Cryptography, Elganal Encryption.

### Unit - IV

**Integrity, Authentication & Hash Function:** Authentication requirements, Authentication functions, Message Authentication Codes. Hash functions, Birthday Attacks, Security of Hash function & MAC, MD5 Message Digest Algorithm, Secure Hash Algorithm. **Digital Signatures:** Digital Signature, Authentication Protocol, DSS, Proof of Digital Signature Algorithms.

### Unit - V

**Network Security Applications: Authentication Applications:** Kerberos & X.509, Directory Authentication Services **E-Mail Security:** PGP, S/MIME. **IP Security:** Architecture, Authentication Header, Encapsulating Security Payloads, Combining Security Associations, key management. **Web Security:** Secure Socket Layer & Transport Layer Security , Secure electronic Transaction, **System Security:** Intruder, Intrusion Detection, Password Management. **Malicious Software:** Viruses and related threads. **Firewall:** Firewall design principles, trusted Systems

### Reference Books:

## **CCSN 309 INTERNET WEB PROGRAMMING**

### **Unit 1: Introduction to Web Technologies**

Overview of the internet and the World Wide Web, including the architecture of web applications. Exploration of client-server model, web servers, browsers, and the basics of web hosting.

### **Unit 2: HTML and CSS**

Fundamentals of HTML for structuring web content, including elements, attributes, and semantic HTML. Introduction to CSS for styling web pages, covering selectors, properties, layout techniques, and responsive design principles.

### **Unit 3: JavaScript and DOM Manipulation**

Introduction to JavaScript as a programming language for the web. Focus on syntax, data types, functions, and event handling. Exploration of the Document Object Model (DOM) for dynamic content manipulation and interaction with HTML elements.

### **Unit 4: Server-Side Programming**

Overview of server-side scripting languages, with an emphasis on PHP or Node.js. Topics include form handling, session management, and database connectivity using SQL. Introduction to RESTful services and API integration.

### **Unit 5: Web Development Frameworks**

Introduction to popular web development frameworks such as React, Angular, or Django. Focus on understanding framework architecture, component-based development, and best practices for building scalable web applications.

**Unit 1: Introduction to Graphs**

Overview of graph theory, including definitions and basic terminologies such as vertices, edges, and types of graphs. Exploration of directed and undirected graphs, simple graphs, and multigraphs, as well as graph representations like adjacency matrices and adjacency lists.

**Unit 2: Graph Traversal Algorithms**

Study of fundamental graph traversal methods, including depth-first search (DFS) and breadth-first search (BFS). Applications of these algorithms in solving problems related to connectivity and graph exploration.

**Unit 3: Connectivity and Components**

Examination of connected graphs, components, and the concepts of strong and weak connectivity in directed graphs. Discussion on cut vertices, bridges, and applications in network reliability.

**Unit 4: Trees and Their Properties**

Introduction to trees, properties of tree structures, and applications in various fields. Exploration of binary trees, spanning trees, and the concepts of minimum spanning trees, including algorithms such as Prim's and Kruskal's.

**Unit 5: Graph Coloring and Matching**

Study of graph coloring concepts, including applications in scheduling and resource allocation. Examination of matchings in graphs, including perfect matchings and applications of the Hall's marriage theorem.

**Unit 1: Introduction to Computer Vision**

Overview of the field of computer vision, its history, and applications. Discussion of the human visual system and the fundamentals of image formation, including image acquisition and representation.

**Unit 2: Image Processing Fundamentals**

Introduction to basic image processing techniques including image enhancement, filtering, and noise reduction. Exploration of color spaces, histogram equalization, and morphological operations.

**Unit 3: Feature Detection and Description**

Study of key concepts in feature detection, including edge detection, corner detection, and blob detection. Examination of feature descriptors such as SIFT, SURF, and ORB for image matching and recognition.

**Unit 4: Image Segmentation**

Overview of image segmentation techniques, including thresholding, clustering, region-based methods, and graph-based segmentation. Discussion of the challenges in segmentation and evaluation metrics.

**Unit 5: Object Detection and Recognition**

Exploration of object detection algorithms, including traditional methods and deep learning approaches. Discussion of techniques such as R-CNN, YOLO, and SSD, along with applications in real-world scenarios.

## **CUCS 343    ROBOTICS AND AUTOMATION**

### **Unit 1: Introduction to Robotics**

Overview of robotics, including definitions, history, and types of robots. Exploration of the applications of robotics in various industries and the fundamental components of robotic systems.

### **Unit 2: Kinematics of Robots**

Study of robot kinematics, focusing on forward and inverse kinematics. Analysis of the motion of robotic arms and end effectors, including transformations and the Denavit-Hartenberg convention.

### **Unit 3: Dynamics of Robots**

Introduction to the principles of dynamics as applied to robotic systems. Covers the concepts of forces, torques, and motion equations, including Newton's laws and Lagrangian mechanics.

### **Unit 4: Sensors and Actuators**

Examination of various sensors used in robotics, such as proximity sensors, cameras, and IMUs. Discussion of actuators, including motors and servos, and their roles in robot movement and control.

### **Unit 5: Robot Control Systems**

Overview of control strategies for robotic systems, including open-loop and closed-loop control. Exploration of PID control, adaptive control, and advanced techniques for motion control and trajectory planning.

## **CUCS-345 WEB SERVICE AND SERVICE ORIENTED ARCHITECTURE**

### **Unit 1: Introduction to Web Services**

This unit covers the fundamental concepts of web services, including their definition and purpose. It explores the evolution of web services, their significance in modern computing, and the various types of web services, such as SOAP and REST. Additionally, it examines the architecture of web services and the key components involved.

### **Unit 2: SOAP Web Services**

In this unit, students learn about Simple Object Access Protocol (SOAP), including its structure and messaging framework. It discusses the creation and consumption of SOAP web services, including the use of WSDL (Web Services Description Language) to describe service interfaces. The unit also covers error handling in SOAP and security measures.

### **Unit 3: RESTful Web Services**

This unit focuses on Representational State Transfer (REST) architecture and its principles. It explores how RESTful services differ from SOAP services, including the use of HTTP methods (GET, POST, PUT, DELETE) and status codes. The unit covers the design and implementation of RESTful APIs, including best practices for RESTful web service development.

### **Unit 4: Service-Oriented Architecture (SOA)**

This unit introduces the concept of Service-Oriented Architecture, explaining its principles and benefits. It discusses the role of services in SOA, including service design, service orchestration, and service composition. The unit also covers the importance of interoperability and loose coupling in SOA.

### **Unit 5: Web Service Security**

In this unit, students learn about the security concerns associated with web services. It covers security standards and protocols, such as WS-Security, OAuth, and OpenID. The unit also addresses authentication, authorization, and encryption methods to ensure secure communication between services.

## **HUMAN COMPUTER INTERACTION**

**CUCS-347**

**Cr L-T-P**

**4 3-1-0**

UNIT - I Introduction : Importance of user Interface – definition, importance of good design. Benefits of good design. A brief history of Screen design. The graphical user interface – popularity of graphics, the concept of direct manipulation, graphical system, Characteristics, Web user – Interface popularity, characteristics- Principles of user interface.

UNIT - II Design process – Human interaction with computers, importance of human characteristics human consideration, Human interaction speeds, understanding business junctions.

UNIT - III Screen Designing : Design goals – Screen planning and purpose, organizing screen elements, ordering of screen data and content – screen navigation and flow – Visually pleasing composition – amount of information – focus and emphasis – presentation information simply and meaningfully – information retrieval on web – statistical graphics – Technological consideration in interface design.

UNIT - IV Windows – New and Navigation schemes selection of window, selection of devices based and screen based controls, Components – text and messages, Icons and increases – Multimedia, colors, uses problems, choosing colors.

UNIT – V Software tools – Specification methods, interface – Building Tools, Interaction Devices – Keyboard and function keys – pointing devices – speech recognition digitization and generation – image and video displays – drivers.

TEXT BOOKS : 1. The essential guide to user interface design, Wilbert O Galitz, Wiley DreamaTech.

2. Designing the user interface. 3rd Edition Ben Shneidermann , Pearson Education Asia.

3. Human – Computer Interaction. ALAN DIX, JANET FINCAY, GRE GORYD, ABOWD, RUSSELL BEALG, PEARSON.

4. Interaction Design PRECE, ROGERS, SHARPS. Wiley Dreamtech, 3. User Interface Design, Soren Lauesen , Pearson Education

## ENERGY STUDIES

**CBSN-301**

**Cr L-T-P**

**4 3-1-0**

UNIT 1: Energy Sources - Fossil fuels, Nuclear fuels, hydel, solar, wind and bio fuels in India, Energy conservation, Nuclear energy through fission and fusion processes.

UNIT 2: Energy Conversion- Energy conversion from source to utility, Solar, Nuclear, Geothermal, Tide and Wind Energies.

UNIT 3: Global Energy Scenario- Role of energy in economic development and social transformation, Overall energy demand, availability and consumption, Depletion of energy resources and its impact on economy, Non proliferation of nuclear energy. International energy policies of G-8, G-20, OPEC and European Union countries.

UNIT 4: Indian Energy Scenario- Commercial and noncommercial forms of energy, Utilization pattern in the past, present and also future prediction, Sector wise energy consumption.

UNIT 5: Energy Policy: Energy policy issues at global level, national level and state level, Energy conservation act 2001, Electricity act 2003, Energy pricing and its impact on global variations.

Text Books:

1. Jose Goldenberg, Thomas Johanson, and Reddy, A.K.N., Energy for Sustainable World, WileyEastern, 2005.
2. Charles E. Brown, World Energy Resources, Springer Publication, New York, 2002.
3. Culp, A.W., Principles of Energy Conversion, McGraw Hill New York, 2004. 80

Reference Books:

1. Bukhoutsow, B., Energy Policy and Planning, Prentice Hall of India, New Delhi, 2003.
2. TEDDY Year Book, The Energy Research Institute (TERI), 2011

**Unit 1: Introduction to Software Engineering**

Overview of software engineering principles and methodologies, including the software development lifecycle, software process models, and the importance of requirements analysis. Introduction to software tools and environments.

**Unit 2: Requirements Analysis and Specification**

Hands-on practice in gathering and analyzing software requirements. Techniques for writing clear and concise requirements specifications using tools for requirements management. Emphasis on user stories and use case diagrams.

**Unit 3: Software Design**

Exploration of software design principles, patterns, and best practices. Implementation of design diagrams including class diagrams, sequence diagrams, and architecture design. Use of design tools for visual representation of software architecture.

**Unit 4: Software Development and Implementation**

Practical experience in coding and implementation of software solutions using a chosen programming language. Focus on version control systems, collaborative development tools, and coding standards. Emphasis on modular programming and unit testing.

**Unit 5: Software Testing and Quality Assurance**

Introduction to software testing methodologies and strategies. Practical exercises in writing test cases, conducting different types of testing (unit, integration, system, acceptance), and using automated testing tools. Concepts of software quality assurance and metrics.

**Unit 6: Project Management and Documentation**

Exploration of software project management concepts including planning, scheduling, and resource management. Hands-on experience with project management tools. Emphasis on documenting the software development process and maintaining project artifacts.

## **CCSN-353    COMPILER DESIGN LAB**

### **Unit 1: Introduction to Compilers**

Overview of the compiler design process, components of a compiler, and the phases of compilation. Study of the role of the compiler in programming languages and the importance of syntax and semantics.

### **Unit 2: Lexical Analysis**

Implementation of a lexical analyzer using regular expressions and finite automata. Development of tools like Lex or Flex for tokenizing input strings. Analysis of token representation and symbol tables.

### **Unit 3: Syntax Analysis**

Construction of a syntax analyzer or parser using context-free grammars. Implementation of parsing techniques such as LL(1) and LR(1) parsers. Development of a parser generator like Yacc or Bison.

### **Unit 4: Semantic Analysis**

Design of a semantic analyzer to check variable types, scope, and declarations. Implementation of symbol table management and type checking. Exploration of abstract syntax trees and their construction.

### **Unit 5: Intermediate Code Generation**

Generation of intermediate code representations such as three-address code or quadruples. Techniques for code optimization and analysis of control flow and data flow within programs.

## **CCSN-355 OBJECT ORIENTED ANALYSIS AND DESIGN LAB**

### **Unit 1: Introduction to Object-Oriented Concepts**

Overview of object-oriented programming principles including classes, objects, inheritance, encapsulation, and polymorphism. Discussion of the advantages of object-oriented design over procedural programming.

### **Unit 2: Unified Modeling Language (UML)**

Introduction to UML as a standard modeling language. Study of various UML diagrams such as class diagrams, use case diagrams, sequence diagrams, and activity diagrams. Practical exercises in creating UML diagrams to represent system designs.

### **Unit 3: Object-Oriented Analysis**

Techniques for requirements gathering and analysis using object-oriented methodologies. Focus on identifying use cases, actors, and system requirements. Development of use case diagrams and scenarios to model system functionality.

### **Unit 4: Object-Oriented Design**

Principles of designing software systems using object-oriented techniques. Emphasis on design patterns, system architecture, and the application of SOLID principles. Hands-on experience with designing class structures and interactions.

### **Unit 5: Implementation and Testing**

Transition from design to implementation using an object-oriented programming language. Practical coding sessions to develop, test, and debug applications. Focus on unit testing, integration testing, and validation of object-oriented systems.

**Unit- I**

**Transformation, Projections, and Clipping Algorithm:** Bresenham's Line Drawing Algorithm, Homogeneous Coordinates system for 2D AND 3D , Various 2D, 3D, Transformation matrices(Translation, Scaling, Rotation , Shear), Rotation about an arbitrary point(2D), Rotation about an arbitrary axis(3D), Computing location of V.P., Clipping algorithms, Sutherland-Cohen Clipping Algorithm, Bresenham's Circle Drawing Algorithm.

**Unit - II**

**Curves and Surfaces** Bezier Curves, 4 point and 5 point Bezier curves using Bernstein Polynomials , Conditions for smoothly joining curve segments, Bezier bi-cubic surface patch, B-Spline Curves, Cubic B-Spline curves using uniform knot vectors. Testing for first and second order continuities, Effect of multiple control points at same location, Geometrical Construction, Computing control points given end slopes for a specified curve segment.

**Unit - III**

**Projection and Solid Modeling** Parallel Projection, Oblique Projection on xy plane, Isometric Projection, Perspective Projection, One Vanishing Point(V.P.) projection from a point on z axis, Generation of 2 V.P. Projection , Solid Modeling, Sweeping a polygon or a surface patch along a path to form solids, Boundary Representations (B-Rep), octrees, CSG-Constructive Solid Geometry.

**Unit - IV**

**Shading** Illumination Model for diffused Reflection ,Effect of ambient lighting, distances, Specular Reflection Model, Computing Reflection Vector, Curved Surfaces, Polygonal Approximations, Gourard Shading, Phong Model.

**Unit-V**

**Hidden surface Removal** Floating Horizon Method, Back Face Detection , Depth Buffer(Z-Buffer, A-Buffer) Method, Scan Line Method, Depth Sorting Method, BSP-Tree Method, Area Subdivision Method.

**Reference Book:**

1. Donald Hearn and M. P. Baker, *Computer Graphics*, Prentice Hall Inc., 3<sup>rd</sup> Edition, 2003.
2. Foley, Van Dam, *Computer Graphics Principles & Practice*, Pearson Education, 2<sup>nd</sup>

**Unit – I**

Introduction: Data-ware housing: Definition, Delivery Process, Difference between Database System and Data Warehouse, Multi-Dimensional Data Model, Stars, Snow Flakes, Fact Constellations, Data marts, 3 Tier Architecture of Data Warehouse, OLAP Servers: ROLAP, MOLAP, HOLAP.

Data Mining: Motivation (for Data Mining), Definition & Functionalities, knowledge discovery steps, Architecture, Statistical measures in large Databases. Measuring Central Tendency.

**Unit - II**

Data Processing: Requirement for preprocessing, Data Cleaning and its various techniques, Data Integration and Transformation, Data Reduction:- Data Cube Aggregation, attribute subset selection, Numerosity Reduction, Concept hierarchy generation. Attribute oriented induction Concept Description and Data Generalization, implementation of AOI, presentation of derived generalization and class description, Mining Class comparisons. Mining frequent patterns, A priori Algorithm, F P Growth, Mining various kind of Association rule: Multilevel, Multi-Dimensional, correlation analysis, constraints based mining.

**Unit - III**

Classification and Predictions:

Basics and issues regarding Classification & Prediction, Classification by Decision tree induction, Bayesian Classification, Rule-based Classification, Classification by Back propagation; Multilayer feed-forward Neural Network, Back-propagation Algorithm, Classification methods K-nearest neighbor classifiers, Genetic Algorithm, and regression based methods for prediction, accuracy and error measure.

**Unit - IV**

Cluster analysis: requirement of clustering in data mining, Data types in cluster analysis, Categories of clustering methods, Partitioning methods: K-mean and K-medoids. Hierarchical Clustering: agglomerative and divisive clustering, BIRCH, and Chameleon. Density Based Methods-DBSCAN, OPTICS. Grid Based Methods- STING, CLIQUE. Model Based Method – expectation-maximization, Outlier Analysis: statistical distribution method, distance based method.

**Unit - V**

Applications and Trends in data mining: Data mining applications, themes on data mining, social impact on data mining, trends in data mining. Data mining interface, Security, Backup and Recovery, Tuning Data Warehouse, Testing Data Warehouse.

**Reference Books:**

1. Jiawei Han, Micheline Kamber, "Data Mining Concepts & Techniques" Elsevier, 2nd edition 2010.

## MOBILE COMPUTING

**CCSN-306**

**Cr. L T P**

**4 3 10**

### Unit – I

Introduction, issues in mobile computing, overview of wireless telephony: cellular concept, GSM: air-interface, channel structure, location management: HLR-VLR, hierarchical, handoffs, channel allocation in cellular systems, CDMA, GPRS.

### Unit - II

Wireless Networking, Wireless LAN Overview: MAC issues, IEEE 802.11, Blue Tooth, Wireless multiple access protocols, TCP over wireless, Wireless applications, data broadcasting, Mobile IP, WAP: Architecture, protocol stack, application environment, applications.

### Unit – III

Data management issues, data replication for mobile computers, adaptive clustering for mobile wireless networks, File system, Disconnected operations.

### Unit - IV

Mobile Agents computing, security and fault tolerance, transaction processing in mobile computing environment.

### Unit – V

Ad Hoc networks, localization, MAC issues, Routing protocols, global state routing (GSR), Destination sequenced distance vector routing (DSDV), Dynamic source routing (DSR), Ad Hoc on demand distance vector routing (AODV), Temporary ordered routing algorithm (TORA), QoS in Ad Hoc Networks, applications.

### **Books:**

1. J. Schiller, Mobile Communications, Addison Wesley.
2. A. Mehrotra , GSM System Engineering.
3. M. V. D. Heijden, M. Taylor, Understanding WAP, Artech House.
4. Charles Perkins, Mobile IP, Addison Wesley. 5. Charles Perkins, Ad hoc Networks, Addison Wesley.

# KNOWLEDGE MANAGEMENT& EXPERT SYSTEM

CCSN-308

Cr. L T P

4 3 1 0

## Unit - I

Introduction to knowledge Management Distinction between data , information & knowledge. Concept of knowledge creation, Intellectual Capital Creation, Human Capital, Customer Capital and Organizational Capital

## Unit-II

Socio-cultural aspects & organizational aspects Tacit & Explicit knowledge & Knowledge Organization . Knowledge Storage and Distribution, KM tools, Data warehouse, Data mining, knowledge management evaluation & Valuation of Knowledge.

## Unit-III

K- Sharing Practices and Barriers. K – culture, KM In Indian organizations and MNC. Learning Organizations & Organizational Learning

## Unit – IV

**Expert System** Existing Expert Systems (DENDRAL, MYCIN), Architecture of expert system, Features of Expert system, Genetic algorithm, Fuzzy logic, Neural Networks, Intelligent Agents, Meta Knowledge, Expertise Transfer, Self Explaining System, User and expert systems.

## Unit-V

K-Initiative, K-Strategic issues in knowledge management, K-Commerce

## Reference Books:

1. SudhirWarrier, “*Knowledge Management*”, Vikas publishing House, New Delhi, First edition, 2007.
2. Thotharti Raman, “*Knowledge Management*”, Excel Books ,New Delhi, First Edition,2004.
3. Stuart Barnes “*Knowledge Management Systems: Theory & Practice*”, Thomson Learning Press, New Delhi, First Edition, 2002.
4. Ronald Maier, “*Knowledge Management System*”, Springer, Germany, Second Edition,2002.
5. AmritTiwana, “*Knowledge Management Tool Kit*”, Pearson Education, New Delhi, First Edition, 2002.

### **Unit 1: Understanding Knowledge Management**

Introduction to the concepts of knowledge and knowledge management, exploring the types of knowledge, including tacit and explicit knowledge, and the importance of knowledge management in organizations.

### **Unit 2: Knowledge Creation and Sharing**

Examination of processes involved in knowledge creation, including socialization, externalization, combination, and internalization. Discussion on knowledge sharing practices, barriers to sharing, and strategies for fostering a knowledge-sharing culture.

### **Unit 3: Knowledge Storage and Retrieval**

Overview of methods for storing and organizing knowledge, including knowledge repositories, databases, and content management systems. Emphasis on techniques for effective knowledge retrieval and the role of technology in knowledge management.

### **Unit 4: Knowledge Management Systems and Tools**

Exploration of various knowledge management systems and tools, including collaborative platforms, decision support systems, and enterprise social networks. Discussion on selecting appropriate tools for different organizational needs.

### **Unit 5: Knowledge Management Strategies and Best Practices**

Analysis of knowledge management strategies and frameworks, including the role of leadership and organizational culture. Examination of best practices in implementing and sustaining knowledge management initiatives within organizations.

### **Unit 1: Introduction to Information Systems**

Exploration of the role and importance of information systems in organizations. Examination of various types of information systems, their components, and how they support decision-making processes.

### **Unit 2: Information Technology Fundamentals**

Overview of the fundamental concepts of information technology, including hardware, software, networking, and data management. Discussion of current technologies and trends shaping the IT landscape.

### **Unit 3: Database Management Systems**

Introduction to database concepts, including data modeling, database design, and the relational database model. Study of SQL and database management system functionalities, including data retrieval, manipulation, and integrity.

### **Unit 4: System Development Life Cycle**

Understanding the phases of the system development life cycle, including planning, analysis, design, implementation, and maintenance. Exploration of methodologies and tools used in system development.

### **Unit 5: Information Security and Ethics**

Examination of information security principles, threats, and risk management strategies. Discussion of ethical considerations in information systems, including privacy, intellectual property, and regulatory compliance.

**Unit 1: Introduction to Organizational Learning**

Overview of organizational learning concepts, definitions, and the importance of learning in organizations. Exploration of theories and models of learning within an organizational context.

**Unit 2: Learning Theories and Approaches**

Examination of key learning theories, including behaviorism, cognitivism, and constructivism. Discussion of experiential learning and the role of social learning in organizations.

**Unit 3: Knowledge Management**

Introduction to knowledge management concepts, including the types of knowledge (tacit and explicit) and the processes involved in capturing, sharing, and applying knowledge within organizations.

**Unit 4: Learning Culture and Environment**

Analysis of the role of organizational culture in fostering learning. Exploration of how leadership, communication, and trust contribute to a supportive learning environment.

**Unit 5: Learning Organizations**

Study of the characteristics and attributes of learning organizations. Examination of practices and strategies for promoting continuous learning and adaptability in organizations.

### **Unit 1: Introduction to Knowledge Management**

Overview of knowledge management concepts, definitions, and importance. Examination of the knowledge economy and the role of knowledge in organizational success. Introduction to key theories and models of knowledge management.

### **Unit 2: Knowledge Creation and Capture**

Exploration of knowledge creation processes, including tacit and explicit knowledge. Strategies for knowledge capture and documentation. Discussion on the role of communities of practice and collaborative technologies in knowledge creation.

### **Unit 3: Knowledge Sharing and Transfer**

Analysis of methods and tools for knowledge sharing within organizations. Examination of barriers to knowledge sharing and strategies to overcome them. Study of social networks and informal knowledge transfer mechanisms.

### **Unit 4: Technology in Knowledge Management**

Evaluation of emerging technologies that facilitate knowledge management, including artificial intelligence, machine learning, and big data analytics. Discussion on knowledge management systems, their architecture, and implementation.

### **Unit 5: Knowledge Management Strategies and Practices**

Development of knowledge management strategies aligned with organizational goals. Examination of best practices in knowledge management and case studies from various industries. Discussion on the measurement and assessment of knowledge management effectiveness.

**Unit 1: Introduction to Embedded Systems**

Overview of embedded systems, their characteristics, and applications. Discussion on the architecture of embedded systems, including hardware and software components, and comparison with general-purpose computing systems.

**Unit 2: Microcontrollers and Microprocessors**

Study of microcontrollers and microprocessors, including their architecture, operation, and programming. Exploration of popular microcontrollers and microprocessors used in embedded systems, along with their instruction sets and interfacing techniques.

**Unit 3: Embedded System Design**

Fundamentals of embedded system design, including design methodologies and processes. Discussion on system specification, modeling, and design tools. Consideration of hardware-software co-design and integration challenges.

**Unit 4: Real-Time Operating Systems**

Introduction to real-time operating systems (RTOS) and their importance in embedded systems. Exploration of task scheduling, synchronization, and inter-process communication. Discussion on different types of RTOS and their applications.

**Unit 5: Embedded System Applications**

Examination of various applications of embedded systems in different fields such as automotive, healthcare, industrial automation, and consumer electronics. Study of case studies showcasing the implementation of embedded systems in real-world scenarios.

**Unit 1: Introduction to Simulation**

Overview of simulation concepts, types of simulation, and the role of modeling in various applications. Discussion of the advantages and disadvantages of simulation as a problem-solving tool.

**Unit 2: Modeling Techniques**

Exploration of different modeling techniques, including mathematical, statistical, and graphical models. Introduction to system dynamics and discrete event simulation, along with model development processes.

**Unit 3: Simulation Process**

Detailed examination of the simulation process, including problem definition, model formulation, experimentation, and analysis of results. Emphasis on the validation and verification of models.

**Unit 4: Statistical Analysis of Simulation Output**

Introduction to statistical methods for analyzing simulation output. Topics include confidence intervals, hypothesis testing, and regression analysis. Techniques for sensitivity analysis and model calibration.

**Unit 5: Applications of Simulation**

Discussion of practical applications of simulation across various fields such as engineering, healthcare, finance, and manufacturing. Case studies demonstrating the use of simulation in real-world scenarios.

**Unit 1: Introduction to Approximation Algorithms**

Overview of algorithmic problem-solving and the necessity of approximation algorithms. Discussion on NP-hardness and the classification of problems based on their approximation characteristics.

**Unit 2: Performance Analysis of Approximation Algorithms**

Study of the concepts of approximation ratio and performance guarantees. Analysis of different approximation techniques and their effectiveness in various problem domains.

**Unit 3: Greedy Algorithms**

Exploration of greedy strategies for optimization problems. Examination of classic problems such as the Knapsack problem, Minimum Spanning Tree, and Huffman coding. Understanding when greedy algorithms yield optimal solutions.

**Unit 4: Dynamic Programming and Approximation**

Application of dynamic programming techniques in designing approximation algorithms. Discussion on problems such as the Traveling Salesman Problem and how dynamic programming approaches can be adapted for approximation.

**Unit 5: Linear Programming and Rounding Techniques**

Introduction to linear programming as a tool for approximation. Examination of rounding techniques and their application in creating approximation algorithms for various optimization problems.

## SOFTWARE PROJECT MANAGEMENT

CUCS-342

Cr. L T P  
4 3 10

### Unit – I

#### Introduction and Software Project Planning

Fundamentals of Software Project Management (SPM), Need Identification, Vision and Scope document, Project Management Cycle, SPM Objectives, Management Spectrum, SPM Framework, Software Project Planning, Planning Objectives, Project Plan, Types of project plan, Structure of a Software Project Management Plan, Software project estimation, Estimation methods, Estimation models, Decision process.

### Unit – II

#### Project Organization and Scheduling

Project Elements, Work Breakdown Structure (WBS), Types of WBS, Functions, Activities and Tasks, Project Life Cycle and Product Life Cycle, Ways to Organize Personnel, Project schedule, Scheduling Objectives, Building the project schedule, Scheduling terminology and techniques, Network Diagrams: PERT, CPM, Bar Charts: Milestone Charts, Gantt Charts.

### Unit - III

#### Project Monitoring and Control

Dimensions of Project Monitoring & Control, Earned Value Analysis, Earned Value Indicators: Budgeted Cost for Work Scheduled (BCWS), Cost Variance (CV), Schedule Variance (SV), Cost Performance Index (CPI), Schedule Performance Index (SPI), Interpretation of Earned Value Indicators, Error Tracking, Software Reviews, Types of Review: Inspections, Desk checks, Walkthroughs, Code Reviews, Pair Programming.

### Unit – IV

#### Software Quality Assurance and Testing

Testing Objectives, Testing Principles, Test Plans, Test Cases, Types of Testing, Levels of Testing, Test Strategies, Program Correctness, Program Verification & validation, Testing Automation & Testing Tools, Concept of Software Quality, Software Quality Attributes, Software Quality Metrics and Indicators, The SEI Capability Maturity Model (CMM), SQA Activities, Formal SQA Approaches: Proof of correctness, Statistical quality assurance, Cleanroom process.

### Unit – V

#### Project Management and Project Management Tools

Software Configuration Management: Software Configuration Items and tasks, Baselines, Plan for Change, Change Control, Change Requests Management, Version Control, Risk Management: Risks and risk types, Risk Breakdown Structure (RBS), Risk Management Process: Risk identification, Risk analysis, Risk planning, Risk monitoring, Cost Benefit Analysis, Software Project Management Tools: CASE Tools, Planning and Scheduling Tools, MS-Project.

#### Reference Books:

1. Software Project Management by M. Cotterell
2. Information Technology Project Management
3. Management Information and Control by
4. Software Project Management by S. A. Kelkar

### **Unit 1: Introduction to Project Management**

Overview of project management concepts, terminology, and frameworks. Exploration of the project life cycle, project stakeholders, and the importance of project planning and scheduling in achieving project success.

### **Unit 2: Project Planning Techniques**

Examination of various project planning techniques, including project scope definition, work breakdown structures (WBS), and estimation of project activities. Discussion of resource allocation and budgeting in project planning.

### **Unit 3: Scheduling Methods**

Introduction to different scheduling methods, including Gantt charts, network diagrams, and critical path method (CPM). Analysis of program evaluation and review technique (PERT) and its applications in project scheduling.

### **Unit 4: Resource Management**

Focus on resource management in projects, including resource leveling and resource allocation strategies. Discussion of constraints, dependencies, and the impact of resource availability on project schedules.

### **Unit 5: Monitoring and Controlling Projects**

Techniques for monitoring and controlling project progress, including earned value management (EVM) and performance measurement. Examination of project risk management and its role in project planning and scheduling.

### **Unit 1: Introduction to Risk Management**

Overview of risk management principles and processes in software projects. Discussion on the importance of risk management and its impact on project success. Introduction to key terms and concepts related to risk.

### **Unit 2: Risk Identification**

Techniques and methods for identifying risks in software projects. Exploration of tools and frameworks for risk identification, including brainstorming, checklists, and interviews. Understanding the role of stakeholders in the identification process.

### **Unit 3: Risk Assessment and Analysis**

Methods for assessing and analyzing risks, including qualitative and quantitative approaches. Exploration of risk prioritization techniques and the use of risk matrices. Understanding the implications of risk assessment on project planning.

### **Unit 4: Risk Mitigation Strategies**

Development of risk response strategies and planning for risk mitigation. Discussion on various approaches to manage identified risks, including avoidance, transfer, acceptance, and reduction. Strategies for creating effective risk management plans.

### **Unit 5: Risk Monitoring and Control**

Techniques for monitoring and controlling risks throughout the software project lifecycle. Discussion on the role of continuous risk assessment, documentation, and reporting. Exploration of tools for tracking risks and measuring the effectiveness of mitigation strategies.

### **Unit 1: Introduction to Project Quality Management**

Overview of project quality management principles and its significance in project management. Discussion on quality concepts, definitions, and the role of quality management in achieving project objectives.

### **Unit 2: Quality Planning**

Exploration of quality planning processes, including defining quality standards and objectives for projects. Examination of tools and techniques used for quality planning, such as quality metrics and quality assurance plans.

### **Unit 3: Quality Assurance**

Study of quality assurance principles and practices in project management. Focus on the processes involved in ensuring that quality standards are met, including audits, process analysis, and continuous improvement strategies.

### **Unit 4: Quality Control**

Introduction to quality control methods and techniques used to monitor project performance and ensure quality requirements are fulfilled. Covers statistical quality control tools, inspection processes, and corrective actions.

### **Unit 5: Continuous Improvement and Quality Management Systems**

Examination of continuous improvement methodologies such as Six Sigma and Total Quality Management (TQM). Discussion on implementing quality management systems and standards, including ISO standards and their application in project management.

**Unit 1: Introduction to Stakeholder Management**

Overview of stakeholder management concepts, identification of stakeholders, and the importance of stakeholder engagement in project management. Exploration of the stakeholder management process and its relevance to organizational success.

**Unit 2: Stakeholder Identification and Analysis**

Techniques for identifying stakeholders and categorizing them based on their influence and interest. Examination of stakeholder mapping tools, analysis of stakeholder needs and expectations, and understanding their potential impact on projects.

**Unit 3: Stakeholder Engagement Strategies**

Development of effective engagement strategies for various stakeholder groups. Exploration of communication methods, relationship building, and negotiation techniques to ensure active stakeholder involvement and buy-in.

**Unit 4: Managing Stakeholder Expectations**

Understanding the dynamics of stakeholder expectations and the role of effective communication in managing them. Strategies for aligning stakeholder expectations with project objectives and handling conflicts that may arise.

**Unit 5: Evaluating Stakeholder Management Success**

Methods for assessing the effectiveness of stakeholder management efforts. Examination of key performance indicators, feedback mechanisms, and lessons learned to improve future stakeholder engagement processes.

**Unit 1: Introduction to Microwave Engineering**

Overview of microwave frequencies and applications. Discussion on the characteristics of microwave signals and their propagation in various media. Introduction to microwave components and systems.

**Unit 2: Microwave Transmission Lines**

Analysis of transmission line theory, including the concept of characteristic impedance and reflection coefficient. Examination of different types of transmission lines such as coaxial cables and microstrip lines, along with their applications in microwave circuits.

**Unit 3: Microwave Devices**

Study of various microwave devices such as waveguides, resonators, and filters. Exploration of solid-state devices including diodes and transistors used at microwave frequencies. Introduction to active and passive microwave components.

**Unit 4: Microwave Network Analysis**

Fundamentals of network parameters including S-parameters and their applications in microwave circuit design. Discussion on two-port networks, matching networks, and stability considerations in microwave circuits.

**Unit 5: Microwave Measurement Techniques**

Techniques and equipment used for measuring microwave signals, including power, frequency, and impedance. Introduction to microwave test equipment and methods for evaluating the performance of microwave components and systems.

**Unit 1: Introduction to Supply Chain Management**

Overview of supply chain management concepts, objectives, and the importance of effective supply chain planning. Discussion of supply chain components and relationships between suppliers, manufacturers, distributors, and customers.

**Unit 2: Demand Planning and Forecasting**

Examination of demand planning processes and techniques, including qualitative and quantitative forecasting methods. Analysis of demand variability, forecasting accuracy, and the impact of demand planning on supply chain performance.

**Unit 3: Inventory Management**

Study of inventory types, functions, and costs within the supply chain. Exploration of inventory management techniques, including Economic Order Quantity (EOQ), Just-In-Time (JIT), and safety stock management.

**Unit 4: Production Planning and Scheduling**

Discussion of production planning methodologies, including aggregate planning and master production scheduling. Analysis of scheduling techniques, resource allocation, and the role of production planning in meeting demand.

**Unit 5: Supply Chain Strategy and Network Design**

Evaluation of supply chain strategies and their alignment with business goals. Examination of network design principles, including facility location, capacity planning, and transportation considerations.

**Unit 1: Introduction to Software Testing**

Basics of software testing, importance, and objectives. Overview of testing processes, principles, and the role of testing in the software development lifecycle. Types of software testing and their classifications.

**Unit 2: Test Planning and Documentation**

Creating a test plan, defining test objectives, and scope. Developing test cases and test scripts. Importance of test documentation and test data preparation. Test management and tracking tools.

**Unit 3: Testing Techniques and Strategies**

Black-box and white-box testing techniques. Equivalence partitioning, boundary value analysis, decision table testing, and path testing. Overview of testing strategies like unit testing, integration testing, system testing, and acceptance testing.

**Unit 4: Test Automation**

Introduction to test automation and its benefits. Overview of test automation tools and frameworks. Criteria for selecting test tools, creating automated test scripts, and maintaining automated test suites. Challenges in test automation.

**Unit 5: Debugging and Defect Management**

Understanding the debugging process and identifying root causes of defects. Defect lifecycle and defect tracking systems. Tools for defect management and best practices for logging and resolving defects.

## ENVIRONMENTAL STUDIES

L T P 2 0 0

**CBSN-302**

### **Unit I**

**Atmosphere:** The Earth's Natural Greenhouse Effect: Greenhouse Gases, Global Warming, Ozone depletion, Acid rain, El Nina and La Nina Phenomenon.

### **Unit-II**

**Pollution:** Air, Water, Noise and Soil pollutions and their quality parameters

### **Unit-III**

**Waste Management:** Agricultural waste, Industrial waste and Other hazardous waste, Environment Impact Assessment.

### **Unit-IV**

**Sustainable Development:** Conservation of natural resources watershed management, Rain water harvesting and storage; Application of Remote Sensing and GIS

### **Unit-V**

**Environmental Management Systems:** ISO certification control policies, International and National legislations and acts related to environment.

### **Reference:**

## **CCSN-352    COMPUTER GRAPHICS LAB**

### **Unit 1: Introduction to Computer Graphics**

Overview of computer graphics fundamentals, including the graphics pipeline, types of graphics, and applications. Introduction to graphics programming environments and tools.

### **Unit 2: Basic Drawing Algorithms**

Implementation of fundamental drawing algorithms such as line drawing, circle drawing, and polygon filling. Exploration of rasterization techniques and pixel manipulation.

### **Unit 3: 2D Transformations**

Study of geometric transformations including translation, rotation, scaling, and reflection in 2D space. Implementation of transformation matrices and their applications in graphics.

### **Unit 4: 3D Graphics and Transformations**

Introduction to 3D graphics concepts, including 3D modeling, viewing transformations, and projection techniques. Implementation of basic 3D transformations and manipulation of 3D objects.

### **Unit 5: Animation Techniques**

Exploration of animation principles and techniques. Implementation of basic animation methods, including keyframe animation and motion interpolation. Introduction to time-based animation and its applications.

**Unit 1: Introduction to Data Mining Tools**

Overview of popular data mining tools and software, including installation and setup procedures. Introduction to the user interface and basic functionalities of tools such as Weka, RapidMiner, and Python libraries for data mining.

**Unit 2: Data Preprocessing**

Techniques for data cleaning, transformation, and normalization. Exploration of methods for handling missing values, outliers, and categorical data. Application of data reduction techniques to enhance efficiency in data analysis.

**Unit 3: Data Exploration and Visualization**

Methods for exploring datasets through descriptive statistics. Visualization techniques using tools like Matplotlib, Seaborn, or Tableau to represent data insights effectively. Emphasis on graphical representation of data patterns and trends.

**Unit 4: Classification Techniques**

Implementation of classification algorithms such as Decision Trees, k-Nearest Neighbors, and Support Vector Machines. Evaluation of classification models using metrics like accuracy, precision, recall, and F1-score.

**Unit 5: Clustering Techniques**

Exploration of clustering methods such as k-Means, Hierarchical clustering, and DBSCAN. Practical applications of clustering techniques in real-world scenarios and evaluation of clustering results through internal and external validation metrics.

### **Unit 1: Project Introduction**

Overview of the mini project concept, objectives, and significance in practical learning. Exploration of the project lifecycle, including planning, execution, and evaluation.

### **Unit 2: Topic Selection and Proposal**

Guidance on selecting relevant topics based on interest and feasibility. Development of a project proposal, including defining project scope, objectives, and expected outcomes.

### **Unit 3: Literature Review and Research Methodology**

Conducting a literature review to gather existing knowledge related to the chosen topic. Understanding research methodologies and techniques for data collection and analysis.

### **Unit 4: Project Implementation**

Hands-on execution of the project, including practical application of theoretical concepts. Development of the project deliverable, whether it be a report, prototype, or presentation.

### **Unit 5: Project Presentation and Evaluation**

Preparation for presenting project findings to an audience. Techniques for effective communication and presentation skills. Evaluation of the project based on set criteria, including originality, methodology, and results.

# DISTRIBUTED COMPUTING SYSTEMS

CCSN-401

Cr.	L	T	P
4	3	1	0

## Unit-I

Characterization of Distributed Systems: Introduction, Examples of distributed Systems, Resource sharing and the Web Challenges. Architectural models, Fundamental Models. Theoretical Foundation for Distributed System: Limitation of Distributed system, absence of global clock, shared memory, Logical clocks ,Lamport's& vectors logical clocks. Concepts in Message Passing Systems: causal order, total order, total causal order, Techniques for Message Ordering, Causal ordering of messages, global state, termination detection.

## Unit-II

Distributed Mutual Exclusion: Classification of distributed mutual exclusion, requirement of mutual exclusion theorem, Token based and non token based algorithms, performance metric for distributed mutual exclusion algorithms. Distributed Deadlock Detection: system model, resource Vs communication deadlocks, deadlockprevention, avoidance, detection & resolution, centralized dead lock detection, distributed dead lock detection, path pushing algorithms, edge chasing algorithms.

## Unit-III

Agreement Protocols: Introduction, System models, classification of Agreement Problem, Byzantine agreement problem, Consensus problem, Interactive consistency Problem, Solution to Byzantine Agreement problem, Application of Agreement problem, Atomic Commit in Distributed Database system. Distributed Resource Management: Issues in distributed File Systems, Mechanism for buildingdistributed file systems, Design issues in Distributed Shared Memory, Algorithm for Implementation of Distributed Shared Memory.

## Unit-IV

Failure Recovery in Distributed Systems: Concepts in Backward and Forward recovery, Recoveryin Concurrent systems, Obtaining consistent Checkpoints, Recovery in Distributed Database Systems. Fault Tolerance: Issues in Fault Tolerance, Commit Protocols, Voting protocols, Dynamicvotingprotocols.

## Unit -V

Transactions and Concurrency Control: Transactions, Nested transactions, Locks, OptimisticConcurrency control, Timestamp ordering, Comparison of methods for concurrency control. Distributed Transactions: Flat and nested distributed transactions, Atomic Commit

protocols, Concurrency control in distributed transactions, Distributed deadlocks, Transaction recovery. Replication: System model and group communication, Fault - tolerant services, highly available services, Transactions with replicated data.

## ADVANCED COMPUTER SYSTEM ARCHITECTURE

CCSN-403

Cr L-T-P

4 3-1-0

### Unit - I

Parallel computer model: Evolution of computer architecture, system performance attributes, Multiprocessors and Multicomputer: shared memory multiprocessors and distributed memory multicomputer, Vector supercomputers, Program and network properties: conditions of parallelism, program partitioning and scheduling, program flow mechanism, Dynamic interconnection network.

**Unit - II**Principles of scalable performance: Performance metrics and measures: parallelism profile in programs, harmonic mean performance, efficiency utilization and quality, standard performance measure, scalability of parallel algorithms, Speedup performance laws: Amdahl's law for fixed workload, Gustafson's law for scaled problems, Memory bounded speedup model.

**Unit - III**Processor and Memory hierarchy: Advanced processor technology, superscalar and vector processor, memory hierarchy technology, virtual memory technology, Bus, cache and shared memory: Backplane bus system: bus specification, addressing and timing protocol, arbitration, transaction, and interrupt, cache memory organization: addressing model, direct and associative mapping, set associative and sector cache, shared memory organization: Interleaved memory organization.

**Unit – IV**Pipelining: Linear and non linear pipeline processors, Multiprocessors: Multiprocessor system interconnects, cache coherence and synchronization mechanism, Scalable and multithreaded architectures: Principles of multithreading, scalable and multithreaded architectures.

**Unit - V**Parallel models, languages and compilers: Parallel programming models, parallel languages and compiler, dependence analysis of data arrays, code optimization and scheduling loop parallelization and pipelining.

4 3- 1-0

## Unit - I

**Introduction:** Introduction to Artificial Intelligence, History, What is AI, Importance of AI, Issues, Simulation of sophisticated & Intelligent Behaviors in different area, problem solving in games, natural language, automated reasoning, visual perception, Search algorithms: Informed search, Uninformed search, Hill Climbing, Depth first search, Best first search, And or graph.

## Unit - II

**Processing and understanding Natural Languages:** Understanding Natural Languages: Applications of Natural Languages, Natural Language processing, Parsing techniques: Rules of parsing, Top down parsing, Bottom up parsing, Transformational grammars, Context free grammar, Transition networks, Fillmore's grammars, Shanks Conceptual Dependency.

## Unit - III

**Knowledge Representation:** Graphs, Frames structures and related structures, Semantic Nets and Partitioned Nets, Scripts, Introduction to PROLOG, Production Rules, Knowledge Based systems, Inference engine, Forward deductions and backward deductions, Matching production rules against working memory.

## Unit - IV

**Expert System** Existing Expert Systems (DENDRAL, MYCIN), Architecture of expert system, Features of Expert system, Genetic algorithm, Fuzzy logic, Neural Networks, Intelligent Agents, Meta Knowledge, Expertise Transfer, Self Explaining System, User and expert systems.

## Unit - V

**Pattern Recognition** Introduction to Pattern Recognition, Structured Description, Symbolic Description, Machine perception, Line Finding, Interception, Semantic & Model, Object Identification, Speech Recognition. **Programming Language** Introduction to programming Language, LISP, PROLOG.

## Reference Books :

2. Stuart Russell and Peter Norvig, "*Artificial Intelligence: A Modern Approach.*", Prentice Hall, Third Edition, 2010.

3. Elaine Rich, Kevin Knight and Shivashankar B.Nair, "*Artificial Intelligence*", Tata McGraw-Hill, Third edition, 2009.

**Unit 1: Introduction to Digital Image Processing**

Overview of digital image processing, applications, basic concepts of image formation, and the human visual system. Understanding image sampling and quantization processes.

**Unit 2: Image Enhancement Techniques**

Spatial domain methods for image enhancement, histogram processing, contrast manipulation, and image smoothing and sharpening filters. Frequency domain techniques for enhancement using Fourier transforms.

**Unit 3: Image Restoration and Reconstruction**

Concepts of image degradation, noise models, restoration using inverse filtering, Wiener filtering, and image reconstruction methods. Techniques for dealing with motion blur and other degradation effects.

**Unit 4: Color Image Processing**

Color models and spaces (RGB, CMY, HSI), color transformations, and processing color images. Techniques for color enhancement and the use of pseudo-color and full-color image processing.

**Unit 5: Image Segmentation**

Segmentation techniques including edge detection, thresholding, region-based methods, and morphological processing. Advanced methods such as active contours, watershed, and segmentation using machine learning.

**Unit 1: Introduction to Multimedia Computing**

Fundamentals of multimedia, components, and applications. Understanding multimedia systems, characteristics, and the importance of multimedia in different fields. Overview of multimedia hardware and software.

**Unit 2: Text and Image Processing**

Text representation and formats, text compression techniques, and standards. Image fundamentals, graphics, color models, and image formats. Image compression and processing techniques for effective storage and transmission.

**Unit 3: Audio Processing**

Basics of digital audio, audio sampling, and representation. Audio formats, compression techniques, and standards for efficient storage and streaming. Overview of audio editing and sound synthesis methods.

**Unit 4: Video Processing**

Fundamentals of digital video, video standards, and formats. Video compression techniques, including temporal and spatial redundancy reduction. Introduction to video streaming and real-time video transmission.

**Unit 5: Animation Techniques**

Principles of animation, types of animation (2D and 3D), animation tools, and software. Keyframing, tweening, and morphing. The use of animation in multimedia projects and real-world applications.

# PATTERN RECOGNITION

CCSN-411

Cr L-T-P

4 3- 1-0

## Unit – I

Introduction : Machine perception, pattern recognition example, pattern recognition systems, the design cycle, learning and adaptation. Bayesian Decision Theory: Introduction, continuous features – two categories classifications, minimum error-rate classification- zero–one loss function, classifiers, discriminant functions, and decision surfaces.

## Unit – II

Normal density :Univariate and multivariate density, discriminant functions for the normal density different cases, Bayes decision theory – discrete features, compound Bayesian decision theory and context. Maximum likelihood and Bayesian parameter estimation : Introduction, maximum likelihood estimation, Bayesian estimation, Bayesian parameter estimation–Gaussian case.

**Unit – III** Un-supervised learning and clustering: Introduction, mixture densities and identifiability, maximum likelihood estimates, application to normal mixtures, K-means clustering. Data description and clustering – similarity measures, criteria function for clustering.

## Unit - IV

Linear discriminant function based classifiers : Perceptron, Support Vector Machines. Component analyses : Principal component analysis, non-linear component analysis; Low dimensional representations and multi dimensional scaling.

**Unit - V** Discrete Hidden Markov Models : Introduction, Discrete–time markov process, extensions to hidden Markov models, three basic problems for HMMs. Continuous hidden Markov models : Observation densities, training and testing with continuous HMMs, types of HMMs.

Applications: Data mining, web searching, handwriting recognition, multimedia data retrieval, speech recognition, network traffic analysis

**Unit 1: Introduction to VLSI Design**

Basics of Very Large Scale Integration (VLSI), the evolution of VLSI technology, and design hierarchy. Overview of VLSI design flow, design styles, and types of VLSI circuits including ASICs and FPGAs.

**Unit 2: CMOS Technology and Fabrication**

CMOS logic, fabrication processes, and the layout design rules. Concepts of nMOS and pMOS transistors, CMOS inverter characteristics, and design considerations for CMOS circuits. Fabrication techniques and process steps.

**Unit 3: Digital VLSI Design**

Designing combinational and sequential logic circuits using CMOS. Implementation of logic gates, flip-flops, and registers. Circuit characterization and performance metrics including power, area, and timing analysis.

**Unit 4: VLSI Design Methodologies**

Hierarchical design, full-custom, semi-custom, and programmable logic design. Introduction to hardware description languages (HDLs) like Verilog and VHDL. Techniques for design verification and simulation.

**Unit 5: VLSI Algorithms**

Algorithms for circuit partitioning, floorplanning, and placement. Algorithms for routing, including global and detailed routing techniques. Introduction to graph algorithms and optimization techniques for VLSI design.

**Unit 1: Introduction to Client-Server Computing**

Fundamentals of client-server architecture, characteristics, and evolution of client-server models. Overview of distributed systems and comparison with peer-to-peer networks. Benefits and challenges of client-server computing.

**Unit 2: Client-Server Architecture and Models**

Detailed study of client-server architecture including 2-tier, 3-tier, and n-tier models. Components of client-server systems and roles of clients and servers. Thin clients, thick clients, and hybrid models.

**Unit 3: Networking and Communication Protocols**

Overview of network protocols used in client-server systems, including TCP/IP, HTTP, and FTP. Communication mechanisms and techniques for data transfer. Concepts of sockets, ports, and connection handling.

**Unit 4: Middleware and Application Servers**

Introduction to middleware technologies and their role in client-server communication. Overview of application servers, database connectivity, and middleware services such as message brokers and RPC (Remote Procedure Call).

**Unit 5: Database Management in Client-Server Systems**

Client-server database management, database access mechanisms, and SQL query processing. Concepts of database connectivity using JDBC/ODBC, data consistency, and transaction management.

# NEURAL NETWORK

**CUCS-443**

**Cr L-T-P**

**4 3- 1-0**

## **UNIT – I INTRODUCTION TO NEURAL NETWORKS**

Introduction, Humans and Computers, Organization of the Brain, Biological Neuron, Biological and Artificial Neuron Models, Characteristics of ANN, McCulloch-Pitts Model, Historical Developments, Potential Applications of ANN.

## **UNIT – II ESSENTIALS OF ARTIFICIAL NEURAL NETWORKS**

Artificial Neuron Model, Operations of Artificial Neuron, Types of Neuron Activation Function, ANN Architectures, Classification Taxonomy of ANN – Connectivity, Learning Strategy (Supervised, Unsupervised, Reinforcement), Learning Rules.

## **UNIT – III SINGLE LAYER FEED FORWARD NETWORKS**

Introduction, Perceptron Models: Discrete, Continuous and Multi-Category, Training Algorithms: Discrete and Continuous Perceptron Networks, Limitations of the Perceptron Model.

## **UNIT – IV MULTI- LAYER FEED FORWARD NETWORKS**

Credit Assignment Problem, Generalized Delta Rule, Derivation of Back propagation (BP) Training, Summary of Back propagation Algorithm, Kolmogorov Theorem, Learning Difficulties and Improvements.

## **UNIT - V ASSOCIATIVE MEMORIES**

Paradigms of Associative Memory, Pattern Mathematics, Hebbian Learning, General Concepts of Associative Memory, Bidirectional Associative Memory (BAM) Architecture, BAM Training Algorithms: Storage and Recall Algorithm, BAM Energy Function. Architecture of Hopfield Network: Discrete and Continuous versions, Storage and Recall Algorithm, Stability Analysis. Neural network applications: Process identification, control, fault diagnosis.

**Unit 1: Introduction to System Modeling and Simulation**

Overview of system modeling and the purpose of simulation in engineering. Types of models including physical, mathematical, and computational models. Applications of modeling and simulation in various engineering fields.

**Unit 2: Mathematical Modeling Techniques**

Basic concepts of differential equations, state-space representation, and transfer functions. Techniques for modeling mechanical, electrical, and other dynamic systems. Linear and non-linear system modeling approaches.

**Unit 3: Simulation Techniques and Tools**

Classification of simulation methods, including continuous and discrete event simulation. Overview of simulation software tools and environments. Introduction to Monte Carlo simulation and its applications.

**Unit 4: System Dynamics and Feedback Control**

Concepts of system dynamics, feedback loops, and their role in system behavior. Analysis of open-loop and closed-loop systems. Basics of control system design and its integration with simulation models.

**Unit 5: Modeling of Complex Systems**

Approaches to modeling multi-domain and complex systems using modular techniques. Methods for simulating interactions within complex systems. Use of block diagrams and flowcharts for system representation.

**Unit 1: Introduction to Law and Legal Systems**

This unit introduces the basic concepts of law, the sources of law, and the structure of the legal system. Students will explore different branches of law, including civil, criminal, administrative, and constitutional law. The unit will emphasize the importance of law in engineering practice and the implications of legal decisions in the engineering field.

**Unit 2: Contract Law**

In this unit, students will study the principles of contract law, focusing on the formation, enforcement, and breach of contracts. Topics will include elements of a valid contract, types of contracts, and remedies for breach. The unit will also cover specific contracts relevant to engineering, such as construction contracts and service agreements.

**Unit 3: Intellectual Property Rights (IPR)**

This unit covers the various forms of intellectual property protection, including patents, copyrights, trademarks, and trade secrets. Students will learn about the importance of IPR in engineering and innovation, the process of obtaining patents, and the implications of infringement. Case studies will illustrate the application of IPR in engineering projects.

**Unit 4: Liability and Professional Ethics**

This unit focuses on legal liability, including torts and negligence, as they relate to engineering practice. Students will explore the concepts of professional liability, duty of care, and the consequences of professional misconduct. Ethical considerations and professional standards will also be discussed, highlighting the role of ethics in engineering decisions.

**Unit 5: Regulatory Frameworks and Compliance**

In this unit, students will study the regulatory frameworks governing engineering practices, including environmental laws, safety regulations, and industry standards. The unit will emphasize the importance of compliance and the consequences of violations. Topics may include occupational safety, environmental protection, and building codes.

**Unit 1: Overview of Law and Legal Systems**

This unit introduces the fundamental concepts of law, the structure of the legal system, and the role of law in society. Students will explore the different branches of law, such as civil law, criminal law, and administrative law, as well as the sources of law including statutes, regulations, and case law. The unit will emphasize the importance of understanding legal principles in the context of engineering practice.

**Unit 2: Contracts in Engineering**

In this unit, students will study the principles of contract law as they apply to engineering. Key topics will include the elements of a valid contract, types of contracts commonly used in engineering projects, and the processes for contract negotiation and enforcement. The unit will also cover the implications of breach of contract and available remedies.

**Unit 3: Intellectual Property Rights**

This unit focuses on the significance of intellectual property rights in engineering and innovation. Students will learn about the different forms of intellectual property protection, including patents, copyrights, trademarks, and trade secrets. The unit will cover the process of obtaining these protections, the importance of safeguarding innovations, and the consequences of infringement.

**Unit 4: Professional Liability and Ethics**

In this unit, students will explore the concepts of professional liability, negligence, and ethical standards in engineering practice. Topics will include the duty of care engineers owe to clients and the public, the implications of professional misconduct, and the importance of adhering to ethical codes and standards within the profession.

**Unit 5: Regulatory Frameworks in Engineering**

This unit examines the various regulatory frameworks that govern engineering practices. Students will learn about environmental regulations, safety standards, zoning laws, and building codes. The unit will highlight the importance of compliance with these regulations and the role of engineers in ensuring adherence to legal requirements.

**Unit 1: Introduction to Intellectual Property**

This unit provides an overview of intellectual property (IP), including its definition, significance, and historical development. Students will explore the different types of intellectual property, including patents, copyrights, trademarks, and trade secrets. The unit will emphasize the role of IP in innovation and economic development.

**Unit 2: Patents**

In this unit, students will learn about patent law, including the requirements for patentability, the types of patents (utility, design, and plant patents), and the application process. The unit will cover the rights granted by a patent, the duration of protection, and the limitations of patent rights. Case studies will illustrate the impact of patents on technology and industry.

**Unit 3: Copyrights**

This unit focuses on copyright law, covering the protection of original works of authorship, including literary, artistic, and musical works. Students will explore the requirements for copyright protection, the rights of copyright holders, and the duration of copyright protection. The unit will also address issues related to fair use, infringement, and the impact of digital technology on copyright.

**Unit 4: Trademarks**

In this unit, students will study trademark law, including the importance of trademarks in branding and consumer protection. Topics will include the types of trademarks, the process of registering a trademark, and the rights conferred by trademark registration. The unit will also cover issues related to trademark infringement, dilution, and fair use.

**Unit 5: Trade Secrets and Confidentiality**

This unit examines the concept of trade secrets and the legal protections available for confidential information. Students will learn about the criteria for trade secret protection, the legal remedies for misappropriation, and the importance of maintaining confidentiality in business practices. Case studies will illustrate the significance of trade secrets in various industries.

**Unit 1: Introduction to Ethics**

This unit introduces the fundamental concepts of ethics, including definitions, the importance of ethical behavior, and the relationship between ethics and law. Students will explore different ethical theories, such as utilitarianism, deontology, and virtue ethics, and discuss the role of ethics in personal and professional decision-making.

**Unit 2: Professional Ethics**

In this unit, students will examine the concept of professional ethics, focusing on the specific ethical standards and codes of conduct that govern various professions. The unit will cover the importance of integrity, accountability, and transparency in professional practice, as well as the consequences of unethical behavior.

**Unit 3: Ethical Decision-Making Frameworks**

This unit focuses on the frameworks and models for ethical decision-making. Students will learn about systematic approaches to identify ethical dilemmas, analyze options, and make informed decisions. Case studies will be used to illustrate practical applications of these frameworks in real-world scenarios.

**Unit 4: Responsibility to Stakeholders**

In this unit, students will explore the concept of stakeholder theory and the responsibilities professionals have towards various stakeholders, including clients, employers, colleagues, and the community. The unit will discuss the implications of ethical conduct on stakeholder relationships and the importance of balancing competing interests.

**Unit 5: Legal and Regulatory Frameworks**

This unit examines the legal and regulatory context in which professionals operate. Students will learn about the laws and regulations relevant to their field, including compliance issues, risk management, and the role of regulatory bodies. The unit will emphasize the importance of understanding legal obligations as part of professional responsibility.

# **CBSN-401 D                    LEGAL ASPECTS OF INTELLECTUAL PROPERTY IN ENGINEERING**

## **Unit 1: Introduction to Intellectual Property**

This unit provides an overview of intellectual property, its significance in engineering, and its impact on innovation. Students will learn about the different types of intellectual property, including patents, copyrights, trademarks, and trade secrets. The unit will emphasize the role of IP in protecting inventions and fostering technological advancement.

## **Unit 2: Patent Law Fundamentals**

In this unit, students will explore the fundamentals of patent law, including the requirements for patentability, types of patents, and the patent application process. Key topics will include novelty, non-obviousness, and utility, as well as the rights conferred by patents. The unit will also cover patent infringement and enforcement issues relevant to engineers.

## **Unit 3: Copyrights and Engineering Works**

This unit focuses on copyright law as it applies to engineering-related works, such as software, designs, and technical documents. Students will learn about the scope of copyright protection, the rights of authors, and the duration of copyright. The unit will also discuss fair use, copyright infringement, and the impact of digital technology on copyright law.

## **Unit 4: Trademarks in Engineering**

In this unit, students will study trademark law, emphasizing its importance in branding and marketing engineering products and services. Topics will include the definition and types of trademarks, the process of trademark registration, and the legal rights associated with trademarks. The unit will cover trademark infringement and the significance of protecting brand identity.

## **Unit 5: Trade Secrets and Confidentiality**

This unit examines the concept of trade secrets and the legal protections available for confidential information in engineering contexts. Students will learn about the criteria for trade secret protection, the legal remedies for misappropriation, and strategies for maintaining confidentiality. The unit will highlight the importance of trade secrets in competitive advantage.

1. Implement a client-server model using sockets for communication between a server and multiple clients.
2. Create a distributed file system where files can be stored and retrieved from multiple nodes in a network.
3. Develop a simple chat application that allows multiple clients to communicate through a central server.
4. Implement a distributed banking system that supports transactions from multiple clients, ensuring data consistency.
5. Design a distributed mutual exclusion algorithm using token-based or voting-based methods.
6. Build a peer-to-peer file sharing application that allows users to upload and download files from each other.
7. Create a distributed sensor network that collects and aggregates data from multiple sensor nodes.
8. Implement a distributed scheduling system that manages tasks across multiple nodes.
9. Design a distributed online voting system that ensures security and integrity of votes.
10. Create a load balancer that distributes incoming requests across multiple servers to optimize resource usage.
11. Develop a replicated database system that maintains consistency among replicas across different nodes.
12. Implement a distributed hash table (DHT) for efficient data retrieval in a peer-to-peer network.
13. Build a distributed logging system that aggregates logs from multiple applications into a central repository.
14. Create a microservices architecture where different services communicate over a network using REST APIs.
15. Implement a distributed version control system that allows collaborative development of software projects.

16. Design a fault-tolerant distributed system that can handle node failures without losing data or functionality.
17. Create a real-time distributed data processing system using a stream processing framework.
18. Develop a distributed machine learning application that trains a model using data from multiple sources.
19. Implement a blockchain-based system for secure and transparent transactions across a network.
20. Build a distributed monitoring system that tracks the performance and health of multiple services and nodes.

1. Implement a simple chatbot using rule-based techniques to respond to user queries.
2. Develop a decision tree classifier for a dataset and visualize the tree structure.
3. Create a program that uses k-nearest neighbors (KNN) to classify handwritten digits from the MNIST dataset.
4. Build a linear regression model to predict house prices based on various features.
5. Implement a basic neural network from scratch to solve a binary classification problem.
6. Develop a program that uses natural language processing (NLP) to perform sentiment analysis on movie reviews.
7. Create a program that utilizes reinforcement learning to train an agent to play a simple game like Tic-Tac-Toe.
8. Build a recommendation system using collaborative filtering techniques for movie recommendations.
9. Implement the A\* search algorithm to find the shortest path in a maze.
10. Develop a program that uses support vector machines (SVM) for classifying data points.
11. Create a simple image recognition system using convolutional neural networks (CNNs) with a popular dataset.
12. Implement a program that uses genetic algorithms to solve optimization problems.
13. Build a program that performs clustering on a dataset using k-means clustering algorithm.
14. Develop a facial recognition system using OpenCV and machine learning techniques.
15. Create a program that uses the Long Short-Term Memory (LSTM) network for time series prediction.
16. Implement a text summarization tool using NLP techniques to summarize articles or documents.
17. Develop an anomaly detection system using unsupervised learning techniques.
18. Create a program that uses transfer learning to fine-tune a pre-trained model for image classification.
19. Build a program that utilizes the Monte Carlo method for simulating random processes.
20. Implement a speech recognition system using machine learning techniques to transcribe audio to text.

**Unit 1: Introduction and Project Planning**

Understanding project objectives, scope definition, project selection criteria, and planning methodologies. Developing timelines, work breakdown structures, and resource allocation plans.

**Unit 2: Literature Review and Research Methodology**

Conducting a comprehensive literature review relevant to the project topic. Establishing research methodologies, data collection techniques, and analysis frameworks to guide the project.

**Unit 3: Project Development and Execution**

Implementing project plans, applying technical skills, and developing prototypes or project components. Ensuring adherence to quality standards and project timelines during development.

**Unit 4: Data Collection and Analysis**

Collecting relevant data through surveys, experiments, or fieldwork. Analyzing data using appropriate tools and methods, interpreting findings, and deriving insights that align with project objectives.

**Unit 5: Progress Monitoring and Reporting**

Tracking project progress, preparing status reports, identifying potential challenges, and implementing solutions. Documenting findings and maintaining clear communication with project mentors or supervisors.

**Unit 1: Fundamentals of Presentations**

Understanding the purpose and importance of presentations, types of presentations, analyzing the audience, and structuring a presentation effectively.

**Unit 2: Presentation Design and Tools**

Designing impactful presentation slides, utilizing multimedia, applying best practices for visual content, and exploring various software and tools for creating presentations.

**Unit 3: Communication Skills**

Developing verbal and non-verbal communication, improving speech clarity and tone, using effective body language, and engaging with the audience.

**Unit 4: Delivery Techniques**

Preparing for confident delivery, managing presentation anxiety, incorporating storytelling, and handling audience interactions seamlessly.

**Unit 5: Evaluation and Feedback**

Practicing self-evaluation, receiving constructive feedback, using peer review, and understanding key criteria for assessing presentations and vivas.

# **Shobhit University, Gangoh**

(Established by UP Shobhit University Act No. 3, 2012)

## **School of School of Engineering and Technology**

### **Ordinances, Regulations & Syllabus**

For

### **Bachelor of Computer Application (BCA) Three Year Programme**

#### **Semester System**

(w.e.f. session 2013-14)

**Revised and approved in the year 2021 (17<sup>th</sup> Meeting, Board of  
Studies)**

## **Programme Educational Objectives (PEOs)**

**PEO1:** To facilitate in development of strong basic fundamentals of Computer Applications that fit as a perfect foundation towards a beginning a professional career in industry.

**PEO2:** To develop programming skills in learners by using fundamental knowledge of computer Science.

**PEO3:** To apply new designs and solutions to complex real life problems using existing and/or novel technologies.

**PEO4:** To play a creative role during professional life through turning problems to opportunities and foster personal and organizational growth

**PEO5:** To inculcate comprehensive communication ability that is useful during professional communication and leading of teams in future

## **Programme Specific Objectives (PSO's)**

**PSO 1** Students will able to understand, analyze and develop computer programs in the areas related to algorithm, web design and networking for efficient design of computer based system.

**PSO 2** Apply standard software engineering practices and strategies in software project development using open source programming environment to deliver a quality of product for business success.

**PSO 3** Student will able to know various issues, latest trends in technology development and thereby innovate new ideas and solutions to existing problems.

**PSO 4** Analyze and design solutions for real-world problems using computational techniques.

**PSO 5** Explore trends in AI, Machine Learning, Cloud Computing, and Big Data.

## Programme Outcome Objectives (POO's)

- PO1:** Understand the concepts of key areas in computer science.
- PO2:** Analyze and apply latest technologies to solve problems in the areas of computer applications.
- PO3:** Analyze and synthesis computing systems through quantitative and qualitative techniques
- PO4:** Apply technical and professional skills to excel in business.
- PO5:** Communicate effectively in both verbal and written form.
- PO6:** Develop practical skills to provide solutions to industry, society and business.
- PO7:** Acquire Knowledge of mathematical foundations, computer application theory and algorithm principles in the design and modeling of computer based system.
- PO8:** Earn caliber to design, analyze and development principles in the construction of complex hardware and software computer systems.

2

## Unit-I

**Introduction to computer System:** Definition of a Computer, Characteristics and Limitations of computer, Block diagram of computer, Types of computers Types of Software: system software, Application software, Commercial, Open source, Domain and Freeware software.

**Types of programming languages:** Assembler, Compiler, Interpreter, Linker, Loader (Definitions only), **Number system:** Decimal, Binary Octal and Hexadecimal number ,Interconversion of decimal to binary and vice-versa, ASCII codes, Flowchart-definition, Symbols used in writing the flow-chart Writing an algorithm and flow-chart of simple problems.

## Unit-II

**Fundamentals of 'C':** Features of C language, Structure of C program, Writing the first C Program, Comments, Header files, Data types, Constants and Variables, Operators, Expressions, Evaluation of expressions, Type conversion and Type casting, Precedence and Associativity, I/O functions, Definition of Macro and Pre-Processor Directives.

## Unit-III

**Decision Control and Looping Statements:** Introduction to Decision Control Statements, Conditional Branching Statements, Iterative Statements, Nested Loops, Break and Continue Statement, Goto Statement, **Array & String:** Concept of array, One and Two-dimensional arrays, declaration and initialization of arrays, String, String storage, Built-in string functions

## Unit-IV

**Functions:** Concept of user defined functions, prototype, definition of function, parameters, parameter passing, calling a function, Macros, Pre-processing, **Recursion:** Definitions, recursive function, Examples, Applications, **Pointers:** Basics of pointers, pointer to pointer, pointer and array, pointer to array, array of pointers, function returning a pointer.

## Unit-V

**Structure and Union:** Basics of structure, structure members, accessing structure members, nested structures, array of structures, structure and functions, structures and pointers, unions, bit-fields, **File Management:** Introduction to file management, Simple file management functions for text files, Reading from and writing to files.

## Reference:

1. Fundamentals of Computers, V. Rajaraman.
2. Computer Concepts and C Programming, P.B. Kotur
3. Let us C, Yashwanth Kanetkar
4. ANSI C, Balagurusamy

## PROBLEM SOLVING USING COMPUTER

BCA-102

L T P 3 1 2

### Unit-I

**Computer Fundamentals:** Introduction to Computers: Characteristics of Computers, Uses of computers, Types and generations of Computers. **Basic Computer Organization** - Units of a computer, CPU, ALU, memory hierarchy, registers, I/O devices. **Planning the Computer Program:** Concept of problem solving, Problem definition, Program design, Debugging, Types of errors in programming, Documentation.

### Unit-II

**Techniques of Problem Solving:** Flowcharting, decision table, algorithms, Structured programming concepts, Programming methodologies viz. top-down and bottom-up programming. **Overview of Programming:** Structure of a Python Program, Elements of Python, IDEs for python, Python Interpreter, Using Python as calculator, Python shell, Indentation.

### Unit-III

**Introduction to Python:** Atoms, Identifiers and keywords, Literals, Strings, Operators (Arithmetic operator, Relational operator, Logical or Boolean operator, Assignment, Operator, Ternary operator, Bit wise operator, Increment or Decrement operator).

**Creating Python Programs:** Input and Output Statements, Control statements (Looping- while Loop, for Loop, Loop Control, Conditional Statement- if...else, Difference between break, continue and pass).

### Unit-IV

**Structures:** Numbers, Strings, Lists, Tuples, Dictionary, Date & Time, Modules, Defining Functions, Exit function, default arguments. File handling in python.

### Unit-V

**Introduction to Advanced Python:** Objects and Classes, Inheritance, Regular Expressions, Event Driven Programming, GUI Programming. Basic concepts of concepts of Package and modules

## PROFESSIONAL COMMUNICATION

BCA-103

L T P 31 2

### UNIT 1

**Effective communication:** Meaning, Barriers, Types of communication and Essentials. Interpersonal Communication skills. Effective Spoken Communication: Understanding essentials of spoken communication, Public speaking, Discussion Techniques, Presentation strategies.

### UNIT 2

**Effective Professional and Technical writing:** Paragraph development, Forms of writing, Abstraction and Summarization of a text; Technicalities of letter writing, internal and external organizational communication. Technical reports, proposals and papers.

### UNIT 3

**Effective non-verbal communication:** Knowledge and adoption of the right non-verbal cues of body language, interpretation of the body language in professional context. Understanding Proxemics and other forms of non-verbal communication.

### UNIT 4

**Communicating for Employment:** Designing Effective Job Application letter and resumes; Success strategies for Group discussions and Interviews

### UNIT 5

**Communication Networks in organizations:** Types, barriers and overcoming the barriers.

#### Laboratory work:

- Needs-assessment of spoken and written communication and feedback.
- Training for Group Discussions through simulations and role plays.
- Training for effective presentations.
- Project based team presentations.
- Proposals and papers-review and suggestions

#### Text Books:

1. Lesikar V. R. and Flatley M. E., Basic Business Communication Skills for the Empowering the Internet Generation, Tata Mc Graw Hill, New Delhi (2006).
2. Raman M & Sharma S., Technical Communication Principles and Practice, Oxford University Press, New Delhi (2015) 3rd ed.
3. Mukherjee S. H., Business Communication-Connecting at Work, Oxford University Press, New Delhi (2013).

# ENGLISH

## English BCA-103 A

### **Unit 1: Grammar**

Expressing in Style; Words often confused; One-word substitution; Phrases; Idioms.

### **Unit II: Advanced Reading**

Paraphrasing; Interpreting visual information: Tables, Graphs, Charts; Speed Reading. Comprehension and Analysis of the book, "Who Moved My Cheese."

### **Unit III: Effective Writing**

Business Correspondences: Fax, Email; Taking Notes; Making Inquiries; Placing Orders; Asking

Giving Information; Registering Complaints; Handling Complaints; Drafting Notices; Job Applications; Expository Composition; Argumentative Composition; Techniques of Argument;

Logical Presentation; Descriptive Composition; Narrative Composition; Summary Writing, Proposal; Abstract, Agenda, Minutes.

### **Unit IV: Speaking**

Business Etiquettes; Impromptu Speech; Debate; Role Play; Presentations.

### **Unit V: Listening**

Business-related Conversation Exercises.

### **Reference Books:**

1. Spencer Johnson; Who Moved My Cheese; Vermilion; (2009).
2. Balasubramanian, T., A Textbook of English Phonetics for Indian Students; Macmillan India, Delhi (1998).
3. McLearn, Stephen., Writing Essays and Report: A Student's Guide; Viva Books, New Delhi (2011).
4. Burton Roberts, N., Analysing Sentences; Longman, London (1986).
5. Wekker, H. And Haegeman, L., A Modern Course in English Syntax; Croom Helm, London (1985).

**UNIT: 1**

Technical Documentation Presentation :Accuracy and Conciseness in Technical English, Structure Format etc. for Technical Reports & Thesis, Comparing and Contractive other aspects of short reports and long dissertations.

**UNIT: 2**

Communication Skills: Communication Process: Concept & importance, System of communication: Formal & internal. Barrier to effective communication.

**UNIT: 3**

Principles of Business Communication: Planning and conduction conversations, interviews and Discussion. The preparation of oral statements, effective listening, telephonic communication.

**UNIT: 4**

Written Communication: Guides to effective writing for business correspondence including letter and job application Memorandum, Office orders, Reports.

**UNIT: 5**

Non-Verbal Communication: Importance and Type-Cluster and congruency. Kinetics VoalCUES. Modern Forms of Communication: Telex, Fax, Telegram & Teleconferencing & E-mail.

**SUGGESTED READINGS:-**

1. Lesikar “ Business Communication” AITBC
2. S. M. Ray “Business Communication” HP

**Module 1:** Course Introduction - Need, Basic Guidelines, Content and Process for Value Education

1. Understanding the need, basic guidelines, content and process for Value Education
2. Self Exploration–what is it? - its content and process; ‘Natural Acceptance’ and Experiential Validation- as the mechanism for self exploration
3. Continuous Happiness and Prosperity- A look at basic Human Aspirations
4. Right understanding, Relationship and Physical Facilities- the basic requirements for fulfillment of aspirations of every human being with their correct priority
5. Understanding Happiness and Prosperity correctly- A critical appraisal of the current scenario
6. Method to fulfill the above human aspirations: understanding and living in harmony at various levels.

**Module 2:** Understanding Harmony in the Human Being - Harmony in Myself!

7. Understanding human being as a co-existence of the sentient ‘I’ and the material ‘Body’
  8. Understanding the needs of Self (‘I’) and ‘Body’ - Sukh and Suvidha
  9. Understanding the Body as an instrument of ‘I’ (I being the doer, seer and enjoyer)
  10. Understanding the characteristics and activities of ‘I’ and harmony in ‘I’
  11. Understanding the harmony of I with the Body: Sanyam and Swasthya; correct appraisal of Physical needs, meaning of Prosperity in detail
  12. Programs to ensure Sanyam and Swasthya
- Practice Exercises and Case Studies will be taken up in Practice Sessions.

**Module 3:** Understanding Harmony in the Family and Society- Harmony in HumanHuman Relationship

13. Understanding harmony in the Family- the basic unit of human interaction

14. Understanding values in human-human relationship; meaning of Nyaya and program for its fulfillment to ensure Ubhay-tripti;

Trust (Vishwas) and Respect (Samman) as the foundational values of relationship

15. Understanding the meaning of Vishwas; Difference between intention and competence

16. Understanding the meaning of Samman, Difference between respect and differentiation; the other salient values in relationship

17. Understanding the harmony in the society (society being an extension of family): Samadhan, Samridhi, Abhay, Sah-astitva as comprehensive Human Goals

18. Visualizing a universal harmonious order in society- Undivided Society (Akhand Samaj), Universal Order (SarvabhaumVyawastha )- from family to world family!

- Practice Exercises and Case Studies will be taken up in Practice Sessions.

**Module 4:** Understanding Harmony in the Nature and Existence - Whole existence as Co-existence

19. Understanding the harmony in the Nature

20. Interconnectedness and mutual fulfillment among the four orders of nature recyclability and self-regulation in nature

21. Understanding Existence as Co-existence (Sah-astitva) of mutually interacting units in all-pervasive space

22. Holistic perception of harmony at all levels of existence

- Practice Exercises and Case Studies will be taken up in Practice Sessions.

**Module 5:** Implications of the above Holistic Understanding of Harmony on Professional Ethics

23. Natural acceptance of human values

24. Definitiveness of Ethical Human Conduct

25. Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal

### **Text Book**

## MATHEMATICS

BCA-104

L T P 310

### UNIT-I

**DETERMINANTS:** Definition, Minors, Cofactors, Properties of Determinants **MATRICES:** Definition, Types of Matrices, Addition, Subtraction, Scalar Multiplication and Multiplication of Matrices, Adjoint, Inverse, Cramers Rule, Rank of Matrix Dependence of Vectors, Eigen Vectors of a Matrix, Caley-Hamilton Theorem (without proof).

### UNIT-II

**LIMITS & CONTINUITY:** Limit at a Point, Properties of Limit, Computation of Limits of Various Types of Functions, Continuity at a Point, Continuity Over an Interval, Intermediate Value Theorem, Type of Discontinuities

### UNIT-III

**DIFFERENTIATION:** Derivative, Derivatives of Sum, Differences, Product & Quotients, Chain Rule, Derivatives of Composite Functions, Logarithmic Differentiation, Rolle's Theorem, Mean Value Theorem, Expansion of Functions (Maclaurin's & Taylor's), Indeterminate Forms, L' Hospitals Rule, Maxima & Minima, Curve Tracing, Successive Differentiation & Leibnitz Theorem.

### UNIT-IV

**INTEGRATION:** Integral as Limit of Sum, Fundamental Theorem of Calculus (without proof.), Indefinite Integrals, Methods of Integration Substitution, By Parts, Partial Fractions, Reduction Formulae for Trigonometric Functions, Gamma and Beta Functions(definition).

### UNIT-V

**VECTOR ALGEBRA:** Definition of a vector in 2 and 3 Dimensions; Double and Triple Scalar and Vector Product and physical interpretation of area and volume. **Matrices:** Matrix, sub matrix, types of matrices, such as symmetric, square, diagonal Matrices, singular and non-singular matrices. Addition, subtraction, multiplication of matrices. Rank of a matrix, Matrix equation, solution by Cramer's rule and Gauss elimination method.

### Referential Books:

2. Shanti Narayan, "Integral Calculus", S. Chand & Company, 1999
3. H.K. Dass, "Advanced Engineering Mathematics", S. Chand & Comp
4. J.P. Chauhan "BCA Mathematics Volume -1", Krishna Publications.

## **BCA-104 A BASIC MATHEMATICS**

### **MODULE I : SYMBOLIC LOGIC & SET THEORY :**

Proposition, Logical operators, conjunction, disjunction, negation, conditional and bi-conditional operators, converse, Inverse, Contra Positive, logically equivalent, tautology and contradiction. Arguments and validity of arguments. Set operations, Venn diagram, Properties of sets, number of elements in a set, Cartesian product, relations & functions, Relations : Equivalence relation. Equivalence class, Partially and Totally Ordered sets, Functions: Types of Functions, Composition of Functions.

### **MODULE II : DIFFERENTIAL CALCULUS**

Differentiation, successive differentiation, Leibnitz theorem, partial differentiation, Applications of differentiation, Tangent and normal, angle between two curves, Maximum and Minimum values (Second derivative test), Curvature and radius of Curvature (Cartesian coordinates), Envelopes.

### **MODULE III : INTEGRAL CALCULUS**

Definite Integral and its application for area, length and volume. Multiple Integrals. Change of order of Integration. Transformation of integral from Cartesian to polar. Applications in Areas, volume and surfaces.

### **MODULE IV : TWO DIMENSIONAL ANALYTICAL GEOMETRY**

Straight Lines .Pair Straight Lines .Circles.

**MODULE V : FUNCTION AND RELATION :** Injective and surjective functions, composition of function, Inverse function, Use of function in coding theory, Relation composition of relation, Equivalence relation.

#### **Text Books:**

1. Das BC and Mukherjee, Differential Calculus, Calcutta, U.N. Dhar Publishers
2. Das BC and Mukherjee, Integral Calculus, Calcutta, U.N. Dhar Publishers
3. Grewal B.S., Higher Engineering Mathematics, Delhi Khanna Publishers.

## BCA - 104 B

### MATHEMATICS – 1

#### UNIT : 1

BASIC CONCEPTS: Definition of Sets, Number systems, Relations Functions.

LIMIT CONTINUITY: Definition of limit, Limit of a function, Right and Left hand Limits, Algebra of limits, General principle for existence of limit, limit of inequalities, Method of finding limits, Continuity of functions, Cauchy's definition, graphical meaning of continuity, Kinds of discontinuities.

DIFFERENTIAL CALCULUS: Successive differentiation, Leibnitz theorem, Partial differentiation, Euler's Theorem, change of variables, Jacobian theorem.

#### UNIT : 2

INTEGRAL CALCULUS: Integration of rational and Irrational functions, Reduction Formulae, Definite Integral, Rectification; Quadrature, volumes and surfaces of Revolution, Simple applications of integration & simple problems of double and triple integrals.

#### UNIT : 3

DIFFERENTIAL EQUATION: Differential equations of first order, Differential equations of 2nd order, Differential of 2nd order with constant coefficients.

#### UNIT : 4

VECTOR CALCULUS AND ALGEBRA: Vectors, Differentiation and partial differentiation of vector functions, derivative of sum, Dot product and cross product of two vectors, gradient, divergence and curl.

#### UNIT : 5

COORDINATE GEOMETRY: Straight lines, Circles and the system of circles; standard equations and properties of Parabola. Ellipse and Hyperbolas, General equation of second degree in two variables, tracing of simple conic section.

#### Suggested Readings :

1. E. Kreyzig, "Engineering Mathematics".
2. B.S. Grewal, "Higher Engineering Mathematics"
3. Shanti Narayan, "Differential Calculus"
4. K.P. Gupta. "Vector Calculus"

**Unit 1: Advanced Calculus and Analysis**

Multivariable calculus: gradients, divergence, and curl Theorems of Green, Stokes, and Gauss Metric spaces and Convergence, Functions of several variables: continuity, differentiability, Optimization techniques: Lagrange multipliers

**Unit 2: Differential Equations**

Ordinary differential equations (ODEs): existence and uniqueness, Systems of ODEs and stability analysis, Partial differential equations (PDEs): classification and methods of solution, Fourier series and transforms, Numerical methods for ODEs and PDEs

**Unit 3: Linear Algebra and Matrix Theory**

Vector spaces and subspaces, Linear transformations and their properties, Eigenvalues and eigenvectors, Diagonalization and spectral theorem, Applications to systems of equations and optimization problems

**Unit 4: Numerical Methods and Computational Mathematics**

Numerical analysis: error analysis and convergence, Root-finding algorithms (Newton's method, bisection), Numerical integration and differentiation, Finite difference methods for PDEs, Introduction to MATLAB/Python for mathematical modeling

**Unit 5: Probability, Statistics, and Stochastic Processes:**

Probability theory: distributions, expected values, and variance, Statistical inference: hypothesis testing, confidence intervals, Regression analysis and time series forecasting, Markov chains and stochastic processes, Applications in finance, engineering, and science

S.N	PRACTICAL PROGRAMS FILE
1	Write a program to print "hello world" in C.
2	Write a program to insert a new line using \n.
3	Write a program to make a line Single-line comment.
4	Write a program to make a line multi-line comment.
5	Write a program to create a variable and assign values to variables.
6	Write a program to create a variable and assign values to variables using scanf() function.
7	Write a program to print other types, use %c for char and %f for float.
8	Write a program to declare more than one variable of the same type.
9	Write a program to calculate the area of a rectangle.
10	Write a program to perform operations on variables and values (+, -, *, /, %).
11	Write a program to perform addition assignment operator (+=) adds a value to a variable
12	Write a program to find out if a person is old enough to vote using scanf() function using if-else.
13	Write a program to check even or odd no using while loop in C.
14	Write a program to print 1 to 50 using do while loop in C.
15	Write a program to print 5 to 10 using for loop in C.
16	Write a program to print 1 to 5 using array in C.
17	Write a program to create structure in C.
18	Write a program to create union in C.
19	Write a program to using pointer in C.
20	Write a program to create user define function in C.

1. Write a program to demonstrate basic data type in python.
2. Demonstrate the working of following functions in Python.  
i) id( ) ii) type( ) iii) range( )
3. Create a list and perform the following methods  
(a) Insert (b) remove (c) append (d) pop (e) clear
4. Write a Python program to demonstrate various ways of accessing the string.  
i) By using Indexing (Both Positive and Negative)  
ii) By using Slice Operator
5. Create a tuple and perform the following methods.  
(a) Add items (b) len (c) Check for item in tuple (d) Access items
6. Demonstrate the following functions/methods which operates on dictionary in Python  
i) print dictionary items ii) len( ) iii) clear( ) iv) get( ) v) pop( ) vi) change values
7. Demonstrate the following Conditional statements in Python with suitable examples.  
i) if statement ii) if else statement iii) if – elif – else statement
8. write a program to print a number is positive/negative using while loop.
9. Write a program to demonstrate for loop in python.
10. Write Python program to demonstrate use of nested loop statements: print the following pattern  
\*  
\* \*  
\* \* \*  
\* \* \* \*  
\* \* \* \* \*
11. Demonstrate the following control transfer statements in Python with suitable examples.  
i) Break ii) continue iii) pass
12. Write a Python program to perform read and write operations on a file.
13. Demonstrate the following kinds of Parameters used while writing functions in Python.  
i) Positional Parameters ii) Default Parameters iii) Keyword Parameters iv) Variable length Parameters
14. Write a python program to demonstrate inheritance.

**BCA 153****English Communication lab**

1	Self-Introduction and Group Interaction
2	Role Play: Telephone Etiquette
3	Debate: Discussing Current Issues
4	Storytelling Skills Development
5	Persuasive Speech Practice
6	Listening Comprehension: News Analysis
7	Group Discussion: Analyzing Advertisements
8	Job Interview Simulation
9	Film Scene Analysis and Discussion
10	Pronunciation Practice and Phonetics
11	Formal and Informal Letter Writing
12	Creative Writing: Dialogue Creation

## **BCA 153 A**

## **English lab**

### Practicals

#### 1. Listening Skills

- The student should be able to listen to a text read aloud in normal speed with focus on intonation.
- After listening the student can fill-in-blanks, choose a suitable title, make a summary, supply required information and be able to answer comprehension questions from the passage read aloud.

#### 2. Speaking Skill

- Reading aloud of dialogues, texts, poems, speeches focusing on intonation.
- Self-introduction • Role plays on any two-situations.
- Telephonic Conversations.

#### 3. Personality Development

- Initiation
- Physical Appearance
- Audience Purpose

#### 4. Interpersonal Skills

- Appropriate use of non-verbal skills in face to face communication [i.e. Viva –Voce, group –interviews, GDs and seminars.]

#### 5. Presenting in GD, Seminars and Conferences.

- Leadership Quality
- Time Management
- Achieving the target

Interactive and Communicative Practical with emphasis on Oral Presentation/Spoken Communication based on International Phonetic Alphabets (I.P.A.)

**LIST OF PRACTICALS**

1. Group Discussion: Practical based on Accurate and Current Grammatical Patterns.
2. Conversational Skills for Interviews under suitable Professional Communication Lab conditions with emphasis on Kinesics.
3. Communication Skills for Seminars/Conferences/Workshops with emphasis on Paralinguistics/Kinesics.
4. Presentation Skills for Technical Paper/Project Reports/ Professional Reports based on proper Stress and Intonation Mechanics.
5. Official/Public Speaking based on suitable Rhythmic Patterns.
6. Theme- Presentation/Key-Note Presentation based on correct argumentation methodologies.
7. Individual Speech Delivery/Conferencing with skills to defend Interjections/Quizzes.
8. Argumentative Skills/Role Play Presentation with Stress and Intonation.
9. Comprehension Skills based on Reading and Listening Practicals on a model AudioVisual Usage.

**Reference Books**

1. Bansal R.K. & Harrison: A manual of Speech & Phonetics, Orient Black Swan Pvt. Ltd. New Delhi, 2010.
2. Sethi & Dhamija: A Course in Phonetics and Spoken English, Prentice Hall, New Delhi, 2011.
3. L.U.B.Pandey: Practical Communication-Process & Practice, A.I.T.B.S. Pub. India Ltd. Krishan Nagar, Delhi, 2013.
4. Joans Daniel, English Pronouncing Dictionary, Cambridge Univ. Press. 2007.

## **BCA 153 C Human Values, Deaddiction and Traffic Rules (Lab)**

### **Course Objectives:**

- To instill human values and ethics.
- To understand the impact of addiction and methods for deaddiction.
- To educate students on traffic rules and safe driving practices.

### **Module 1: Human Values**

1. **Introduction to Human Values**
  - Definition and importance
  - Types of human values (e.g., honesty, respect, empathy)
2. **Ethics in Everyday Life**
  - Decision-making and moral dilemmas
  - Case studies and discussions
3. **Community Service**
  - Organizing and participating in community outreach programs
  - Reflective practices on service experiences

### **Module 2: Deaddiction**

1. **Understanding Addiction**
  - Definition and types of addiction (substance and behavioral)
  - Psychological and social impacts of addiction
2. **Deaddiction Strategies**
  - Methods and approaches to deaddiction
  - Role of family and community support
3. **Workshops and Guest Lectures**
  - Inviting health professionals and recovering individuals
  - Interactive sessions on coping strategies

### **Module 3: Traffic Rules**

1. **Introduction to Traffic Rules**
  - Importance of traffic regulations
  - Basic traffic signs and signals
2. **Road Safety Practices**
  - Safe driving techniques
  - Pedestrian safety and awareness
3. **Practical Lab Sessions**
  - Simulated driving scenarios (using simulators or practical demonstrations)
  - Role-playing exercises for emergency situations

### **Assessment and Evaluation**

- Participation in discussions and activities
- Practical assessments (lab performance)
- Group projects or presentations on chosen topics

### **Additional Resources**

- Recommended readings and online resources
- Community organizations related to deaddiction and road safety

- **Educational technology**

A common topic at EdCamps, this includes practical examples of using modern tools in the classroom and how to solve problems that technology can cause.

- **Current events**

Students can track current events and create a news show or podcast about them.

- **Artificial intelligence**

Seminars can help you learn about responsible AI development and deployment, and build a professional network.

- **Case studies and debates**

These activities can help students engage with the material and develop communication, critical analysis, and teamwork skills.

- **Classroom management**

This includes strategies and techniques for creating a learning environment that reduces disruptions.

- **Global issues in education and research**

This can include topics such as the impact of crisis on education, ethical issues in education, and technology in teaching and learning.

- **Psychology**

This includes core areas such as biological, cognitive, developmental, social, and individual differences.

# OBJECT ORIENTED PROGRAMMING SYSTEM USING C++

BCA-201

L T P 3 1 2

## UNIT 1

**Introduction to Object Oriented Programming:** Basic concept of OOP, Comparison of Procedural Programming and OOP, Benefits of OOP, C++ compilation, Difference between C and C++, **Tokens and identifiers:** Character set and symbols, Keywords, C++ identifiers, Variables and Constants, Integer, character and symbolic constants; Dynamic initialization of variables, Reference variables, Basic data types in C++, Streams in C++, Operators, Types of operators in C++, Precedence and associativity of operators, Manipulators.

## UNIT 2

**Decision and Control Structures:** if statement, if-else statement, switch statement, Loop: while, do-while, for; Jump statements: break, continue, go to, Array, Pointer and Structure Arrays, pointers, structures, unions; Functions, main() function, components of function: prototype, function call, definition, parameter; passing arguments; types of function, inline function, function overloading. **Classes and Objects:** Classes in C++, class declaration, declaring objects, Defining Member functions, Inlinemember function, Array of objects, Objects as function argument, Static data member and member function, Friend function and friend class.

## UNIT 3

**Constructors and Destructors:** Constructors, Instantiation of objects, Default constructor, Parameterized constructor, Copy constructor and its use, Destructors, Constraints on constructors and destructors, Dynamic initialization of objects. **Operator Overloading:** Overloading unary operators: Operator keyword, arguments and return value; overload in unary and binary operators: arithmetic operators, manipulation of strings using operators; Type conversions.

## UNIT 4

**Inheritance and Polymorphism :** Derived class and base class, Defining a derived class, Accessing the base class member, **Inheritance:** multilevel, multiple, hierarchical, hybrid; Virtual base class, Abstract class, Virtual Functions and Polymorphism, Virtual functions, pure virtual functions; **Polymorphism:** Categorization of polymorphism techniques: Compile time polymorphism, Run time polymorphism

## UNIT 5

**File Handling:** File classes, Opening and Closing a file, File modes, Manipulation of file pointers, Functions for I/O operations.

## BOOKS SUGGESTED

- 1) E. Balaguruswami – Object Oriented programming with C++
- 2) Kris James – Success with C++
- 3) David Parsons – Object Oriented programming with C++

# DATABASE MANAGEMENT SYSTEMS

BCA-202

L T P 31 2

## UNIT-I

### Database Concepts:

Data, Database and DBMS, Comparison between traditional file V/s DBMS, Characteristics of datain database, Components of database system environment, Functions of DBMS, Advantagesand disadvantages of the DBMS, DBMS users, Database administrator, Role of DBA, 3-schema architecture, Database development process - conceptual data modelling, logical database design, physical database design, database implementation, database maintenance.

## UNIT-II

**Database Analysis:** Conceptual data modelling using E-R data model -entities, attributes,relationships, generalization, specialization, specifying constraints, 5-6 practical problems basedon E-R data model.

## UNIT-III

**Relational Database:** Relational data model: Introduction to relational database theory: definitionof relation, relational model integrity rules, relational algebra and relational calculus.

**Relational Database Design:** Normalization- 1NF, 2NF, 3NF, BCNF, 4NF and 5NF. Concept of De-normalization and practical problems based on these forms.

## UNIT-IV

**Indexing of Data:** Impact of indices on query performance, basic structure of an index, creating indexes with SQL, Types of Indexing and its data structures.

**Transaction Management and Concurrency Control:** Transaction, Concurrency control, Concurrency control with locking Methods, Concurrency control with time stamping methods, Concurrency control with optimistic methods, database recovery management.

## UNIT-V

**Database Implementation:** Introduction to SQL, DDL aspect of SQL, DML aspect of SQL – update, insert, delete & various form of SELECT- simple, using special operators, aggregate functions, group by clause, sub query, joins, co-related sub query, union clause, exist operator. PL/SQL - cursor, stored function, stored procedure, triggers, error handling, and package.

### Text Books:

1. Silverschatz A., Korth F. H. and Sudarshan S., Database System Concepts, Tata McGrawHill (2010) 6th ed.
2. Elmasri R. and Navathe B. S., Fundamentals of Database Systems, Pearson (2016) 7th ed.

### Reference Books:

1. Bayross I., SQL, PL/SQL the Programming Language of Oracle, BPB Publications (2009)4th ed.
2. Hoffer J., Venkataraman, R. and Topi, H., Modern Database Management, Pearson (2016)12th ed.

## WEB AND E-COMMERCE TECHNOLOGIES

BCA-203

L T P 3 1 0

### UNIT-I

**An introduction to Electronic commerce:** What is E-Commerce (Introduction and Definition), Main activities E-Commerce, Goals of E-Commerce, Technical Components of E-Commerce, Functions of E-Commerce, Advantages and disadvantages of E-Commerce, Scope of E-Commerce, Electronic Commerce Applications, Electronic Commerce and Electronic Business (C2C) (2G, G2G, B2G, B2P, B2A, P2P, B2A, C2A, B2B, B2C)

### UNIT-II

**Building Own Website:** Reasons for building own website, Benefits of Website, Cost, Time, Reach, Registering a Domain Name, Web promotion, Target email, Banner Exchange, Shopping Bots

### UNIT-III

**Internet Security:** Secure Transaction, Computer Monitoring, Privacy on Internet, Corporate Email privacy, Computer Crime (Laws, Types of Crimes), Threats, Attack on Computer System, Software Packages for privacy, Hacking, Computer Virus (How it spreads, Virus problem, virus protection, Encryption and Decryption, Secret key Cryptography, DES, Public Key Encryption, RSA, Authorisation and Authentication, Firewall, Digital Signature (How it Works))

### UNIT-IV

**Electronic Data Exchange:** Introduction, Concepts of EDI and Limitation, Applications of EDI, Disadvantages of EDI, EDI model, Electronic Payment System, Types of Electronic Payment System, Payment Types, Traditional Payment, Value Exchange System, Credit Card System, Electronic Fund Transfer, Paperless bill, Modern Payment Cash, Electronic Cash

### UNIT-V

**Planning for Electronic Commerce:** Planning Electronic Commerce initiatives, Linking objectives to business strategies, Measuring cost objectives, Comparing benefits to Costs, Strategies for developing electronic commerce web sites, Internet Marketing, The PROS and CONS of online shopping, The cons of online shopping, Justify an Internet business, Internet marketing techniques, The E-cycle of Internet marketing, Personalisation e-commerce.

**E – Governance for India:** Governance of India, Indian customer EDI System, Service centre, Imports, Exports.

### Recommended Books :

1. E-Commerce Concepts, Models, Strategies- :- G.S.V. Murthy Himalaya Publishing House
2. E- Commerce :- Kamlesh K Bajaj and Debjani Nag
3. Electronic commerce :- Gray P. Schneider
4. E-Commerce, Fundamentals & Applications : Chand (Wiley)

## DISCRETE STRUCTURES

BCA-204

L T P 3 10

### UNIT-I

**Propositional logic:** Logical connectives, Truth tables, Normal forms, Proof Techniques: Notions of implication, equivalence converse, inverse, contra positive, negation, and contradiction.

### UNIT-II

**Set Theory:** Introduction, Combination of sets, Multisets, Ordered pairs. Proofs of some general identities on sets. **Relations:** Definition, Operations on relations, Properties of relations, Composite Relations, Order of relations. **Functions:** Definition, Classification of functions, Operations on functions, Partially Ordered Set, Totally Ordered Set, Hasse Diagram, Minimal and Maximal Elements, Upper Bound and Lower Bound, Infimum & Suprimum

### UNIT-III

**Graphs Theory:** Representation, Type of Graphs, Paths and Circuits: Euler Graphs, Hamiltonian Paths & Circuits; Definition and terminology, Representation of graphs, Multigraphs, Bipartite graphs, Planar graphs, Isomorphism and Homeomorphism of graphs.

### UNIT-IV

**Trees:** Definition, Binary tree, Binary tree traversal, Binary search tree, Cut-sets, Connectivity and Separability, Isomorphism.

### UNIT-V

**Lattice:** Lattice as a poset, Bounded Lattice, Lattice as algebraic system, Dual of a lattice, Complete Lattice

**Text Books:** 1. Rosen, K.H., Discrete Mathematics and its Applications, McGraw Hill (2011), 7th ed. 2. Tremblay, J.P. and Manohar R., "Discrete Mathematical Structures with Applications to Computer Science", Tata McGraw Hill (2007), 1st ed.

**Reference Books:** 1. Haggard G., Schlipf J. and Whitesides, Sue, Discrete Mathematics for Computer Science, Cengage Learning, (2008), 2nd ed. 2. Johnsonbaugh R., Discrete Mathematics, Pearson Education, (2007), 7th ed

**Unit 1: Introduction to Set Theory**

Definition of sets and elements, Notation and terminology (subsets, proper subsets), Venn diagrams and visual representations of sets, Operations on sets (union, intersection, difference, complement), Cartesian products

**Unit 2: Types of Sets and Functions**

Finite vs. infinite sets, Countable and uncountable sets, Power sets, Introduction to functions (one-to-one, onto, bisections), Relationships between sets and functions

**Unit 3: Relations and Cardinality**

Definitions and examples of relations, Properties of relations (reflexivity, symmetry, transitivity), Equivalence relations and partitions, Cardinality: comparing sizes of sets, Cantor's theorem and the concept of infinity

**Unit 4: Axiomatic Set Theory**

Introduction to axiomatic systems, Zermelo-Fraenkel set theory (ZF) and the Axiom of Choice (AC), Basic axioms and their implications, Alternative set theories (e.g., Von Neumann-Bernays-Gödel set theory), Paradoxes in set theory (Russell's paradox, Burali-Forti paradox)

**Unit 5: Applications and Advanced Topics**

Applications of set theory in mathematics and computer science, Fuzzy sets and their applications, Set theory in probability and statistics, Introduction to ordinal and cardinal numbers, Discussion of open problems and recent developments in set theory

**Course Code:-BCA-204 B**

**L T P C**

**Course Name :-Graph Theory**

**4 0 0 4**

**UNIT-I** what is graph Application of graphs, Finite and Infinite graphs, Incidence & Degree, Isolated vertex, Pendant Vertex, and Null Graph.

**UNIT-II** Isomorphism, Sub graphs, A puzzle with multicolored Cubes, walks, Path, and circuits connected graph, Disconnected graphs and Components, Euler graphs, Operations on graphs more on Euler Graphs, Hamiltonian paths and circles.

**UNIT-III** Tree, some properties of trees, pendant Vertices in a tree, Distance and centers in a tree Rooted and Binary trees, Spanning trees, fundamental circuits, Finding all spanning tree of a graph.

**UNIT-IV** Cut-Sete, Some Properties of Cut-Set, All Cut-Sets in a graph, Path-Sets, some properties of paths sets in a graph, fundamental Circuits & Cut-Set, Connectively and separability. Directed graph, undirected graph. Matrix representation of graph.

Text Books:

1. NarsinghDeo, "Graph Theory", Prentice Hall of India

**UNIT 1:- PROBABILITY;** Introduction to Probability, Terms Used in Probability Random Experiment Sample Space Event and Definition of Various Events, Mathematical, Statistical and Axiomatic Definitions of Probability, Addition Rule, Multiplication Rule and Sub Rules of the Probability (Without Proof), Conditional Probability, Bayes' theorem (without proof) and its application up to three events, Simple numerical examples based on the above concepts 25%

**UNIT 2:- MATHEMATICAL EXPECTATION** (For Discrete Random Variable), Meaning of Discrete Random variable, Meaning of Probability Distribution, Meaning of Mathematical Expectation Properties of Mathematical Expectation (Without Proof), Variance of a Discrete Random Variable Properties of Variance (without proof), Mean and Variance of Linear Combination of Two Independent Variables, Examples based on the above Concepts 25%

**UNIT 3:- DISCRETE DISTRIBUTIONS -I ;** Concept of Probability Mass Function , Introduction to Poisson Distribution Properties and Uses of Poisson Distribution , Introduction to Hyper geometric Distribution Properties and Uses of Hyper geometric Distribution , Examples Related to these Distributions 25%

**UNIT 4 :- DISCRETE DISTRIBUTIONS -II ;** Introduction to Negative Binomial Distribution Properties and Uses of Negative Binomial Distribution 25% , Geometric Distribution Properties and Uses of Geometric Distribution , Examples Related to these Distributions

**REFERENCE BOOKS** 1. "Introduction to Probability and Mathematical Statistics" by PrasannaSahoo (published by CRC Press) 2. "Probability and Statistics" by T.K. V. Iyengar (published by S. Chand Publishing) 3. "Fundamentals of Probability, with Stochastic Processes" by Saeed Ghahramani (published by PHI Learning Private Limited) 4. "Probability and Random Processes" by S.V. Prabhu and P.G. Sankaran (published by John Wiley & Sons India Pvt. Ltd.) 5. "A First Course in Probability and Statistics" by B.L.S. Prakasa Rao (published by Universities Press)

## ENVIRONMENTAL STUDIES

BCA-205

L T P 3 10

### UNIT-I

**Environment pollution, global warming and climate change:** Air pollution (local, regional and global); Water pollution problems; Land pollution and food chain contaminations; Carbon cycle, greenhouse gases and global warming; Climate change – causes and consequences; Carbon footprint; Management of greenhouse gases at the source and at the sinks.

### UNIT-II

**Ecology, Structure and functioning of natural ecosystems:** Ecology, ecosystems and their structure, functioning and dynamics; Energy flow in ecosystems; Biogeochemical cycles and climate; Population and communities.

### UNIT-III

**Natural resources:** Human settlements and resource consumption; Biological, mineral and energy resources; Land, water and air; Natural resources vis-à-vis human resources and technological resources; Concept of sustainability; Sustainable use of natural resources.

### UNIT-IV

**Agricultural, industrial systems and environment:** Agricultural and industrial systems vis-à-vis natural ecosystems; Agricultural systems, and environment and natural resources; Industrial systems and environment.

### UNIT-V

**Energy technologies and environment:** Electrical energy and steam energy; Fossil fuels, hydropower and nuclear energy; Solar energy, wind energy and biofuels; Wave, ocean thermal, tidal energy and ocean currents; Geothermal energy; Future energy sources; Hydrogen fuels; Sustainable energy.

**Text Books:** Bharucha, E., Textbook of Environmental Studies, Universities Press (2005). Chapman, J.L. and Reiss, M.J., Ecology-Principles and Application, Cambridge University Press (LPE) (1999). Joseph, B., Environmental Studies, Tata McGraw-Hill (2006).

**Reference Books:** Miller, G.T., Environmental Science- Working with Earth, Thomson (2006). Wright, R.T., Environmental Science-Towards a sustainable Future, Prentice Hall (2008) 9<sup>th</sup> ed.

**UNIT-1: THE MULTIDISCIPLINARY NATURE OF ENVIRONMENTAL STUDIES**

Definition, Scope and Importance, Need for Public Awareness.

**UNIT-2: NATURAL RESOURCES:** - Renewable and Non-renewable Resources:

Natural resources and associated problems: - a) **FOREST RESOURCES:** use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forests and tribal people.

b) **WATER RESOURCES:** use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.

**UNIT-3: ECOSYSTEMS:-** Concept of an ecosystem, Structure and function of an ecosystem, Producers, consumers and decomposers, Energy flow in the ecosystem, Ecological succession, Food chains, food webs and ecological pyramids, Introduction, types, characteristic features, structure and function of the following ecosystem: - a) Forest ecosystem b) Grassland ecosystem c) Desert ecosystem d) Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

**UNIT-4: BIODIVERSITY AND ITS CONSERVATION :-**Introduction – Definition: genetic, species and ecosystem diversity, Bio geographical classification of India, Value of biodiversity: Consumptive use, productive use, social, ethical, and aesthetic and option values, Biodiversity at global, National and local levels, India as a mega-diversity nation ,Hot-spots of biodiversity, Threats to biodiversity: Habitat loss, poaching of wildlife, man-wildlife conflicts, Endangered and endemic species of India, Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.

**UNIT-5: ENVIRONMENTAL POLLUTION DEFINITION:** Causes, effects and control measures of: - a) Air pollution b) Water pollution c) Soil pollution d) Marine pollution e) Noise pollution f) Thermal pollution g) Nuclear pollution, Solid waste Management: Causes, effects and control measures of urban and industrial wastes, Role of an individual in prevention of pollution, Pollution case studies, Disaster Management: Floods, earthquake, cyclone and landslides.

**TEXT BOOKS:-**

- 1."Environmental Studies: From Crisis to Cure":- Author: R. Rajagopalan, Publisher: Oxford University Press
- 2."Environmental Studies":- Author: ErachBharucha, Publisher: University Grants Commission (UGC)
3. "Textbook of Environmental Studies for Undergraduate Courses":- Authors: Benny Joseph, Publisher: McGraw Hill Education
4. "Environmental Science: A Global Concern":- Authors: William P. Cunningham, Mary Ann Cunningham, Publisher: McGraw-Hill

**Natural Resource Management****3 0 1**

**UNIT 1: Resources:** Types, Renewable & non-renewable resources; resource degradation and conservation; Human impact on natural resources.

Land resources: Land degradation and desertification; Soil erosion and control; reclamation & management of waste lands with special reference to India.

Water resources: Pools of water and hydrological cycle; Surface water, ground water, Human use of freshwater. Rain water harvesting; watershed management

**UNIT 2:- Energy resources:** Fossil fuels, nuclear energy, solar energy, wind energy, tidal energy, geothermal energy, hydropower. Global energy consumption; Environmental impacts of various forms of energy use.

Hydrogen as a source of energy, energy from biomass, bioconversion technology, energy plantations and petro-crops. Bioenergy-Prospects in India.

Mineral resource conservation & recycling, bacterial leaching of metals from low grade ores.

**UNIT 3:- Forest resources:** Forests, their importance, types, global distribution; primary and secondary products, forest resources of India. Impact of deforestation; Sustainable forest Forest Management.

Range lands: Types, uses, grassland types and management in India.

Medicinal plant resources and bioprospecting-a brief account.

Fisheries and Marine resources- a general account; aquaculture

**UNIT 4:** Economics, environment and development: Economic categories of resources; the market, environment and natural resources; the economics theory- market, demand and supply relationships.

The limit of growth; cost benefit ratio; natural resources accounting; market based mechanisms for environmental protection.

Economically sustainable forest management designs- green certification, resource conservation, community forest management; ecotourism.

Economic efficient model of sustainable fisheries; designs for renewable energy resources.

**TEXT BOOKS:-**

1. "Natural Resource Management for Sustainable Development": -Author: B.D. Dhawan, Focus: Sustainable development and conservation strategies in natural resource management.
2. "Integrated Watershed Management: Principles and Practice":- Authors: Isobel W. Heathcote
3. "Natural Resource and Environmental Economics":-Authors: Roger Perman, Yue Ma, Michael Common, David Maddison, James McGilvray
- 4."Principles of Environmental and Resource Economics":-Authors: HenkFolmer, Landis Gabel, Shelby Gerking, Adam Rose
5. "Natural Resource Management: The Human Dimensions":- Authors: Alan W. Ewert, Deborah J. Chavez, Arthur W. Magill

**Unit 1: Introduction to Pollution and Environmental Issues**

Definition and Types of Pollution:-Air Pollution, Water Pollution, Soil Pollution, Noise Pollution, Thermal Pollution

Sources and Causes of Pollution:-Natural vs. Anthropogenic sources

Impacts of Pollution on Environment and Human Health

Global Environmental Issues:-Ozone depletion, Global warming, Acid rain, Eutrophication

**Unit 2: Air Pollution Control**

Air Pollutants:-Types (Particulate matter, gases, etc.), Primary vs. Secondary pollutants

Sources and Health Effects of Air Pollutants

Air Quality Standards: -WHO and National Standards, Monitoring Air Quality

Air Pollution Control Technologies:-Filtration (Cyclones, bag filters), Electrostatic precipitators, Scrubbers (Wet and dry), Catalytic converters

**Unit 3: Water and Wastewater Treatment**

Water Pollution:-Sources (Industrial, domestic, agricultural), Types of water pollutants (Physical, chemical, biological)

Water Quality Standards and Monitoring

Water Treatment Processes:-Coagulation and flocculation, Filtration

Sedimentation, Disinfection methods (Chlorination, UV, ozone)

Wastewater Treatment Techniques:-Primary, Secondary, and Tertiary treatments,

Biological processes (Activated sludge, trickling filters), Advanced treatment (Membrane filtration, adsorption)

**Unit 4: Solid Waste Management and Noise Pollution Control**

Solid Waste Management:-Types of Solid Waste (Municipal, Industrial, Hazardous), Collection, transportation, and disposal of solid waste, Waste reduction and recycling, Landfills and composting, Incineration and waste-to-energy technologies

Noise Pollution:- Sources of Noise Pollution, Effects on Human Health and Environment, Noise Measurement and Control Methods, Soundproofing, barriers, and zoning

**Unit 5: Environmental Policies and Sustainable Development**

Environmental Legislation and Policies:-National Environmental Policies, International Conventions and Protocols (Kyoto Protocol, Paris Agreement)

Environmental Impact Assessment (EIA):- Process and Importance, Case Studies

Sustainable Development:-Principles of sustainability, Role of renewable energy in pollution control, Green technologies and innovations, Circular Economy concepts (Reduce, Reuse, Recycle)

**TEXT BOOKS:-**

1. Air Pollution Control Engineering:-Author: Noel De Nevers,Publisher: McGraw-Hill
2. Wastewater Engineering: Treatment and Reuse:-Authors: Metcalf & Eddy, George,Chobanoglous,Publisher: McGraw-Hill
3. Environmental Pollution Control Engineering:-Author: C.S. Rao, Publisher: New Age International Publishers
4. Solid Waste Management:-Authors: K. Sasikumar, SanoopGopiKrishna,Publisher: PHI Learning Pvt. Ltd.

S.N	PRACTICAL PROGRAMS FILE
1	Write a program to print "HELLO" in C++.
2	Write a program to addition of two numbers using C++.
3	Write a program to find factorial number of 5 in C++.
4	Write a program to Find Simple Interest in C++.
5	Write a program to Check Even or Odd Integers using if and else in C++.
6	Write a program to print 1 to 10 using array in C++.
7	Write a program to create function overloading in C++.
8	Write a program to print 20 to 1 using while loop in C++.
9	Write a program to using single inheritance in ++.
10	Write a program to create private function and call using C++.
11	Write a program to create default constructor in C++.
12	Write a program to using friend function in C++.
13	Write a program to create function overriding in C++.
14	Write a program to print matrix in C++.
15	Write a program to print addition of a single dimensional array in C++
16	Write a program to check even or odd using for loop in C++.
17	Write a program to print 1 to 20 using do while loop in C++
18	Write a program to using switch case in C++;
19	Write a program to find multilevel inheritance in C++.
20	Write a program to create operator overloading in C++.

**List of Experiments:**

1. Introduction SQL-SQL\*Plus
2. Road way travels E-R Diagrams
3. Various Data Types
4. Tables
5. My SQL Installation
6. DDL and DML Commands with Examples
7. Key Constrains-Normalization
8. Aggregate functions
9. Joins
10. Views
11. Index
12. PL/ SQL
13. Exception handling
14. Triggers
15. Cursors
16. Subprograms-procedure PL/ SQL
17. Functions of PL/ SQL

- **Educational technology**

A common topic at EdCamps, this includes practical examples of using modern tools in the classroom and how to solve problems that technology can cause.

- **Current events**

Students can track current events and create a news show or podcast about them.

- **Artificial intelligence**

Seminars can help you learn about responsible AI development and deployment, and build a professional network.

- **Case studies and debates**

These activities can help students engage with the material and develop communication, critical analysis, and teamwork skills.

- **Classroom management**

This includes strategies and techniques for creating a learning environment that reduces disruptions.

## OPERATING SYSTEMS

**BCA-301**

**L T P 31 2**

### **UNIT-I**

Introduction to the Operating System (OS), Types of Operating System: Batch System, Time Sharing System, Real Time System. Multi Programming, Distributed System, Functions and Services of OS.

### **UNIT - II**

Process Management: Process Concept, Process State, Process Control Block, Process Scheduling, CPU Scheduling - Scheduling Criteria, Scheduling Algorithms, Pre-emptive & Non-Preemptive Scheduling.

### **UNIT - III**

Deadlocks-System model, Characterization, Deadlock Prevention, Deadlock Avoidance and Detection, Recovery from deadlock.

### **UNIT - IV**

Memory Management: Logical Address, Physical Address, External and Internal Fragmentation. Concept of paging, Page table structure - Hierarchical Paging, Hashed Page Tables, Inverted Page Table.

### **UNIT -V**

Information Management: File Concept, Access Methods, Directory Structure. Device Management: Disk Structure, Disk Scheduling Algorithms.

### **Text Books:**

1. Silbershatz and Galvin, "Operating System Concept", Addison Wesley, 2002.
2. Nutt, G., "Operating Systems", Addison-Wesley.
3. Godbole Ahyut, "Operating System", PHI, 2003.

### **Reference Books:**

1. Flynn, Mchoes, "Understanding Operating System", Thomson Press, Third Edition, 2003
2. Tannenbaum, "Operating System Concept", Addison Wesley, 2002.
3. Joshi, R. C. and Tapaswi, S., "Operating Systems", Wiley Dreamtech.

## HTML, DHTML AND CSS PROGRAMMING

BCA-302

L T P 3 1 2

### UNIT-I

**Introduction:** Overview of HTML, need of HTML, Use of it, HTML Tags: concept of Tag, types of HTML tags, structure of HTML program, Text formatting through HTML: Paragraph breaks, line breaks, background and BGcolor attributes, Emphasizing material in a web page: Heading styles, drawing lines, text styles, Text styles and other text effects-centering, spacing, controlling font size & color, Lists: Using unordered, ordered, definition lists Adding Graphics To HTML Documents: Using Image tag, attributes of Image tag, changing width & height of image

### UNIT-II

**Tables, Frames and Linking Documents:** Handling Tables: To define header rows & data rows, use of table tag and its attributes. Use of caption tag Linking Documents: Concept of hyperlink, types of hyperlinks, linking to the beginning of document, linking to a particular location in a document, Images as hyperlinks Frames: Introduction To frames, using frames & frameset tags, named frames how to fix the size of a frame, targeting named frames.

### UNIT-III

**Introduction to CSS:** Introducing CSS, font attributes, color and background attributes, text attributes, border attributes, margin related attributes, list attributes Using class and span tag, External Style Sheets, Creating Divs with ID style, Creating Tag & Class style, creating borders, Navigation links, creating effects with CSS.

### UNIT-IV

**Introduction to JavaScript:** use of JavaScript in web pages. Understand JavaScript event model, use some basic event and control webpage behavior. Variable declaration, Operators, , Control Statements, Error Handling, Understanding arrays, Function Declaration, Built In Functions, Standard Date and Time Functions, Working with Objects, Call method in JavaScript.

### UNIT-V

Web hosting - what is domain? Introduction to DNS, how to register a domain ?, what is web hosting ?, how to get a web hosting ?, host your website on web server. FTP - FTP introduction, FTP commands viewing files and directories, FTP commands transfer and rename files, FTP with WS FTP/ CuteFTP, Filezilla on Windows.

## THEORY OF COMPUTATION

BCA-303

L T P 3 1 0

### Unit-I

Introduction: Alphabets, Strings and Languages; Automata and Grammars, Deterministic finite Automata (DFA)- Formal Definition, Simplified notation: State transition graph, Transition table, Language of DFA, Non deterministic finite Automata (NFA), NFA with epsilon transition, Language of NFA, Equivalence of NFA and DFA, Minimization of Finite Automata, Myhill-Nerode Theorem, Finite State Machine with output- Moore machine and Melay Machine, Properties and Limitations of Finite state machine, Conversion of Moore machine to Melay Machine & Vice-Versa, Application of Finite Automata.

### Unit-II

Properties of Regular languages: Regular Expressions, Definition, Operators of regular expression and their precedence, Chomsky Hierarchy, Conversion of DFA to Regular Expression, Arden Theorem, Pumping Lemma, Decision properties of Regular Languages,

### Unit-III

Context Free Grammar and Push Down Automata: Context Free Grammar, Derivation tree and Ambiguity, Application of Context free Grammars, Chomsky and Greibach Normal form, Properties of context free grammar, Decidable properties of Context free Grammar, Pumping Lemma for Context free grammar, Push down Stack Machine, Design of Deterministic and Non-deterministic Push-down stack.

### Unit-IV

**Turing Machine:** Turing machine definition and design of Turing Machine, Church-Turing Thesis, Variations of Turing Machines, combining Turing machine, Universal Turing Machine, Post Machine, Post correspondence problem.

### Unit-V

**Uncomputability:** Halting Problem, Turing enumerability, Turing Acceptability and Turing decidabilities, unsolvable problems about Turing machines, Rice's theorem.

## MULTIMEDIA AND APPLICATIONS

BCA-304

L T P 310

### UNIT-I

**Introductory Concepts:** Multimedia - Definitions, Basic properties and medium types (Temporal and non-temporal), Multimedia applications, Uses of Multimedia, Introduction to making multimedia - The Stages of project, the requirements to make good multimedia, Multimedia skills and training.

### UNIT-II

**Multimedia-Hardware and Software:** Multimedia Hardware - Macintosh and Windows production Platforms, Hardware peripherals - Connections, Memory and storage devices, Media software - Basic tools, making instant multimedia, Multimedia software and Authoring tools, Production Standards.

### UNIT-III

**Multimedia building blocks Creating & Editing Media elements:** Text, image, Sound, animation Analog/ digital video Data Compression: Introduction, Need, Difference of lossless/lossy compression techniques. Brief overview to different compression algorithms concern to text, audio, video and images etc.

### UNIT-IV

**Multimedia and the Internet:** History, Internet working, Connections, Internet Services, The World Wide Web, Tools for the WWW - Web Servers, Web Browsers, Webpage makers and editors, Plug-Ins and Delivery Vehicles, HTML, Designing for the WWW - Working on the Web, Multimedia Applications - Media Communication, Media Consumption, Media Entertainment, Media games.

### UNIT-V

**Multimedia-looking towards Future:** Digital Communication and New Media, Interactive Television, Digital Broadcasting, Digital Radio, Multimedia Conferencing, Virtual Reality, Digital Camera. Assembling and delivering a Multimedia project-planning and costing, Designing and Producing, content and talent, Delivering, CD-ROM: The CD family, production process, CD-i – Overview – Media Types Technology.

### TEXTBOOKS:

1. Tay Vaughan, "Multimedia: Making it work", TMH, 1999.
2. Ralf Steinmetz and Klara Naharstedt, "Multimedia: Computing, Communications Applications", Pearson, 2001.

## OPTIMIZATION TECHNIQUES

BCA-305

L T P 310

### UNIT – I

**Measures of Central Tendency & Dispersion:** Definition, Importance & Limitation. Collection of data and formation of frequency distribution. Graphic presentation of frequency distribution – graphics, Bars, Histogram, Diagrammatic. Measures of central tendency – mean, median and mode, partition values – quartiles, deciles and percentiles. Measures of variation – range, IQR, quartile, deciles and percentiles.

### UNIT – II

**Correlation/Regression:** Correlation Coefficient; Assumptions of correlation analysis; coefficients of determination and correlation; measurement of correlation- Karl Person's Methods; Spearman's rank correlation; concurrent deviation the correlation coefficient; Pitfalls and limitations associated with regression and correlation analysis; real world application using IT tools.

### UNIT – III

**Linear Programming & Queuing:** Concept a assumptions usage in business decision making linear programming problem: formulation, methods of solving: graphical and simplex, problems with mixed constraints: duality; concept, significance, usage & application in business decision making. Queuing Models: Basic structure of queuing models, Birth-Death queuing models and its steady state solution, M/M/1 and M/M/C models with infinite/finite waiting space, PERT, CPM

### UNIT – IV

**Transportation & Assignment Problem:** General structure of transportation problem, solution procedure for transportation problem, methods for finding initial solution, test for optimality. Maximization of transportation problem, transportation problem.

### UNIT – V

**Assignment Problem:** Assignment problem approach of the assignment model, solution methods of assignment problem, maximization in an assignment, unbalanced assignment problem, restriction on assignment.

### TEXT BOOKS

1. Sharma, J.K.; Operations Research: problems & solutions; Macmillan India
2. Gupta, S.P. and Gupta, P.K.; Quantitative Techniques and Operations Research, Sultan Chand & Sons
3. Vohra, N.D.; Quantitative Techniques in Management 2003.
4. Gupta, S.P. Statistical Methods, Sultan Chand & Sons. 2004
5. A.M. Natarajan, P Balasubramani A. Tamilarasi, Operations Research, Pearson 2005

### REFERENCE BOOKS

1. R.L. Rardin, Optimization in Operations Research, Prentice Hall.
2. A. Racindran, D.T. Phillips, J.S. Solberg, Second edition, John Wiley.

## ELEMENTS OF STATISTICS

**BCA-305 A**

**Cr L-T-P**

**4 3-1-0**

### **Unit - I**

#### **Introduction to Statistics:**

Definition and scope of statistics, Importance of statistics in decision making, Types of data: Primary and secondary data, Methods of data collection, Classification and tabulation of data,

Frequency distribution.

### **Unit – II**

#### **Measures of Central Tendency and Dispersion:**

Measures of Central Tendency: Mean, Median, Mode, Properties and applications of central tendency, Measures of Dispersion: Range, Variance, Standard Deviation, Quartiles, Coefficient of variation, Moments, Skewness, and Kurtosis.

### **Unit - III**

#### **Probability and Probability Distributions:**

Introduction, Basic concepts: Sample space, Events, Probability axioms, Conditional probability, Independent events, Bayes' theorem, Random variables: Discrete and Continuous, Probability distributions: Binomial, Poisson, and Normal distributions.

### **Unit - IV**

#### **Sampling and Estimation**

Sampling methods: Simple random sampling, Stratified sampling, Systematic sampling, Sampling and non-sampling errors, Point and Interval estimation, Properties of estimators: Unbiasedness, Efficiency, Consistency, Introduction to Hypothesis testing

### **Unit – V**

**Correlation, Regression, and Time Series Analysis:** Types, Karl Pearson's correlation coefficient, Spearman's rank correlation, Simple and Multiple regression analysis, Time series analysis: Components of time series, Methods of measuring trends: Moving averages, Least squares method, Applications of correlation, regression.

#### **TEXT BOOKS:**

1. S.C. Gupta: **Fundamentals of Statistics**, Himalaya Publishing House
2. R.S. Bhardwaj: **Business Statistics**, Excel Books
3. Goon, A.M., Gupta, M.K. and Dasgupta, B.: **Fundamentals of Statistics**, Vol I, The World Press.

4. Richard A. Johnson: **Probability and Statistics for Engineers**, Pearson Education

**Reference Books:**

1. Murray R. Spiegel: **Schaum's Outline of Probability and Statistics**, McGraw-Hill
2. A.M. Mood, F.A. Graybill: **Introduction to the Theory of Statistics**, McGraw-Hill

4. Sheldon M. Ross: **Introduction to Probability and Statistics for Engineers and Scientists**, Academic Press

## COMBINATORIAL OPTIMIZATION

BCA-305B

Cr L-T-P

4 3-1-0

### Unit – I

#### Introduction to Combinatorial Optimization:

Basics of combinatorial optimization, Problem-solving strategies in combinatorial optimization

Introduction to graphs and networks, Linear programming and integer programming, Applications of combinatorial optimization in real-world problems.

### Unit – II

#### Greedy Algorithms and Dynamic Programming:

Greedy algorithm principles, Applications of greedy methods: Minimum spanning tree Huffman coding, Dynamic programming techniques, Examples: Knapsack problem, shortest paths, Comparison of greedy algorithms and dynamic programming.

### Unit - III

#### Network Flow and Matching:

Basics of network flow problems, Maximum flow problem: Ford-Fulkerson method, Bipartite matching and assignment problems, Minimum-cost flow problem, Applications of network flow in optimization.

### Unit – IV

#### Approximation Algorithms and Heuristics:

Concept of approximation algorithms, Polynomial-time approximation schemes (PTAS)

Heuristic methods for optimization: Genetic algorithms, Simulated annealing, Traveling salesman problem (TSP) and its approximations, Applications of heuristic methods in large-scale optimization problems.

### Text Books

4. Robert Sedgewick, Kevin Wayne: Algorithms, Addison-Wesley

## MULTI-OBJECTIVE OPTIMIZATION

BCA-305C

Cr L-T-P

4 3-1-0

### Unit – I

#### Introduction to Multi-objective Optimization:

Basics of optimization, Single vs. multi-objective optimization, Concept of Pareto optimality

Formulation of multi-objective optimization problems, Applications of multi-objective optimization in real-world scenarios.

### Unit – II

#### Techniques for Multi-objective Optimization:

Weighted sum method,  $\epsilon$ -constraint method, Goal programming, Evolutionary algorithms for multi-objective optimization, Examples and case studies.

### Unit - III

#### Decision Making in Multi-objective Optimization:

Ranking and selection of solutions, Multi-criteria decision-making (MCDM)

Methods: Analytic Hierarchy Process (AHP), Technique for Order of Preference by Similarity to Ideal Solution (TOPSIS), Trade-offs and decision making in multi-objective problems.

### Unit – IV

#### Applications and Advanced Topics:

Real-world applications in engineering, finance, and logistics, Introduction to hybrid optimization techniques, Fuzzy multi-objective optimization, Case studies in multi-objective optimization.

### Text Books

1. Kalyanmoy Deb: **Multi-objective Optimization Using Evolutionary Algorithms**, Wiley
2. Carlos M. Fonseca: **Evolutionary Multi-objective Optimization**, Springer
3. Matthias Ehrgott: **Multicriteria Optimization**, Springer
4. CoelloCoello, Carlos A., Lamont, Gary B.: **Applications of Multi-objective Evolutionary Algorithms**, World Scientific

### Reference Books

2. Masatoshi Sakawa: **Fuzzy Multi-objective and Goal Programming**, Springer
3. Paolo Vercellis: **Multi-objective Combinatorial Optimization**, Wiley
4. AndrzejJaszkiewicz: **Genetic and Evolutionary Algorithms for Multi-objective Optimization**,

## BIOSTATISTICS

BCA-305 D

Cr L-T-P

4 3-1-0

### Unit - I

#### Introduction to Biostatistic:

Definition and scope of biostatistics, Types of data: Qualitative and quantitative

Data collection methods in biological sciences, Descriptive statistics: Mean, median, mode, standard deviation, Introduction to probability theory.

### Unit - II:

#### Probability Distributions:

Basic probability concepts, Normal distribution, binomial distribution, Poisson distribution

Application of probability distributions in biology, Sampling methods and sample size determination, Central limit theorem and its importance.

### Unit - III

#### Hypothesis Testing:

Null and alternative hypotheses, Types of errors (Type I and Type II), t-test, chi-square test, and ANOVA, Confidence intervals, Applications of hypothesis testing in biological research.

### Unit - IV: Regression and Correlation:

Simple linear regression, Multiple regression analysis, Correlation coefficient: Pearson and Spearman, Logistic regression in biological data, Applications of regression in biological and medical research.

### Text Books

1. Kalyanmoy Deb: **Multi-objective Optimization Using Evolutionary Algorithms**, Wiley
2. Carlos M. Fo Wayne W. Daniel: **Biostatistics: A Foundation for Analysis in the Health Sciences**, Wiley
3. Harvey Motulsky: **Intuitive Biostatistics**, Oxford University Pressnseca: **Evolutionary Multi-objective Optimization**, Springer
4. Matthias Ehrgott: **Multicriteria Optimization**, Springer
5. CoelloCoello, Carlos A., Lamont, Gary B.: **Applications of Multi-objective Evolutionary Algorithms**, World Scientific.

### Reference Books

2. Robert R. Sokal, F. James Rohlf: **Biometry: The Principles and Practice of Statistics in Biological Research**, W.H. Freeman
3. John A. Rice: **Mathematical Statistics and Data Analysis**, Cengage Learning
4. Jerrold H. Zar: **Biostatistical Analysis**, Pearson

1. Basics of MS-Dos commands and Implementation
2. Implementation of CPU Scheduling.
  - i. FCFS
  - ii. SJF
  - iii. Round Robin
  - iv. Priority.
3. Simulate algorithm for deadlock prevention and detection
4. Simulate the algorithm for deadlock avoidance
5. Simulate algorithm for deadlock recovery
6. Simulate page replacement algorithms:
  - i. FIFO
  - ii. LRU
  - iii. Optimal
7. Implementation of Disk Scheduling using
  - i. FCFS,
  - ii. SCAN
  - iii. C-SCAN algorithm
8. Implementation of Disk Scheduling using
  - i. LOOK
  - ii. C-LOOK
  - iii. SSTF algorithm

## **HTML, DHTML and CSS Programming**

**BCA 352**

**L T P 0 0 2**

### **List of Programs**

1. Program to describe various text formatting commands.
2. Program to create an unordered list.
3. Program to create an ordered list.
4. Program to create a Table.
5. Program to create a simple form.
6. Program to create a Hyperlink.
7. Program to insert an image to Web page.
8. Program to insert scrolling text using Marquee tag.
9. Program to divide a page into Frames.
10. Program to create a simple layout of Webpage.
11. Program to insert a Video element.
12. Implement the CSS functioning with any of the program.
13. Program to calculate the length of the given string.
14. Apply the User consent option with the web page.
15. Insert the current date and time in the web page.

**Course Objectives:**

- To enhance critical thinking and presentation skills.
- To foster collaborative learning and peer feedback.
- To deepen understanding of selected topics through research and discussion.

**Module 1: Seminar Preparation****1. Introduction to Seminar Topics**

- Overview of themes and subject areas.
- Guidelines for topic selection.

**2. Research Skills**

- Finding credible sources (books, journals, online databases).
- Evaluating and synthesizing information.

**3. Creating Effective Presentations**

- Designing visual aids (slides, posters).
- Tips for effective public speaking and engagement.

**Module 2: Seminar Execution****1. Presentation Skills**

- Delivering content clearly and confidently.
- Engaging the audience through questions and discussions.

**2. Peer Feedback Mechanism**

- Constructive feedback techniques.
- Self-assessment and reflection post-presentation.

**3. Group Dynamics**

- Working in teams to prepare collaborative seminars.
- Assigning roles and responsibilities within groups.

**Module 3: Topics for Seminars****1. Interdisciplinary Themes**

- Examples: Technology in Education, Environmental Sustainability, Mental Health Awareness.
- Encouraging connections across various disciplines.

**2. Current Events and Issues**

- Analyzing recent developments and their implications.
- Encouraging critical discourse around current affairs.

## **DATA STRUCTURES**

**BCA-401**

**L T P 3 1 2**

### **UNIT 1**

Introduction: Data types, structures, review of data structures in C/C++, static and dynamic memory allocation, recursion, Tower of Hanoi problem.

### **UNIT 2**

Stacks & Queues: Concept, operations and representation in C/C++, application to evaluation of post fix expressions, conversion from in fix to post fix representation. Queues-Sequential representation, operations, priority queues, and array implementation.

### **UNIT 3**

Linked Lists & Binary Trees: Concept, operations, stacks and queues as lists, array and dynamic representation circular lists, doubly linked lists, Josephus problem. Binary trees definition, array and dynamic representations, operations, lists as trees. Almost complete binary trees, threaded binary trees, Games Trees.

### **UNIT 4**

Sorting: Efficiency considerations, Onotation, Bubblesort, Quicksort, Selection sort, binary trees or Heap, heapsort, heapasapriority queue, Insertion sort, Shellsort, Mergesort, Radixsort.

### **UNIT5**

Searching: Sequential searching, indexed Sequential searching, binary search, interpolation search, binary tree searching, insertion and deletion, Optimum search trees, height balanced trees, single and double rotations, Multiway, search trees, B-trees, B+- trees, Hashing methods of resolving clashes, methods of choosing hash functions.

### **Laboratory work:**

Implementation of Arrays, Recursion, Stacks, Queues, Lists, Binary trees, Sorting techniques, Searching techniques. Implementation of all the algorithmic techniques.

**Text Books:** Kruse, R.L., Leung, B.P. and Tondo, C.L., Data Structures and Program Design in C, Dorling Kindersley (2008). • Langsam, Y. and Augenstein, M.J., Data Structures Using C and C++, Dorling Kindersley (2008) 2nd ed.

**Reference Books:** • Trembley, J.P., Sorenson, P.G., An introduction to data structures with applications, Tata McGraw Hill (2008) 2nd ed. • Sahni, Sartaj, Data Structures, Algorithms and Applications in C++, Universities Press (2005) 2nd ed.

## JAVA PROGRAMMING

BCA-402

L T P  
3 1 2

### UNIT-I

**Java Programming:** Introduction, Data types, access specifiers, operators, control statements, arrays. Classes: Fundamentals, objects, methods, constructors. Inheritance: Super class, subclass, this and super operator, method overriding, use of final, packages, abstract class, interface. Polymorphism: Method overloading, constructor overloading.

### UNIT – II

**Java Library:** String handling (only main functions), String Buffer class. Elementary concepts of Input/Output: byte and character streams, System.in and System.out, print and println, reading from a file and writing in a file.

### UNIT – III

**Exception Handling:** Exception Class, built in checked and unchecked exceptions, user defined exceptions, use of try, catch, throw, throws, finally. Multi threaded programming: Overview, comparison with multiprocessing, Thread class and Runnable interface, life cycle, creation of single and multiple threads, thread priorities, overview of Synchronization.

### UNIT-IV

**Software Development using Java:** Applets: Introduction, Life cycle, creation and implementation, AWT controls: Button, Label, TextField, TextArea, Choice lists, list, scrollbars, check boxes, Layout managers, Elementary concepts of Event Handling: Delegation Event Model, Event classes and listeners, Adapter classes, Inner classes. Swings: Introduction and comparison with AWT controls.

### UNIT-V

**Networking Basics:** Socket (datagram and TCP/IP based client and server socket), factory methods, InetAddress. JDBC: JDBC Architecture, JDBC Drivers, Connecting to the Database. Introduction to Java Servlets: Life cycle, Interfaces and classes in javax.servlet package (only description) Creating a simple servlet

### TEXT BOOKS:

1. Patrick Naughton and Herbert Schildt, "Java-2 The Complete Reference", TMH.
2. Y. Daniel Liang, "Introduction to Java Programming, Comprehensive Version, 7/e" Pearson.

### REFERENCE BOOKS: -

1. Krishnamoorthy R, Prabhu S, "Internet and Java Programming", New Age Intl.
2. David Flanagan, Jim Farley, William Crawford and Kris Magnusson, "Java Enterprise in a Nutshell", O'Reilly.

## COMPUTER SYSTEM ARCHITECTURE

BCA-403

L T P 312

### UNIT-I

**Register Transfer and Micro-operations:** Register Transfer Language, Register Transfer, Bus and Memory Transfers, Arithmetic Micro-operations, Logic Micro-operations, Shift Microoperations, Arithmetic logic shift unit

### UNIT-II

**Basic Computer Organizations and Design:** Instruction Codes, Computer Registers, Computer Instructions, Timing and Control, Instruction Cycle, Memory-Reference Instructions, Register reference instructions, Input - Output Instructions, Design of Accumulator Logic.

### UNIT-III

**Design of Microprogrammed Control Unit**

**Central Processing Unit:** Introduction, General Register Organization, Stack Organization, Instruction Formats, Addressing Modes. Difference between RISC and CISC.

**Pipeline and Vector Processing:** Arithmetic and Instruction pipeline, Vector operations, Matrix Multiplication, memory interleaving.

### UNIT-IV

**Computer Arithmetic:** Introduction, Multiplication Algorithms, Division Algorithms, for fixed point-members.

**Input-Output Organization:** Peripheral Devices, Input-Output Interfaces, Asynchronous Data Transfer, Modes of Transfer, Priority Interrupt, Direct Memory Access (DMA)

### UNIT-V

**Memory Organization:** Memory Hierarchy, Main Memory, Auxiliary Memory, Associative Memory, Cache Memory, Virtual Memory, Memory Management Hardware.

### TEXT BOOKS :

1. Morris Mano, Computer System Architecture, 3rd Edition, Prentice-Hall of India Private Limited, 1999.

### REFERENCE BOOKS:

## **KNOWLEDGE MANAGEMENT**

**BCA-404**

**L T P 310**

### **UNIT I**

#### **INTRODUCTION**

An Introduction to Knowledge Management - The foundations of knowledge management-including cultural issues- technology applications organizational concepts and processes-management aspects- and decision support systems. The Evolution of Knowledge management : From Information Management to Knowledge Management - Key Challenges Facing the Evolution of Knowledge Management - Ethics for Knowledge Management.

### **UNIT II**

#### **CREATING THE CULTURE OF LEARNING AND KNOWLEDGE SHARING**

Organization and Knowledge Management - Building the Learning Organization. Knowledge Markets: Cooperation among Distributed Technical Specialists – Tacit Knowledge and Quality Assurance.

### **UNIT III**

#### **KNOWLEDGE MANAGEMENT-THE TOOLS**

Telecommunications and Networks in Knowledge Management - Internet Search Engines and Knowledge Management - Information Technology in Support of Knowledge Management - Knowledge Management and Vocabulary Control - Information Mapping in Information Retrieval - Information Coding in the Internet Environment - Repackaging Information.

### **UNIT IV**

#### **KNOWLEDGEMANAGEMENT-APPLICATION**

Components of a Knowledge Strategy - Case Studies (From Library to Knowledge Center, Knowledge Management in the Health Sciences, Knowledge Management in Developing Countries).

### **UNIT V**

#### **FUTURE TRENDS AND CASE STUDIES**

Advanced topics and case studies in knowledge management - Development of a knowledge management map/plan that is integrated with an organization's strategic and business plan - A case study on Corporate Memories for supporting various aspects in the process life -cycles of an organization.

#### **TEXT BOOK:**

1. Srikantaiah.T. K., Koenig, M., “Knowledge Management for the Information Professional” Information Today, Inc., 2000.

#### **REFERENCE:**

1. Nonaka, I., Takeuchi, H., “The Knowledge-Creating Company: How Japanese Companies Create the Dynamics of Innovation”, Oxford University Press, 1995.

## KNOWLEDGE TRANSFER

BCA-404 A

Cr L-T-P

4 3-1-0

### Unit - I

#### Fundamentals of Knowledge Transfer

Definition and scope of knowledge transfer, Importance of knowledge sharing in organizations

Types of knowledge: Tacit and Explicit, Knowledge transfer vs. Knowledge management, Barriers to effective knowledge transfer.

### Unit – II

#### Models and Frameworks of Knowledge Transfer

SECI model (Socialization, Externalization, Combination, Internalization), Wiig's Knowledge Management Cycle, Nonaka and Takeuchi's Knowledge Creation Model, Communities of practice (CoP), Knowledge transfer strategies in organizations.

### Unit - III

#### Techniques for Knowledge Transfer

mentoring and coaching methods, Storytelling as a knowledge transfer tool, Use of technology: Wikis, blogs, and forums, Workshops and seminars for knowledge dissemination, Knowledge repositories and databases.

### Unit - IV

#### Knowledge Transfer in Organizations

knowledge-sharing culture, Role of leadership & knowledge transfer, Cross-functional knowledge sharing, Measuring knowledge transfer effectiveness, Legal and ethical considerations in knowledge transfer.

### Unit – V

#### Knowledge Transfer and Emerging Technologies

Artificial Intelligence and knowledge transfer, Data mining and knowledge discovery, Virtual teams and remote collaboration, Future trends in knowledge transfer, Case studies of knowledge transfer in modern organizations.

#### TEXT BOOKS:

5. Ikujiro Nonaka and Hirotaka Takeuchi: **The Knowledge-Creating Company**, Oxford University Press
6. Elias M. Awad and Hassan Ghaziri: **Knowledge Management**, Pearson Education
7. J. W. Cortada and J. A. Woods: **The Knowledge Management Yearbook**, Butterworth-Heinemann

8. Thomas H. Davenport and Laurence Prusak: **Working Knowledge**, Harvard Business Review Press

**Reference Books:**

1. Amrit Tiwana: **The Knowledge Management Toolkit**, Pearson Education
2. Michael Polanyi: **The Tacit Dimension**, University of Chicago Press
3. Karl M. Wiig: **Knowledge Management Foundations**, Schema Press
4. Mark W. McElroy: **The New Knowledge Management**, Butterworth-Heinemann
5. Alex Bennet and David Bennet: **Organizational Survival in the New World**, Routledge

**Course Objectives:**

- To develop skills in visualizing and organizing information.
- To enhance critical thinking and knowledge retention.
- To promote collaborative learning through shared knowledge maps.

**Module 1: Introduction to Knowledge Mapping**

1. **Understanding Knowledge Mapping**
  - Definition and purpose of knowledge mapping.
  - Types of knowledge maps (concept maps, mind maps, flowcharts).
2. **Tools and Technologies**
  - Overview of digital tools for knowledge mapping (e.g., MindMeister, XMind, Lucidchart).
  - Introduction to paper-based mapping techniques.

**Module 2: Creating Knowledge Maps**

1. **Basic Techniques**
  - Identifying key concepts and relationships.
  - Structuring information hierarchically.
2. **Practical Lab Sessions**
  - Hands-on workshops to create individual knowledge maps.
  - Group activities to develop collaborative knowledge maps.
3. **Applying Knowledge Mapping**
  - Mapping for different purposes (study aids, project planning, brainstorming).
  - Case studies on effective knowledge mapping.

**Module 3: Analyzing and Sharing Knowledge Maps**

1. **Evaluating Knowledge Maps**
  - Criteria for assessing clarity, completeness, and organization.
  - Peer review sessions for constructive feedback.
2. **Presenting Knowledge Maps**
  - Techniques for effectively presenting and explaining maps.
  - Role-playing to simulate audience engagement.
3. **Reflection and Iteration**
  - Importance of revisiting and updating knowledge maps.
  - Reflective practices on personal learning and mapping experiences.

**Assessment and Evaluation**

- Grading based on creativity, clarity, and effectiveness of knowledge maps.
- Participation in group activities and peer evaluations.

## Course Objectives:

- To understand the principles and practices of knowledge management.
- To explore various knowledge management systems and tools.
- To develop skills in designing and implementing knowledge management solutions.

## Module 1: Introduction to Knowledge Management

1. **Understanding Knowledge Management (KM)**

- Definition and importance of KM.
- Types of knowledge (tacit vs. explicit).

2. **KM Frameworks and Models**

- Overview of key KM theories and frameworks.
- Case studies on successful KM implementations.

## Module 2: Knowledge Management Tools and Technologies

1. **Overview of KM Systems**

- Types of KM systems (content management systems, collaborative tools, etc.).
- Comparison of popular KM tools (e.g., SharePoint, Confluence, Notion).

2. **Hands-On Lab Sessions**

- Setting up a KM system using selected tools.
- Practical exercises in content creation and management.

3. **Data Management and Organization**

- Best practices for organizing and tagging knowledge.
- Introduction to metadata and taxonomies.

## Module 3: Designing and Implementing KM Solutions

1. **Identifying Knowledge Needs**

- Conducting needs assessments for KM systems.
- Engaging stakeholders in the KM process.

2. **Creating a KM Strategy**

- Steps for developing a KM strategy.
- Aligning KM initiatives with organizational goals.

3. **Project Work**

- Group projects to design and propose a KM solution for a hypothetical organization.
- Presentations of project findings and proposed implementations.

## Assessment and Evaluation

- Grading based on participation, project work, and practical assignments.
- Peer feedback on group projects.

**Course Objectives:**

- To understand the role of information systems in knowledge management.
- To explore the design and implementation of information systems for KM.
- To develop practical skills in using KM information systems and tools.

**Module 1: Introduction to Information Systems in KM****1. Understanding Information Systems**

- Definition and components of information systems.
- The relationship between information systems and knowledge management.

**2. Types of Information Systems for KM**

- Overview of various systems (e.g., databases, document management systems, collaborative tools).
- The role of decision support systems in KM.

**Module 2: Knowledge Management System Components****1. Core Components of KM Systems**

- Data management and storage.
- Knowledge repositories and databases.
- User interfaces and access controls.

**2. Tools and Technologies**

- Introduction to popular KM tools (e.g., SharePoint, KnowledgeOwl, Trello).
- Hands-on exercises with selected KM software.

**Module 3: Designing KM Information Systems****1. System Design Principles**

- User-centered design and usability.
- Best practices for designing intuitive interfaces.

**2. Lab Activities**

- Group projects to create prototypes of KM systems.
- Exercises in data modeling and knowledge mapping.

**3. Implementation Strategies**

- Steps for deploying a KM information system.
- Change management considerations in KM implementation.

**Module 4: Evaluating KM Information Systems****1. Assessment Criteria**

- Evaluating the effectiveness of KM systems.
- Metrics for measuring user satisfaction and knowledge utilization.

**2. Feedback Mechanisms**

- Implementing feedback loops for continuous improvement.
- Conducting user testing and gathering insights.

**Assessment and Evaluation**

- Grading based on participation, project quality, and practical assignments.
- Peer reviews of group projects.

## **DATASTRUCTUREUSINGCLAB (BCA-451)**

Program 1:-To search an element in the array using Linear Search.

Program 2:-To search an element in the 2-dimensional array using Linear Search.

Program 3:-To merge two sorted array in to one sorted array.

Program 4:-To perform the following operation in Matrix  
1.Addition 2.Subtraction 3.Multiplication 4.Transpose

Program 5: - To perform the swapping of two numbers using call by value and call by reference

Program 6:-To perform following operation on strings using string functions  
1.Addition 2.Copying 3.Reverse 4.LengthofString

Program 7:-To search an element in the array using Iterative Binary Search.

Program 8:-To search an element in the array using Recursive Binary Search.

Program 9:-To implement Bubble Sort.

Program 10:-To implement Selection Sort.

Program 11:-To implement Insertion Sort.

Program 12:-To implement Quick Sort.

Program 13:-To implement Merge Sort.

Program 14:-To implementStack using array.

Program 15:-To implement Queue using array.

S.NO	PRACTICAL PROGRAMS
1.	Write a program to create class and object in java.
2.	Write a program to create user define function in a user define class in java.
3.	Write a program to find function overloading in java.
4.	Write a program to to create function overriding in java.
5.	Write a program to create single inheritance in java.
6.	Write a program to create multilevel inheritance in java.
7.	Write a program to create multiple inheritance in case of interface in java.
8.	Write a program to create abstract class and abstract function in java.
9.	Write a program to create parameterized constructor in java.
10.	Write a program to create Button using awt in java.
11.	Write a program to using JDBC in java.
12.	Write a program to crate Multithreading in java.
13.	Write a program to create Event handling in java.
14.	Write a program to print matrix in java.
15.	Write a program to print addition of two matrix in java.

Program 1:-Program to implement basic logic gates like AND, OR, NOT, NAND, NOR, XOR using HDL (Verilog/VHDL).
Program 2:- Design and simulate half adder and full adder circuits.
Program 3:- Write programs to implement multiplexer and demultiplexer circuits.
Program 4:- Design a 4-bit binary adder/subtractor using Verilog or VHDL.
Program 5:- Develop a program to implement a simple ALU that performs basic arithmetic and logical operations.
Program 6:- Implement flip-flops using HDL and simulate their behavior.
Program 7:- Design and simulate a 4-bit synchronous up/down counter.
Program 8:- Program to simulate registers and shift registers using Verilog/VHDL.
Program 9:- Simulate the working of RAM/ROM using hardware description languages (HDL).
Program 10:- Design and implement a finite state machine (FSM) for sequence detection.
Program 11:- Write and simulate Booth's algorithm for signed binary multiplication.
Program 12:- Develop a basic CPU design that can execute simple instructions like ADD, SUB, and LOAD using HDL.
Program 13:- Simulate a custom instruction set architecture (ISA) with simple operations.
Program 14:- Implement a basic instruction pipeline to simulate how pipelining works in processors.
Program 15:- Simulate cache memory using various mapping techniques (direct mapping, associative mapping).

## **Seminar Based on Learning(BCA-454)**

- **Educational technology**

A common topic at EdCamps, this includes practical examples of using modern tools in the classroom and how to solve problems that technology can cause.

- **Current events**

Students can track current events and create a news show or podcast about them.

- **Artificial intelligence**

Seminars can help you learn about responsible AI development and deployment, and build a professional network.

- **Case studies and debates**

These activities can help students engage with the material and develop communication, critical analysis, and teamwork skills.

- **Classroom management**

This includes strategies and techniques for creating a learning environment that reduces disruptions.

- **Global issues in education and research**

This can include topics such as the impact of crisis on education, ethical issues in education, and technology in teaching and learning.

- **Psychology**

This includes core areas such as biological, cognitive, developmental, social, and individual differences.

# SOFTWARE ENGINEERING

BCA-501

L T P 3 12

## UNIT 1

**Software Engineering and Processes:** Introduction to Software Engineering, Software Evolution, Software Characteristics, Software Crisis: Problem and Causes, Software process models (Waterfall, Incremental, and Evolutionary process models and Agile), Software quality concepts, process improvement, software process capability maturity models, Personal Software process and Team Software Process, Overview of Agile Process.

## UNIT 2

**Requirements Engineering:** Problem Analysis, Requirement elicitation and Validation. Requirements modelling: Scenarios, Information and analysis classes, flow and behavioral modeling, documenting Software Requirement Specification (SRS).

## UNIT 3

**Software Design and construction:** System design principles: levels of abstraction (architectural and detailed design), separation of concerns, information hiding, coupling and cohesion, Structured design (top-down functional decomposition), object-oriented design, event driven design, component-level design, test driven design, function oriented, service oriented, Design patterns.

## UNIT 4

**Software Verification and Validation:** Levels of Testing, Functional Testing, Structural Testing, Test Plan, Test Case Specification, Software Testing Strategies, Verification & Validation, Unit, Integration Testing, Top Down and Bottom-Up Integration Testing, Alpha & Beta Testing, White box and black box testing techniques, System Testing and Debugging.

## UNIT 5

**Software Project Management:** (COCOMO models), Quality Management, Plan for software Quality Control and Assurance, Earned Value Analysis. Advanced Topics: Formal specification, CASE Tools, Software Business Process Reengineering, Configuration Management.

### Laboratory work:

Implementation of Software Engineering concepts and exposure to CASE tools like Rational Software suit, Turbo Analyst, Silk Suite. Follow entire SDLC depending on project domain.

**Text Books:** 1. Pressman S. R. and Maxim R. B., Software Engineering, A Practitioner's Approach, McGraw Hill International (2015) 8th Edition. 2. Sommerville I., Software Engineering, Addison-Wesley Publishing Company (2011) 9th Edition.

**Reference Book:** 1. Foster C. E., Software Engineering: A Methodical Approach, Apress (2014) 1st ed. 2. Booch G., Rumbaugh J., Jacobson I., The Unified Modeling Language User Guide (2005) 2nd Edition.

## ANALYSIS OF ALGORITHM AND DATA STRUCTURES

BCA-502

L T P 3 1 2

### UNIT 1

**Linear Data Structures:** Arrays, Records, Strings and string processing, References and aliasing, Linked lists, Strategies for choosing the appropriate data structure, Abstract data types and their implementation: Stacks, Queues, Priority queues, Sets, Maps.

### UNIT 2

**Basic Analysis:** Differences among best, expected, and worst-case behaviours of an algorithm, Asymptotic analysis of upper and expected complexity bounds, Big O notation: formal definition and use, Little o, big omega and big theta notation, Complexity classes, such as constant, logarithmic, linear, quadratic, and exponential, Time and space trade-offs in algorithms, Recurrence relations, Analysis of iterative and recursive algorithms.

### UNIT 3

**Algorithmic Strategies with examples and problem solving:** Brute-force algorithms with examples, Greedy algorithms with examples, Divide-and-conquer algorithms with examples, Recursive backtracking, Dynamic Programming with examples, Branch-and-bound with examples, Heuristics, Reduction: transform-and-conquer with examples.

### UNIT 4

**Non-Linear Data Structures and Sorting Algorithms:** Hash tables, including strategies for avoiding and resolving collisions, Binary search trees, Common operations on binary search trees such as select min, max, insert, delete, iterate over tree, Graphs and graph algorithms, Representations of graphs, Depth- and breadth-first traversals, Heaps, Graphs and graph algorithms, Shortest-path algorithms (Dijkstra and Floyd), Minimum spanning tree (Prim and Kruskal)

### UNIT 5

**Problem Clauses:** P, NP, NP- Hard and NP-complete, deterministic and non-deterministic polynomial time algorithm approximation and algorithm for some NP complete problems. Introduction to parallel algorithms, Genetic algorithms, intelligent algorithms.

#### **Laboratory work:**

Implementation of Arrays, Recursion, Stacks, Queues, Lists, Binary trees, Sorting techniques, Searching techniques. Implementation of all the algorithmic techniques.

**Text Books:** 1. Cormen H. T., Leiserson E. C., Rivest L. R., and Stein C., Introduction to Algorithms, MIT Press (2009) 3rd ed. 2. Goldberg E. D., Genetic Algorithms, Pearson education 1989 (2009) 1st ed.

**Reference Books:** 1. Sedgewick R. and Wayne K., Algorithms, Addison-Wesley Professional (2011), 4th ed.

## **MOBILE COMPUTING**

**BCA-503**

**L T P 3 10**

### **UNIT 1: Introduction**

Introduction to Mobile Computing – Applications of Mobile Computing- Generations of Mobile Communication Technologies- Multiplexing – Spread spectrum -MAC Protocols – SDMA- TDMA- FDMA- CDMA

### **UNIT 2: Mobile Telecommunication System**

Introduction to Cellular Systems - Cellular systems- Frequency Management and Channel Assignment- types of handoff and their characteristics, dropped call rates & their evaluation, GSM – Services & Architecture – Protocols – Connection Establishment – Frequency Allocation – Routing – Mobility Management – Security – GPRS- UMTS – Architecture – Handover - Security

### **UNIT 3: Telecommunication Networks & Wireless Lan**

Telecommunication systems – GSM – GPRS - Satellite Networks ,Wireless LAN – IEEE802.11 - Architecture – services – MAC – Physical layer – IEEE 802.11a -802.11b standards–HIPERLAN – Blue Tooth.

### **UNIT 4: Mobile Network Layer & Transport Layer**

Mobile IP – DHCP – AdHoc– Proactive protocol-DSDV, Reactive Routing Protocols – DSR, AODV , Hybrid routing –ZRP, Multicast Routing- ODMRP, Vehicular Ad Hoc networks (VANET) –MANET Vs VANET – Security, Traditional TCP, Mobile TCP

### **UNIT5: Mobile Platforms and Applications**

Mobile Device Operating Systems – Special Constraints & Requirements – Commercial Mobile Operating Systems, Mobile Payment System – Security Issues, WAP Model- Mobile Location based services -WAP Gateway –WAP protocols – WAP useragent profile- caching model-wireless bearers for WAP - WML – WML Scripts

### **TEXT BOOKS:**

1. Jochen Schiller, “Mobile Communications”, Second Edition, Pearson Education, 2003.

## **BIG DATA AND MACHINE LEARNING**

**BCA-504**

**L T P 3 10**

### **UNIT 1**

Introduction to Business Intelligence: Business View of IT Applications, Digital Data, OLTP vs. OLAP, Why, What and How BI? , BI Framework and components, BI Project Life Cycle, Business Intelligence vs. Business Analytics.

### **UNIT 2**

Introduction to Data Analytics: Data and Relations, Data Visualization, Correlation, Regression, Forecasting, Classification, Clustering. Big Data Technology Landscape: Fundamentals of Big Data Types, Big data Technology Components, Big Data Architecture, Big Data Warehouses, Functional vs. Procedural Programming Models for Big Data.

### **UNIT 3**

Basic concepts, Designing a learning system, Issues in machine learning. Types of machine learning: Learning associations, Supervised learning, Unsupervised learning, Reinforcement learning, Model Evaluation Parameters, Feature Selection and Extraction. Linear Regression, Multi Regression, Gradient Descent, SVM.

### **UNIT 4**

Clustering: K-Means, k-Medoids, Agglomerative versus Divisive Hierarchical Clustering Distance Measures in Algorithmic Methods, Mean-shift Clustering.

### **UNIT5**

Decision Tree Learning: Decision tree representation, appropriate problems for decision tree learning, Univariate Trees (Classification and Regression), Bayesian Learning: Bayes theorem and concept learning, Bayes optimal classifier, Naive Bayes Classifier.

**Text Books:** . Mitchell T.M., Machine Learning, McGraw Hill (1997) 2nd ed. 2. Alpaydin E., Introduction to Machine Learning, MIT Press (2010) 2nd ed.

**Reference Books:** Bishop C., Pattern Recognition and Machine Learning, Springer-Verlag (2006) 2nd ed. 4. Michie D., Spiegelhalter D. J., Taylor C. C., Machine Learning, Neural and Statistical Classification. Overseas Press (2009) 1st ed.

1. To prepare problem statement for any project.
2. Create a problem statement for an online learning platform.
3. Develop an understanding and Software Requirements Specification(SRS).
4. To draw a sample Entity Relationship Diagram for library management system.
5. To prepare DataFlow Diagram Online shopping management system.
6. To prepare the student / university management system Use Case Diagram.
7. To draw a sample activity diagram for enterprise architectural modeling.
8. To draw a sample Class diagram for seminar.
9. To draw a Sequence Diagram for Online Shopping Checkout Process
10. To draw a Component Diagram for Library Management System.
11. To draw a Deployment Diagram for University Management System.
12. Develop a testing strategy for an online banking application.
13. Create a presentation that explains each phase of the SDLC with examples.

**Course Objectives**

- Implement various data structures
- Analyze algorithm efficiency
- Develop practical problem-solving skills

**1. Introduction to C++**

- Review of C++ syntax and fundamentals
- Basic data types and control structures

**2. Arrays and Strings**

- Dynamic and static arrays
- String manipulation functions

**3. Linked Lists**

- Singly and doubly linked lists
- Basic operations: insert, delete, traverse

**4. Stacks and Queues**

- Stack implementation and applications
- Queue implementation and applications

**5. Trees**

- Binary trees and traversal techniques
- Binary search trees: operations and applications

**6. Heaps**

- Heap data structure and heap sort
- Priority queues

**7. Hashing**

- Hash tables: creation and collision handling
- Practical applications of hashing

**8. Graphs**

- Graph representations (adjacency list/matrix)
- Traversal algorithms: BFS and DFS

**9. Sorting Algorithms**

- Overview of sorting algorithms: quicksort, mergesort, bubblesort
- Analysis of time and space complexity

**10. Searching Algorithms**

- Linear search vs. binary search
- Searching techniques on various data structures

**11. Algorithm Analysis**

- Big O notation and complexity analysis
- Practical examples and case studies

**12. Final Project**

- Implementation of a complex data structure or algorithm
- Presentation and demonstration of project

- **Introduction to Research Methodologies:** Overview of qualitative, quantitative, and mixed methods.
- **Research Topic Selection:** Strategies for identifying and refining research questions.
- **Literature Review:** Conducting thorough searches and summarizing relevant literature.
- **Research Methodology Design:** Choosing appropriate research methods and approaches.
- **Data Collection Techniques:** Exploring surveys, interviews, experiments, and observations.
- **Data Analysis:** Introduction to statistical and qualitative analysis techniques.
- **Research Proposal Development:** Structuring and writing an effective research proposal.
- **Ethical Considerations in Research:** Understanding ethical issues and obtaining necessary approvals.
- **Project Review and Feedback:** Presenting progress and receiving constructive feedback.
- **Final Project Submission:** Preparing and submitting the completed research project.

## DATA COMMUNICATION AND COMPUTER NETWORK

BCA-601

L T P 3 12

### UNIT 1

Introduction: Organization of the Internet, ISP, Network criteria, Categories of networks, Network performance and Transmission Impairments. Network Devices, OSI Model, TCP/IP Protocol Suite, Layering principles, Line Encoding, Switching technique and Multiplexing.

### UNIT 2

Local Area Networks: LAN topologies: Bus topology, Ring topology, Token passing rings, FDDI, Star topologies, Asynchronous transfer mode, Ethernet, IEEE standards 802.3, 802.5. Wireless LANs: IEEE 802.11 and Bluetooth, introduction to Virtual circuit switching including frame relay, X.25, and ATM.

### UNIT 3

Reliable Data Delivery: Error control (retransmission techniques, timers), Flow control (Acknowledgements, sliding window), Multiple Access, Performance issues (pipelining). Routing and Forwarding: Routing versus forwarding, Static and dynamic routing, Unicast and Multicast Routing. Distance-Vector, Link-State, Shortest path computation.

### UNIT 4

Process-to-Process Delivery: UDP, TCP and SCTP, Multiplexing with TCP and UDP, Principles of congestion control, Approaches to Congestion control, Quality of service, Flow characteristics, Techniques to improve QoS.

### UNIT 5

Network Applications: Naming and address schemes (DNS, IP addresses, Uniform Resource Identifiers, etc.), Distributed applications (client/server, peer-to-peer, cloud, etc.), HTTP as an application layer protocol, Electronic mail, File transfer, Remote login.

**Laboratory work:** To design conceptual networks using E-Draw, Visual Studio etc. and to implement topologies BUS, RING, STAR, Mesh and configuring Router using Packet tracer or GNS3 platform

**Text Books:** 1. Forouzan A. B., Data communication and Networking, McGraw Hill (2012) 5thed. 2. Tanenbaum S. A. and Wetherall J. D., Computer Networks, Prentice Hall (2013) 5thed.

**Reference Books:** Kurose J. and Ross K., Computer Networking: A Top Down Approach, Pearson (2017) 7thed. 2. Stallings W., Computer Networking with Internet Protocols and Technology, Pearson (2004)

# ARTIFICIAL INTELLIGENCE

BCA-602

L T P 310

## UNIT 1

**Overview:** foundations, scope, problems, and approaches of AI. Intelligent agents: reactive, deliberative, goal-driven, utility-driven, and learning agents Problem-solving through Search: forward and backward, state-space, blind, heuristic, problem reduction, A, A\*, AO\*.

## UNIT 2

**Knowledge Representation and Reasoning:** ontologies, foundations of knowledge representation and reasoning, representing and reasoning about objects, relations, events, actions, time, and space; predicate logic, situation calculus, description logics, reasoning with defaults, reasoning about knowledge, sample applications.

## UNIT 3

**Planning:** planning as search, partial order planning, construction and use of planning graphs Representing and Reasoning with Uncertain Knowledge: probability, connection to logic, independence, Bayes rule, Bayesian networks, probabilistic inference, sample applications

## UNIT 4

**Decision-Making:** decision theory, sequential decision problems  
Machine Learning and Knowledge Acquisition: learning from memorization, Learning nearest neighbour, naive Bayes, and decision tree classifiers, Q-learning for learning action policies, applications.

## UNIT 5

**Expert Systems:** Architecture of an expert system, existing expert systems like MYCIN, RI, Expert system shells.

### Laboratory work:

Programming in C/C++/Java/LISP/PROLOG: Programs for Search algorithms- Depth first, Breadth first, Hill climbing, Best first, A\* algorithm, Implementation of games: 8-puzzle, Tic-Tac-Toe, tower of Hanoi and water jug problem using heuristic search, Designing expert system using logic in PROLOG, Implementing an intelligent agent.

**Text Books:** 1. Rich E., Knight K. and Nair B. S., Artificial Intelligence, Tata McGraw Hills (2009) 3rd ed. 2. Luger F. G., Artificial Intelligence: Structures and Strategies for Complex Problem Solving, Pearson Education Asia (2009) 6th ed.

**Reference Books:** 1. Patterson W. D., Introduction to Artificial Intelligence and Expert Systems, Pearson (2015) 1st ed. 2. Russel S., Norvig P., Artificial Intelligence: A Modern Approach, Prentice Hall (2014) 3rd ed.

## **CYBER SECURITY AND CYBER LAW**

**BCA-603**

**L T P 3 10**

### **Unit-I**

Information Security, Cyber Security, Information Assurance, Cyber Crime- Meaning, Types, Need, Function

### **Unit-II**

Information Policy- Meaning, Types, Need, Function, Case Studies, Need, Convergence, Information Divide, Digital Divide, Information Literacy, Network Literacy, Digital Humanities & Sociology, Information and IT Policy as a Discipline and Degrees worldwide

### **Unit-III**

Information Technology Act, Information Security Protocols, Non-repudiation services, related protocols, Fairness in Information Exchanges Protocols

### **Unit-IV**

Trusted Third Party, its use as Adjudicator, message authenticator, Information Security standards, Information Security Infrastructure.

### **Unit-V**

International Information Act & IT Act, Right to Information Act-2005 with Process, Features and Functions, IT Act 2000-Role, Features, Summary, Changes, Data Privacy Rules, Real life Example of IT Act uses, Emerging Cyber Act in India

### **Text/References:**

# SOFTWARE PROJECT MANAGEMENT

BCA-604

L T P 310

## UNIT 1

**Introduction to Project Management:** The characteristics of software projects, Objectives of project management: time, cost and quality, Basics of Project Management, Stakeholders, Stages of Project, The Feasibility Study, Cost-benefit Analysis, Planning, Project Execution, Project and Product Life Cycles, Project Management Knowledge areas, Project Management Tools & Techniques, Project success factors, role of project manager

## UNIT 2

**Project Management and Planning:** System view of project management, Understanding organizations, stakeholder's management, project phases and project's life cycles. Introduction to Agile software, why planning is necessary, Iterative steps for planning, Project Plan documentation methods, Software Requirement Specification.

## UNIT 3

**Project Quality Management:** Quality Planning, quality Assurance, Quality control, Tool & techniques for quality control, Pareto Analysis, Six Sigma, CMM, ISO Standards, Juran Methodology.

## UNIT 4

**Project risk management:** Risk Management planning, common sources of risk, risk identification, risk register, qualitative risk analysis, using probability impact matrixes, expert judgement, qualitative risk analysis, decision trees & expected monetary value, simulation, sensitivity analysis, risk response planning, risk monitoring & control.

## UNIT 5

**Software Configuration Management:** Why versions exist, why retain versions, SCI, Releases vs. version. Change Control and Management

### Laboratory work:

Laboratory work: Using Function Point calculation tools for estimation, comparing with COCOMO estimates, Implementation of various exercises using PERT, CPM methods, Preparing schedule, resource allocation etc. using MS Project or Fissure. sim or VENSIM can also be used, Preparing an RMMM Plan for a case study, Preparing Project Plan for a Software Project for Lab Project or case study. Exploring about PMBOK (Project Management Body of Knowledge) and SWEBOK (Software Engineering Body of Knowledge) from related website, Implementation of software project management concepts using related tools and technologies.

**Text Books:** 1. Hughes B. and Cotterell M. and Mall R., Software Project Management, Tata McGraw Hill (2011) 5th Ed. 2. Pressman R., A practitioner's Guide to Software Engineering, Tata McGraw Hill (2014) 7th Ed.

**Reference Books:** 1. Stellman A., Greene J., Applied Software Project Management, O'Reilly Media, Inc. (2008). 2. Futrell T. R., Shafer F. D. and Shafer I. L., Quality Software Project Management, Prentice Hall (2002).

**BCA-651**

**COMPUTER NETWORK**

1. Programs using TCP Sockets (like date and time server & client, echo server & client, etc.)
2. Programs using UDP Sockets (like simple DNS)
3. Programs using Raw sockets (like packet capturing and filtering)
4. Programs using RPC
5. Simulation of sliding window protocols

**BCA-656**

## **Seminar and Group Discussion**

- **Introduction to Seminar Presentations:** Overview of effective presentation techniques and styles.
- **Topic Selection:** Guidance on choosing relevant and engaging topics for seminars.
- **Research Skills:** Techniques for researching and organizing information for presentations.
- **Presentation Skills:** Training on voice modulation, body language, and visual aids.
- **Group Discussion Dynamics:** Understanding roles in discussions, including facilitators, note-takers, and speakers.
- **Critical Thinking:** Techniques for analyzing arguments and providing constructive feedback.
- **Peer Evaluation:** Learning how to give and receive feedback on presentation skills and content.
- **Technology in Presentations:** Utilizing tools such as PowerPoint, Prezi, and video aids effectively.
- **Special Topics:** Guest lectures or workshops on specific communication skills (e.g., negotiation, conflict resolution).
- **Final Group Discussion:** A culminating group discussion where students will apply skills learned throughout the course.

- **Project Implementation:** Execution of the research plan, including data collection and analysis.
- **Data Analysis Techniques:** Application of statistical tools and software for data interpretation.
- **Research Documentation:** Structuring and writing a detailed research report.
- **Presentation Preparation:** Techniques for effectively communicating research findings.
- **Peer Review Process:** Engaging in constructive feedback sessions with peers on research presentations and reports.
- **Ethical Considerations:** Addressing ethical issues encountered during the research process.
- **Final Presentation:** Preparing and delivering a presentation summarizing the research project and findings.

**Shobhit University, Gangoh**

**(Established by UP Shobhit University Act No. 3, 2012)**

**School of School of Engineering and Technology**

**Ordinances, Regulations & Syllabus**

**For**

**Bachelor of Computer Application (BCA) Three Year  
Programme**

**Semester System**

**(w.e.f. session 2013-14)**

**Approved and adopted in the year 2016 (7<sup>th</sup> Meeting, Board of  
Studies)**

## **Programme Educational Objectives (PEOs)**

**PEO1:** To facilitate in development of strong basic fundamentals of Computer Applications that fit as a perfect foundation towards a beginning a professional career in industry.

**PEO2:** To develop programming skills in learners by using fundamental knowledge of computer Science.

**PEO3:** To apply new designs and solutions to complex real life problems using existing and/or novel technologies.

**PEO4:** To play a creative role during professional life through turning problems to opportunities and foster personal and organizational growth

**PEO5:** To inculcate comprehensive communication ability that is useful during professional communication and leading of teams in future

## **Programme Specific Objectives (PSO's)**

**PSO 1** Students will able to understand, analyze and develop computer programs in the areas related to algorithm, web design and networking for efficient design of computer based system.

**PSO 2** Apply standard software engineering practices and strategies in software project development using open source programming environment to deliver a quality of product for business success.

**PSO 3** Student will able to know various issues, latest trends in technology development and thereby innovate new ideas and solutions to existing problems.

**PSO 4** Analyze and design solutions for real-world problems using computational techniques.

**PSO 5** Explore trends in AI, Machine Learning, Cloud Computing, and Big Data.

## **Programme Outcome Objectives (POO's)**

**PO1:** Understand the concepts of key areas in computer science.

**PO2:** Analyze and apply latest technologies to solve problems in the areas of computer applications.

**PO3:** Analyze and synthesis computing systems through quantitative and qualitative techniques

**PO4:** Apply technical and professional skills to excel in business.

**PO5:** Communicate effectively in both verbal and written form.

**PO6:** Develop practical skills to provide solutions to industry, society and business.

**PO7:** Acquire Knowledge of mathematical foundations, computer application theory and algorithm principles in the design and modeling of computer based system.

**PO8:** Earn caliber to design, analyze and development principles in the construction of complex hardware and software computer systems.

**UNIT I**

**Introduction to C :**History of C , Overview of Procedural Programming and Object-Orientation Programming, Using main() function, Compiling and Executing Simple Programs in C.**Data Types, Variables, Constants, Operators and Basic I/O:** Declaring, Defining and Initializing Variables, Scope of Variables, Using Named Constants, Keywords, Data Types, Casting of Data Types, Operators (Arithmetic, Logical and Bitwise), Using Comments in programs, Character I/O (getc, getchar, putc, putcharc), Formatted and Console I/O (printf(), scanf(), cin, cout), Using Basic Header Files (stdio.h, iostream.h, conio.hetc).

**UNIT II: Expressions, Conditional Statements and Iterative Statements:** Simple Expressions in C (including Unary Operator Expressions, Binary Operator Expressions), Understanding Operators Precedence in Expressions, Conditional Statements (if construct, switch-case construct), Understanding syntax and utility of Iterative Statements (while, do-while, and for loops), Use of break and continue in Loops, Using Nested Statements (Conditional as well as Iterative)

**UNIT III: Functions and Arrays:** Utility of functions, Call by Value, Call by Reference, Functions returning value, Void functions, Return data type of functions, Functions parameters, Differentiating between Declaration and Definition of Functions, Functions with variable number of Arguments. Creating and Using One Dimensional Arrays ( Declaring and Defining an Array, Initializing an Array, Accessing individual elements in an Array, Manipulating array elements using loops), Use Various types of arrays (integer, float and character arrays / Strings) Two-dimensional Arrays (Declaring, Defining and Initializing Two Dimensional Array, Working with Rows and Columns), Introduction to Multi-dimensional array.

**UNIT IV Pointers and References in C:**Understanding a Pointer Variable, Simple use of Pointers (Declaring and Dereferencing Pointers to simple variables), Pointers to Pointers, Pointers to structures, Problems with Pointers, Passing pointers as function arguments, Returning a pointer from a function, using arrays as pointers, Passing arrays to functions. Pointers vs. References, Declaring and initializing references, Using references as function arguments and function return values **Memory Allocation in C:** Differentiating between static and dynamic memory allocation, use of malloc, calloc and free functions, use of new and delete operators, storage of variables in static and dynamic memory allocation

**UNIT V: File I/O, Preprocessor Directives:** Opening and closing a file (use of fstream header file, ifstream, ofstream and fstream classes), Reading and writing Text Files, Using put(), get(), read() and write() functions, Random access in files, Understanding the Preprocessor Directives (#include, #define, #error, #if, #else, #elif, #endif, #ifndef, #ifnndef and #undef), Macros

2. Business English, Pearson, 2008.
3. Language, Literature and Creativity, Orient Blackswan, 2013.

**UNIT:1 Introduction to Behavioural Skills**

Understanding personality traits and types, Self-assessment tools for identifying strengths and areas for improvement, Importance of self-awareness and how it impacts relationships and career.

**UNIT :2 Self-Motivation and Personal Development**

Goal-setting techniques (SMART goals), Building self-discipline and resilience, Techniques to stay motivated, even during challenging times.

**UNIT:3 Interpersonal Skills**

Developing empathy and active listening, Conflict resolution strategies, Building strong relationships through trust and effective communication.

**UNIT:4 Time Management & Prioritization**

Time-blocking, scheduling, and the Eisenhower Matrix, Techniques to reduce procrastination, Setting realistic goals and evaluating progress.

**UNIT:5 Stress and Anger Management**

Identifying personal triggers and stressors, Techniques for stress relief, like deep breathing, meditation, and exercise, Anger management strategies and learning to communicate effectively when angry.

**UNIT:1 Fundamentals of English Grammar**

Parts of speech, sentence structure, types of sentences, Tenses, subject-verb agreement, and common grammatical errors, Usage of prepositions, articles, and conjunctions.

**UNIT:2 Vocabulary Building**

Expanding vocabulary with synonyms, antonyms, idioms, and phrases, Techniques to retain and use new vocabulary, Importance of context in vocabulary usage.

**UNIT:3 Listening and Speaking Skills**

Improving pronunciation and intonation, Active listening techniques for better comprehension, Developing fluency through speaking exercises and dialogue practice.

**UNIT:4 Reading and Writing Skills**

Developing reading strategies (skimming, scanning, and detailed reading), Practice exercises for comprehension and critical analysis of texts, Basics of writing formats: formal and informal letters, essays, and reports.

**UNIT:5 Communication Skills in English**

Difference between verbal and non-verbal communication, Engaging in effective communication, both spoken and written, Role of English in professional and academic settings.

**Unit-I**

**Differential Calculus:** Limits and continuity, Differentiation of algebraic, polynomial, trigonometric, logarithmic, exponential functions, Simple applications of derivatives, Increasing and decreasing functions, Maxima and minima of functions of one variable;

**Unit-II**

**Vectors :**Vector, vector algebra Addition, subtraction, scalar multiplication, magnitude, vector multiplication. Simple applications of vectors.

**Matrices:** Matrix, sub matrix, types of matrices, such as symmetric, square, diagonal Matrices, singular and nonsingular matrices. Addition, subtraction, multiplication of matrices. Rank of a matrix, Matrix equation, solution by Cramer's rule and Gauss elimination method.

**Unit-III**

**Matrix Algebra:** Types of matrices, Rank of a matrix, Inverse of a matrix by elementary operations, Eigenvalues and Eigenvectors of matrices, Cayley-Hamilton theorem and its use in finding inverse of a matrix, Complex matrices and their elementary properties, Application of matrices to a system of linear (homogeneous and non-homogeneous) equations.

**Unit-IV Functions:** Interval and sub-intervals. Definition of function and examples, polynomial, rational, exponential, logarithmic and trigonometric functions. Graph of some simple functions like polynomial (upto 3rd deg), rational trigometric functions, modulus, function, step functions, rational functions, composite functions.

**Unit-V : Probability and Statistics:**Masure of central tendency (Mean, Weighted mean, Median, Mode), Dispersion (Range, Deviation from the mean, Variance, Standard deviation, Coefficient of variation), Symmetry and Kurtosis in data. Quartiles and Percentiles.Probability and axioms of probability.Probability and probability distribution (Binomial, Poisson and Normal).Correlation and Regression.

**Reference Books**

1. Engineering Mathematics : E. Kreyzig
2. Higher Engineering Mathematics : B. S. Grewal
3. Advanced Engineering Mathematics : H. K. Das
4. Differential Calculus : Shanti Narayan

**1. Calculus**

Limits, continuity, and differentiability, Derivatives, applications of derivatives in real-world problems, Integration techniques and applications of definite integrals in engineering.

**2. Linear Algebra**

Matrices: types, operations, determinants, and inverse, System of linear equations and methods (Gaussian elimination, Cramer's rule), Eigenvalues, eigenvectors, and applications.

**3. Differential Equations**

First-order differential equations and applications, Higher-order differential equations, Laplace transforms and their application in solving differential equations.

**4. Vector Calculus**

Vector functions, gradient, divergence, and curl, Line, surface, and volume integrals, Green's, Stokes', and Gauss' theorems.

**GCAC-101B:**

**Discrete Mathematics I**

**L T P Cr**

**3 1 0 4**

**UNIT:1 Fundamentals of Logic and Proof**

Propositional and predicate logic, Methods of proof, including direct, indirect, contradiction, and contraposition, Mathematical induction and recursive definitions.

**UNIT:2 Set Theory**

Sets, relations, and functions, Set operations, Cartesian product, and power sets, Countable and uncountable sets.

**UNIT:3 Combinatorics**

Basic counting principles (addition and multiplication), Permutations and combinations, Introduction to recurrence relations and generating functions.

**UNIT:4 Graph Theory**

Basics of graphs, types of graphs, and graph terminology, Paths, cycles, connectivity, and graph traversal (BFS and DFS), Applications in computer science, such as networking and shortest path problems.

**UNIT:1 Basic Algebra**

Algebraic expressions, equations, and inequalities, Linear and quadratic equations and their solutions, Introduction to complex numbers and polynomials.

**UNIT:2 Coordinate Geometry**

Cartesian coordinate system and distance formula, Straight lines, slope, and equations of lines, Circles and conic sections: parabolas, ellipses, and hyperbolas.

**UNIT:3 Trigonometry**

Basic trigonometric ratios and identities, Solving trigonometric equations, Applications of trigonometry in real-world problems.

**UNIT:4 Elementary Calculus**

Basic concepts of limits and continuity, Introduction to differentiation and integration, Applications of differentiation and integration in simple scenarios.

**GCAC-101D**

**Mathematical Foundation of Computer Science I**

**L T P Cr**

**3 1 0 4**

**UNIT:1 Propositional Logic and Predicate Logic**

Logic statements, connectives, truth tables, Quantifiers, predicates, and proofs in predicate logic, Applications in digital circuit design and algorithm logic.

**UNIT:2 Set Theory and Relations**

Sets, subsets, power sets, and set operations, Relations, properties of relations, equivalence relations, and partial orderings, Functions: one-to-one, onto, and bijective functions.

**UNIT:3 Algorithms and Complexity**

Introduction to algorithm design and efficiency, Time complexity and Big O notation, Recursive functions and basic recurrence relations.

**UNIT:4 Graph Theory for Computer Science**

Graphs, trees, and basic graph algorithms, Applications of graphs in computer science (e.g., networks, pathfinding), Introduction to Boolean algebra and its application in computer logic.

**UNIT – I****Computer Fundamentals**

Brief history of development of computers, Computer system concepts and characteristics, Types of computers, Generations of computers, Capabilities and limitations, Basic components of a computer system - CU, ALU, Input/Output functions and characteristics, memory - RAM, ROM, EPROM, PROM and other types of memory.

**UNIT – II**

Input/Output units, Keyboard, Mouse, Trackball, Joystick, Scanners Printers - Daisy wheel, Dot Matrix, Inkjet, Laser, Line Printer, Plotter, Sound Card and Speakers,

**UNIT – III****Storage devices**

Primary vs Secondary Data Storage and Retrieval methods, Sequential and Direct, Various Storage Devices, Magnetic Tape, Magnetic Disks, Cartridge Tape, Hard Disk Drives, Floppy Disks (Winchester Disk), Optical Disks, CD, VCD, CD-R, CD-RW, Zip Drive, flash drives Video Disk, Blue Ray Disc, SD/MMC Memory cards, Physical structure of floppy & hard disk, drive naming conventions.

**UNIT – IV**

Software and its Need, Types of Software, System & Application software, System Software- Operating System, Utility Program, Programming languages, Assemblers, Compilers and Interpreter, Introduction to MSDOS, Windows, booting process details of DOS and Windows, DOS system files. Application Software and its types - Word-processing, Spreadsheet, Presentation Graphics, Data Base Management Software, characteristics, Uses principles, Types of viruses, virus detection and prevention, viruses on network.

**UNIT – V Information Technology**

Use of communication and IT, Communication Process, Communication types- Simplex, Half Duplex, Full Duplex, Communication Protocols, Communication Channels - Twisted, Coaxial, Fiber Optic, Serial and Parallel Communication, Modem - Working and characteristics, Types of Network - LAN, WAN, MAN, Internet, VPN etc., Topologies of LAN - Ring, Bus, Star, Mesh and Tree topologies, World Wide Web Internet Services, Convergence of technologies.

**TEXT & REFERENCE BOOKS:**

1. Using Information Technology, 5<sup>th</sup> Edi, Brian K Williams & Stacey C. Sawyer, 2003, TMH
2. Fundamentals of computers and programming with C, A. K. Sharma, Dhanpat Rai Publications, Daryaganj New Delhi
3. Information technology, Dennis P. Curtin, Kim Foley, Kunal Sen, Cathleen Morin, 1998, TMH

**AECC-151****Professional Communication Lab**

1. Write a program to calculate the sum of two integers entered by the user.
2. Write a program to check whether a given number is prime or not.
3. Write a program to reverse a given string without using built-in functions.
4. Write a program to find the largest element in an array of integers.
5. Write a program to compute the factorial of a given number using recursion.
6. Write a program to check if a string entered by the user is a palindrome.
7. Write a program to count the number of vowels in a given string.
8. Write a program to calculate the length of a string without using any library functions.
9. Write a program to calculate the power of a number raised to an exponent.
10. Write a program to print the Fibonacci sequence up to the nth term.
11. Write a program to determine if a given number is even or odd.
12. Write a program to swap two numbers without using a third variable.
13. Write a program to merge two arrays into one and display the result.
14. Write a program to print the multiplication table of a number from 1 to 10.
15. Write a program to find the greatest common divisor (GCD) of two numbers using Euclid's algorithm.

**Textbooks:**

1. *Effective Technical Communication* by M. Ashraf Rizvi
2. *Business Communication* by Meenakshi Raman and Prakash Singh

**Reference Books:**

1. *Professional Communication* by Aruna Koneru
2. *The Art of Public Speaking* by Stephen E. Lucas

**Unit I:**

- Introduction to Personality Development: Definition, importance, and goals.
- Self-awareness and Self-assessment.

**Unit II:**

- Positive Attitude: Developing a positive mindset and self-confidence.
- Motivation and Goal Setting.

**Unit III:**

- Time Management: Techniques and tips for effective time management.
- Stress Management and Resilience Building.

**Unit IV:**

- Emotional Intelligence: Understanding and managing emotions.
- Communication in Relationships and Interpersonal Skills.

**Unit V:**

- Leadership Skills: Types of leadership and leadership qualities.
- Teamwork and Conflict Resolution.

**Textbooks:**

1. *Personality Development and Soft Skills* by Barun Mitra
2. *The 7 Habits of Highly Effective People* by Stephen R. Covey

**Reference Books:**

1. *How to Win Friends and Influence People* by Dale Carnegie
2. *Emotional Intelligence* by Daniel Goleman

## **AECC-151B**

## **Behaviour Skill - I**

### **Unit I:**

- Basics of Behavioral Skills: Definition, importance, and categories.
- Self-esteem and Self-confidence.

### **Unit II:**

- Adaptability and Flexibility in Workplace: Coping with changes.
- Empathy and Compassion.

### **Unit III:**

- Developing a Positive Work Ethic.
- Problem Solving and Decision Making.

### **Unit IV:**

- Conflict Management and Handling Criticism.
- Respect and Ethics in Professional Conduct.

### **Unit V:**

- Building Effective Interpersonal Relationships.
- Collaboration and Building a Team.

### **Textbooks:**

1. *Behavioral Skills for Managers and Supervisors* by Edward J. Willett
2. *The Essential Workplace Conflict Handbook* by Barbara Mitchell and Cornelia Gamlem

### **Reference Books:**

1. *Emotional Intelligence for Project Managers* by Anthony Mersino
2. *People Skills* by Robert Bolton

**Unit I:**

- Basics of Grammar: Parts of speech, tenses, and sentence structure.
- Vocabulary Building.

**Unit II:**

- Writing Skills: Paragraph and essay writing.
- Reading Comprehension Techniques.

**Unit III:**

- Pronunciation and Accent Neutralization.
- Listening Skills: Techniques for effective listening.

**Unit IV:**

- Conversational Skills: Dialogues, debates, and discussions.
- Formal and Informal Communication.

**Unit V:**

- Business Communication: Report writing, emails, and proposals.
- Presentation and Public Speaking Skills.

**Textbooks:**

1. *High School English Grammar & Composition* by Wren and Martin
2. *English Grammar in Use* by Raymond Murphy

**Reference Books:**

1. *The Elements of Style* by William Strunk Jr. and E.B. White
2. *Word Power Made Easy* by Norman Lewis

**UNIT I: Introduction to Java:** Java Architecture and Features, Understanding the semantic and syntax differences between C++ and Java, Compiling and Executing a Java Program, Variables, Constants, Keywords Data Types, Operators (Arithmetic, Logical and Bitwise) and Expressions, Comments, Doing Basic Program Output, Decision Making Constructs (conditional statements and loops) and Nesting, Java Methods (Defining, Scope, Passing and Returning Arguments, Type Conversion and Type and Checking, Built-in Java Class Methods),

**UNIT II: Arrays, Strings and I/O:** Creating & Using Arrays (One Dimension and Multi-dimensional), Referencing Arrays Dynamically, Java Strings: The Java String class, Creating & Using String Objects, Manipulating Strings, String Immutability & Equality, Passing Strings To & From Methods.

**UNIT III: Object-Oriented Programming Overview:** Principles of Object-Oriented Programming, Defining & Using Classes, Controlling Access to Class Members, Class Constructors, Method Overloading, Class Variables & Methods, Objects as parameters, final classes, Object class, Garbage Collection.

**UNIT IV: Exception Handling, Threading, Networking and Database Connectivity:** Exception types, uncaught exceptions, throw, built-in exceptions, Creating your own exceptions; Multi-threading: The Thread class and Runnable interface, creating single and multiple threads, Thread prioritization, synchronization and communication, suspending/resuming threads. Using java.net package, Overview of TCP/IP and Datagram programming. Accessing and manipulating databases using JDBC.

**UNIT V : Applets and Event Handling:** Java Applets:Introduction to Applets, Writing Java Applets, Working with Graphics, Incorporating Images & Sounds. Event Handling Mechanisms,Listener Interfaces, Adapter and Inner Classes. The design and Implementation of GUIs using the AWT controls, Swing components of Java Foundation Classes such as labels,

**UNIT I:** Introduction: to Notions of data type, abstract data type, and data structures. Importance of algorithms and data structures in programming. Examples of simple algorithms and illustration of their complexity. **Array** Single and Multi-dimensional Arrays, Sparse Matrices (Array and Linked Representation)

**UNIT II: Stack** Implementing single / multiple stack/s in an Array; Prefix, Infix and Postfix expressions, Utility and conversion of these expressions from one to another; Applications of stack; Limitations of Array representation of stack **Queue** Array and Linked representation of Queue, De-queue, Priority Queues

**UNIT III: Linked Lists** Singly, Doubly and Circular Lists (Array and Linked representation); Normal and Circular representation of Stack in Lists; Self Organizing Lists; Skip Lists. Developing Recursive Definition of Simple Problems and their implementation; Advantages and Limitations of Recursion;

**sssssUNIT IV:**

Introduction to Tree as a data structure: Binary Trees (Insertion, Deletion, Iterative Traversals on Binary Search Trees); Algebraic Expressions, Height-Balanced Trees (Various operations on AVL Trees).

**UNIT V:** Searching: Linear Search, Binary Search, Comparison of Linear and Binary Search, Sort: Selection Sort, Insertion Sort, Insertion Sort, Shell Sort, Comparison of Sorting Techniques

**Text Books:**

1. Data Structures and Algorithms by Alfred V. Aho, Jeffrey D. Ullman and John E. Hopcroft, Addison-Wesley Series (1983)
2. Data Structures and Algorithm Analysis in Java (3rd Edition) by Mark Allen Weiss, Addison Wesley, (2011).

**Reference Books:**

1. T.H. Cormen, C.E. Leiserson, and R.L. Rivest. *Introduction to Algorithms*. The MIT Press and McGraw-Hill Book Company, Cambridge, Massachusetts, 1990 (Available in Indian Edition).
2. Steven S. Skiena. *The Algorithm Design Manual*. Springer, Second Edition

## **DATA STRUCTURES & USING 'C' Lab.**

### **CCAC-154**

1. Programs based on Arrays (Insertion and Deletion of elements).
2. Programs based on Sorting in Arrays.
3. Programs based on Searching in Arrays.
4. Programs based on Linked Lists
5. Programs based on Stacks.
6. Programs based on Evaluating expressions in Stacks.
7. Programs based on Queues.
8. Programs based on Trees.
9. Programs based on Graphs.

### **Reference Books:**

R. P. Agarwal, Ankita Singh, "*Laboratory Manual on Data Structures using C*", 1<sup>st</sup> Edition, 2010, Shobhit University Publications.

**Unit I: Introduction to Environmental Science**

- Definition, Scope, and Importance: Understanding the interdisciplinary nature of environmental science and its relevance in today's world.
- Concept of Ecosystems: Structure, function, and types of ecosystems (forest, grassland, desert, and aquatic).
- Biodiversity: Importance of biodiversity, threats to biodiversity, conservation methods, and types of biodiversity (genetic, species, and ecosystem).

**Unit II: Natural Resources**

- Forest Resources: Importance, deforestation causes and effects, and sustainable forest management.
- Water Resources: Importance, over-utilization, water scarcity, and conservation of water resources.
- Mineral Resources: Environmental effects of extracting and using mineral resources.
- Energy Resources: Renewable and non-renewable energy sources, energy conservation, and sustainable energy practices.

**Unit III: Environmental Pollution**

- Air Pollution: Sources, effects on health and the environment, and control measures.
- Water Pollution: Sources, effects on aquatic ecosystems, and methods of control.
- Soil Pollution: Causes, effects, and soil conservation techniques.
- Noise Pollution: Sources, effects on health, and noise pollution control.
- Waste Management: Types of waste (solid, liquid, e-waste), waste management techniques, and the concept of "Reduce, Reuse, Recycle."

**Unit IV: Environmental Policies and Practices**

- Environmental Policies in India: Major environmental laws and regulations, such as the Environment Protection Act, Wildlife Protection Act, and Forest Conservation Act.
- Environmental Impact Assessment (EIA): Purpose, process, and importance in developmental projects.
- Role of Individuals and Communities: How individuals and communities can contribute to environmental conservation and sustainable practices.
- Climate Change and Global Warming: Causes, effects, and measures to combat climate change.

## **Unit V: Human Population and the Environment**

- Population Growth and Environment: Effects of population growth on natural resources and urbanization.
- Human Health and Environment: Impact of environmental factors on health, including waterborne diseases, air pollution, and sanitation.
- Sustainable Development: Principles, importance, and practices for achieving sustainable development.
- Environmental Ethics and Awareness: Importance of ethics in environmental conservation and the role of environmental education.

### Textbooks:

1. *Textbook of Environmental Studies for Undergraduate Courses* by Erach Bharucha
2. *Environmental Science: Principles and Practices* by R.C. Sharma and Gurbir Singh

### Reference Books:

1. *Environmental Studies* by Benny Joseph
2. *Environmental Science: Earth as a Living Planet* by Daniel B. Botkin and Edward A. Keller

**Unit I: Self-Awareness and Personal Development**

Understanding self-awareness and its importance, Personal values, goals, and identity, Building self-confidence and self-esteem, Techniques for personal growth and development.

**Unit II: Emotional Intelligence and Stress Management**

Introduction to emotional intelligence (EI), Components of EI: self-awareness, self-regulation, motivation, empathy, and social skills, Stress sources, types of stress, and coping mechanisms, Techniques for managing stress and promoting mental well-being.

**Unit III: Effective Communication and Interpersonal Skills**

Types of communication: verbal, non-verbal, and written, Active listening, empathy, and assertive communication, Building healthy interpersonal relationships, Conflict resolution and negotiation skills.

**Unit IV: Decision Making and Problem Solving**

Steps and techniques in decision-making, Problem-solving models and creative thinking, Critical thinking and evaluating outcomes, Ethical decision-making and responsibility.

**Unit V: Time Management and Goal Setting**

Importance of time management for personal and professional life, Prioritization, scheduling, and delegation techniques, Setting SMART (Specific, Measurable, Achievable, Relevant, Time-bound) goals, Overcoming procrastination and developing discipline

**Suggested Books:**

• **Textbooks:**

1. "Life Skills: Managing Your Future Success" by Evan Davis
2. "Developing Life Skills" by John Smith and Martha Rogers

• **Reference Books:**

1. "Emotional Intelligence: Why It Can Matter More Than IQ" by Daniel Goleman
2. "How to Win Friends and Influence People" by Dale Carnegie

**Unit I: Introduction to Ethics and Moral Values**

Concept of ethics, morality, and values, Relationship between ethics and moral values, Importance of moral values in personal, social, and professional contexts

**Unit II: Ethical Theories and Principles**

Overview of ethical theories: Utilitarianism, Deontology, Virtue Ethics, Applications of ethical principles in decision-making, Personal vs. societal ethics

**Unit III: Moral Development and Ethical Behavior**

Stages of moral development (Kohlberg, Piaget), Factors influencing ethical behavior, Case studies on moral dilemmas in various professions

**Unit IV: Contemporary Ethical Issues**

Ethics in technology, environment, and business, Workplace ethics and corporate social responsibility (CSR), Resolving ethical conflicts and dilemmas

**Suggested Books:**

• **Textbooks:**

1. "Ethics: Theory and Contemporary Issues" by Barbara MacKinnon
2. "Moral Values and Ethics: Theory and Practice" by K.K. Sharma

• **Reference Books:**

1. "Ethics in the Real World: 82 Brief Essays on Things That Matter" by Peter Singer
2. "Applied Ethics: A Multicultural Approach" by Larry May

**Unit I: Fundamentals of Leadership and Management**

Definitions, characteristics, and roles of leaders and managers, Differences between leadership and management, Importance of leadership and managerial skills in organizations

**Unit II: Leadership Theories and Styles**

Overview of leadership theories: Transformational, Transactional, Situational, Leadership styles: autocratic, democratic, laissez-faire, Matching leadership style with organizational needs

**Unit III: Key Managerial Skills**

Skills for effective management: decision-making, problem-solving, strategic planning, Importance of interpersonal and communication skills, Managing time and resources efficiently

**Unit IV: Challenges in Modern Leadership**

Managing diversity and inclusion in teams, Ethical leadership and social responsibility, Case studies on contemporary leadership challenges

**Unit V: Contemporary Challenges in Leadership**

Managing diversity, inclusion, and ethical leadership, Coping with global business challenges and crises, Case studies on ethical leadership and contemporary leadership issues

**Suggested Books:**

• **Textbooks:**

1. "Leadership: Theory and Practice" by Peter G. Northouse
2. "Management and Leadership in Organizations" by Alan Murray

• **Reference Books:**

1. "Developing Management Skills" by David A. Whetten and Kim S. Cameron
2. "The Art of Leadership" by George Manning and Kent Curtis

**Unit I**

**Atmosphere:** The Earth's Natural Greenhouse Effect: Greenhouse Gases, Global Warming, Ozone depletion, Acid rain, El Nina and La Nina Phenomenon.

**Unit-II**

**Pollution:** Air, Water, Noise and Soil pollutions and their quality parameters

**Unit-III**

**Waste Management:** Agricultural waste, Industrial waste and Other hazardous waste, Environment Impact Assessment.

**Unit-IV**

**Sustainable Development:** Conservation of natural resources watershed management, Rain water harvesting and storage; Application of Remote Sensing and GIS

**Unit-V**

**Environmental Management Systems:** ISO certification control policies, International and National legislations and acts related to environment.

**Reference:**

**Unit-I: Logic gates & Boolean algebra**

Basic laws of Boolean algebra, Conversion between bases (Binary, Octal, Hexadecimal & Decimal); Logic gates: Inverters, OR, AND, NAND, NOR, XOR & X-NOR gates.

Simplification of Boolean equations using Boolean algebra, universal gates & K-maps (up to 6 variables). Code Conversion: BCD, Gray and Excess-3 codes.

**Unit-II: Combinational Circuits**

Half adder, Full adder, Binary adder, Signed binary numbers,  $1^{\text{'s}}$  &  $2^{\text{'s}}$  complements adder – subtractor. Binary multiplier and divider.

Multiplexers/Demultiplexers, encoder / decoders, decimal adders & amplitude comparators.

**Unit-III: Sequential Logic Circuits (I) – Flip-flops**

SR, D, JK, T, & JK master-slave flip-flops and their conversions, excitation table, state table & state diagram. Shift registers: SISO, SIPO. PISO & PIPO. Bidirectional shift registers.

**Unit-IV: Sequential Logic Circuits (II) – Counters**

Design procedure, Synchronous and Asynchronous counters, Ripple counters, modulo counters, twisted ring & Johnson counters.

**Unit-V : Memories**

ROMs, PROMs, EPROMs, EEPROMs, RAMs, Hard Disk, Floppy Disk and CD-ROM.

PAL & PLA.

**Text Books :**

1. Digital Design by M. Mano, 2nd Edn. PHI
2. Introduction to Digital Microelectronic Circuits, by Gopalan, TMH

**Reference Books :**

1. Switching Circuit & Logic Design by Hill & Peterson, Wiley
2. Digital Circuit & Logic Design, by Holsworth.

**Unit I: Advanced Business Writing**

- **Professional Emails:** Effective email formatting, clarity, and tone.
- **Reports and Proposals:** Structure and essentials of writing concise business reports and proposals.

**Unit II: Oral Communication in Business**

- **Presentation Skills:** Organizing and delivering impactful presentations.
- **Meetings and Negotiations:** Basics of running or participating in meetings and negotiation techniques.

**Unit III: Interpersonal Skills for Business**

- **Team Communication:** Building trust and clear communication in team settings.
- **Networking:** Basics of professional networking and relationship building.

**Unit IV: Public Speaking and Listening Skills**

- **Public Speaking Techniques:** Confidence-building strategies and engaging audiences.
- **Active Listening:** Techniques to improve listening and respond effectively.

**Unit V: Digital Communication**

- **Digital and Social Media Communication:** Basics of professional communication on platforms like LinkedIn.
- **Etiquette for Online Communication:** Tone, clarity, and professionalism in virtual interactions.

**Textbooks:**

1. *Business Communication* by Asha Kaul
2. *Effective Business Communication* by Herta A. Murphy

**Unit I: Basics of Communication**

- **Introduction to Communication:** Types, channels, and barriers in communication.
- **Role Play Exercises:** Practicing communication in real-life scenarios.

**Unit II: Business Writing Skills**

- **Email Writing:** Structure and tone for professional emails.
- **Memo and Report Writing:** Simple formats for internal and external communication.

**Unit III: Presentation Skills**

- **Developing Presentations:** Organizing content and visuals.
- **Public Speaking Practice:** Techniques to build confidence and engage audiences.

**Unit IV: Listening and Feedback**

- **Active Listening Skills:** Exercises to improve listening comprehension.
- **Constructive Feedback:** Learning how to give and receive feedback effectively.

**Unit V: Interview Skills**

- **Mock Interviews:** Practicing answering common interview questions.
- **Resume Building:** Basics of creating a professional resume.

**Textbooks:**

1. *Essentials of Business Communication* by Rajendra Pal and J.S. Korlahalli
2. *Business Communication Today* by Courtland Bovee and John Thill

**Unit I: Self-Awareness and Growth**

- **Personal Strengths and Weaknesses:** Identifying areas of improvement.
- **Goal Setting and Motivation:** Techniques for personal and professional goal setting.

**Unit II: Communication and Social Skills**

- **Verbal Communication:** Basics of clear and effective verbal interactions.
- **Non-Verbal Communication:** Understanding body language and eye contact.

**Unit III: Building Confidence**

- **Self-Confidence:** Exercises to improve self-belief and assertiveness.
- **Overcoming Fear and Anxiety:** Simple relaxation techniques.

**Unit IV: Time and Stress Management**

- **Prioritizing Tasks:** Techniques to organize and manage time effectively.
- **Managing Stress:** Identifying stress triggers and coping strategies.

**Unit V: Personal Grooming and Etiquette**

- **Professional Appearance:** Basics of personal grooming.
- **Social and Workplace Etiquette:** Simple rules of professional and social etiquette.

**Textbooks:**

1. *Personality Development and Soft Skills* by Barun Mitra
2. *The Power of Positive Thinking* by Norman Vincent Peale

## CCAC-158B

## Behaviour Skill II

### Unit I: Interpersonal Skills Development

- **Emotional Intelligence:** Basics of recognizing and managing emotions.
- **Empathy and Understanding:** Exercises to improve empathy.

### Unit II: Conflict Resolution

- **Types of Conflict:** Basics of personal and professional conflict.
- **Conflict Management Techniques:** Practical approaches to resolve disagreements.

### Unit III: Decision Making and Problem Solving

- **Steps in Decision Making:** Basics of identifying and evaluating options.
- **Problem-Solving Skills:** Structured approach to solving problems.

### Unit IV: Adaptability and Flexibility

- **Adaptation to Change:** Exercises for improving flexibility in various situations.
- **Overcoming Resistance:** Techniques to embrace new challenges.

### Unit V: Teamwork and Cooperation

- **Roles in a Team:** Understanding roles and responsibilities.
- **Collaboration Skills:** Basics of effective teamwork and collaboration.

### Textbooks:

1. *Behavioral Skills in Management* by R.K. Sahu
2. *Emotional Intelligence* by Daniel Goleman

## CCAC-158C

## Language Proficiency and English II

### Unit I: Advanced Grammar and Vocabulary

- **Grammar Skills:** Complex sentence structures and advanced usage.
- **Vocabulary Development:** Synonyms, antonyms, and usage in context.

### Unit II: Writing Skills

- **Essay Writing:** Structuring ideas clearly and concisely.
- **Summarizing and Paraphrasing:** Techniques for effective summarization.

### **Unit III: Reading and Comprehension**

- **Reading for Information:** Strategies for quick comprehension.
- **Analyzing Texts:** Understanding context and main ideas.

### **Unit IV: Speaking and Listening**

- **Pronunciation and Accent Neutralization:** Basic techniques.
- **Conversational English:** Engaging in meaningful conversations.

### **Unit V: Presentation and Public Speaking**

- **Short Presentations:** Basics of organizing and delivering presentations.
- **Audience Interaction:** Techniques for engaging with listeners.

### **Textbooks:**

1. *High School English Grammar & Composition* by Wren and Martin
2. *Word Power Made Easy* by Norman Lewis

**Unit I:**

Nature of Communication: Process of Communication, Types of Communication (verbal & Non Verbal), Importance of Communication, Different forms of Communication Barriers to Communication Causes, Linguistic Barriers, Psychological Barriers, Interpersonal Barriers, Cultural Barriers, Physical Barriers, Organizational Barriers

**Unit II:**

Business Correspondence: Letter Writing, presentation, Inviting quotations, Placing order, Memorandum, Memo, Notices, Job application letter, Resume:FormulatingCareerPlans,PlanningyourResumeStructuringtheResume,Contentofthe Resume, ElectronicResumes

**Unit III:**

Report Writing: Business reports, Types, Characteristics, Importance, Elements of structure, Process of writing, Order of writing, the final draft and check lists for reports.

**Unit IV:**

Vocabulary: Words often confused Words often misspelt, common errors in English.

**Unit V:**

Oral Presentation: Importance, Characteristics, Presentation Plan, Power point presentation, Visual aids.

**Suggested Readings:**

1. Bovee, and Thill, Business Communication Today, Pearson Education
2. Lesikar, R.V. & Flatley, M.E. Kathryn Rentz; Business Communication Making Connections in Digital World, 11th ed., McGraw Hill Education.
3. Shirley Taylor, Communication for Business, Pearson Education
4. Locker and Kaczmarek, Business Communication: Building Critical Skills, TMH

**Unit-1**

Database Systems: Introducing the database and DBMS, Files and File Systems, Problems with File System and advantages of Database Management systems. Data Models: The importance of Data models, Data Model Basic Building Blocks, Business Rules, The evaluation of Data Models, Degree of Data Abstraction.

**Unit-II**

The Relational Database Model: A logical view of Data, Keys, Integrity Rules, Relational Set Operators, The Data Dictionary and the system catalog, Relationships within the Relational Database, Data Redundancy revisited, Indexes, Codd's relational database rules. Entity Relationship Model: The ER Model, Developing ER Diagram.

**Unit-III**

Normalization of database tables: Database Tables and Normalization, The need for Normalization, The Normal forms and High level Normal Forms, denormalization.

**Unit-IV**

Introduction to SQL: Data Definition Commands, Data Manipulation Commands, Select queries, Advanced Data Definition Commands, Advanced Select queries, Virtual Tables, Joining Database Tables. Advanced SQL: Relational Set Operators, SQL Join Operators, Subqueries and correlated queries, SQL Functions, Oracle Sequences, and Procedural SQL.

**Unit-V**

Transaction Management and Concurrency Control: What is transaction, Concurrency control, Concurrency control with locking Methods, Concurrency control with time stamping methods, concurrency control with optimistic methods, database recovery management.

**Reference Books:**

## **CCA-251      DATABASE MANAGEMENT SYSTEM LAB**

Perform the following operations in SQL

1. Creating and managing tables.
2. Manipulating data.
3. Defining constraints
4. Functions
5. Joins
6. Aggregate Functions
7. Sub-queries
8. Views
9. Set operators
10. Procedures

**I –Unit**

operating Introduction: Definition of operating systems, Operating System Design Issues, types of time-sharing parallel, distributed and real-time systems, Batch Systems, multi programming, time systems, Operating system structure, Operating system components and services  
 ses, Interprocess Process Management: Process concept, Process scheduling, Cooperating process scheduling, -communication, CPU scheduling criteria, Scheduling algorithms, Multiple time scheduling and Algorithm evaluation-Real

**II -Unit**

ardware, Section problem, synchronization h-Process Synchronization and Deadlocks: The Critical System model, -Semaphores, Classical problems of synchronization, Critical regions, Deadlocks Characterization, Deadlock prevention, Avoidance and Detection, Recovery from deadlock, .Combined approach to deadlock handling

**III -Unit**

Logical and Physical Address Space, Swapping, -ment: Memory ManagementStorage management Contiguous Allocation, Paging, Segmentation with paging in MULTICS and Intel 386, Virtual Memory, Demand paging and its performance, Page replacement algorithms, Allocation of frames, .rasing, Page Size and other considerations, Demand segmentationTh

**IV –Unit**

File systems, secondary Storage Structure, File concept, access methods, directory ,implementation, Efficiency and performance, recovery  
 Disk management, Recovery, Disk structure, disk ,Disk structure, Disk scheduling methods .Space management, Disk reliability-scheduling methods, Disk management, Swap

**V –Unit**

Goals of protection, Domain of protection, Access -Security & Case Study: Protection and Security f access Matrix, Revocation of Access Rights, language based protection, matrix, Implementation o The Security problem, Authentication, One Time passwords, Program threats, System threats, .Threat Monitoring, Encryption. Case Study: Linux

**Books:**

2. Milan Milenkovic, "*Operating Systems, Concepts and Design*", McGraw-Hill Fifth Edition, 2000.
3. Richard Peterson, "*Linux: The Complete Reference*", McGraw-Hill, sixth edition, 2007.
4. Harvey M Deital, "*Operating Systems*", Addison-Wesley Pub. Co., Second Edition, 2007.

**List of experiments:**

1. Simulate the following CPU scheduling algorithms
  - a) Round Robin b) SJF c) FCFS d) Priority
2. Simulate all file allocation strategies
  - a) Sequential b) Indexed c) Linked
3. Simulate MVT and MFT
4. Simulate all File Organization Techniques
  - a) Single level directory b) Two level c) Hierarchical d) DAG
5. Simulate Bankers Algorithm for Dead Lock Avoidance
6. Write a C program to create a child process and allow the parent to display “Hello” and the child to display “Welcome” on the screen.
7. Simulate all page replacement algorithms
  - a) FIFO b) LRU c) LFU Etc...
8. Simulate Paging Technique of memory management.
9. Write C programs that make a copy of a file using i) standard I/O and ii) system calls.
10. Write C programs that count the number of blanks in a text file using i) standard I/O and ii) system calls.

**Unit-I** Introductory Concepts Goals and Applications of Networks, the OSI reference model and Network Architecture, TCP/IP Architecture, Networks topology, Types of Networks, Physical Layer Transmission Media, Switching methods, ISDN.

**Unit-II** Connecting Devices Repeaters, Active & Passive Hubs, Head End, Bridges, Switches, Routers, Gateway. Medium access sub layer Channel allocations, Random Access overview, LAN protocols, Pure ALOHA, slotted ALOHA, Carrier Sense Multiple Access Protocols, CSMA with Collision Detection, Collision free Protocols, IEEE standards, FDDI.

**Unit-III** Data Link Layer Elementary data link protocols, sliding windows protocols, error handling, Parity Bit Check, CRC, Checksum, Hamming Code, Hamming Distance. High Level Data Link Control (HDLC), Overview of Ethernet. Network Layer Point-to-Point networks, X.25, Layers of X.25, Routing algorithms, Congestion control algorithms, internetworking, TCP/IP packet, IP addresses, Ipv6. Internet Control Protocol ICMP, ARP, RARP, Interior Gateway routing Protocol OSPF, Exterior Gateway Protocols BGP.

**Unit-IV** Transport Layer: Design issues, connection management, User Datagram Protocol: UDP protocol & Header, Transmission Control Protocol: TCP protocol, TCP segment Header Format, TCP window Management, TCP Timer Management), Data Compression techniques.

**Unit-V** Application Layer WWW, Hyper Text Transfer Protocol, Domain Name System, Simple Network Management Protocol, Electronic mail, File Transfer Protocol, TFTP, RTP, RTCP, Telnet Virtual Terminal and terminal handling, Internet and Public networks.

Reference Books:

2. Forouzan, A. Behrouz, Data Communication and Networking, Tata Mc-Graw Hall, Special Indian Edition, 2006.
3. Comer, Computer Networks & Internet, Prentice Hall Inc., 3<sup>rd</sup> Edition, 2002.

LIST OF PRACTICALS

1. Implementation of the Data Link layer framing method such as character stuffing and bit stuffing in C.
  2. Implementation of CRC algorithm in c.
  3. Implementation of hamming code in C.
  4. Implementation of LZW compression algorithm in C.
  5. Implementation of Checksum in C.
  6. Implementation of Client –Server.
  7. Performance analysis of following over LAN Trainer Kit
    - i) Token bus
    - ii) Token ring
    - iii) Ethernet
    - iv) Flow Control
- a. Stop-and-wait
  - b. Go-back-n
  - v) File transfer Protocol

**Unit-I: Introduction:** Internet Basics communicating on the internet, internet domains, establishing connection on the internet, TCP/IP and its services, transmission control protocol, WWW, intranet, extranet.

**Unit-II: The Basics:** Commonly used HTML commands, text formatting, text styles, The Head, the Body, Colors, Attributes, Lists, ordered and unordered

**Unit-III: Links:** Introduction of links, Hyperlinks, Internal document references, External document references

**Images:** Putting an Image on a Page, Using Images as Links, Putting an Image in the Background

**Unit IV: – Tables:** Introduction, Creating a Table, Table Headers, Captions, Spanning Multiple Columns, Styling Table

**Unit V – Forms:** Basic Input and Attributes, Other Kinds of Inputs, Styling forms with CSS, Where to Go from Here

**Book Recommended:**

1. Virginia DeBolt , Integrated HTML and CSS A Smarter, Faster Way to Learn  
Wiley / Sybex , 2006
2. Cassidy Williams, Camryn Williams Introduction to HTML and CSS, O'Reilly, 2015
3. Ivan Bayross, “HTML, DHTML, Java Script, Perl cgi”, BPB publication,

Q.1 Create an HTML document with the following formatting options:

I. Bold, II. Italics, III. Underline, IV. Headings (Using H1 to H6 heading styles), V. Font (Type, Size and Color), VI. Background (Colored background/Image in background), VII. Paragraph, VIII. Line Break, IX. Horizontal Rule, X. Pre tag

Q.2 Create an HTML document which consists of:

I. Ordered List, II. Unordered List III.

Q.3 Create an HTML document which implements Internal linking as well as external linking.

Q.4 Create a table using HTML which consists of columns for Roll No., Student's name and grade.

Q.5 Create a table using colspan and rowspan.

Q.6 Create a form using HTML which has the following types of controls:

I. Text Box, II. Option/radio buttons, III. Check boxes, IV. Reset and Submit buttons

Q.7 Create HTML documents having multiple frames.

**UNIT I : Introduction to PHP** -Evaluation of Php, Basic Syntax, Defining variable and constant, Php Data type, Operator and Expression. **Decisions and loop** Making Decisions, Doing Repetitive task with looping, Mixing Decisions and looping with Html.

**UNIT II Function:**What is a function, Define a function, Call by value and Call by reference, Recursive function, String Creating and accessing, String Searching & Replacing String, Formatting String, String Related Library function. **Array** Anatomy of an Array, Creating index based and Associative array Accessing array, Element Looping with Index based array, Looping with associative array using each () and foreach(), Some useful Library function.

**UNIT III: Handling Html Form with Php:** Capturing Form, Data Dealing with Multi-value filed, and Generating File uploaded form, redirecting a form after submission. **Working with file and Directories:** Understanding file& directory, Opening and closing, a file, Coping, renaming and deleting a file, working with directories, Creating and deleting folder, File Uploading & Downloading.

**UNIT IV: Session and Cookie** -Introduction to Session Control, Session Functionality What is a Cookie, Setting Cookies with PHP. Using Cookies with Sessions, Deleting Cookies, Registering Session variables, Destroying the variables and Session.

**UNIT V: Database Connectivity with MySql:** Introduction to RDBMS, Connection with MySql Database, Performing basic database operation(DML) (Insert, Delete, Update, Select), Setting query parameter, Executing queryJoin (Cross joins, Inner joins, Outer Joins, Self joins.) **Exception Handling** Understanding Exception and error, Try, catch, throw. Error tracking and debugging.

**Unit I**

**Introduction to Multimedia** Evolution of Multimedia and its objects, Scope of multimedia in business & work, Production and planning of Multimedia applications. Multimedia Application.

**Unit-II**

**Multimedia Hardware & Software** Macromedia products, Basic drawing techniques, Basic tools , painting and drawing tools , OCR software, sound editing programs, animation devices Multimedia requirements-Hardware, software, and training Macintosh verses PC, the Macintosh platform, PC platform connections, memory and storage devices, input devices output hardware communication devices.

**Unit-III**

**Production Building blocks** Text using text in multimedia , computer and text font editing and design tools , hyper media and hyper text , sound multimedia system sounds MIDI verses Digital audio, audio file formats , working with sound in windows, notation interchange file format , adding sound

**Unit-IV: Production tips**

Image creation , making stiff images, images color, image file format, animation-principles of animation, making workable animation video using video, Broad cast video, standard integrating computers and TVS shooting and editing video using recording formats , video tips , video compression

**Unit-V : Multimedia project development and case studies**

Planning Costing, Proposal preparation Project planning estimating, RPFs and bid proposals designing, producing acquiring and CD-ROM technology and standards  
Designing for the World Wide Web working on the web, Text for the web, images for the web, sound for the web, animation for the web.

**Unit-I**

**Computer System:** Basics of computer systems, Generations and history, Classification of computers, capability and limitations of computer systems

**Hardware Organization:** Anatomy of a digital computer, CPU, Accumulator and instruction characteristics.

**Memory Units:** Hierarchy, primary memory-RAM, ROM, cache; Auxiliary storage devices: magnetic tapes and disks, hard disks, floppy disks, CD-ROM.

**Unit-II**

**Input and Output Devices:** Input devices: Keyboard, MICR, OCR, OMR, Digitizer, mouse, light pen, and offline input devices; Output Devices: Printers-impact printers: line-character printers, Non impact printers -ink-jet, laser printers; Display devices.

**Number System:** Decimal , binary, octal, hexadecimal numbers and their inter-conversions; Representation of information inside the computers, Integer representation- Signed 1's and signed 2's complement representation, Floating point representation, Codes: BCD, ASCII, ISCII.

**Unit-III**

**Basics of Programming Languages and Operating Systems:** Low level programming languages: Machine and Assembly languages, High level languages-procedure oriented languages, Translation process- Assembler, Compiler, Interpreter.

**Graphical User Interface and Windows-** Working with windows operating systems, Introduction to system software systems, Operating System Principles. Memory Management, Types of Operating Systems.

**Unit-IV**

**Introduction to 'C' :** History, Characters used in C, Structure of a C program, Data types, C tokens, Basic input output through printf( ) and scanf( ), Comments, Escape sequence, Use of Editor, Compiling and Linking.

**Operations and Expressions:** Operators- arithmetic, relational and logical, Order of evaluation of expression, Special Operators: assignment, bitwise shift Operators.

**Problem Solving and Programming Methodology:** Algorithms, Programming methodology, Debugging,

**Flow of Control and I/O Functions:** Compound statement, Selective execution, Repetitive execution, Single character functions, String-based Functions, More discussion on scanf( ) & printf( ) functions.

**Unit-V**

**Loop Constructs:** For loop, While loop, go to break, switch statement, Arrays and Structures: One dimensional array, Strings, Array initialization; Structure, User defined data types.

Introduction of functions and library functions.

**UNIT – I**

**Introduction:** Software engineering definition and paradigms, Program Vs Software ,Software Crisis, Software Characteristics, Software life cycle models: Why use a Life Cycle Model, Waterfall Model; Iterative Model; Prototyping Model; Evolutionary Model; Spiral Model;

**UNIT – II**

**Software Requirements analysis & specifications:** Requirement engineering, requirement elicitation techniques like Interview & Brainstorming, requirements analysis using DFD, Data dictionaries & ER Diagrams.

**UNIT-III**

**Software Project Planning:** Size Estimation: LOC & Function Count, Risk Management.

**Software Design:** Modularity: Cohesion & Coupling, Function Oriented Design, Object Oriented Design.

**UNIT-IV**

**Software Testing:** Definition, Types of Testing, Verification vs Validation testing , Functional Testing, Structural Testing, Test Activities, Unit Testing, Integration Testing and System Testing.

**UNIT –V**

Software Quality: **Software Quality, CMM and ISO 9000;**

**Software Maintenance:** Types of Maintenance, Maintenance Process, Reverse Engineering, Software Re-engineering, Configuration Management.

7. Analysis & Design of Information System V. Rajaraman
8. Software Engineering Concepts Richard Fairley

The student has to select one of the project listed below:

1. Health Care Insurance
2. Attendance Management System
3. Paylogs
4. Air Ticketing System
5. E-Banking
6. Online Recruitment System
7. Online Trading System
8. Resource Manager
9. Warehouse Management System
10. Grievance Handling System.

Perform the different phases of software development life cycle on the selected project.

- a. Feasibility study and requirement analysis
- b. Design (students are advised to use object oriented approach)
- c. Coding
- d. Testing
- e. Installation and Maintenance ( optional).

### Unit-I

**Introduction to Algorithms** Analysis of algorithm, Design of algorithm, complexity of algorithm, asymptotic notations, Recurrences. Sorting in polynomial time: Insertion sort, Merge sort, Quick sort, heap sort. Sorting in linear time: counting sort, bucket sort, radix sort. Medians and order statistics.

### Unit-II

**Elementary data structure** binary search tree. **Advanced data structure** Red Black tree, Augmenting data structure, binomial heaps, B-tree, Fibonacci heap and data structure for disjoint sets.

### Unit-III

**Advanced design and analysis techniques** Dynamic programming, Greedy algorithm, Backtracking, Amortized analysis.

### Unit-IV

**Graph algorithm** Breadth first search, Depth first search, Minimum spanning tree, Kruskal's algorithms, Prim's algorithms, Single source shortest path, All pair shortest path, Maximum flow and Traveling salesman problem.

### Unit-V

**String matching:** The naïve String Matching algorithm, The Rabin-Karp Algorithm, String Matching with finite automata, The Knuth-Morris Pratt algorithm.

Randomized algorithms, string matching, NP-hard and NP-completeness, Approximation algorithms.

### References Books :

1. Thomas H. Cormen, Charles E. Leiserson, Ronald L. Rivest, Clifford Stein, *Introduction to Algorithm*, Tata Mc-Graw Hill, 2<sup>nd</sup> Edition, 2003.
2. Horowitz Sahani, *Fundamentals of Computers Algorithm*, Golgotia Publications, 1998.
  3. Parag H. Dave, Himanshu B. Dave, *Design and Analysis of Algorithms*, Pearson

1. Write a program showing the implementation of selection sort algorithm using recursively problem solving approach.
2. Write a program showing the implementation of insertion sort algorithm using recursively problem solving approach.
3. Write a program showing the implementation of merge sort algorithm using divide-conquer-combine problem solving approach.
4. For a given array  $A = \{234, 233, 455, 423, 567, 656\}$ , arrange the elements of the array A in increasing order using radix sort algorithm.
5. Write the implementation of the searching algorithm as described below-  
First of all arrange the elements of the given array in increasing order, then find the median element, if the key element is smaller than the median element then perform the searching on the left of the median element else perform the searching on the right of the median element as described above.
6. Create a linked list and show all the operations on the linked list such as – insertion, deletion and traversing.
7. Create a doubly linked list and show all the operations on the doubly linked list such as – insertion, deletion and traversing.
8. Create a binary search tree and perform the searching operation on binary search tree.
9. Consider the string  $s = \text{"abcdabcerfabcd erabc"}$ , write a program using naïve string matching to find out how many times the pattern  $p = \text{"abc"}$  found in the string s.
10. Given a text string t and a pattern string p, find all occurrences of p in t using rabin-krap algorithm.

**Unit I**

**Introduction to OOPs and C++** Introduction to OOPs, Features & Advantages of OOPs, Different element of C++ (Tokens, Keywords, Identifiers, Variable, Constant, Operators, Expression, String).

**Unit II**

**Program Control Statements** –Sequential Constructs, Decision Making Construct, Iteration / Loop Construct, Arrays, Functions (User defined Function, Inline Function, Function Overloading), User Defined Data Types (Structure, Union and Enumeration).

**Unit III**

**Class, Object, Constructor & Destructor** Class, Modifiers (Private, Public & Protected), Data Member, Member Function, Static Data Member, Static Member Function, Friend Function, Object, Constructor (Default Constructor, Parameterized Constructor and Copy Constructor), Destructor.

**Unit IV**

**Pointer, Polymorphism & Inheritance** Pointer (Pointer to Object, this Pointer, Pointer to Derive Class), Introduction to Polymorphism (Runtime Polymorphism, Compiletime Polymorphism), Operator Overloading, Virtual Function, Inheritance (Single Inheritance, Multiple Inheritance, Multilevel Inheritance, Hierarchical Inheritance, Hybrid Inheritance), Virtual Base Class, Abstract Class.

Unit V - File Handling, Exception Handling - 10 Hrs (15 Marks)

Files I/O, Exception Handling (Exception Handling Mechanism, Throwing Mechanism, Catching Mechanism, Re-throwing an Exception).

**BOOKS SUGGESTED**

1. E. Balaguruswami – Object Oriented programming with C++
2. Kris James – Success with C++
3. David Parsons – Object Oriented programming with C++

**UNIT I:**

Introduction to Unix/Linux Operating System, Difference between Linux, Unix and other operating System. Functions of OS

**UNIT II:**

Features and Architecture of Unix/Linux Operating System, Various Distribution available in market, Installation, Booting and Shut down process.

**UNIT III:**

System Process, External and Internal Command, Creation Of Partition in Operating System, Process and its creation phases for fork(),exec(),wait().

**UNIT IV:**

User Management and File System, Types of users, creating users, Granting rights , user management commands, files quota and various file system available, File system management and layout, file permissions ,login process ,managing disk quota, Links(rad links, symbolic inks)

**UNIT V:**

Shell introduction and Scripting , What is Shell and various types of Shells, Various Editors present in Linux, Different modes of Vi editor , What is Shell Script, Writing and Executing Shell Scripting, shell variable, system calls , Using System calls, pipes and filters, Decision making in shell script, loops I shell. Functions utility program,(cut,copy,paste,join),Pattern Matching Utility

**UNIT – I**

**Visual Basic:** Introduction, Variable Names, Data Types, constants, Assignment, statements, Object oriented concept, Object and classes, If-then, If-then-else, if then-else if else, expression, print statement, arrays, variable declaration, built-in & User defined types, Subroutine and functions, Boolean Operators, Arithmetic Operator, For- .next, do loop, while-wend, procedure/Public, Private and Static & Dim Statement.

**UNIT – II**

Structure of VB program, Forms & built in controls, Properties and events, Code Module, Scale Modes, Printer Object (Printing text, setting Fonts, graphics), Common dialog Boxes, picture controls, image-controls, send keys, MS-Common Controls, Error Handling, Classes, Control Arrays, MDI, SDI. **File Handling** – Text and Binary Files, Files System Orbit Object.

**UNIT – III**

**Database Interface:** Review of ANSI SQL, ODBC, Pass through ODBC, DAO, MS-Jet Engine, DB-Engine, Workspaces, Databases, record sets, Data bound controls, ActiveX controls, ADO, Active X Data controls, RDO Data view Window, Data Environment Designer, Crystal Report and Data Report Utility Using Visual Basic (VB) for Transaction Management, Concurrency Control, Interfacing with RDBMS, Backend Stored procedure Usage.

**UNIT – IV**

**Help Writing:** Building a help, System, Building & Topics File, Labeling the topics, Creating a help project, primary & secondary help window, linking to internet, Adding Multimedia, Using HTML help workshop, content sensitive help, help file. Overview of COM/DCOM using Windows API Functions, MAPI interface, Microsoft Transaction Server, Visual source safe, VB Script.

**UNIT – V :Introduction to .NET framework** Introduction, Common language runtime, Common Type System, Common Language Specification, The Base class Library, The .NET class library intermediate language, Just in –time compilation, garbage collection, Application installation & Assemblies, WEB Services, Unified classes

**Unit-I**

**Set :** Definition of sets, countable and uncountable sets, Venn Diagrams, Power set, Partition of sets, cardinality, inclusion-exclusion principles, proofs on some general identities on sets. **Relation-**Definition, types of relation, composition of relations, pictorial representation of relation, equivalence relation, partial ordering relation. **Function-**Definition, type of functions, one to one, into and onto function, inverse function, composition of functions, recursively defined functions. **Theorem Proving Techniques** mathematical induction, pigeonhole principle, proves by contradiction.

**Unit-II**

**Algebraic Structures:** Definition, Properties, types: Semi Group, Monoid, Groups, Abelian group, properties of groups, Subgroup, cyclic groups, cosets, factor group, permutation groups, Normal subgroup, Homomorphism and isomorphism of groups, example and standard results, rings and fields.

**Unit-III**

**Posets, Hasse Diagram and Lattices:** Introduction, ordered sets, Hasse diagram of partially ordered set, isomorphic ordered sets, well ordered set, properties of Lattices, bounded lattices and Complemented lattices. **Boolean Algebra** Basic definitions, sum of products and product of sums forms, Logic gates and Karnaugh maps.

**Unit-IV: Propositional Logic:** Proposition, logic operators, first order predicate logic, truth tables, tautologies, arguments, contradictions, logical implications, logical equivalence, predicates, universal and existential quantifiers.

**Unit-V : Graphs & Combinatorics:** Recurrence Relation, Generating function, simple graph, multi graph, graph terminology, representation of graphs, Bipartite, Regular, Planar and connected graphs, Euler graphs, Hamiltonian path and circuits, Adjacency and Incidence Matrices Graph coloring number, chromatic number, **Tree** Definition, Rooted tree, properties of trees, binary search tree, tree traversal.

**Unit 1: Differential Equations**

- **Ordinary Differential Equations (ODEs):** Basic concepts and solutions.
- **Applications:** Real-world problems modeled with ODEs.

**Unit 2: Partial Differential Equations (PDEs)**

- **Introduction:** What PDEs are and their classifications.
- **Solution Methods:** Basic techniques like separation of variables.

**Unit 3: Vector Calculus**

- **Vector Functions:** Understanding vector fields.
- **Integrals:** Line and surface integrals, including Green's and Stokes' Theorems.

**Unit 4: Complex Variables**

- **Complex Functions:** Introduction and properties of complex numbers.
- **Integration:** Basic techniques for integrating complex functions.

**Unit 5: Numerical Methods**

- **Root Finding:** Simple methods like Bisection and Newton-Raphson.
- **Numerical Integration:** Basic methods such as the Trapezoidal and Simpson's rule.

**Unit 6: Laplace Transforms**

- **Definition:** Understanding the Laplace transform.
- **Applications:** How to use Laplace transforms in solving differential equations.

**Textbooks:**

2. *Engineering Mathematics* by John Bird

**Unit 1: Graph Theory**

- **Basic Concepts:** Definitions of graphs, vertices, edges, and types of graphs (simple, directed, weighted).
- **Graph Traversal:** Depth-First Search (DFS) and Breadth-First Search (BFS).

**Unit 2: Trees**

- **Tree Basics:** Definitions and properties of trees.
- **Binary Trees:** Types (full, complete, binary search trees) and traversal methods (in-order, pre-order, post-order).

**Unit 3: Combinatorics**

- **Counting Principles:** Basic counting techniques, permutations, and combinations.
- **Binomial Theorem:** Understanding the binomial coefficients.

**Unit 4: Boolean Algebra**

- **Basics of Boolean Algebra:** Definitions and operations (AND, OR, NOT).
- **Applications:** Use of Boolean algebra in logic circuits and simplifying expressions.

**Unit 5: Relations and Functions**

- **Relations:** Types (reflexive, symmetric, transitive) and properties.
- **Functions:** Definitions, types (injective, surjective, bijective), and compositions.

**Unit 6: Recurrence Relations**

- **Definition:** Understanding recurrence relations and their solutions.
- **Applications:** Use in algorithm analysis and computer science.

**Textbooks:**

1. *Discrete Mathematics and Its Applications* by Kenneth H. Rosen
2. *Discrete Mathematics* by Richard Johnsonbaugh

**Reference Books:**

2. *Mathematics for Computer Science* by Eric Lehman, F. Thomson Leighton, and Albert R. Meyer

**Unit 1: Algebra**

- **Basic Algebraic Operations:** Simplifying expressions, solving linear equations, and inequalities.
- **Polynomials:** Operations on polynomials, factoring, and solving quadratic equations.

**Unit 2: Trigonometry**

- **Trigonometric Ratios:** Understanding sine, cosine, tangent, and their applications.
- **Trigonometric Identities:** Fundamental identities and solving basic trigonometric equations.

**Unit 3: Calculus**

- **Differentiation:** Basic rules of differentiation, application of derivatives to find slopes and rates of change.
- **Integration:** Understanding definite and indefinite integrals and their applications.

**Unit 4: Matrices and Determinants**

- **Matrices:** Definitions, types of matrices, and basic operations (addition, subtraction, multiplication).
- **Determinants:** Calculation of determinants and their properties, and applications in solving linear equations.

**Unit 5: Statistics and Probability**

- **Basic Statistics:** Measures of central tendency (mean, median, mode) and measures of dispersion (range, variance, standard deviation).
- **Probability:** Basic concepts of probability, counting principles, and conditional probability.

### Unit-I

**Internet Basics** communicating on the internet, internet domains, establishing connection on the internet, client IP address, TCP/IP and its services, transmission control protocol, WWW, intranet, extranet.

### Unit-II

**Introduction to HTML** commonly used HTML commands, text formatting, text styles, Lists – types of lists, adding graphics to HTML documents, tables, links – external document references, internal document references, frames.

### Unit-III

**Javascript** javascript in web pages, the advantages of javascript, building javascript syntax – data types, type casting, creating variables, javascript array, operators and expressions, conditional checking, functions – build in functions, user defined functions, dialog boxes – alert dialog box, prompt dialog box, confirm dialog box, javascript document object model – understanding objects, forms object methods.

### Unit-IV

**JSP** jsp execution model, components of jsp, using java beans in jsp, directives in jsp-page directive, include directive, taglib directive, standard action tags- <jsp:include>, <jsp:forward>, <jsp:init>, implicit objects in jsp-application, session, pagecontext, out, request, response, error handling in jsp, database connectivity using jsp.

### Unit-V

**Active Server Pages:** Basics, Integrating Script, ASP Objects and Components, configuring and troubleshooting, Request and response objects, Retrieving the contents of a an HTML form, Retrieving a Query String, Cookies, Creating and Reading Cookies. Using application Objects and Events.

### References

2. James Godwill, “Pure JSP”, Sams publications, edition-2000
3. Bryan Basham, “Head First in Servlets and Jsp”, O’Rielly publications, March 2008.

## INTERNET TECHNOLOGY LAB

### CCAC-351

1. Create a registration form in html containing student name, student roll no, branch, session, email id, phone no., address etc.
2. Create a document with two links to an external document. The first link should lead to the beginning of the external document. The second link should lead to a particular section in the external document.
3. Create a specimen of corporate web page. Divide the browser screen into two frames, The frame on the left will be a menu consisting of hyper links. Clicking on one of these links will lead to a new page, which must open in the target frame, which is on the right hand side.
4. Using scripting language validate a registration form whether the user enter character in the username textfield, in the password filed the no. of characters not more than 6.
5. Create a web page using two image files, which between one another as the mouse pointer moves over the images.
6. Create a web page which accepts user information and user comments on the web site. Design the web page using form elements and check if all the text fields have begin entered with data else display an alert.
7. Create a JSP for inserting a employee information in a database.
8. Create an application which displays how many times a JSP is visited.
9. Create a JSP showing the use of application implicit object.
10. Create a jsp showing the use of jsp error handling.

**Unit - I****Introduction and Software Project Planning**

Fundamentals of Software Project Management (SPM), Need Identification, Project Management Cycle, SPM Objectives, Management Spectrum, SPM Framework,

**Unit – II**

Software Project Planning, Planning Objectives, Project Plan, Types of project plan, Structure of a Software Project Management Plan, Software project estimation, Estimation models.

Work Breakdown Structure (WBS), Scheduling techniques, Network Diagrams: PERT, CPM and Gantt Charts.

**Unit - III**

Project Monitoring & Control, Earned Value Analysis, Earned Value Indicators: Budgeted Cost for Work Scheduled (BCWS), Cost Variance (CV), Schedule Variance (SV), Cost Performance Index (CPI), Schedule Performance Index (SPI), Interpretation of Earned Value Indicators.

**Unit - IV**

Concept of Software Quality, Software Quality Attributes, Software Quality Metrics and Indicators, The SEI Capability Maturity Model (CMM) and SQA Activities.

**Unit - V**

Software Configuration Management: Software Configuration Items and tasks, Baselines, Plan for Change, Change Control, Change Requests Management, Version Control.

## KNOWLEDGE MANAGEMENT & EXPERT SYSTEM

DCAC 301

Cr. L T P

4 3 10

### Unit - I

Introduction to knowledge Management Distinction between data , information & knowledge. Concept of knowledge creation, Intellectual Capital Creation, Human Capital, Customer Capital and Organizational Capital

### Unit-II

Socio-cultural aspects & organizational aspects Tacit & Explicit knowledge & Knowledge Organization . Knowledge Storage and Distribution, KM tools, Data warehouse, Data mining, knowledge management evaluation & Valuation of Knowledge.

### Unit-III

K- Sharing Practices and Barriers. K – culture, KM In Indian organizations and MNC. Learning Organizations & Organizational Learning

### Unit – IV

**Expert System** Existing Expert Systems (DENDRAL, MYCIN), Architecture of expert system, Features of Expert system, Genetic algorithm, Fuzzy logic, Neural Networks, Intelligent Agents, Meta Knowledge, Expertise Transfer, Self Explaining System, User and expert systems.

### Unit-V

K-Initiative, K-Strategic issues in knowledge management, K-Commerce

### Reference Books:

1. SudhirWarrier, “*Knowledge Management*”, Vikas publishing House, New Delhi, First edition, 2007.
2. Thotharti Raman, “*Knowledge Management*”, Excel Books ,New Delhi, First Edition,2004.
3. Stuart Barnes “*Knowledge Management Systems: Theory & Practice*”, Thomson Learning Press, New Delhi, First Edition, 2002.
4. Ronald Maier, “*Knowledge Management System*”, Springer, Germany, Second Edition,2002.

**Unit 1: Foundations of Knowledge Management**

- Definition and Importance of Knowledge Management
- Types of Knowledge: Explicit and Tacit
- Key Concepts and Principles of KM

**Unit 2: Knowledge Management Processes**

- Knowledge Creation
- Knowledge Sharing
- Knowledge Application

**Unit 3: Tools and Technologies for KM**

- Information Systems in KM
- Technology Support: Databases, Intranets
- Collaborative Tools and Social Media

**Unit 4: Organizational Culture and Knowledge Management**

- Role of Organizational Culture in KM
- Knowledge Management Strategies
- Building a Learning Organization

**Unit 5: Challenges and Future of KM**

- Barriers to Effective KM
- Trends in KM: AI, Big Data, and Emerging Technologies
- Future Directions in Knowledge Management

**Textbooks:**

1. *Knowledge Management: An Evolutionary View* by David J. Skyrme
2. *The New Knowledge Management* by Chris C. C. Wong

**Reference Books:**

1. *Knowledge Management in Organizations* by Michael A. J. Cowan
2. *The Knowledge-Creating Company* by Ikujiro Nonaka and Hirotaka Takeuchi

**Unit 1: Introduction to Information Systems**

- Definition and Types of Information Systems
- Components of Information Systems
- Role of Information Systems in Organizations

**Unit 2: Data Management**

- Data Collection, Storage, and Retrieval
- Database Management Systems (DBMS)
- Data Warehousing and Data Mining

**Unit 3: Information Technology Infrastructure**

- IT Components: Hardware, Software, Networks
- Network Architecture and Security
- Cloud Computing and Virtualization

**Unit 4: Systems Development and Implementation**

- System Development Life Cycle (SDLC)
- Agile and Waterfall Methodologies
- Testing, Deployment, and Maintenance

**Unit 5: Emerging Technologies in Information Systems**

- Impact of Artificial Intelligence and Machine Learning
- Internet of Things (IoT) and Big Data
- Future Trends in Information Systems

**Textbooks:**

1. *Management Information Systems* by Kenneth C. Laudon and Jane P. Laudon
2. *Information Systems for Managers* by Gabe Piccoli

**Reference Books:**

1. *Information Technology for Management* by Efraim Turban
2. *Systems Analysis and Design* by Alan Dennis and Barbara Wixom

**Unit 1: Understanding Organizational Learning**

- Definition and Importance of Organizational Learning
- Theories of Learning in Organizations
- Learning Organizations vs. Traditional Organizations

**Unit 2: Knowledge Creation and Sharing**

- Knowledge Management Frameworks
- Knowledge Creation Processes: SECI Model
- Sharing Knowledge: Best Practices and Tools

**Unit 3: Learning Culture and Leadership**

- Role of Leadership in Fostering Learning
- Creating a Learning Culture
- Assessing Organizational Learning

**Unit 4: Training and Development**

- Employee Development Strategies
- Learning and Development Programs
- Evaluating Training Effectiveness

**Unit 5: Measuring and Managing Organizational Learning**

- Metrics for Assessing Learning Outcomes
- Tools and Techniques for Evaluation
- Continuous Improvement in Learning Processes

**Textbooks:**

1. *The Fifth Discipline: The Art and Practice of the Learning Organization* by Peter M. Senge
2. *Organizational Learning: Creating, Retaining, and Transferring Knowledge* by William H. Starbuck

**Reference Books:**

1. *The Learning Organization: A Cultural Change Agenda* by David A. Garvin
2. *The Knowledge-Creating Company* by Ikujiro Nonaka and Hirotaka Takeuchi

**Unit 1: Current Trends in Knowledge Management**

- Overview of Emerging Trends
- Impact of Technology on KM Practices
- AI and Machine Learning in KM

**Unit 2: Social Media and Knowledge Sharing**

- Role of Social Media in Knowledge Management
- Building Communities of Practice
- Collaboration Tools and Platforms

**Unit 3: Big Data and Knowledge Management**

- Understanding Big Data in the Context of KM
- Data Analytics for Knowledge Management
- Case Studies on Big Data Applications

**Unit 4: Knowledge Management Frameworks and Models**

- Popular KM Models and Frameworks
- Implementing a KM Framework
- Best Practices in KM Implementation

**Unit 5: Future Directions and Challenges**

- Ethical Considerations in KM
- Challenges in Implementing KM Systems
- The Future of Knowledge Management

**Textbooks:**

1. *Knowledge Management: A New Challenge for Tomorrow's Managers* by Michael J. Stankosky
2. *Emerging Trends in Knowledge Management* by Klaus North

**Reference Books:**

1. *The New Knowledge Management: The Challenge of Change* by David J. Skyrme
2. *Knowledge Management: Systems and Processes* by David J. Pauleen

**Unit - I**

**Data Warehousing:** Data-ware housing: Definition, Delivery Process, Difference between Database System and Data Warehouse, Multi Dimensional Data Model, Stars, Snow Flakes, Fact Constellations, Data marts, 3 Tier Architecture of Data Warehouse, Introduction to OLAP servers.

**Unit - II**

**Data Mining:** Motivation(for Data Mining), Definition & Functionalities, knowledge discovery steps,Architecture , Statistical measures in large Databases. Measuring Central Tendency, Measuring Dispersion of Data, Graph Displays of Basic Statistical class Description.

**Data Processing:** Requirement for pre processing, Data Cleaning and its various techniques, Data Integration and Transformation,Data Reduction:- Data Cube Aggregation, attribute subset selection, Numerosity Reduction, Concept hierarchy generation.

**Unit - III**

**Data Generalization and Frequent Patterns:** Attribute oriented induction Concept Description and Data Generalization, implementation of AOI, presentation of derived generalization and class description, Mining Class comparisons. Mining frequent patterns, A priori Algorithm, F P Growth, Mining various kind of Association rule.

**Unit - IV****Classification and Predictions:**

Introduction, Classification by Decision tree induction, Bayesian Classification, Rule- based Classification, Classification methods K-nearest neighbor classifiers. **Cluster analysis:** requirement of clustering in data mining, Data types in cluster analysis, Categories of clustering methods, Partitioning methods: K-mean and K- mediods. Hierarchical Clustering: agglomerative and divisive clustering, brief introduction to different clustering techniques.

**Unit - V**

**Applications and Trends in data mining:** Benefits of data mining, Data Mining Applications: in retail industry banking and finance, and telecommunication industry Social impact on data mining, trends in data mining. Data mining interface,

**Reference Books:**

3. Sam Anahory, Dennis Murray, “*Data Warehousing in the Real World : A Practical Guide for Building Decision Support Systems* “, Pearson Education, 1<sup>st</sup> edition, 2008

## SYSTEM PROGRAMMING

DCAC 305

Cr L-T-P

4 3-1-0

### Unit - I

Introduction To PC Architecture (Intel Pentium, PC Hardware, segments and addressing, Registers, Assembly Language Basics, Machine Addressing, special DEBUG features, Data Definition Directives, Addressing Formats, COM Programs.

**Unit – II:** Program Logic And Control Imp, Loop and conditional jump Instructions, Boolean operations, Shifting, Rotating, Keyboard And Screen Processing, String Operations, Arithmetic Operations and Table Processing, Searching, sorting.

### Unit - III

Macro Working and Linking, Macro Definition, The LOCAL Directive, Reception Directives, Conditional Directives, Intra-segment and Inter-segment calls, passing parameters, Advanced Screen and Keyboard Processing, BIOS Interrupt 16H for Keyboard input, Extended Function Keys.

**Unit – IV:** Disk Processing Disk Organization, File allocation Table, File Control Block, Sequential Reading of a Disk File, Random Processing, Miscellaneous disk Processing Features, File Handlers and Extended DOS functions, BIOS Disk Operations, Dos Memory Management, Program Segment Prefix, DOS Memory Control, Program loader, program overlays, Resident programs.

**Unit – V :**Assemblers And Macroprocessor, Design of Assembler, Data Structure, format of Databases, Algorithm, Macro instructions, Features of a macro facility, Atwopass algorithm and a single pass algorithm. LOADERS, Compile-and-go Loaders, General Loader Schemes, Absolute Relocating and Direct-Linking loaders.

### Reference Books:

1. Peter Abel, “*IBM PC Assembly Language and Programming*”, Pearson Education, 5<sup>th</sup> Edition, 2009.
2. John J. Donovan,” *Systems Programming*”, Tata McGraw-Hill, Fourth Edition,6<sup>th</sup> reprint, 2009.
3. Leland L.Beck, D. Manjula, “*System Software - An Introduction to System Programming*”, Pearson Education, 3<sup>rd</sup> Edition, 2009.

4. D. M. Dhamdhere, "*System Programming and Operating Systems*", Tata McGraw-Hill, 2nd Edition, 2008.

**Unit - I**

Introduction and Fundamentals, Components of Image Processing System, Element of Visual Perception, A Simple Image Model, Sampling and Quantization.. Image Enhancement in Spatial Domain: Introduction; Basic Gray Level Functions – Piecewise-Linear Transformation Functions: Contrast Stretching; Histogram Specification; Histogram Equalization; Local Enhancement; Enhancement using Arithmetic/Logic Operations – Image Subtraction, Image Averaging; Basics of Spatial Filtering; Smoothing - Mean filter, Ordered Statistic Filter; Sharpening – The Laplacian.

**Unit - II**

Image Enhancement in Frequency Domain Fourier Transform and the Frequency Domain, Basis of Filtering in Frequency Domain, Filters – Low-pass, High-pass; Correspondence Between Filtering in Spatial and Frequency Domain; Smoothing Frequency Domain Filters – Gaussian Lowpass Filters; Sharpening Frequency Domain Filters – Gaussian Highpass Filters; Homomorphic Filtering.

**Unit - III**

Image Restoration: A Model of Restoration Process, Noise Models, Restoration in the presence of Noise only-Spatial Filtering– Mean Filters: Arithmetic Mean filter, Geometric Mean Filter, Order Statistic Filters – Median Filter, Max and Min filters; Periodic Noise Reduction by Frequency Domain Filtering – Bandpass Filters; Minimum Mean-square Error Restoration.

**Unit - IV**

Color Image Processing: Color Fundamentals, Color Models, and Converting Colors to different models, Color Transformation, Smoothing and Sharpening, Color Segmentation.

Morphological Image Processing: Introduction, Logic Operations involving Binary Images, Dilation and Erosion, Opening and Closing, Morphological Algorithms – Boundary Extraction, Region Filling, Extraction of Connected Components, Convex Hull, Thinning, Thickening

**Unit - V**

Segmentation: Introduction, Region Extraction, Pixel-Based Approach, Multi-level thresholding, Region-based Approach, Edge and Line Detection: Edge Detection, Edge Operators, Pattern Fitting

Approach, Edge Linking and Edge Following, Edge Elements Extraction by Thresholding, Edge Detector performance, Line Detection, Corner Detection. Feature Extraction: Representation, Topological, Geometrical attributes.

**Reference Books:**

1. Rafael C. Gonzalvez and Richard E. Woods, "Digital Image Processing", Pearson Education 2nd edition, Pearson Education 2009.
2. R.J. Schalkoff, "Digital Image Processing and Computer Vision", John Wiley and Sons NY, 2nd edition, reprint 2009.

3. A.K. Jain, "Fundamentals of Digital Image Processing", Prentice Hall, Upper Saddle River, NJ, 2nd edition 2002.

1. Create a simple web page using HTML.
2. Design a web page using CSS for layout and styling.
3. Implement basic JavaScript functions to manipulate HTML elements.
4. Create a responsive webpage using media queries.
5. Design a form using HTML and validate it using JavaScript.
6. Implement an AJAX request to fetch data from an API and display it on the webpage.
7. Create a simple PHP script that displays "Hello, World!"
8. Connect to a MySQL database and retrieve/display data using PHP.
9. Develop a simple RESTful API using PHP.
10. Host a simple website on a cloud server (like Heroku or AWS).
11. Create a responsive webpage using the Bootstrap framework.
12. Integrate a third-party API (like Google Maps or Weather API) into a webpage.
13. Install and set up a basic CMS (like WordPress).
14. Implement basic security measures in a web application (input validation, sanitization).
15. Deploy a simple web application on a cloud server.

1. Create a project charter and define project goals.
2. Develop a WBS for a sample project.
3. Use software tools to create a Gantt chart for project scheduling.
4. Identify and assess risks for a project.
5. Prepare a budget for a project using estimation techniques.
6. Simulate an Agile sprint planning session.
7. Create and manage a Scrum board for a small project.
8. Develop a quality management plan for a project.
9. Identify stakeholders and perform a stakeholder analysis.
10. Develop a change management plan for a project.
11. Use software tools to track project progress and update status.
12. Create a communication plan for stakeholders.
13. Prepare a final report for a completed project.
14. Explore and use tools like JIRA, Trello, or MS Project for project management.
15. Conduct a retrospective meeting to capture lessons learned from a project.

1. Submit a proposal for a minor project including objectives and scope.
2. Conduct a literature review related to the chosen project topic.
3. Gather requirements through interviews or surveys.
4. Create system architecture and design diagrams.
5. Implement the project as per the design specifications.
6. Develop and execute test cases for the project.
7. Prepare project documentation including user manuals.
8. Create a presentation summarizing the project.
9. Conduct peer reviews of the project with classmates.
10. Submit the final project report and all related documents.
11. Use version control (like Git) for project management.
12. Deploy the minor project on a platform.
13. Gather user feedback on the project for future improvements.
14. Conduct a meeting with stakeholders to review project outcomes.
15. Write a reflection on lessons learned during the project development process.

1. Write and execute a simple assembly language program.
2. Create and use macros in assembly programming.
3. Implement system calls in C/C++.
4. Write programs for file handling in system programming.
5. Implement dynamic memory allocation in C/C++.
6. Use IPC mechanisms like pipes or message queues.
7. Write programs to create and manage processes.
8. Implement multithreading in C/C++.
9. Write a program to demonstrate signal handling.
10. Create a client-server application using socket programming.
11. Use debugging tools to troubleshoot system programs.
12. Implement a simple shell in C.
13. Understand and implement basic linker and loader concepts.
14. Write a simple device driver program.
15. Use system calls to monitor system performance.

1. Load and display an image using a programming language (e.g., Python with OpenCV).
2. Apply histogram equalization to improve image contrast.
3. Implement low-pass and high-pass filters.
4. Perform image transformations (scaling, rotation).
5. Convert images between RGB and grayscale.
6. Implement basic image segmentation techniques (thresholding, clustering).
7. Apply edge detection algorithms (Sobel, Canny).
8. Implement morphological operations (dilation, erosion).
9. Apply image compression techniques (JPEG, PNG).
10. Implement basic image restoration techniques (inpainting).
11. Extract features from images using techniques like SIFT or SURF.
12. Implement a basic face detection algorithm using OpenCV.
13. Create a panorama by stitching images together.
14. Apply watermarking techniques to images.
15. Use machine learning for image classification tasks.

**Unit - I**

**Introduction:** Introduction to Artificial Intelligence, History, What is AI, Importance of AI, Issues, AI Examples ,problem solving in games, Search algorithms: Informed search, Uninformed search, Depth first search, Best first search, And or graph , Intelligent Agent.

**Unit - II**

**Processing and understanding Natural Languages:** Understanding Natural Languages: Applications of Natural Languages, Natural Language processing,Parsing techniques: Rules of parsing, Top down parsing, Bottom up parsing, , Transition networks, Fillmore's grammars, Shanks Conceptual Dependency.

**Unit - III**

**Knowledge Representation:** Graphs, Frames structures and related structures, Semantic Nets and Partitioned Nets,Scripts, Production Rules, Knowledge Based systems, Inference engine, Forward deductions and backward deductions,

**Unit - IV**

**Expert System** Existing Expert Systems (DENDRAL, MYCIN), Architecture of expert system, Features of Expert system, Intelligent Agents, Meta Knowledge, Expertise Transfer, Self Explaining System, User and expert systems.

**Unit - V**

**Pattern Recognition** Introduction to Pattern Recognition, Structured Description, Symbolic Description, Machine perception, Speech Recognition. **Programming Language** Introduction to programming Language, Introduction to PROLOG.

**Reference Books :**

1. Char Nick, "*Introduction to Artificial Intelligence*", Addison Wesley, 2007.
2. Stuart Russell and Peter Norvig, "*Artificial Intelligence: A Modern Approach.*", Prentice Hall, Third Edition, 2010.
3. Elaine Rich, Kevin Knight and Shivashankar B.Nair, "*Artificial Intelligence*", Tata McGraw-Hill, Third edition, 2009.

**Unit I**

CRT Monitor ,Line generation: Points lines, Planes, Pixels and Frame buffers, vector and character generation. Graphics Primitives: Display devices, Input devices, Display control text.

**Unit-II** Polygon: Polygon Representation, Entering polygons, Filling polygons. Segments: Segments table, creating deleting and renaming segments, visibility, image transformations.

**Unit-III** Transformations: Matrices transformation, transformation routines, displays procedure. Windowing and Clipping: Viewing transformation and clipping, generalize clipping, multiple windowing.

**Unit-IV** Three Dimension: 3-D geometry primitives, transformations, projection clipping. Interaction: Hardware input devices handling algorithms, Interactive techniques.

**Unit-V** Hidden Line and Surface: hidden line methods. Rendering and Illumination: Introduction to curve generation, Bezier,and B-spline algorithms and their comparisons.

**Unit-I**

Management Information System( MIS): Concept & definition, Role of MIS, Process of Management, MIS-A tool for management process, Impact of MIS, MIS & computers, MIS & the user, IMS- a support to the Management.

**Unit-II**

Concept of organizational planning, The Planning Process, Computational support for planning, MIS planning, Characteristics of control process, the nature of control in an organization.

**Unit-III**

Internet & electronic commerce, Intranet, Extranet & Enterprise Solutions, Information System for Business Operations, Information System for Managerial Decision Support, Information System for Strategic Advantage.

**Unit-IV**

Enterprise & global management, Security & Ethical challenges, Planning & Implementing changes. Define the problems, set system objectives, establish system constraints, determine information needs, determine information sources, develop alternative conceptual designs.

**Unit-V**

Plan the implementation, organize for implementation, develop procedures for implementation, computer related acquisitions, develop forms for data collection and information, dissemination, test the system, document the system.

**Unit-I****Neural Networks-1(Introduction & Architecture)**

Neuron, Nerve structure and synapse, Artificial Neuron and its model, activation functions, Neural network architecture: single layer and multilayer feed forward networks, recurrent networks. Various learning techniques; perception and convergence rule, Auto-associative and hetro-associative memory.

**Unit-II****Neural Networks-II (Back propogation networks)**

Architecture: perceptron model, solution, single layer artificial neural network, multilayer perception model; back propogation learning methods, effect of learning rule co-efficient ;back propagation algorithm, factors affecting backpropagation training, applications.

**Unit-III****Fuzzy Logic-I (Introduction)**

Basic concepts of fuzzy logic, Fuzzy sets and Crisp sets, Fuzzy set theory and operations, Properties of fuzzy sets, Fuzzy and Crisp relations, Fuzzy to Crisp conversion.

**Unit-IV****Fuzzy Logic –II (Fuzzy Membership, Rules)**

Membership functions, interference in fuzzy logic, fuzzy if-then rules, Fuzzy implications and Fuzzy algorithms, Fuzzyfication&Defuzzificataions, Fuzzy Controller, Industrial applications.

**Unit-V****Genetic Algorithm(GA)**

Basic concepts, working principle, procedures of GA, flow chart of GA, Genetic representations, (encoding) Initialization and selection, Genetic operators, Mutation, Generational Cycle, applications.

**Text Books:**

4. Timothy J. Ross, "Fuzzy Logic with Engineering Applications" Wiley India.
5. Kumar Satish, "Neural Networks" Tata McGraw Hill

**Unit – I**

Introduction, issues and challenges in mobile computing, overview of wireless telephony: cellular concept, UMTS, GSM: air-interface, channel structure, location management: HLR-VLR, hierarchical, handoffs, policy based handoff process, channel allocation in cellular systems, CDMA, GPRS.

**Unit – II:** ISM band, Spread Spectrum, physical layer accessing techniques – FHSS, DSSS, OFDM, (IEEE 802.11a) HR-DSSS, OFDM (IEEE 802.11g) Wireless Networking, Wireless LAN Overview: MAC issues, IEEE 802.11, Blue Tooth, Wireless multiple access protocols, Wireless applications, data broadcasting, Mobile IP-entities and terminology, IP Packet delivery, Agent discovery, Registration, Tunneling and encapsulation, optimization and reverse tunneling WAP: Architecture, protocol stack, application environment, applications.

**Unit – III:** Data management issues, data replication for mobile computers, adaptive clustering for mobile wireless networks, File system-consistency, CODA, Ficus, MIO-NFS, Rover, Disconnected operations.

**Unit – IV:** Mobile Agents computing, security and fault tolerance, transaction processing in mobile computing environment, TCP over wireless-Traditional TCP, Indirect TCP, Snooping TCP, Mobile TCP, Fast Retransmit/Fast recovery, Transmission-time out Freezing, selective retransmission, Transaction oriented TCP, TCP over 2 G and 3 G wireless network.

**Unit – V** Ad Hoc networks, localization, Routing protocols, global state routing (GSR), Destination sequenced distance vector routing (DSDV), Dynamic source routing (DSR), Ad Hoc on demand distance vector routing (AODV), Temporary ordered routing algorithm (TORA), QoS Parameters in Ad Hoc Networks-routing, bandwidth, delay, Jitter, Location management, handoff and energy management, fault tolerance in MANET, MANET applications.

## **ARTIFICIAL INTELLIGENCE LAB.**

### **CCAC-352**

1. Write a Prolog Program to count the numbers.
2. Write a Prolog Program for addition.
3. Write a Prolog Program for subtraction.
4. Write a Prolog Program multiplication.
5. Write a Prolog program for division.
6. Write a Prolog program to find smaller number.
7. Write a Prolog program to find greater number.
8. Write a Prolog program to find the factorial of a number.
9. Write a Prolog program to do the best first search.
10. Write a Prolog program to do the depth first search.
11. Write a Prolog program to make a family tree.

## COMPUTER GRAPHICS LAB.

CCAC-354

1. Write a program to draw a line using DDA.
  2. Write a program to draw a line using Bresenham's algorithm.
  3. Write a program to draw a circle using Bresenham's algorithm.
  4. Write a program to Translate a triangle using 2-D transformation.
  5. Write a program to Rotate a triangle by 45o using 2-D transformation.
  6. Write a program to Scale triangle using 2-D transformation.
  7. Write a program to Translate a triangle using 3-D transformation.
  8. Write a program to Rotate a triangle using 2-D transformation.
  9. Write a program to Scale a triangle using 2-D transformation.
  - 10 Write a program to clip the line whose co. ordinate (2, 3) and (8, 4) and whose lower left corner is (1, 2) and upper right corner (9,8).using Cohen-sutherland line clipping algorithm.
1. Write the program for pendulum using Bezier curve

1. Students choose a seminar topic and conduct preliminary research
2. Design a PowerPoint presentation based on the researched topic.
3. Practice verbal and non-verbal communication skills.
4. Simulate a group discussion on a current event or controversial topic.
5. Provide constructive feedback to classmates on their presentations.
6. Organize a panel discussion with select students as panelists and others as the audience.
7. Present a research paper summarizing findings on a specific topic.
8. Conduct a mock interview as an interviewer and interviewee.
9. Simulate a conflict scenario in a group setting and practice resolution techniques.
10. Experiment with creative presentation methods (e.g., storytelling, infographics).
11. Simulate a conflict scenario in a group setting and practice resolution techniques.
12. Create an infographic to summarize key information visually.
13. Engage in role-playing to explore different perspectives in a conflict scenario.
14. Develop presentation skills using visual aids effectively.
15. Practice giving and receiving constructive feedback.

1. Develop a detailed project proposal, including objectives, methodology, and expected outcomes.
2. Conduct a literature review on the selected project topic and summarize key findings.
3. Create a project plan using Gantt charts or project management software (e.g., MS Project).
4. Collect and analyze project requirements through interviews or surveys.
5. Prepare design documentation, including architecture diagrams and user interface mockups.
6. Implement a specific module of the project, ensuring code quality and functionality.
7. Develop testing strategies, perform testing, and document results for the implemented module.
8. Prepare a project budget, including resource allocation and cost estimation.
9. Identify potential risks and create a risk management plan with mitigation strategies.
10. Prepare and present a progress report on the project to stakeholders.
11. Collect relevant data for the project and perform statistical analysis.
12. Present the final project outcomes, including objectives met and future work.
13. Document each phase of the project, including challenges faced and lessons learned.
14. Create a user manual that guides end-users in utilizing the project deliverables.
15. Gather feedback from peers and mentors and evaluate project outcomes against objectives.

# **School of Biological Engineering & Sciences**

## **Shobhit University, Gangoh**

**Master of Science in Microbiology (M.Sc.) Two Year Programme  
Semester Pattern  
(w.e.f. session 2017-18)**

**Revised and approved in the year 2020(13<sup>th</sup> meeting Board of Studies)**

**(Scheme & syllabus from 2020-2024)**

## **PEOs: Program Educational Objectives POs: Program Outcomes PSOs: Program Specific Outcomes**

**Name of the Department:** Department of Microbiology

**Name of the Program:** M.Sc. Microbiology

**Duration of the degree:** 2 Years

M. Sc. (Microbiology) course combines the concepts of biology and chemistry to understand living things and their relationship with the ecosystem. The course covers the study of microorganisms and their effect on human life. M.Sc. in Microbiology is an advanced course that helps students understand the microbes such as virus, bacteria, fungi, algae etc. at a deeper level. Students also learn the role of these microorganism in waste management and the production of fermented foods. Throughout M.Sc. Microbiology course, students study the detailed microbiology topics and interdisciplinary subjects.

M.Sc. Microbiology has a significant role in pharmaceuticals, agriculture, brewery and manufacturing of commercial products. The practical, research-based project and laboratory work throughout the M.Sc. Microbiology helps candidates excel at the workplace with required skills and knowledge.

### **Program Educational Objectives (PEOs)**

**PEO 1:** The objective of the Master's Program in Microbiology is to equip the students to gain bimolecular knowledge and analytical skills at an advanced level.

**PEO 2:** The program emphasizes to apply knowledge acquired about prokaryotic and eukaryotic cellular processes, interaction of microorganisms among themselves, with physical and chemical agents and higher order organisms in environment and biological systems to various conditions.

**PEO 3:** The laboratory training in addition to theory is included so that the students will acquire the skills to qualify for a broad range of positions in research, industry, consultancy, education and public administration, or for further education in a doctoral program.

**PEO 4:** Students will be able to address broad range of fields including biopolymer chemistry, marine biochemistry, environmental biotechnology, food science, microbiology, microbial genetics, molecular biology and systems biology.

### **Program Specific Outcomes (PSOs)**

**PSO 1:** Acquires and demonstrates competency in laboratory safety. Develops routine and specialized microbiological laboratory skills applicable to research, hospitals and industries.

**PSO 2:** Applies statistical and bioinformatics tools for interpretation of biological data and gains expertise in Computational Biology.

**PSO 3:** Acquires knowledge of structural and enzymatic properties of microbes and fermentation engineering, to develop human / environment friendly products or processes.

**PSO 4:** Gets familiarized with principles and techniques of various basic and analytical instruments used in laboratories.

**PSO 5:** Recognizes the importance of IPR and Patenting. Gain Entrepreneurial skills to initiate Startup.

**PSO 6:** Gets trained in bimolecular mechanisms involved in life processes, health and diseases.

**PSO 7:** Gains proficiency in related disciplines such as Molecular Biology, Pharmaceutical Sciences, Nano biotechnology and Immunology.

**PSO 8:** Explores the life forms at cellular, molecular and nano levels. Understands amazing properties of microbial world and appreciates the beauty of microbial life forms.

**PSO 9:** Assesses the role of microbes in improving soil quality and agricultural output through sustainable microbiological applications.

**PSO 10:** Work as Health care professionals in the fields of laboratory management, hospital and community services, in development & preparation of Study material for visually challenged.

### **Program Outcomes Objectives (POOs)**

**The Masters in Microbiology Program will address the increasing need for skilled scientific manpower with an understanding of research ethics involving microorganisms to contribute to application, advancement and impartment of knowledge in the field of microbiology and molecular biology globally. The laboratory training will empower them to prepare for careers in broad range fields. The M.Sc. Microbiology student will have:**

**POO 1:** State of art knowledge about various methodological and analytic approaches that are used within the specialization.

**POO 2:** Knowledge of the leading edge in a chosen specialized area of Microbiology, based on own research experience from a master's project and international literature.

**POO 3:** Can compete in national level competitive exams such as NET-JRF or GATE or International exams such as GRE-TOEFEL and can pursue career in higher studies.

**POO 4:** In-depth knowledge in the structure of a repertoire of microorganisms, metabolism in the cell, knowledge of the concepts of molecular genetics and biosynthesis of proteins, enzymology, physiology, microbial pathogenicity, environmental and agricultural microbiology, genetic engineering, bioengineering and a good theoretical and practical insight into methods used to obtain this knowledge.

**POO 5:** Demonstrate practical skills in the use of tools, technologies and methods common to microbiology, and apply the scientific method and hypothesis testing in the design and execution of experiments.

**POO 6:** Develop ability to independently carry out a complete scientific work process, including the understanding of theoretical background, hypothesis generation, collection and analysis of data, and interpretation and presentation of results.

**POO 7:** Has high competence and multidisciplinary project experience within selected topics related to microbiology and ability to contribute in a multidisciplinary team.

**POO 8:** Is capable to evaluate methods and results within the field of specialization critically.

**POO 9:** Is able to evaluate and apply relevant theory, methods and analytic approaches within the specialized field of microbiology, including statistical methods.

**POO 10:** Can assess and predict the technological, ethical and social effects of their own work /disciplines and of microbiology.

**POO 11:** Acknowledges health, safety and environment (HSE) issues in handling chemicals and biological materials; understands the environmental impacts associated with the activity; performs risk assessments and is familiar with safety instructions in his/her subject area.

**POO 12:** Can communicate scientific results to the general public and experts by writing well-structured reports and contributions for scientific publications and posters, and by oral presentations.

# Course Components of Academic Programme

## M.Sc. (Microbiology)

Minimum Duration : 4 Semesters (2 Years)

Maximum Duration : 6 Semesters (3 Years)

Total Number of Credits : 93 Credits

Course Components		Credits
<b>1.</b>	<b><u>Compulsory Course</u></b>	
I.	Foundation Course (FC)	00
II.	Core Course (CC)	61
<b>2.</b>	<b><u>Elective Course</u></b>	
I.	Departmental Electives (DE)	06
II.	Interdepartmental Electives (IE)	00
<b>3.</b>	<b><u>Discipline-Centric Ability Enhancement Course</u></b>	
I.	Seminar (SM)	03
II.	Project (PJ)/ Dissertation (DS)	16
III.	Skill (SK) and Ability Enhancement Course (AEC)	04
IV.	Comprehensive (CM)	00
<b>4.</b>	<b><u>General Course</u></b>	
I.	Human Values, Health Care and Professional Ethics (HP)	00
II.	Healthy Living and Fitness (HF)	00
III.	Disaster Management (DM)	00
IV.	General Proficiency (GP)	03
<b>5.</b>	<b><u>Audit Course</u></b>	

**Requirement of Awards of Degree: - Total Credits: - 93; CGPA $\geq$ 4.5 and any other conditions as per regulation and ordinances.**

### FOURTH SEMESTER

Course Code	Course Title	Category	(L)	(T)	(P)	Credits
<b>Discipline-Centric Ability Enhancement Course</b>						
MMB-401	Project/Dissertation	PJ	0	0	16	16
	<b>TOTAL</b>					<b>16</b>

### Dissertation

**Note:** Students must submit their dissertation report immediately on return from summer vacation in

June /July and the same would be evaluated for 16 credit units, which would be included in the Fourth Semester marks.

**Examination Scheme:**

<b>Components</b>	<b>Internal Assessment</b>			<b>External Evaluation</b>
	<b>Attendance</b>	<b>Class Test</b>	<b>Assignment/ Project/Seminar/Quiz</b>	
<b>Weightage (%)</b>	10	20	10	60

## SEMESTER I

### Cell and Developmental Biology

**Course Code: MMB-101**

**Credit Units: 03**

**Pre-requisite:** Basic information of Cell Biology

#### **Course Outcome:**

- Students will acquire knowledge about basics of cell biology.
- Students will learn about how various functions of organelles and their working.
- Students will gain an insight into microscopic structures and chemical components of various regions of cells.
- Students will attain a comprehensive knowledge of functioning of cell and synchronization of activities of various organelles.
- Students will be able to learn about various signaling mechanism involved in a cell which ultimately leads to a visible physiological response.
- Students will be able to understand the architectural components involved in making cells rigid and how cells are connected to each other.
- Students will learn about molecular events involved in cell cycle.
- Students will apply the information gained in understanding the issues and conditions encountered if things go wrong with cell cycle and how our understanding of cell signaling generate drug targets.

#### **Details of the Course:-**

#### **UNIT1**

Introduction to prokaryotes, eukaryotes & cell theory

Introduction to microscopy

Plasma Membrane: structure – organization, lipid bilayer, proteins & glycoconjugates, liposomes, functions – ionic transport, types of transport (symport, antiport, active & passive), channel proteins.

Intracellular compartmentalization: structure, organization and functions of nucleus, mitochondria, lysosome, golgi body, chloroplast, peroxisome, endoplasmic reticulum (rough and smooth)

#### **UNIT2**

Vesicular traffic in the secretory and endocytic pathway: transport from endoplasmic reticulum through the golgi network to lysosome, endocytosis, exocytosis, molecular mechanisms of vesicular transport and the maintenance of compartments diversity.

Cell signaling: general mechanistic principles

Types of signaling, GPCR, RTK with examples, Calcium Signaling, Mechanism of Chemotaxis, signal transduction and vision Significance of vesicular trafficking and cell signaling

#### **UNIT3**

Cell motility and shape: structure and functions, microfilaments microtubules and intermediate filament.

Integrating cell into tissue: cell-cell adhesion and communication, cell matrix adhesion, extra cellular matrix: collagen & non-collagen components. Cell cycle, molecular events and regulation.  
 Cell division: general strategy and regulation, molecular mechanism of mitosis and meiosis.  
 Regulation of cell cycle  
 Role of cyclins / cdks in the initiation of replication.

#### UNIT4

Cancer-Biology: Types of cancer, onset of cancer, proto- oncogenes and tumor suppresser genes, oncogenic mutations affecting cell proliferation, cell cycle and genome stability.  
 Programmed cell death & unprogrammed cell death.  
 Expression patterns of proteins & enzymes during cell proliferation  
 Molecular signaling of cancer Aetiology of Cancer

#### UNIT5

Introduction to Developmental Biology, History and Basic Concepts, Basics of model systems: Vertebrate Model Systems, Invertebrate and Plant Model Systems, basic patterning and development plan of model Plan, initial division pattern, evolution and development biology

#### Suggested Books:

S. No.	Name of Authors/Books/Publishers	Year of Publication/Reprint
<b>Reference Books</b>		
1.	Molecular Biology of cell, 4 <sup>th</sup> ed. Alberts, Bruce ( <i>et.al</i> ) (2002) Garland Science Publishing, New York.	2002
2.	Cell Biology- Smith and Wood by Chapman and Hall. Cell Biology: Organelle structure and function, Sadava, D E. (2004) Panima pub., New Delhi. Cell and Molecular Biology, 8 <sup>th</sup> ed. Robertis, Edp De and Robertis Emf De (2002) Lippincott Williams and Wilkins Pvt. Ltd., (International Student Edition) Philadelphia.	2004, 2002

#### Examination Scheme:

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

**SEMESTER I****Human Pathology****Course Code: MMB-101a****Credit Units: 03**

**Pre-requisite:** Basic understanding of diseases and their pathogenesis

**Course Outcome:**

Students will be able to learn and understand the concepts of how human system works in altered and diseased stage under the influence of various internal and external stimuli.

**Details of the Course:-****Unit I: Introduction:**

History of pathology, basic definitions and familiarization with the common terms used in pathology, techniques used in pathology.

**Cellular Adaptations, Cell Injury and Cell Death:**

Causes and mechanisms of cell injury: reversible and irreversible injury, Cellular responses: Hyperplasia, Hypertrophy, Atrophy, Metaplasia, Necrosis, Apoptosis, subcellular and intracellular response, (with suitable examples of diseases), Cellular ageing.

**Unit II: Role of Inflammation in diseases (with suitable examples):**

General features of acute and chronic inflammation: Vascular changes, cellular events, termination of acute inflammatory response. Cells and molecular mediators of inflammation, morphological effects and outcome of acute inflammation. Systemic effects of chronic inflammation, granulomatous inflammation.

**Unit III: Tissue Renewal And Repair, Healing And Fibrosis:**

Mechanism of tissue regeneration, role of ECM, repair by healing, scar formation and fibrosis, cutaneous wound healing, tissue remodelling in liver (mechanism of fibrosis and cirrhosis).

**Unit IV: Hemodynamic Pathology:**

Edema, hyperaemia, congestion, haemorrhage, haemostasis and thrombosis, Embolism, Infarction and shock and hypertension.

**Nutritional diseases:** Protein energy malnutrition, deficiency diseases of vitamins and minerals, nutritional excess and imbalances. Role and effect of metals (Zinc Iron and Calcium) and their deficiency diseases.

### Unit V: Cell proliferation: Cancer:

Definitions, nomenclature, characteristics of benign and malignant neoplasms, grading and staging of cancer, biology of tumor growth, mechanism of tumor invasion and metastasis, carcinogens and cancer, concept of oncogenes, tumor suppressor genes, DNA repair genes and cancer stem cells.

### Pathophysiology diseases:

- **Aetiology and Pathophysiology of:** Diabetes, Arteriosclerosis, Myocardial infarction, restrictive and obstructive respiratory diseases (COPD), Parkinson, Schizophrenia, Silicosis
- **Infectious Diseases:** Pathogenesis of diseases and overview of modes of infections, prevention and control with suitable examples like Typhoid, Dengue

### Suggested Books:

S. No.	Name of Authors/Books/Publishers	Year of Publication/Reprint
<b>Text Books</b>		
1.	Robbins and Cotran Pathologic Basis of Disease, 8th edition (2009), Vinay Kumar, Abul K. Abbas, Jon C. Aster, Nelson Fausto; Saunders Publishers, ISBN-13: 978-1416031215.	2009
2.	Medical Laboratory Technology Methods and Interpretations Volume 1 and 2, 6th edition (2009), Ramnik Sood; Jaypee Brothers Medical Publishers, ISBN-13: 978-8184484496.	2009
<b>Reference Books</b>		
1.	General and Systematic Pathology, 2nd edition (1996), J., Ed. Underwood and J. C. E. Underwood; Churchill Livingstone, ISBN-13: 978-0443052828.	1996
2.	Robbins Basic Pathology, 9th edition (2012), Kumar, Abbas, Fausto and Mitchell; Saunders Publication, ISBN-13: 978-1437717815.	2012

### Examination Scheme:

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

## **SEMESTER I**

## **Cytology**

**Course Code: MMB-101b**

**Credit Units: 03**

**Pre-requisite:** Basic information of Cell Biology

### **Course Outcome:**

- Basic chemical composition of living matter.
- Structural characteristics of prokaryotic and eukaryotic cells.
- Taxonomy and characteristics of the major kingdoms.
- Mechanics of membrane transport.
- Basic concepts of bioenergetics, photosynthesis, and cellular respiration.
- Mechanics of cellular reproduction.
- Mendelian genetics and genetic change.
- Nucleic acids and basic concepts of protein synthesis and gene regulation.

### **Details of the**

#### **Course:-UNIT I:**

##### **Cell:**

Introduction and classification of organisms by cell structure, cytosol, Compartmentalization of eukaryotic cells, cell fractionation Cell Membrane and Permeability: Chemical components of biological membranes, organization and Fluid Mosaic Model

#### **UNIT II: Cell Membrane and Permeability:**

Chemical components of biological membranes, organization and Fluid Mosaic Model, membrane as a dynamic entity, cell recognition and membrane transport. Sex-limited and sex-influenced inheritance, Transposons. Membrane Vacuolar system, cytoskeleton and cell motility: Structure and function of microtubules, Microfilaments, Intermediate filaments

#### **UNIT III: Endoplasmic reticulum:**

Endoplasmic reticulum: Structure, function including role in protein segregation.  
 Golgi complex: Structure, biogenesis and functions including role in protein secretion.  
 Lysosomes: Vacuoles and micro bodies: Structure and functions Ribosomes: Structures and function including role in protein Synthesis .

**UNIT IV: Mitochondria:**

Structure and function, Genomes, biogenesis. Chloroplasts: Structure and function, genomes, biogenesis. Nucleus: Structure and function, chromosomes and their structure. Extracellular Matrix: Composition, molecules that mediate cell adhesion

**UNIT V: Membrane receptors:**

For extra cellular matrix, macromolecules, regulation of receptor expression and function. Signal transduction. Cancer: Carcinogenesis, agents promoting carcinogenesis, characteristics and molecular basis of cancer.

**Suggested Books:**

S. No.	Name of Authors/Books/Publishers	Year of Publication/Reprint
<b>Reference Books</b>		
1.	Molecular Biology of cell, 4 <sup>th</sup> ed. Alberts, Bruce ( <i>et.al</i> ) (2002) Garland Science Publishing, New York.	2002

Robertis, Edp De and Robertis Emf De (2002) Lippincott Williams and Wilkins Pvt. Ltd., (International Student Edition) Philadelphia.	2004, 2002

**Examination Scheme:**

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
<b>Weightage (%)</b>	10	20	10	60

**SEMESTER I****Toxicology and Forensic Science****Course Code: MMB-101c****Credit Units: 03**

**Pre-requisite:** Basic information of molecular biology and medical laboratory techniques

**Course Outcome:**

- Students will become familiar with how forensic scientists work.
- Students will be able to learn the tools and techniques used in forensic science and how they reach the conclusions they present in court.
- Students will be familiarized with the creative, problem solving and inquiry based approach to investigate the crime scene.
- Students will be able to explain the characteristics of a fingerprint collect, process, and analyze fingerprint evidence and explain DNA analysis.

**Details of the Course:-****Unit I: Crime Scene Investigation:**

Introduction and principles of forensic science, Forensic science laboratory and its organization and service, tools and techniques in forensic science, branches of forensic science, causes of crime, role of modus operandi in criminal investigation.

**Unit II: Types of injuries and death:**

Classification of injuries and their medico-legal aspects, method of assessing various types of deaths.

**Forensic chemistry and Ballistics:**

Classification of fire arms and explosives, introduction to internal, external and terminal ballistics. Chemical evidence for explosives.

**Unit III: Forensic Graphology:**

General and individual characteristics of handwriting, examination and comparison of handwritings and analysis of ink various samples.

**Unit IV: Forensic Toxicology and Fingerprint analysis:**

Fundamental principles of fingerprinting, classification of fingerprints, development of finger print as science for personal identification. Principle of DNA fingerprinting, application of DNA profiling in forensic medicine.

## Unit V: Cyber Forensic Investigation:

Investigation Tools, eDiscovery, Evidence Preservation, Search and Seizure of Computers, Introduction to Cyber Security.

	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

**SEMESTER I**

**Biochemistry & Enzymology**

**Course Code: MMB-102**

**Credit Units: 03**

**Pre-requisite:** Background information of biochemistry.

**Course Outcome:**

- Students will be able to define biomolecules and buffers.
- Students will understand the structure and functions of biomolecules.
- Students will be able to classify and explain the role of various biomolecules in human body.
- Students will be able to analyze the causes of diseases on biochemical basis.
- Students will be able to understand various biochemical process and cell metabolism.
- Students will be able to classify enzymes and will understand kinetic properties.
- Students will be able to understand  $K_m$  and  $V_{max}$  for enzymatic equations.
- Students will be able to understand the application of enzymes in daily life.

**Details of the Course:-**

**Unit : I Introduction:**

Importance of water, pH and buffer, cell structure and organelles, structure of biomolecules: structure of amino acids and proteins (primary, secondary, tertiary and quaternary structure, reverse turn), Ramachandran plot, peptide synthesis, protein sequencing, protein folding kinetics and cooperativity.

**Unit : II Lipids:**

Types, structure and function, oxidation of fatty acids- mitochondrial and peroxisomal oxidation, oxidation of unsaturated and odd chain fatty acids, ketone bodies, lipoproteins, rancidity, acid value, saponification value, iodine number, acetyl number, R.M. number. Biosynthesis of fatty acids, phospholipids and glycosphingolipids- synthesis.

**Unit : III Metabolic pathways and their regulation :**

Glycolysis/glycogenolysis, citric acid cycle, pentose phosphate pathway, oxidative phosphorylation, amino acid metabolism, basic nucleic acid structure, biosynthesis of purines and pyrimidines, glyoxalate cycle, CAM, and metabolomics.

**Unit : IV Enzymes:**

Classification of enzymes; quantification of enzyme activity and specific activity. Effect of pH and temperature on enzyme activity, estimation of Michaelis-Menten parameters, kinetics of inhibition. Mechanism of enzyme catalysis with reference to chymotrypsin, lysozyme, metalloenzyme and the role of metals in catalysis with reference to carboxypeptidases. Allosteric enzymes: kinetics and examples. Techniques of enzyme immobilisation-matrix entrapment, ionic and cross linking, column packing.

**Unit : V Enzyme Purification and Applications of Enzymes:**

Extraction of commercially important enzymes from natural sources; commercial applications of enzymes in food, pharmaceutical and other industries; enzymes for diagnostic applications. Industrial production of enzymes. Applications of enzymes in analysis; design of enzyme electrodes and case studies on their application as biosensors in industry, healthcare and environment.

**SEMESTER I****Elements of Biochemistry****Course Code: MMB-102a****Credit Units: 03****Pre-requisite:** Basic understanding of biomolecules and concepts of general chemistry**Course Outcome:**

- Students will be able to define biomolecules and buffers.
- Students will understand the structure and functions of biomolecules.
- Students will be able to classify and explain the role of various biomolecules in human body.
- Students will be able to analyze the causes of diseases on biochemical basis.
- Students will be able to understand various biochemical process and cell metabolism.

**Details of the Course:-****Unit I:**

A historical prospective, Amino acids & Proteins: Structure & Function. Structure and properties of Amino acids, Types of proteins and their classification, Forces stabilizing protein structure and shape. Different Level of structural organization of proteins, Protein Purification. Denaturation and renaturation of proteins. Fibrous and globular proteins.

**Unit II:**

Nucleic acids: Structure and functions: Physical & chemical properties of Nucleic acids, Nucleosides & Nucleotides, purines & pyrimidines,. Biologically important nucleotides, Double helical model of DNA structure and forces responsible for A, B & Z – DNA, denaturation and renaturation of DNA.

Carbohydrates: Structure, Function and properties of Monosaccharides, Disaccharides and Polysaccharides. Homo & Hetero Polysaccharides, Mucopolysaccharides, Bacterial cell wall polysaccharides, Glycoprotein's and their biological functions.

**Unit III:**

Lipids: Structure and functions –Classification, nomenclature and properties of fatty acids, essential fatty acids. Phospholipids, sphingolipids, glycolipids, cerebrosides, gangliosides, Prostaglandins, Cholesterol.

#### Unit IV:

Enzymes: Nomenclature and classification of Enzymes, Holoenzyme, apoenzyme, Cofactors, coenzyme, prosthetic groups, metalloenzymes, monomeric & oligomeric enzymes, activation energy and transition state, enzyme activity, specific activity, common features of active sites, enzyme specificity: types & theories, Biocatalysts from extreme thermophilic and hyperthermophilic archaea and bacteria.

Role of:  $\text{NAD}^+$ ,  $\text{NADP}^+$ , FMN/FAD, coenzymes A, Thiamine pyrophosphate, Pyridoxal phosphate, lipoic-acid, Biotin vitamin B12, Tetrahydrofolate and metallic ions

#### Unit V:

Carbohydrates Metabolism: Reactions, energetics and regulation. Glycolysis: Fate of pyruvate under aerobic and anaerobic conditions. Pentose phosphate pathway and its significance, Gluconeogenesis, Glycogenolysis and glycogen synthesis. TCA cycle, Electron Transport Chain, Oxidative phosphorylation.  $\beta$ -oxidation of fatty acids.

## **Semester I    Concept in Medicinal Chemistry & Drug Development**

**Course Code: MMB-102b**

**Credit Units: 03**

**Pre-requisite:** Basic information of chemistry and drug development

### **Course Outcome:**

After the successful completion of this course

- Students will be able to explain the relationship between structure and biological activity of various drug molecules.
- Students will be able to understand the most of various classes of drug molecules.

### **Details of the Course:-**

#### **Unit I: General Introduction and Drug target classification**

Definition and scope of drug design.

Proteins as drug targets: Receptors – receptor role, ion channels, membrane bound enzyme activation, agonist and antagonists, concept of inverseagonist, desensitization and sensitization of receptors, affinity, efficacy and potency. Enzymes – Enzyme inhibitors (competitive, non-competitive, suicide inhibitors), medicinal use of enzyme inhibitors. Nucleic acids as drug targets: Classes of drugs that interact with DNA: DNA intercalators and DNA alkylators.

#### **Unit II: Physicochemical principles of drug action**

Partition coefficient, drug dissolution, acid base properties, surface activity, bioavailability, stereochemical aspects of drug action.

#### **Unit III: Drug receptor interactions**

Kinetic analysis of ligand receptor interactions using scatchard plot, double reciprocal plot, Hill plot, forces involved, relationship between dose and effect (graded and quantal response).

#### **Unit IV: Principles of drug design**

Introduction to SAR, strategies in the search for new lead compounds, analogue synthesis versus rational drug design, concept of prodrugs.

## Unit V: Drug discovery and pharmainformatics

Drug discovery pipeline, drug target identification and validation for microbial pathogen, selection of gene unique to the pathogen, screening for its presence in other microbes and human host, Drug Databases, PubChem, Calculating drug-like properties, introduction to rational drug design methods, optimization of lead compounds, protein3D structure and bindings it analysis, similarity based virtual screening using online tools.

## Semester I

## Biophysics

**Course Code: MMB-102c**

**Credit Units: 03**

**Pre-requisite:** Basic knowledge of physics, and biotechnology

### Course Outcome:

After completion of the course the students should be able

- To Learn understanding and appreciation of biophysics as an interdisciplinary research field;
- To Understand the link between the structure and functions of biological system from molecular to system level;
- To get insight on how experimental methods and theoretical approaches from physics can give answers related to the structure and functions of biological systems;
- To understand the diffusion processes and their role in the transport phenomena across the biological membrane;
- To understand the relationship of the membrane transport mechanisms and the electrical activity of the cell.

### Details of the Course:-

#### UNIT-I:

Introduction to biophysics, basic physics, mechanical properties of matter, newton's law, applications of newton's law of motion in one dimension, motion, force and energy in more than one dimension, momentum, rotational motion. Ideal fluids, viscous fluids. Waves and resonance. Molecules and matters. Phases, force between molecules, thermodynamics, pressure, surface tension, stress and strain. Gravity, laws of gravity. Applications of these in living system.

#### UNIT-II:

Intensity of sound, superposition of sound, echoes and diffraction of sound, Doppler's effect and applications in life sciences. The human ear-physiology and function. Frequency response. Echo-location, The Doppler's effect, ultrasound, angiodynography.

#### UNIT-III:

Light rays, lenses and mirrors, reflection and refraction, prisms, colours. Wave nature of light, polarization and their applications in life. The human eye-physiology and functions. Lens. Defects and loss of visual acuity, Principle of microscopy, different microscopy. Quantum optics and Image analysis.

## UNIT-IV:

Magnetic forces and field, electromagnetic induction, electromagnetic waves, applications in living world, magnets and medicines. Nuclear Magnetic Resonance, Electric charges, attractive and repulsive forces, Coulomb's law, Electric field and potential, Electric fields and sense organs, EMF and current, Ohm's law, resistance and capacitance. Membrane potential, conductance and capacitance. Cellular and electricity and electrophysiology. Biological motors.

## UNIT-V:

The atomic nucleus and the radiation spectrum, sources of radiation, interaction of radiations with matter, Biological effects of radiation. Radiobiological consequences of nuclear fission. Radiation detectors, autoradiography, introduction to PET and SPECT.

# Bacteriology

**Course Code: MMB-103**

**Credit Units: 03**

**Pre-requisite:** Basic information of biology and microbiology.

**Course Outcome:**

Students will have knowledge of structure function and application of microorganism. On studying the subject students will be skilled to handle microorganisms in laboratory.

**Details of the Course:-**

**Unit I: History of Microbiology:**

Discovery of Microorganisms spontaneous generation: vs.biogenesis, Germ theory of disease. Scope of microbiology. Methods & basis of microbial classification.Modern trends of bacterial taxonomy.

**Unit II:Morphology and ultrastructure of bacteria.**

Cell wall of archaebacteria, Gram, negative and Gram-positive bacteria.Cell wall (Peptidoglycan) synthesis. Capsules- composition and function. Cell membranes-structure, composition and properties. Structure and function of bacterial cell organelles.

**Unit III:Cultivation of bacteria :**

Culture media, Microbial preservation techniques. Synchronous and diauxic growth, Batch and continuous cultures.Nutritional types, Growth curve. Measurement of growth, Sterilization: physical and chemical methods.

**Unit IV:Photosynthesis:**

Photosynthetic microorganisms, photosynthetic pigments,Electron transport chain in photosynthetic bacteria.Carbon dioxide fixation pathways.

**Unit V:Carbohydrate metabolism:**

Glycolysis, Pentose phosphate pathway, EDpathway, Kreb's cycle and glyoxalate pathway. Bacterial aerobic respiration, components of electron transport chain,ATP synthesis: substrate level and oxidative phosphorylation and un-couplers, inhibitors of oxidative phosphorylation.

## **SEMESTER I**

### **Virology**

**Course Code: MMB-104**

**Credit Units: 03**

**Pre-requisite:** Basic knowledge of Viruses

#### **Course Outcome:**

Students will be able to differentiate the nature of viruses, laboratory diagnosis of viruses using different techniques and classification of viruses.

#### **Details of the Course:-**

##### **Unit I:**

General Virology: Brief outline on discovery of viruses. Nomenclature and classification of plant, animal and bacterial viruses. Distinctive properties of viruses; morphology & ultrastructure of virus. Virus related agents (viroids, prions).

##### **Unit II:**

General Methods of Diagnosis and Serology: Cultivation of viruses in embryonated eggs, experimental animals, and cell cultures. Primary & secondary cell cultures. Monolayer cell cultures; cell strains, cell lines and transgenic systems. Serological methods – haemagglutination & HAI; complement fixation; immunofluorescence methods, ELISA and radioimmunoassays.

Assay of viruses – physical and chemical methods (protein, nucleic acid, radioactivity tracers, electron microscopy). Infective assay (plaque method, end point method).

##### **Unit III:**

Bacterial Viruses: Bacteriophage: structural organization and life cycle. Bacteriophage typing - application in bacterial genetics. Brief details on M13, Mu, T3, T4 and Lambda P1.

##### **Unit IV:**

Plant Viruses: Effects of viruses on histology, physiology and cytology of plants. Common viral diseases of plants; paddy, cotton, tomato and sugarcane. Common plant viruses: TMV, Cauliflower Mosaic Virus and Potato Virus X. transmission of plant viruses through vectors and without vectors. Control measures - virus-free planting material; vector control.

##### **Unit V:**

Animal Viruses: Epidemiology, lifecycle, pathogenicity, diagnosis, prevention and treatment of RNA Viruses Picorna, Ortho myxo, Paramyxo, Toga, Rhabdo, Rota, HIV - Oncogenic viruses. DNA viruses; Pox, Herpes, Adeno, SV 40, Hepatitis virus. Interferons, and antiviral drugs.

## **SEMESTER I**

### **Computer Applications & Biostatistics**

**Course Code: MMB-105**

**Credit Units: 03**

**Pre-requisite:** Basic information of Computer Applications and Biostatistics

#### **Course Outcome:**

A student who successfully fulfills the course requirements will be able to

- define and appropriately use information technology terms;
- identify computer hardware components and describe their function;
- describe the essential elements of the computer's architecture and discuss how this architecture functions;
- describe the characteristics and representations of data, and interpret and compare data in different representations;
- identify and describe telecommunication components;
- describe the characteristics of operating systems and compare different operating systems;
- use a hypertext markup language to produce basic Web documents;
- discuss the general trends in technologies including examples of leading edge developments;
- Compare the roles of different sectors of the information technology.

#### **Details of the course:**

##### **Unit 1: Introducing Computer System**

Evolution Of Computers, Generations of Computer, Characteristics Of Computers, Functions Of Computers Advantages, Disadvantages Of Computers, Computer Applications, The parts of a Computer system, Types Of Computers. Storing Data: Types of storage devices, Memory Hierarchy. Essential computer hardware, software.

##### **Unit II: Computer Input Devices:**

Keyboard, Mouse, Webcam, Joystick and Output devices: Monitor, Printer, Plotters.

Data representation Using Operating System Operating system basics- The purpose of operating system, Type of operating system, providing a user interfaces. Networks and the Internet

Networking basics – The uses of a network, Common types of networks. Network topologies. What is the Internet? Internet's major services, Understanding the world wide web.

##### **Unit III: Algorithms and Flowcharts :**

Algorithms, Flowcharts, Divide and conquer strategy, Writing algorithms and drawing flowcharts for simple exercises – Swapping contents of 2 variables, Largest of given three numbers, Solving a given quadratic equation, Factorial Of a given integer Constants, Variable and Data types

Characters set, C tokens, Keywords and identifiers, Constants, Variables, Data types, Declaration of variables.

##### **Unit IV: Operators and Expressions:**

Decision making and branching Decision making with if statement, simple if statement, the if...else statement, nesting of if...else statements. The else...if ladder, the switch statement, the: operator, the go to

statement. Decision making and looping The while statement, the do statement, The for statement, jumps in loops.

### Unit V: Introduction of Bio statistics

Introductory Statistics, Measure of central tendency: Mean, Mode, Median. Measure of Dispersion: Standard Deviation, Variance, Moments, Skewness and Kurtosis.

Statistical methods

Sampling parameters Difference between sample and Population parametric and nonparametric statistics, Chi-square test.

### Professional Communication

**Course Code: AEC-101**

**Credit Units: 02**

**Pre-requisite:** Basic information of English Language

#### **Course Outcome:**

- Exhibit competent writing that is reasonably proficient in correct grammar and sentence structure skills.
- Construct the vocabulary of the students to assist them acquire plethora of knowledge of foreign as well as indigenous languages.
- Maximize the capability of students pertaining to discussion initiation, carrying on and conclusion.
- Help demonstrate proficiency in written communication using appropriate style, structure and voice.
- Provide knowledge in the area of research.
- Utilize the already learnt grammar skills towards accurate usage of language.

#### **Details of the Course:-**

##### **UNIT I:**

Functional Grammar Tenses

Parts of speech

- a) Usage of parts of speech
- b) Spotting errors

##### **UNIT II:**

Articles Reported Speech

##### **UNIT III:**

Basic Vocabulary Building Prefixes, suffixes Homonyms

Idioms & Proverbs Phrasal verbs One word

substitution Role plays

##### **UNIT IV:**

Group Discussions Interview Skills Written communication

Paragraphing paraphrasing summarizing, Email writing,

**UNIT V:** Proof reading Scientific paper Writing Difference in scientific reports ,  
Research articles, review articles , book chapters, Reading a scientific

publication. literature review, writing research paper, review book chapter  
 .Research work Presentation (oral /poster)

	<b>Attendance</b>	<b>Class Test</b>	<b>Assignment/ Project/Seminar/Quiz</b>	
<b>Weightage (%)</b>	10	20	10	60

## SEMESTER I

### Seminar & Research Orientation

Course Code: SM-101

Credit Units: 02

#### Course Outcomes:

- Describe the measurable skills, abilities, knowledge or values.
- Students should be able to demonstrate as a result of a completing a course.
- They are student-centered rather than teacher-centered.
- They describe what the students will do, not what the instructor will teach.

#### Detail of the course

**Research methods:** Lectures, seminars, and practical exercises that cover themes like what constitutes scientific knowledge

**Research problems:** How to identify and work through research problems

**Primary and secondary sources:** How to become familiar with sources and critique them, and how to research secondary sources

**Research databases:** How to use research database tools

**Research proposals:** How to prepare preliminary interdisciplinary research proposals

#### Examination Scheme:

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

## **SEMESTER I**

### **Research Methodology**

**Course Code: SM-101a**

**Credit Units: 02**

#### **Course Outcomes:**

- Students who complete this course will be able to understand and comprehend the basics in research methodology
- And applying them in research/ project work.
- This course will help them to select an appropriate research design.

#### **Detail of the course:**

##### **Unit I : Foundations of Research:**

Meaning, Objectives, Motivation, Utility. Concept of theory, empiricism, deductive and inductive theory. Characteristics of scientific method – Understanding the language of research – Concept, Construct, Definition, Variable. Research Process Problem Identification & Formulation – Research Question – Investigation Question – Measurement Issues – Hypothesis – Qualities of a good Hypothesis – Null Hypothesis & Alternative Hypothesis. Hypothesis Testing – Logic & Importance.

##### **Unit II : Research Design:**

Concept and Importance in Research – Features of a good research design – Exploratory Research Design – concept, types and uses, Descriptive Research Designs – concept, types and uses. Experimental Design: Concept of Independent & Dependent variables. Qualitative and Quantitative Research: Qualitative research – Quantitative research – Concept of measurement, causality, generalization, replication. Merging the two approaches.

##### **Unit III : Measurement:**

Concept of measurement– what is measured? Problems in measurement in research – Validity and Reliability. Levels of measurement – Nominal, Ordinal, Interval, Ratio. Sampling: Concepts of Statistical Population, Sample, Sampling Frame, Sampling Error, Sample Size, Non Response. Characteristics of a good sample. Probability Sample – Simple Random Sample, Systematic Sample, Stratified Random Sample & Multi-stage sampling. Determining size of the sample – Practical considerations in sampling and sample size.

##### **Unit IV : Data Analysis:**

Data Preparation – Univariate analysis (frequency tables, bar charts, pie charts, percentages), Bivariate analysis – Cross tabulations and Chi-square test including testing hypothesis of association. Interpretation of Data and Paper Writing – Layout of a Research Paper, Journals in Computer Science, Impact factor of Journals, When and where to publish ? Ethical issues related to publishing, Plagiarism and Self-Plagiarism.

9. Use of Encyclopedias, Research Guides, Handbook etc., Academic Databases for Computer Science Discipline.

**Unit V: Use of tools / techniques for Research:**

methods to search required information effectively, Reference Management Software like Zotero/Mendeley, Software for paper formatting like LaTeX/MS Office, Software for detection of Plagiarism

**Suggested Books :**

1. Business Research Methods – Donald Cooper & Pamela Schindler, TMGH, 9th edition
2. Business Research Methods – Alan Bryman & Emma Bell, Oxford University Press.
3. Research Methodology – C.R.Kothari
4. Select references from the Internet

## SEMESTER I

### General Proficiency

**Course Code: GP-101**

**Credit Units: 02**

**Pre-requisite:** Basic information of English Language

**Course Outcome:**

- **Effective communication:** The ability to exchange ideas and information in a way that builds trust and respect
- **Critical and analytical thinking:** The ability to explore issues and ideas before forming a conclusion
- **Integrative thinking:** The ability to synthesize knowledge across different domains and perspectives
- **Preparing students to be engaged citizens:** Preparing students to participate in political culture and thrive in a rapidly evolving world

**Details of the Course:-**

General language proficiency is the ability to read, write, listen, and speak in real-life situations. To test this, a test is usually developed for each skill with questions that are designed to imitate real life.

A syllabus is a guide to a course that includes course policies, rules, regulations, required texts, and a schedule of assignments and seminar.

**Examination Scheme:**

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

## **SEMESTER I**

### **Enterprenuership Development and Business Communication I**

**Course Code: GP-101a**

**Credit Units: 02**

**Pre-requisite:** Basic information of Enterprenuership Development

#### **Course Outcome:**

- To familiarize the students, and make them understand with key concepts and processes in entrepreneurship and business communication.
- To provide context to the processes in the form of differences between small and large firms, and the economic environment.
- To introduce key debates around entrepreneurship and small businesses.
- To impart knowledge on different extension methods and approaches used for transfer of agricultural technology.
- To impart skills required for entrepreneurship development among the students for self-employment.

#### **Details of the Course:-**

##### **Unit-I**

Concept of Entrepreneur, Entrepreneurship Development, Characteristics of entrepreneurs; SWOT Analysis & achievement motivation, Government policy, and programs & institutions for entrepreneurship development.

##### **Unit-II**

Impact of economic reforms on Agribusiness/Agri-enterprises, Entrepreneurial Development Process.

##### **Unit-III**

Business Leadership Skills; developing organizational skills (controlling, supervising, problem-solving, monitoring & evaluation).

##### **Unit-IV**

Developing Managerial skills, Business Leadership Skills ( Communication, direction, and motivation skills), Problem-solving skills

##### **Unit-V**

Supply chain management & Total quality management, Project Planning Formulation & report preparation; Financing of enterprise, Opportunities for agri-entrepreneurship & rural enterprise.

#### **Examination Scheme:**

<b>Components</b>	<b>Internal Assessment</b>			<b>External Evaluation</b>
	<b>Attendance</b>	<b>Class Test</b>	<b>Assignment/ Project/Seminar/Quiz</b>	
<b>Weightage (%)</b>	10	20	10	60

## **SEMESTER I**

### **Human Values and Moral Ethics I**

**Course Code: GP-101b**

**Credit Units: 02**

#### **Course Outcome:**

- Understanding life's purpose: Students become aware of their life's mission, vision, and goals.
- Developing virtues: Students learn to cultivate virtues and avoid vices.
- Understanding ethical personalities: Students learn to understand the metaphors of ethical personalities from various domains.
- Developing a positive outlook: Students develop a personality that allows them to view life in a positive way.
- Building strong relationships:

#### **Unit I : Morals, values, and ethics:**

This unit may cover topics such as integrity, work ethic, service learning, civic virtue, respect for others, living peacefully, caring, sharing, honesty, courage, valuing time, cooperation, commitment, empathy, self-confidence, character, and spirituality

#### **Unit II : Engineering ethics:**

This unit may cover topics such as the senses of engineering ethics, moral issues, types of inquiry, moral dilemmas, moral autonomy, models of professional roles, engineering as experimentation, research ethics, codes of ethics, industrial standards, and a balanced outlook on law

#### **Unit III : Engineering ethics:**

This unit may cover topics such as the senses of engineering ethics, moral issues, types of inquiry, moral dilemmas, moral autonomy, models of professional roles, engineering as experimentation, research ethics, codes of ethics, industrial standards, and a balanced outlook on law

#### **Unit IV :Peer pressure, alcoholism, and drug abuse:**

This unit may cover topics such as ethical values, causes, impact, laws, prevention, and the ill effects of smoking

#### **Unit V : Global issues:**

This unit may cover global issues  
Indian and global case studies: This unit may cover Indian and global case studies

## **SEMESTER I**

### **Life Management I**

**Course Code: GP-101c**

**Credit Units: 02**

- Goal setting: How to set SMART goals that are specific, measurable, achievable, realistic, and have a time frame.
- Prioritization: How to prioritize tasks and effectively manage time.
- Stress management: How to manage stress and improve work-life balance.
- Organization: How to organize work and use organization tools.
- Delegation: How to delegate tasks and assignments.

## SEMESTER I

### Cell & Developmental Biology Lab

**Course Code: MMB-151**

**Credit Units: 02**

**Pre-requisite:** Basic information of Cell Biology

#### **Course Outcome:**

- Students will acquire knowledge about basics of cell biology.
- Students will learn about how various functions of organelles and their working.
- Students will gain an insight into microscopic structures and chemical components of various regions of cells.
- Students will attain a comprehensive knowledge of functioning of cell and synchronization of activities of various organelles.
- Students will be able to learn about various signaling mechanism involved in a cell which ultimately leads to a visible physiological response.
- Students will be able to understand the architectural components involved in making cells rigid and how cells are connected to each other.
- Students will learn about molecular events involved in cell cycle.
- Students will apply the information gained in understanding the issues and conditions encountered if things go wrong with cell cycle and how our understanding of cell signaling generate drug targets.

#### **Details of the Course:-**

S. No.	Contents	Contact Hours
1	Use of fluorescence microscope and demonstration of nucleic acid by acridine orange or ethidium bromide.	2
2	Localization of Barr bodies.	2
3	Blood smear – differential staining.	2
4	Study of mitosis from onion root tips by making temporary squash preparation (staining with acetocarmine).	2
5	Vital staining of mitochondria.	2
6	Demonstration of cellular organelles including mitochondria, Golgi bodies etc.	2
7	Determination of absorption maximum of a solution.	2
8	Determination of relationship between absorption and various concentration of a solution using a colorimeter, spectrophotometer/spectrophotometer.	2
9	Isolation of Mitochondria.	2
10	Isolation of Chloroplast.	2
11	Determination of osmotic fragility of RBC membrane.	2

**Suggested Books:**

<b>S.No.</b>	<b>Name of Authors/Books/Publishers</b>	<b>Year of Publication/Reprint</b>
	<b>Reference Books</b>	
1.	Culture of Animal Cells – a manual of basic techniques 4 <sup>th</sup> Edition. Freshney, R. I. (2000) John Wiley & Sons, New York.	2000
2.	Animal Cell Biotechnology. Spier, R. E. and Griffiths, J. B. (1988) Academic Press.	1988

**Examination Scheme:**

<b>Components</b>	<b>Internal Assessment</b>			<b>External Evaluation</b>
	<b>Attendance</b>	<b>Viva-Voce</b>	<b>Practical Record</b>	
<b>Weightage (%)</b>	10	20	10	60

## SEMESTER I

### Biochemistry & Enzymology Lab

**Course Code: MMB-152**

**Credit Units: 02**

**Pre-requisite:** Background information of biochemistry and enzymes.

#### Course Outcome:

- Students will be able to define biomolecules and buffers.
- Students will understand the structure and functions of biomolecules.
- Students will be able to classify and explain the role of various biomolecules in human body.
- Students will be able to analyze the causes of diseases on biochemical basis.
- Students will be able to understand various biochemical process and cell metabolism.
- Students will be able to classify enzymes and will understand kinetic properties.
- Students will be able to understand  $K_m$  and  $V_{max}$  for enzymatic equations.
- Students will be able to understand the application of enzymes in daily life.

#### Details of the Course:-

S. No.	Contents	Contact Hours
1	Preparation of various solution and preparation of buffer solution and calculation of pKa and buffer capacity.	2
2	Quantitative and qualitative estimation of reducing	2
3	Quantitative estimation of proteins	2
4	Method of DNA/ RNA detection and estimation.	2
5	Enzyme assay, partial purification and kinetic studies with reference to of $K_m$ and $V_{max}$ .	2
6	Polyacryamide gel electrophoresis.	2
7	Iodine value, saponification value and acid values.	2
8	Estimation of amino acids from biological samples with the help of standard curve.	2
9	Quantification of soluble proteins in biological samples in Bradford's method.	2
10	Isolation of casein from skimmed milk.	2
11	Determination of osmotic fragility of RBC membrane.	2

**Suggested Books:**

<b>Weightage (%)</b>	10	20	10	60

## SEMESTER I

### Bacteriology Lab

**Course Code: MMB-153**

**Credit Units: 02**

**Pre-requisite:** Basic information of biology and bacteriology.

#### Course Outcome:

At the end of the course, the students will be familiar with microbial technology. This would help students to launch themselves in industrial biotechnology which is the fastest growing industry in the developing country. After completion of the course the students should be able to

- Describe the cell organization of bacteria i.e. morphology, ultrastructure and organelles present in bacterial cells.
- Apply the knowledge of bacteriological techniques.
- Describe the nutritional and physical requirements for bacterial growth.
- Describe the principles involved in killing bacteria, and make recommendations on use of physical and chemical methods used to control microbial growth.
- Describe the dynamics of the growth of a bacterial population and how this growth can be measured.

#### Details of the Course:-

S. No.	Contents	Contact Hours
1	To prepare plates, butts, slants of sterilized culture media.	2
2	To demonstrate the technique for isolation of pure culture by streaking plate method, pour plate method, spread plate method and serial dilution method (Ten & Two fold).	2
3	To prepare the bacterial smear, fixation and demonstration of bacterial shape by simple and negative staining.	2
4	To study the bacterial morphology and its differentiation using Gram's stain.	2
5	To evaluate alcohol as a skin disinfectant and to study the effectiveness of hand washing.	2
6	To study the germicidal effect of UV on bacterial growth.	2
7	To isolate the Staphylococci from human skin on MSA media.	2
8	To test the antibiotic sensitivity of an organism by disc diffusion method.	2
9	To study the effect of dye(s) on bacterial growth.	2
10	To study the viable and nonviable organisms in given culture by Viable Staining Techniques.	2
11	To show the effect of given antibiotic on bacterial culture and to isolate the antibiotic resistant mutant by Gradient Plate Technique.	2
12	To isolate & differentiate Staphylococcus aureus on MSA from milk source.	2
13	To perform biochemical tests.	2
14	To determine the MIC & MBC of given antibiotic substance.	2
15	To demonstrate the motility of a bacteria by Hanging drop method and wet slide test.	2

**Suggested Books:**

## SEMESTER I

### Virology Lab

**Course Code: MMB-154**

**Credit Units: 02**

**Pre-requisite:** Basic information of Virology

#### Course Outcome:

After completion of the course the students should be able to

- Differentiate the nature of viruses.
- Understand classification of viruses.
- Learn the methods of laboratory diagnosis of viruses using different techniques.
- Learn about different plant and animal viruses.

#### Details of the Course:-

S. No.	Contents	Contact Hours
1	Isolation of coliphages from sewage water sample.	3
2	One step growth curve for determination of virus titre.	3
3	Immunological assays for virus detection.	3
4	Screening of embryonated viable eggs and demonstration of virus cultivation.	6
5	Cultivation and morphological identification of animal cell lines.	3
6	Induction of lambda lysogen by UV radiations.	3
7	Studies on Specialized transduction .	3
8	Isolation of lambda DNA and their characterization.	3
9	Amplification of lambda DNA by PCR.	3
10	Phage typing of E.coli bacteriophages.	3

#### Suggested Books:

	<b>Attendance</b>	<b>Viva-Voce</b>	<b>Practical Record</b>	
<b>Weightage (%)</b>	10	20	10	60

## SEMESTER I

### Computer Applications & Biostatistics Lab

Course Code: MMB-155

Credit Units: 02

**Pre-requisite:** Basic knowledge of Computer Application and Biostatistics

**Course Outcome:**

- Students will learn to execute internal and external commands.
- Students will also be able to understand basic computer applications practically.

**Details of the Course:-**

S. No.	Contents	Contact Hours
1	Execute "Internal & External Commands" in MS-DOS.	2
2	Create any 3 ".txt" files in MS-DOS and Copy the contents of two files in one single file.	2
3	Create the "directory structure" in MS-DOS.	2
4	In MS-DOS, Change the dos prompt: With your name, current date, current time, change the prompt to its original path.	2
5	Create one MS-word file having name "INTRODUCTION" and apply "center alignment", Make the heading bold, Italic and underlined and do apply font style of heading as —ALGERIAN   and size —24   by including fields like: Name, Permanent Address, Current Address, Educational Qualification, Hobbies, and Aim etc. Insert table for "educational Qualification".	2
6	Create one MS-Word File for drawing a flow chart to calculate "Simple Interest", using shapes.	2
7	Create a table in MS-Excel having name BCA having fields: S.No, Student Name, sub1_marks, sub2_marks, sub3_marks, sub4_marks. Calculate the "sum" and "percentage" of all the students. Also draw "pie chart" for showing the student percentage.	2
8	Create one MS-excel for a "Automobile Garage" by having fields like "year", "Sale", "Car Name". Draw a "column chart" for year and Sale.	2
9	Create "Attendance letter" for class MCA and send this letter at the address of all the MCA students using "Mail Merge" option.	2
10	Create a Power Point presentation with the main title "INTERNET ". Also add the following topics like: HISTORY OF THE INTERNET, INTERNET TERMS, and ADAVANTAGES OF THE INTERNET in Slides.	2

**Suggested Books:**

<b>S.No.</b>	<b>Name of Authors/Books/Publishers</b>	<b>Year of Publication/Reprint</b>
	<b>Text Books</b>	
1.	Norton, PESEr, -Introduction to Computersl, McGraw-Hill.	2011
2.	\Leon, Alexis & Leon, Mathews, -Introduction to Computersl, Leon Tech World.	2012
3.	Yashwant Kanetker, -Let us Cl,BPB.	2010
4.	Rajaraman, V., -Fundamentals of Computersl,PHI.	2011
5.	Rajaraman, V., -Computer Programming in Cl,PHI.	2012

**Examination Scheme:**

<b>Components</b>	<b>Internal Assessment</b>			<b>External Evaluation</b>
	<b>Attendance</b>	<b>Viva-Voce</b>	<b>Practical Record</b>	
<b>Weightage (%)</b>	10	20	10	60

## **SEMESTER II**

### **Immunology & Immunotechnology**

**Course Code: MMB-201**

**Credit Units: 03**

**Pre-requisite:** Basic knowledge of immunology and diseases, and host-parasite interactions

#### **Course Outcome:**

- Students will be able to understand and appreciate the contribution of various scientists in unraveling the various facets of immune system and responses in our body.
- The knowledge of various types of immune responses along with the key players in the form of cells and organs of immune system will be absorbed by the students.
- Students will become familiar with concept of antigenicity and immunogenicity along with contribution of structural variability of antibody in eliciting immune response.
- The role of MHC molecule in graft rejection along with structure and function of various types of MHC in body will be understood by the students.
- Students will be able to understand the structure and function of Complement protein along with various pathways of their activation.
- The knowledge of various kinds of Hypersensitivity reactions will be imparted to students.
- Students will be able to understand various factors responsible for causation of tumor and subsequently cancer in the body.
- Students will become familiar with practical applications of various immunological methods like ELISA, RIA, and Immunoelectrophoresis etc.
- Students will be able to understand the structure and function of various cells and organs of immune system.

#### **Details of the Course:-**

##### **UNIT 1 : Fundamentals of Immunology**

Components of innate and acquired immunity; phagocytosis; complement and inflammatory responses; haematopoiesis; organs and cells of the immune system- primary and secondary lymphoid organs; Lymphatic system; Lymphocyte circulation; Lymphocyte homing; mucosal and cutaneous associated lymphoid tissue.(MALT & CALT); Mucosal Immunity; Antigens - immunogens, haptens; Major Histocompatibility Complex - MHC genes, MHC and immune responsiveness and disease susceptibility, HLA typing. Molecular basis of Immune responses

##### **UNIT II :Humoral immune response:**

Immunoglobulins-basic structure, classes and subclasses of immunoglobulins, antigenic determinants; multigene organization of immunoglobulin genes; B-cell receptor; immunoglobulinsuperfamily; principles of cell signaling; immunological basis of self –non-self discrimination; Kinetics of immune response, memory; B cell

maturation, activation and differentiation; generation of antibody diversity; Cell-mediated immune responses: T-cell maturation, activation and differentiation and T-cell receptors; Functional T Cell Subsets, ADCC; cytokines-properties, receptors and therapeutic uses; antigen processing and presentation- endogenous antigens, exogenous antigens, non-peptide bacterial antigens and super-antigens; Cell-cell co-operation, Hapten-carrier system, plantibodies.

### **UNIT III :Antigen-antibody interactions and Immunotechniques**

Precipitation, agglutination and complement mediated immune reactions; Advanced immunological techniques - RIA, ELISA, western blotting, ELISPOT assay, immunofluorescence, flow cytometry and immunoelectron microscopy; Surface plasmon resonance, Biosenor assays for assessing ligand –receptor interaction, CMI techniques- lymphoproliferation assay, mixed lymphocyte reaction, cell cytotoxicity assays, apoptosis, microarrays, transgenic mice, gene knock out animals, hybridoma technology.

### **UNIT IV :Vaccinology**

Active and passive immunization; live, killed, attenuated, sub unit vaccines; vaccine technology- role and properties of adjuvants, recombinant DNA and protein based vaccines, edible vaccines, reverse vaccinology; peptide vaccines, conjugate vaccines; Antibody genes and antibody engineering- chimeric and hybrid monoclonal antibodies; catalytic antibodies and generation of immunoglobulin gene libraries. Clinical Immunology and human health Immunity to infection: bacterial, viral, fungal and parasitic infections (with examples from each group);

### **UNIT V :Hypersensitivity**

Type I-IV; autoimmunity; types of autoimmune diseases; Treatment of autoimmune diseases; Transplantation – Immunological basis of graft rejection; clinical transplantation and immunosuppressive therapy; Tumor immunology – Tumor antigens; Immune response to tumors and tumor evasion of the immune system, Cancer immunotherapy; immunodeficiency-primary immunodeficiencies, acquired or secondary immunodeficiencies.

**Suggested Books:**

3.	Janeway's Immunobiology, Murphy K, Travers P, Walport M., 7 <sup>th</sup> edition Garland Science Publishers, New York. 2008.	2008

**Examination Scheme:**

<b>Components</b>	<b>Internal Assessment</b>			<b>External Evaluation</b>
	<b>Attendance</b>	<b>Class Test</b>	<b>Assignment/ Project/Seminar/Quiz</b>	
<b>Weightage (%)</b>	10	20	10	60

## **SEMESTER II**

### **Molecular Biology & Recombinant DNA Technology**

**Course Code: MMB-202**

**Credit Units: 03**

**Pre-requisite:** Basic information of cell biology and molecular biology dogma (replication, transcription, translation, restrictions enzymes and plasmids etc.)

#### **Course Outcome:**

To impart theoretical and practical knowledge on, tools, techniques, scope and applications of recombinant DNA Technology or genetic engineering to prepare students ready for research, industry and higher studies.

- The student will be familiar with the historical background and important milestones, biosafety and bioethics in genetic engineering.
- The student will be acquainted with tools of RDT like enzymes, vectors and hosts.
- The student will be acquainted with technical knowhow of gene cloning and expression and factors for optimizing the heterologous gene expression.
- The student will be acquainted with the techniques required for gainful applications of genetic engineering.
- The student will be able to apply RDT in different domains of life science, medical, agriculture, forensic and allied fields for the welfare of living beings.

#### **Details of the Course:-**

##### **Unit I: Methods of Studying Biomolecules:**

Density gradient sedimentation, zonal centrifugation, electrophoretic separation, agarose, polyacrylaide, pulse field electrophoreses, southern blotting, northern blotting, labeling – radioactive and non-radioactive labeling, isopycnic separation. DNA sequencing direct sequencing, indirect sequencing, Maxam and Gilbert method, Sangers method, RNA sequencing.

##### **Unit II: Nucleic acid hybridization:**

Design and construction of probes, nick translation, chemical synthesis, hybridization, liquid hybridization, solid hybridization, determination of stringency conditions. Applications of nucleic acid hybridization. Systems that safeguard DNA – DNA repair mechanisms – photo reactivation, mismatch repair, recombination repair, SOS repair, DNA restriction and modification.

##### **Unit III: Plasmid vectors:**

Use of natural plasmids as vectors, artificial plasmid vectors, pSC 101, RI,pBR322, pUC 18/19, Tiplasmid vectors. Bacteriophage vectors – Insertion vectors, replacement vectors, cosmid vectors, phagemid vectors, shuttlevectors and M13 based vectors. Restriction endonucleases – Type, I, II & III, restriction mapping, RFLP and RAPD. Genome libraries – construction and screening of genome libraries, chromosome walking, cDNA libraries.

#### Unit IV: Recombinant DNA:

Isolation of gene of interest: Construction of recombinant DNA, selection of DNA fragments for cloning, cDNA synthesis, chemical synthesis, gene synthesizers, ligation with RES, homopolymer tailing, blunt end ligation, linkers, monitoring restriction and ligation. Gene transformation techniques- Direct method-Indirect methods, Screening of recombinant. PCR – principles, types and applications, primer design and applications.

#### Unit V: Applications of Genetic Engineering:

Transgenic animal and plants; Knockouts; Gene therapy; DNA finger printing and DNA bar-coding for phylogenetic relationship; Production of recombinant therapeutics (vaccines/insulin); Gene editing technology (CRISPR-CAS). Human Genome Project.

## SEMESTER II

### Mycology & Phycology

**Course Code: MMB-203**

**Credit Units: 03**

**Pre-requisite:** Basic information of Fungus and Algae

#### **Course Outcome:**

After the successful completion of this course

- Students will be able to isolate fungi from soil.
- Students will be able to learn about the cultivation and preservation of fungi and algae.
- Students will be able to recognize the microscopic structure of fungi.
- Students will be able to recognize the microscopic structure of algae.

#### **Details of the Course:-**

##### **Unit I: Introduction to fungi:**

Occurrence and distribution, thallus structure, characteristics, nutrition, classification and reproduction. Introduction of fungi: Occurrence and distribution, somatic structure, hyphal growth, nutrition, heterothallism, sex hormones in fungi, physiological specialization in fungi, fungi and ecosystem; saprophytic parasitic, mutualistic and symbiotic relationship with plants and animals. Classification of fungi. Reproduction in fungi: asexual, sexual and parasexual.

##### **Unit II: Study of the different classes of fungi:**

Salient features of division and sub division of Myxomycota, mastigomycota, ztgomycota, ascomycotina, basidiomycotina and deuetromycotina. Structure and reproduction of: Dictyostelium, Allomyces, Pilobolus, Claviceps and Fusarium.

##### **Unit III: Economic importance of fungi:**

Economic importance of Mycorrhiza: ecto-, endo and ect-endo VAM, Fungi as insect symbionts, fungi as biocontrol agents, attack of fungi on other microorganisms, potential application in Agriculture, environment, industry, food. Role of fungi in bio deterioration of wood, paper, textile. Mycotoxins, quorum sensing in fungi.

##### **Unit IV: Salient Features of Algae:**

Distribution, morphology and classification of algae. Isolation from soil and water, algal ecology, media and methods used for cultivating algae. Measurement of algal growth, strain selection and large scale cultivation. Symbiotic algae: Lichens, coral reef and sea sponges. Structure and reproduction of important algae.

##### **Unit V: Economic importance of algae:**

Economic importance of algae as primary producers and commercial products. Uses of algae in heavy metal removal, algal blooms and toxins. Uses of algae with examples in agriculture, environment, industry and food.

**Suggested Books:**

## **SEMESTER II**

### **IPR, Biosafety & Bioethics**

**Course Code: MMB-204**

**Credit Units: 03**

**Pre-requisite:** Basic knowledge of Biology and Biotechnology

#### **Course Outcome:**

- Students will understand with the importance of intellectual property and its protection under the constitution, able to classify patentable subject matter under the realm of Biotechnology.
- Students will be able to understand the protection of traditional knowledge
- Students will be able to apply their knowledge to deal with hazards related to biotechnology and the importance of biosafety in research.
- Students will be familiar with the basic principles of bioethics & will be able to analyze ethical issues related to biotechnology research.
- Students will be able to understand the concept of lab biosecurity.

#### **Details of the Course:-**

##### **UNIT I : Introduction to Intellectual Property:**

Types of IP: Patents, Trademarks, Copyright, Industrial Design, Traditional Knowledge, Geographical Indications, IPs of relevance to Biotechnology and few Case Studies

##### **UNIT II : Agreements and Treaties:**

History of GATT & TRIPS Agreement; Madrid Agreement; Hague Agreement; WIPO Treaties; Budapest Treaty; PCT; Indian Patent Act 1970 & recent amendments

##### **UNIT III : Concept of biosafety**

Biorisk, Hazardous characteristics of the agent, Laboratory procedures, Good lab practices, Principles of biosafety, Biosafety levels to personnel, environment and Community

##### **UNIT IV : Biosafety guidelines:**

Definition of GMOs & LMOs; Roles of Institutional Biosafety Committee, RCGM, GEAC etc. for GMO applications in food and agriculture; Environmental release of GMOs; Risk Analysis; Risk Assessment; Cartagena Protocol.

##### **UNIT V : Perceptions of ethical biotechnology**

Morality, Legality and ethics, Principles of bioethics, Ethical conflicts in biotechnology, , Social and ethical implications of biological weapons, Ethical limits of biotechnology

**Suggested Books:**

<b>S. No.</b>	<b>Name of Authors/Books/Publishers</b>	<b>Year of Publication/Reprint</b>
<b>Text Books</b>		
1.	Sateesh, M.K., Bioethics and Biosafety, IK International Publishers	2008
2	Fleming, D.A., Hunt, D.L, Biological Safety Principles and Practices, Fourth Edition, ASM Press, Washington.	2006
<b>Reference Books</b>		
1.	Srinivasan, K. and Awasthi, H.K., Law of Patents, Jain Book Agency	1997
2	Ganguli, P. Intellectual Property Rights: Unleashing the Knowledge. Tata McGraw-Hill Publishing Company.	2001

**Examination Scheme:**

<b>Components</b>	<b>Internal Assessment</b>			<b>External Evaluation</b>
	<b>Attendance</b>	<b>Class Test</b>	<b>Assignment/ Project/Seminar/Quiz</b>	
<b>Weightage (%)</b>	10	20	10	60

## **SEMESTER II**

### **Bioinstrumentation Techniques**

**Course Code: MMB-205**

**Credit Units: 03**

**Pre-requisite:** Basic understanding of molecular biology, Physics and chemistry

#### **Course Outcome:**

- Students will be able to define and explain the fundamental principles of modern biological techniques.
- Students will be able to understand types of chromatography on the basis of different mobile and stationary phases.
- Students will acquire knowledge about principle and applications of different types of electrophoresis.
- Students will be able to understand the general account of centrifugation, types and applications for the separation of different types of biomolecules.
- Students will be able to learn about the general principles and applications of different types of microscopy.
- Students will be able to learn about the basic working principle of biosensor and their applications
- Students will be able to understand basic principle of different types of spectroscopy and their role in biological sciences.
- Students will be able to apply their basic knowledge in characterization of biomolecules.

#### **Details of the Course:-**

##### **UNIT I: Analytical separation methods:**

Principles and techniques. Chromatography – general principle, application and types. Adsorption chromatography, partition chromatography. Gas Chromatography, liquid chromatography, paper chromatography. Thin layer chromatography, gel filtration chromatography. Ionexchange chromatography, affinity chromatography. HPPL/High Performance/Pressure Liquid chromatography.

##### **UNIT II: Electrophoresis:**

General principles, application, and types: paper electrophoresis, moving boundary methods, gel electrophoresis (native, denaturing & reducing). Disc gel electrophoresis, slab gel electrophoresis. isoelectrofocussing (IEF) isoelectrophoresis, molecular weight estimation. Centrifugation: basic principles common centrifuges used in laboratory (clinical high speed & ultracentrifuges). Types of rotors (fixed angle, swing bucket). Types of centrifugation: preparative, differential & density gradient. Ultra centrifugation: sedimentation rate: zonal centrifugation, equilibrium density gradient centrifugation sedimentation constants.

##### **UNIT III: Basic knowledge of the principles and applications of microscopy:**

light, phase contrast, fluorescence, confocal microscopy scanning and transmission electron microscopy

(SEM, TEM).

**UNIT IV: Biosensors:**

introduction & principles. First, second & third generation instruments cell based biosensors, enzymeimmunosensors. Spectroscopic methods: principles and applications of UV-visible, IR, NMR, ES Round X-ray. Spectroscopy.

**UNIT V: Application of radioisotopes in biology:**

Properties and units of radioactivity. Radioactive isotopes and half life Measurement of radioactivity: (basic knowledge) GM Counter, gamma counter, liquid scintillation counter. Tracer techniques (basic knowledge): autoradiography, radioimmunoassay, pitfalls of immunoassays, radio receptor assay. Safety rules in handling of radioisotopes and hazardous chemical.

Weightage (%)	10	20	10	60

## **SEMESTER II**

### **Career Skills**

**Course Code: AEC-201**

**Credit Units: 02**

**Pre-requisite:** English Language Skills & Sound Reasoning and Aptitude ability

#### **Course Outcome:**

- Exhibit competent writing that is reasonably proficient in correct grammar and sentence structure skills.
- Enhance the Vocabulary of the students to make them corporate ready.
- Improve the Logical ability among the students.
- Enhance the problem solving skills of the students.
- Improve the Quantitative ability of the students.
- Discover the key skills required to bridge the gap between campuses and corporate.

#### **Details of the Course:-**

##### **Unit I: Sentence Corrections based on Topics:**

Tenses & Concord

**Sentence completion** -Single word blank & Double blanks

##### **Unit II: Basic Vocabulary Building:**

Antonyms & synonyms

Idioms & Phrasal Verb

Advanced Analogy

##### **Unit-III: Logical Reasoning:**

Blood relation, seating/placing arrangements.

##### **Unit-IV: Logical Reasoning:**

Coding decoding, Direction sense test

##### **Unit V: Quantitative Aptitude:**

Percentage, Ratio, Ages, Profit& loss

**Suggested Books:**

4	Rawat & Rawat “Quantitative aptitude”	2017

**Examination Scheme:**

<b>Components</b>	<b>Internal Assessment</b>			<b>External Evaluation</b>
	<b>Attendance</b>	<b>Class Test</b>	<b>Assignment/ Project/Seminar/Quiz</b>	
<b>Weightage (%)</b>	10	20	10	60

## SEMESTER II

### Public Speaking II

**Course Code:** AEC-201a

**Credit Units:** 02

**Pre-requisite:** Basic information of English Language

#### **Course Outcome:**

- Exhibit competent writing that is reasonably proficient in correct grammar and sentence structure skills.
- Construct the vocabulary of the students to assist them acquire plethora of knowledge of foreign as well as indigenous languages.
- Maximize the capability of students pertaining to discussion initiation, carrying on and conclusion.
- Help demonstrate proficiency in written communication using appropriate style, structure and voice.
- Provide knowledge in the area of research.
- Utilize the already learnt grammar skills towards accurate usage of language.

#### **Details of the Course:-**

##### **UNIT I:**

Functional Grammar Tenses

Parts of speech

g) Usage of parts of speech

h) Spotting errors Voice

##### **UNIT II:**

Articles Reported Speech

##### **UNIT III:**

Basic Vocabulary Building Prefixes, suffixes Homonyms

Idioms & Proverbs Phrasal verbs One word

substitution Role plays

##### **UNIT IV:**

Group Discussions Interview Skills Written communication

Paragraphing paraphrasing summarizing, Email writing,

**UNIT V:** Proof reading Scientific paper Writing Difference in scientific reports ,

Research articles, review articles , book chapters, Reading a scientific publication. literature review, writing research paper, review book chapter .Research work Presentation (oral /poster)

**Suggested Books:**

<b>S. No.</b>	<b>Name of Authors/Books/Publishers</b>	<b>Year of Publication/Reprint</b>
<b>Reference Books</b>		
1.	Spoken English For India by R.K. Bansal and J.B. Harrison	1983

## Semester II

### Seminar & Research Orientation II

Course Code: SM-201

Credit Units: 02

#### Course Outcomes:

- Describe the measurable skills, abilities, knowledge or values.
- Students should be able to demonstrate as a result of a completing a course.
- They are student-centered rather than teacher-centered.
- They describe what the students will do, not what the instructor will teach.

#### Detail of the course

**Research methods:** Lectures, seminars, and practical exercises that cover themes like what constitutes scientific knowledge

**Research problems:** How to identify and work through research problems

**Primary and secondary sources:** How to become familiar with sources and critique them, and how to research secondary sources

**Research databases:** How to use research database tools

**Research proposals:** How to prepare preliminary interdisciplinary research proposals

#### Examination Scheme:

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

## **SEMESTER II**

### **Research Methodology II**

**Course Code: SM-201a**

**Credit Units: 02**

#### **Course Outcomes:**

- Students who complete this course will be able to understand and comprehend the basics in research methodology
- And applying them in research/ project work.
- This course will help them to select an appropriate research design.

#### **Detail of the course:**

##### **Unit I : Foundations of Research:**

Meaning, Objectives, Motivation, Utility. Concept of theory, empiricism, deductive and inductive theory. Characteristics of scientific method – Understanding the language of research – Concept, Construct, Definition, Variable. Research Process Problem Identification & Formulation – Research Question – Investigation Question – Measurement Issues – Hypothesis – Qualities of a good Hypothesis –Null Hypothesis & Alternative Hypothesis. Hypothesis Testing – Logic & Importance.

##### **Unit II : Research Design:**

Concept and Importance in Research – Features of a good research design – Exploratory Research Design – concept, types and uses, Descriptive Research Designs – concept, types and uses. Experimental Design: Concept of Independent & Dependent variables. Qualitative and Quantitative Research: Qualitative research – Quantitative research – Concept of measurement, causality, generalization, replication. Merging the two approaches.

##### **Unit III : Measurement:**

Concept of measurement– what is measured? Problems in measurement in research – Validity and Reliability. Levels of measurement – Nominal, Ordinal, Interval, Ratio. Sampling: Concepts of Statistical Population, Sample, Sampling Frame, Sampling Error, Sample Size, Non Response. Characteristics of a good sample. Probability Sample – Simple Random Sample, Systematic Sample, Stratified Random Sample & Multi-stage sampling. Determining size of the sample – Practical considerations in sampling and sample size.

##### **Unit IV : Data Analysis:**

Data Preparation – Univariate analysis (frequency tables, bar charts, pie charts, percentages), Bivariate analysis – Cross tabulations and Chi-square test including testing hypothesis of association. Interpretation of

Data and Paper Writing – Layout of a Research Paper, Journals in Computer Science, Impact factor of Journals, When and where to publish ? Ethical issues related to publishing, Plagiarism and Self-Plagiarism.  
9. Use of Encyclopedias, Research Guides, Handbook etc., Academic Databases for Computer Science Discipline.

**Unit V: Use of tools / techniques for Research:**

methods to search required information effectively, Reference Management Software like Zotero/Mendeley, Software for paper formatting like LaTeX/MS Office, Software for detection of Plagiarism

**Suggested Books :**

4. Business Research Methods – Donald Cooper & Pamela Schindler, TMGH, 9th edition
5. Business Research Methods – Alan Bryman & Emma Bell, Oxford University Press.
6. Research Methodology – C.R.Kothari 4. Select references from the Internet

## Semester II

## General Proficiency

**Course Code: GP-201**

**Credit Units: 02**

**Pre-requisite:** Basic information of English Language

### Course Outcome:

- **Effective communication:** The ability to exchange ideas and information in a way that builds trust and respect
- **Critical and analytical thinking:** The ability to explore issues and ideas before forming a conclusion
- **Integrative thinking:** The ability to synthesize knowledge across different domains and perspectives
- **Preparing students to be engaged citizens:** Preparing students to participate in political culture and thrive in a rapidly evolving world

### Details of the Course:-

General language proficiency is the ability to read, write, listen, and speak in real-life situations. To test this, a test is usually developed for each skill with questions that are designed to imitate real life.

A syllabus is a guide to a course that includes course policies, rules, regulations, required texts, and a schedule of assignments and seminar.

### Examination Scheme:

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

## **SEMESTER II**

### **Enterprenuership Development and Business Communication II**

**Course Code: GP-201a**

**Credit Units: 02**

**Pre-requisite:** Basic information of Enterprenuership Development

#### **Course Outcome:**

- To familiarize the students, and make them understand with key concepts and processes in entrepreneurship and business communication.
- To provide context to the processes in the form of differences between small and large firms, and the economic environment.
- To introduce key debates around entrepreneurship and small businesses.
- To impart knowledge on different extension methods and approaches used for transfer of agricultural technology.
- To impart skills required for entrepreneurship development among the students for self-employment.

#### **Details of the Course:-**

##### **Unit-I**

Concept of Entrepreneur, Entrepreneurship Development, Characteristics of entrepreneurs; SWOT Analysis & achievement motivation, Government policy, and programs & institutions for entrepreneurship development.

##### **Unit-II**

Impact of economic reforms on Agribusiness/Agri-enterprises, Entrepreneurial Development Process.

##### **Unit-III**

Business Leadership Skills; developing organizational skills (controlling, supervising, problem-solving, monitoring & evaluation).

##### **Unit-IV**

Developing Managerial skills, Business Leadership Skills ( Communication, direction, and motivation skills), Problem-solving skills

##### **Unit-V**

Supply chain management & Total quality management, Project Planning Formulation & report preparation; Financing of enterprise, Opportunities for agri-entrepreneurship & rural enterprise.

**Examination Scheme:**

<b>Components</b>	<b>Internal Assessment</b>			<b>External Evaluation</b>
	<b>Attendance</b>	<b>Class Test</b>	<b>Assignment/ Project/Seminar/Quiz</b>	
<b>Weightage (%)</b>	10	20	10	60

## **SEMESTER II**

### **Human Values and Moral Ethics II**

**Course Code: GP-201b**

**Credit Units: 02**

#### **Course Outcome:**

- Understanding life's purpose: Students become aware of their life's mission, vision, and goals.
- Developing virtues: Students learn to cultivate virtues and avoid vices.
- Understanding ethical personalities: Students learn to understand the metaphors of ethical personalities from various domains.
- Developing a positive outlook: Students develop a personality that allows them to view life in a positive way.
- Building strong relationships:

#### **Unit I : Morals, values, and ethics:**

This unit may cover topics such as integrity, work ethic, service learning, civic virtue, respect for others, living peacefully, caring, sharing, honesty, courage, valuing time, cooperation, commitment, empathy, self-confidence, character, and spirituality

#### **Unit II : Engineering ethics:**

This unit may cover topics such as the senses of engineering ethics, moral issues, types of inquiry, moral dilemmas, moral autonomy, models of professional roles, engineering as experimentation, research ethics, codes of ethics, industrial standards, and a balanced outlook on law

#### **Unit III : Engineering ethics:**

This unit may cover topics such as the senses of engineering ethics, moral issues, types of inquiry, moral dilemmas, moral autonomy, models of professional roles, engineering as experimentation, research ethics, codes of ethics, industrial standards, and a balanced outlook on law

#### **Unit IV :Peer pressure, alcoholism, and drug abuse:**

This unit may cover topics such as ethical values, causes, impact, laws, prevention, and the ill effects of smoking

#### **Unit V : Global issues:**

This unit may cover global issues  
Indian and global case studies: This unit may cover Indian and global case studies

## **SEMESTER II**

### **Life Management II**

**Course Code: GP-201c**

**Credit Units: 02**

- Goal setting: How to set SMART goals that are specific, measurable, achievable, realistic, and have a time frame.
- Prioritization: How to prioritize tasks and effectively manage time.
- Stress management: How to manage stress and improve work-life balance.
- Organization: How to organize work and use organization tools.
- Delegation: How to delegate tasks and assignments.

## SEMESTER II

### Immunology & Immunotechnology Lab

Course Code: MMB-251

Credit Units: 02

**Pre-requisite:** Basic knowledge of immunology

**Course Outcome:**

- Students will be able to understand/experience the immune system.
- Students will be able to understand related immunological techniques and apply them in medical laboratory profession.
- Students will be able to value role of immune system in different diseases.

**Details of the Course:-**

Sl. No.	Contents	Contact Hours
1	To make blood smear, stain and identify different leukocytes.	3
2	Separation of serum and plasma from blood.	3
3	To determine haemoglobin estimation	3
4	To determine blood group by haemagglutination test	3
5	To perform RPR test for detection of Syphilis infection	3
6	To perform immunoprecipitation techniques- a) Double immunodiffusion b) Radial immuno diffusion	3
7	Qualitative estimation of <i>Salmonella</i> infection	3
8	To perform Widal tube test for quantitative determination of <i>Salmonella</i> infection	3
9	Separation of lymphocytes from blood	3
10	To determine concentration of antigen by rocket immunoelectrophoresis	3
11	To perform different types of ELISA for determination of antigen or antibody titer a) Indirect ELISA b) Direct ELISA c) Competitive ELISA	3
12	To perform western Blotting.	3
13	To perform dot blot assay.	3
	Total	39

**Suggested Books:**

<b>S.No.</b>	<b>Name of Authors/Books/Publishers</b>	<b>Year of Publication/Reprint</b>
	<b>Text Books</b>

<b>Components</b>	<b>Internal Assessment</b>			<b>External Evaluation</b>
	<b>Attendance</b>	<b>Viva-Voce</b>	<b>Practical Record</b>	
<b>Weightage (%)</b>	10	20	10	60

## SEMESTER II

### Molecular Biology & Recombinant DNA Technology Lab

Course Code: MMB-252

Credit Units: 02

**Pre-requisite:** Basic experience of molecular biology techniques

**Course Outcome:**

- Students will be able to isolate and analyze DNA/plasmid DNA and protein.
- Students will be able to digest and ligate the DNA molecules.
- Students will be able to design primers and amplification of DNA by PCR.
- Students will be able to learn the techniques of cloning gene in plasmid vectors.
- Students will be able to screen the positive transformants with the gene cloned through reporter based assays.

**Details of the Course:-**

S. No.	Contents	Contact Hours
1	Isolation of Vector/plasmid DNA and its analysis	3
2	RNaseA digestion of isolated plasmid/vector DNA	3
3	Restriction digestion of DNA	3
4	Primer designing	3
5	Amplification of DNA by polymerase chain reaction	6
6	Ligation of DNA molecules	3
7	Competent cell formation	3
8	Transformation in <i>E. coli</i> .	6
9	Reporter gene assay for plasmid vectors	3
10	Expression of cloned gene in prokaryotic system	6

**Suggested Books:**

<b>S. No.</b>	<b>Name of Authors/Books/Publishers</b>	<b>Year of Publication/Reprint</b>
<b>Text Books</b>		
1.	Methods in yeast genetics: a Cold Spring Harbor Laboratory course manual. David C. Amberg, Daniel Burke, Jeffrey Strathern Cold Spring Harbor Laboratory Press, c2005 2005 ed.	2005

**Examination Scheme:**

<b>Components</b>	<b>Internal Assessment</b>			<b>External Evaluation</b>
	<b>Attendance</b>	<b>Viva-Voce</b>	<b>Practical Record</b>	
<b>Weightage (%)</b>	10	20	10	60

## SEMESTER II

### Mycology & Phycology Lab

Course Code: MMB-253

Credit Units: 02

**Pre-requisite:** Basic information of Fungus and Algae

#### Course Outcome:

After the successful completion of this course

- Students will be able to isolate fungi from soil.
- Students will be able to learn about the cultivation and preservation of fungi and algae.
- Students will be able to recognize the microscopic structure of fungi.
- Students will be able to know various properties of fungi and algae.

#### Details of the Course:-

S. No.	Contents	Contact Hours
1	To study the colony morphology and microscopy of fungi.	3
2	Sampling of fungi from soil and air.	3
3	Various enzymatic assays of fungi.	3
4	DNA isolation of fungi.	9
5	Antimicrobial activity of some medicinal plants against certain isolated fungi.	3
6	Isolation of fungal pathogen from plants.	3
7	Isolation and partial purification of enzymes.	3
8	Study of the following genera through temporary and permanent slides: <i>Volvox</i> , and <i>Nostoc</i> .	2
9	Study of the following genera through temporary and permanent slides: <i>Coleochaete</i> , <i>Vaucheria</i> , <i>Ectocarpus</i> , <i>Polysiphonia</i> .	2

**Suggested Books:**

<b>S. No.</b>	<b>Name of Authors/Books/Publishers</b>	<b>Year of Publication/Reprint</b>

3.	Kumar HD. (1990). Introductory Phycology. 2nd edition. Affiliated East Western Press.	1990
4.	Microbiology 5 <sup>th</sup> Edition. Prescott, L. M.; Harley, J.P. and Klein, D.A. (2003) McGraw Hill, USA.	2003

**Examination Scheme:**

<b>Components</b>	<b>Internal Assessment</b>			<b>External Evaluation</b>
	<b>Attendance</b>	<b>Viva-Voce</b>	<b>Practical Record</b>	
<b>Weightage (%)</b>	10	20	10	60

## **SEMESTER III**

### **Microbial Genetics**

**Course Code: MMB-301**

**Credit Units: 03**

**Pre-requisite:** Basic knowledge of microbial genetics

#### **Course Outcome:**

- Students will be able to understand the current status of microbial genetics.
- Students will be able to understand the relevance of microbial genetics in Life Sciences.
- Students will be able explain different mechanisms of transfer of genetic materials in prokaryotes.
- Students will be able identify and distinguish genetic regulatory mechanisms at different levels.
- Students will be able to understand life cycles of different phages.
- Students will be able to know about transposons and transcription.

#### **Details of the Course:-**

##### **Unit I: Historical Preview of Genetics:**

Mendelian principles and classical genetics, Genetic concepts, use of microorganisms in genetic studies. Chemical basis of heredity – early concepts of genes – discovery of the chemical basis of heredity - experimental evidences – contributions of Griffith, Avery, Hershey and Chase, Fraenkel – Conrat. Structure of nucleic acids – Structure of DNA and its elucidation, types and different models of DNA, extra- chromosomal DNA. Structure of RNA. Organization of genetic material -Genome organization in viruses, bacteria and eukaryotes. Structure of nucleosome, chromatin and chromosome. Concept of phenotype and genotype, monohybrid (law of dominance and segregation), dihybrid (law of independent assortment). Applications of Mendel principles.

##### **Unit II: Chromosomes and Genes:**

Cell division and Cell Cycle, chromosomal aberrations, karyotype analysis- normal and abnormal karoyotype. Neurospora- Tetrad analysis and linkage detection - 2 point and 3 point crosses, chromatid and chiasma interference, Mitotic recombination in Neurospora and Aspergillus. B) Algal Genetics: Chlamydomonas - unordered tetrad analysis - Recombination and Mapping, Nucleocytoplasmic interactions and gene expression in Acetabularia. Extra nuclear (Cytoplasmic) inheritance. Heterothalism and Parasexuality.

##### **Unit III: Perpetuation of genetic information:**

Replication of DNA, evidence of semi-conservative replication. Mechanism and enzymology of DNA replication. Regulation of DNA replication. Replication of RNA. Co-linearity between genes and proteins - Central dogma, experimental evidences, components of protein synthesis.

##### **Unit IV: Transcription and Translation:**

Biosynthesis of RNA in prokaryotes and eukaryotes, DNA dependent RNA polymerase, initiation, elongation and termination of transcription. Post transcriptional processing - removal of intron transcripts, addition of 5' cap and 3' poly A tail, processing of mRNA, rRNA and tRNA. Reverse transcription. Genetic code and translation – Elucidation and salient features of genetic code, wobble concept, triplet codon usage. Involvement of ribosome in

translation, ribosome structure, initiation, elongation and termination of polypeptide chain synthesis, extra ribosomal factors, ribosome cycle, post translation modifications of proteins.

**Unit IV: Regulation of gene expression:**

Enzyme induction and repression, constitutive expression and housekeeping genes, Operon concept, negative and positive regulation, catabolite repression, regulation of lac Operon, trp Operon, arabinose Operon, divergent Operon, attenuator regulation, translational regulation, feedback inhibition. Genetic recombination – in bacteria; transformation, competence, lysogeny, generalized and restricted transduction, conjugation, sexduction, genetic and fine structure mapping. Transposable elements – recombination in bacteria, yeasts, maize and drosophila. Mutations – Nature and types, mutagenic agents –Physical, Chemical and biological. Phage  $\mu$  mutagenesis, site directed mutagenesis. Detection of mutation – Ame’s test, Mutation in – yeast, neurospora and chlamydomonas.

## **SEMESTER III**

### **Medical Microbiology**

**Course Code: MMB-302**

**Credit Units: 03**

**Pre-requisite:** Basic information of Medical Microbiology

#### **Course Outcome:**

Upon successful completion of this course the student will be able to:

- This course provides learning opportunities in the basic principles of medical microbiology and infectious disease.
- It covers mechanisms of infectious disease transmission, principles of aseptic practice, and the role of the human body's normal microflora.
- The course provides the conceptual basis for understanding pathogenic microorganisms and the mechanisms by which they cause disease in the human body.
- It also provides opportunities to develop informatics and diagnostic skills, including the use and interpretation of laboratory tests in the diagnosis of infectious diseases.
- To understand the importance of pathogenic bacteria in human disease with respect to infections of the respiratory tract, gastrointestinal tract, urinary tract, skin and soft tissue.
- Helps to understand the use of lab animals in medical field.
- Recall the relationship of this infection to symptoms, relapse and the accompanying pathology.
- Explain the methods of microorganisms' control, e.g. chemotherapy & vaccines. Solve problems in the context of this understanding.

#### **Details of the Course:-**

##### **UNIT I: General Microbiology:**

Morphology and classification of microorganisms. Growth, nutrition and multiplication of bacteria. Sterilization and Disinfection - Principles and use of equipment's of sterilization namely hot air oven, autoclave and serum inspissator, pasteurization, antiseptics and disinfectants. Immunology - antigen, Antibodies, Immunity, vaccines, types of vaccine and immunization schedule. Hospital acquired infection - Causative agents, transmission methods, investigation, prevention and control of hospital Acquired infections.

##### **UNIT II: Bacteriology:**

Classification of bacteria, morphology, infections, lab diagnosis, treatment and prevention of common bacterial infections. Staphylococcus, Streptococcus, Pneumococcus, Neisseria, Corynebacterium, diphtheriae, Clostridia, Enterobacteriaceae-Shigella, Salmonella, Klebsiella, E.coli, Proteus, Vibrio cholerae, Pseudomonas and Spirochetes.

##### **UNIT III: Mycobacteriology & Parasitology:**

Mycobacteria- classification, pathogenesis, lab diagnosis and prevention. Classification, infections and lab diagnosis of following parasites. Entamoeba, Giardia, Malaria, Hookworm, Roundworm and Filarial worms.

**UNIT IV: Mycology:**

Morphology, disease caused and lab diagnosis of following fungi. Candida, Cryptococcus, Dermatophytes, opportunistic fungi (Aspergillus, Zygomycetes and Penicillium).

**Unit V: Virology:**

General properties of viruses, diseases caused lab diagnosis and prevention of following viruses, Herpes, Hepatitis, HIV, Dengue, Influenza, Chikungunya, Rabies and Poliomyelitis.

**Suggested Books:**

## SEMESTER III

### Bioinformatics

**Course Code: MMB-303**

**Credit Units: 03**

**Pre-requisite:** Basic Knowledge of computer application

**Course Outcome:**

- Students will be able to understand the structure and function of computers along with its application in solving Biotechnology problems.
- Students will acquire the ability to retrieve, use and apply tremendous knowledge present in various databases for research purpose.
- Students will be able to perform interspecies genome analysis and also understand the phylogenetic relationship between different species.
- Students will become familiar with various application tools available for various purposes like protein structure prediction, primer designing, nucleic acid structure prediction and molecular mapping and imaging.
- The knowledge of various data generation techniques & intervention of Bioinformatics into it, in the form of softwares for generating restriction map, chromatograms etc. will be imparted to students.

**Details of the Course:-**

S. No.	Contents	Contact Hours
1	Basics of computer, input/ output tools; Application of computer in Biotechnology, Biological Databases for nucleic acids and proteins; Pubmed, NCBI and EBI. Retrieval of data from public Databases.	6
2	Bioinformatics resources on the internet Computational methods for sequence analysis; various approaches to nucleic acids and protein sequence analysis, Local and Global Alignment.	8
3	Genome Analysis and Gene Identification, Genome comparison and analysis; Phylogenetic Analysis, Comparative genomics and computers, Structural analysis of Nucleic acids	8
4	Application tools: Primer designing. Molecular imaging and design, Tools for molecular mapping, Protein Information Sources, PDB, SWISSPROT, TREMBL, Understanding the structure of each source and using it on the web. Prediction of 3- dimensional structure of proteins.	8
5	Introduction to Data generation Techniques and Bioinformatics Problem Posed by them- Restriction Digestion, Chromatograms, Blots, PCR, Microarrays, Mass Spectrometry.	8

**SEMESTER III**

**Environmental Microbiology**

**Course Code: MMB-304 a**

**Credit Units: 03**

**Pre-requisite:** Basic knowledge of environmental science.

**Course Outcome:**

- Students will be able to acquire knowledge about environmental pollution- sources, effects and control measures.
- Students will understand the concept of BOD and analyze the need for different waste water treatment methods.
- Students will be able to understand and implement the methods and importance of solid waste management.
- Students will be able to understand the application of bioreactors.
- Students will be able to apply their knowledge about toxic compounds degradation using microbes.
- Students will understand the role of biopesticides.
- Students will analyze the national and international concern for environment for protecting the environment and sustainable development.
- Students will be able to understand the global issues related to environmental pollution.

**Details of the Course:-**

**UNIT-I: Introduction to Microbial Ecology:**

Evolution of Life on Earth; History and scope of ecology, Concept of autecology, synecology, population, community, biome. Ecological succession. Microorganism in aquatic Environment: major physical and chemical factors (light, temperature, gases, nutrients). Aquatic biota: phytoplankton, zooplankton, benthos, periphyton, macrophytes. Biofilms, Production in lakes, rivers, estuaries and wetlands. Nutrient dynamics in lakes, rivers, estuaries and wetlands.

**UNIT-II: Aquatic Microbiology:**

Fresh and marine ecosystem (estuaries, mangroves, deep sea, hydrothermal vents, salt pans, coral reefs). Zonation of water ecosystem; upwelling, eutrophication; food chain in aquatic ecosystems. Role of methanotrophs in ecosystem. Potability of water, microbial assessment of water, water purification. Ground water types and their contamination. Biofilm. Waste treatment: Sewage and effluent treatment; Primary, secondary and tertiary treatment, Solid waste treatment. Solid wastes as sources of energy and food.

**UNIT-III: Aerobiology:**

Airspora in different layers of the atmosphere, bioaerosol, assessment of air quality using air sampler based principles of sedimentation, impaction, impingement, suction and filtration. Brief account of transmission of airborne microbes, indoor and outdoor microbial quality. Allergy: Causes and tests for detection of allergy. Endotoxin in air and its hazards. Molecular methods for air quality assessment. Historical development of space microbiology, Life detection methods a) Evidence of metabolism (Gulliver) b) Evidence of photosynthesis (autotrophic and heterotrophic)

**UNIT-IV: Role of microbes in degradation:**

Biodegradation of xenobiotic – hydrocarbons, pesticides and plastics. Biodeterioration of wood, pulp and paper; Biosorption/ bioaccumulation of heavy metal. Bioremediation of soil, air and water: various methods, advantages and disadvantages. Bioleaching of iron, copper, gold and uranium.

**UNIT-V: Global environmental problems:**

Ozone depletion, UV-B, greenhouse effect and acid rain, their impact and biotechnological approaches for management. . Containment of acidmine drainage applying biomining [with reference to copper extraction from low grade ores].

**Suggested Books:**

	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
<b>Weightage (%)</b>	10	20	10	60

**SEMESTER III**

**Industrial Microbiology**

**Course Code: MMB-304 b**

**Credit Units: 03**

**Pre-requisite:** Basic knowledge of Industrial Microbiology.

**Course Outcome:**

- Students will be able to understand the technologies for microbial cell maintenance.
- Students will learn about bioprocess technology.
- Students will be able to understand fermenters.

**Details of the Course:**

**UNIT -1 Technology of Microbial Cell Maintenance**

Principles of Microbial growth, Methods to increase yield of microbes, Batch, fed- batch and continuous cultures (definition and kinetics). Strain preservation, maintenance and strain improvement by mutation of gene transfer processes. Microbial culture selection with high yield potential. Commercial Production of Microorganisms.

**UNIT -2 Production of Primary Metabolites**

A brief outline of processes for the production of some commercially important organic acids (e.g. citric acid, lactic acid, acetic acid etc.); amino acids (glutamic acid, phenylalanine, aspartic acid etc.) and alcohols (ethanol, butanol etc.)

**UNIT -3 Production of Secondary Metabolites**

Study of production processes for various classes of secondary metabolites: antibiotics: betalactams (penicillin, cephalosporin etc.), aminoglycosides (streptomycin etc.), macrolides (erythromycin), vitamins and steroids.

**UNIT -4 Design and construction of a Fermentors:**

Body construction; construction material; Aeration and agitation systems; Stirrer glands and bearings; Baffles; Valves and steam traps; Pressure- control valves; computer applications in fermentation technology; specialized bioreactors; membrane bioreactors; tower bioreactors; fluidized bed bioreactors; Immobilized system and packed bed reactors and Photobioreactors.

**UNIT -5 Production Modern Biotechnology Products**

Production of recombinant proteins having therapeutic and diagnostic applications, production of vaccines. Production of monoclonal antibodies. Products of plant and animal cell culture.

**Suggested Books:**

# Watershed Wastland Management

**Course Code: MMB-304c**

**Credit Units: 03**

## **Course Outcomes:**

- Restoring ecological balance
- Promoting economic development
- Improving the socio-economic condition of disadvantaged sections
- Generating employment
- Alleviating poverty
- Empowering the community

## **Details of Course**

### **Unit I: Watershed management**

The process of improving the quality of water and other natural resources in a watershed through land use and water management practices.

### **Unit II: Soil conservation**

Measures such as terracing, contouring, and mulching can help reduce soil erosion, improve soil health, and increase agricultural productivity.

### **Unit III: Groundwater recharge methods**

Methods to improve and increase the production of timbers, fodder, and wildlife resources.

### **Unit IV: Integrated watershed management**

A holistic plan that combines different practices such as agronomic, engineering, forestry, and community-based practices.

### **Unit V: Runoff and floods**

Changes in land use and climate change can significantly influence watershed hydrologic processes and water quality.

**Suggested Books:**

	<b>Attendance</b>	<b>Class Test</b>	<b>Assignment/ Project/Seminar/Quiz</b>	
<b>Weightage (%)</b>	10	20	10	60

## **SEMESTER III**

### **Biochemical Engineering**

**Course Code: MMB-304d**

**Credit Units: 03**

- Problem solving: Identifying, formulating, and solving complex engineering problems
- Engineering design: Applying engineering design to create solutions that meet needs while considering safety, public health, and other factors
- Communication: Communicating effectively with a variety of audiences
- Ethics: Recognizing ethical and professional responsibilities in engineering situations
- Teamwork: Functioning effectively in a team to establish goals & plan tasks.

#### **Unit I : Material and Energy Balance:**

Students learn the fundamental concepts of chemical engineering design and calculations.

#### **Unit II : Pollution control:**

Topics include air pollution, water pollution, solid waste management, and radioactive pollution.  
Process control, Biochemical engineering

#### **Unit III : Thermodynamics:**

A core topic in chemical engineering. Mass transfer: A core topic in chemical engineering.  
Chemical reactions: A core topic in chemical engineering. Instrumentation and process control  
Plant design and economics

#### **Unit IV : Mathematics:**

A common subject in chemical engineering, as engineers use math to make important decisions.  
Fluid mechanics and mechanical operations, Heat transfer

#### **Unit V : Chemical Reaction Engineering:**

A course that involves designing and analyzing chemical reactors. Students often find this course challenging because of the complex mathematical models required.

#### **Suggested Books:**

<b>Weightage (%)</b>	10	20	10	60

## SEMESTER III

### Agriculture Microbiology

**Course Code: MMB-305 a**

**Credit Units: 03**

**Pre-requisite:** Basic knowledge of Agriculture Microbiology.

#### **Course Outcome:**

- Students will be able to understand the microorganisms of soil and nutrient cycle.
- Students will learn about the role of enzymes and toxins in pathogenesis.
- Students will understand about the physical and chemical control of plant diseases.
- Students will learn about Biofertilizers & Mycorrhizae.

#### **Details of the Course:**

##### **UNIT-1**

Microorganisms of soil. Rhizosphere and phyllosphere microflora. Brief account of Microbial interactions: antagonism, symbiosis, mutualism, commensalisms, synergism and parasitism. Nutrient cycle: Carbon cycle, nitrogen cycle, phosphorous cycle and sulphur cycle.

##### **UNIT-2**

Role of enzymes and toxins in pathogenesis. Fungal diseases of plants: Rusts of wheat, linseeds; late blight of potato; red rot of sugarcane. Bacterial diseases of plants: Citrus canker, blight of rice. Viral diseases of plants: Leaf curl of Papaya, vein clearing of lady's finger.

##### **UNIT-3**

Physical and chemical control of plant diseases. Bacterial control of insect pests: *Bacillus thuringiensis* as bacterial insecticide. Viral control of insect pests: Nuclear polyhedrosis viruses (NPV) and cytoplasmic polyhedrosis viruses (CPV). Fungal control of insect pests: *Entomopathogenic fungi* : *Metarhizium anisopliae*, *Beauveria bassiana*, *Verticillium lecani*, *Hirsutella thompsoni*

##### **UNIT-4**

Storage fungi: Categories of storage fungi, conditions during storage in relation to damage of seeds, harmful effects. Mycotoxins and their effect on human being. General idea about quarantine. Production of biogas and alcohol from agricultural wastes.

##### **UNIT-5**

Biofertilizers: Types, production and application. Mycorrhizae: Types and their application in agriculture and forestry. Vermicomposting. Reclamation of waste agricultural land by microorganisms.

**Suggested Books:**

	<b>Attendance</b>	<b>Class Test</b>	<b>Assignment/ Project/Seminar/Quiz</b>	
<b>Weightage (%)</b>	10	20	10	60

**SEMESTER III**

**Food Microbiology**

**Course Code: MMB-305 b**

**Credit Units: 03**

**Pre-requisite:** Basic knowledge of food microbiology.

**Course Outcome:**

- Students will be able to know about the microorganisms important in food microbiology.
- Students would know about the factors influencing microbial growth in food.
- Students will understand various food borne diseases.
- Students will also have knowledge of microbiology of milk.
- Students will understand microorganisms as source of food.

**Details of the Course:**

**UNIT-1**

Microorganisms important in food microbiology: molds, yeast and bacteria – general characteristics, classification and importance. Principles of food preservation, preservation by use of high temperature, low temperature, drying and dessication. Chemical preservatives and additives. Preservation by radiation.

**UNIT-2**

Factors influencing microbial growth in food: Extrinsic and intrinsic factors. Microbial spoilage of food. Chemical changes caused by the microorganisms during spoilage. Spoilage of fish, meat, poultry, eggs, fruits and vegetables. Detection of spoilage and characterization.

**UNIT-3**

Classification of food borne diseases. Food borne infections: Brucella, Bacillus cereus, Clostridium perfringens, Yersinia enterocolitica and Escherichia, Salmonella spp. Food intoxication: Staphylococcal intoxication, Clostridial poisoning (Clostridium Botulinum). Food adulteration and prevailing food standards in India.

**UNIT-4**

Microbiology of Milk: Sources of microorganisms in milk and types of microorganisms in milk. Microbiological examination of milk (standard plate count, direct microscopic count, reductase, and phosphatase test). Dehydration and pasteurization of milk. Dairy products from microorganisms: Butter, yoghurt and cheese.

**UNIT-5**

Microorganisms as source of food: Single Cell Protein (SCP). Mushrooms and food value of mushrooms. Food conversions: Lactic acid conversions, soyabean conversions and Bakery. Microbiological estimation of food: Sample collection, preparation and analysis techniques.

**Suggested Books:**

**SEMESTER III**

**Agricultural Journalism**

### **Course Outcomes**

- Students will understand and analyze the current events and issues that are occurring in agriculture.
- Students will understand and analyze how current events and issues affect your future in agriculture.
- Students will be able to recognize and examine the relationships between inputs and outputs in their agricultural field to make effective and profitable decisions.

### **Unit I: Print Journalism. Introduction to journalism:**

basic terminology: history of Indian press and printing: printing processes; attributes of a reporter: news syndicates and agencies: concept, sources and elements of news: press releases: flash messages: kinds of feature: feature, article and editorial writing: types and sources of editorials: principles of editing; heading writing; illustrations; principles of design and layout; brief introduction to recent trends in mass media; cultural imperialism, media activism, agenda setting, gate keepin.

### **Unit II: Online Journalism. Introduction to online journalism:**

basic terminology; a technical history of the web and early online media; comparative media characteristics (Print and online); online writing and story structure; issues in online research and information gathering; concept of interactive and its tools; ethical dilemmas in online journalism; blogging and participatory journalism; issues concerning blogging; online advertising; virtual community formation v/s atomization; massification v/s individuation of news; understanding difference between web edition and e-edition of newspapers; extensions of new media e.g. RSS feeds, podcasting and wireless paper; convergence.

### **Unit III: Media Planning and Advertising.**

Introduction to advertising, its origin and growth; terminology; advertising – its classification, objectives, strategies at different levels and its future; marketing mix, promotional mix and the communication process; structure of advertising industry – advertising agencies; advertising coverage; types of advertising media; advertising codes, regulations and ethics; consumer redressal forums; advertising and social issues; controversial advertising; issues concerning surrogate advertising; constructing an advertisement; types of consumers and buying motives; media selection and scheduling; difference between advertising and PR; media planning and buying; brand positioning.

### **Unit IV: Agricultural and Development Journalism.**

Meaning, scope and importance of development journalism; problems of rural development; development agencies; development media theory and 3 democratic participant theory; dominant paradigm v/s participatory approach; human development index; making sense of development statistics; determinates of development; nation building and uplifting quality of life; agriculture and rural development schemes; agricultural news story structure, agricultural media dynamics and ethics; editing scientific papers, policy reports; public understanding and media coverage of environmental issues; use of traditional media; rural press; contribution of vernacular press; role of IT in agricultural and rural development; Right to communicate and News World Communication Order; WTO.

### **Unit IV: Ethics.**

Ethical reporting, code of ethics; social responsibility; invasion of privacy; sting operations and ethical

issues; organizational pressures in media ethics; fundamental rights, especially freedom of speech and expression; freedom and accountability of press; laws in India; official secrecy; laws of sedition; defamation, libel and slander; contempt of court; contempt of legislature; privileges of the parliament and press; press council and press commission; copyright laws; registration of journals; Information Technology Act 2000 and cyber Right to Information Act 2005; media's role promotion of human right; editor's freedom; case studies.

### Examination Scheme:

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

## **SEMESTER III**

### **Poultry Production & Management**

**Course Code: MMB-305d**

**Credit Units: 03**

#### **Course Outcomes:**

- Students will be able to know about the importance and contribution of poultry in meat sector in India as well as whole world.
- Students will be able to recognize different characteristics Indian and foreign breeds of chicken.
- Student will be able to learn different aspects of poultry such as its management of chicks, broiler and layer, their feeding and water requirement and feed manufacturing.
- Student will be able to learn about various environmental conditions and different equipment used to maintain those conditions.
- Student will get information related to housing requirement of poultry such as floor space, different housing system their advantages and disadvantages.
- Student will be able to know about various disease and vaccination which are used for poultry at different stage of their life.

#### **Detail of the course:**

##### **Unit 1 Indian poultry Industry**

Importance of poultry farming and poultry development in India. Present status and future prospectus of poultry Industry. Classification of poultry based on genetics Utility

##### **Unit -2 Scientific Poultry Keeping**

Modern breeds of Chicken. Present day egg production lines- meat production lines. Mini breeds- dwarfism in mini-Leghorns

##### **Unit-3 Diversified Poultry**

Ducks and Geese-classification- rearing system-classification-advantage. Guinea fowls - guinea fowl farming in India-Production-varieties. Emu-rearing- Economical aspects-commercial products

##### **Unit-4 Desi Chickens:**

Indigenous breeds and economical aspects of desi chicken. Indigenous breeds-Aseel-Chittagong-Kadaknath-Bursa.Improved varieties in India Giriraja-Vanaraja-Girirani-Kalinga brown, Gramapriya,Swarnandhra

##### **Unit -5 Breeds from Central Avian Research Institute – Izatnagar**

CARI Nirbheek - CARI- Shyama-HITCARI (Naked Neck Cross).CARI- Priya Layer, CARI- Sonali Layer,

CARIBRO-VISHAL, CARI-RAINBRO, Nandanam chicken-I, Nandanam Chicken-II, Nandanm-Quail

**Suggested books:**

1. Text Book of Poultry Science, P V Sreenivasaiah, Write and Print Publications, ISBN No. 9788192970592, 8192970590
2. Poultry Science Practices, Nilothpal Ghosh, CBS Publication & Distributions, 2015
3. Principles of Poultry Science, 1996, CAB Publishers, ISBN 9780851991221
4. A Text Book of Animal Husbandry, C. C. Banerjee, Oxford and IBH, Publish Co, ISBN: 9788120412606

**Examination Scheme:**

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

**Semester III**

## Seminar & Research Orientation III

Course Code: SM-301

Credit Units: 02

### Course Outcomes:

- Describe the measurable skills, abilities, knowledge or values.
- Students should be able to demonstrate as a result of a completing a course.
- They are student-centered rather than teacher-centered.
- They describe what the students will do, not what the instructor will teach.

### Detail of the course

**Research methods:** Lectures, seminars, and practical exercises that cover themes like what constitutes scientific knowledge

**Research problems:** How to identify and work through research problems

**Primary and secondary sources:** How to become familiar with sources and critique them, and how to research secondary sources

**Research databases:** How to use research database tools

**Research proposals:** How to prepare preliminary interdisciplinary research proposals

### Examination Scheme:

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

SEMESTER III

## Research Methodology III

**Course Code: SM-301a**

**Credit Units: 02**

### **Course Outcomes:**

- Students who complete this course will be able to understand and comprehend the basics in research methodology
- And applying them in research/ project work.
- This course will help them to select an appropriate research design.

### **Detail of the course:**

#### **Unit I : Foundations of Research:**

Meaning, Objectives, Motivation, Utility. Concept of theory, empiricism, deductive and inductive theory. Characteristics of scientific method – Understanding the language of research – Concept, Construct, Definition, Variable. Research Process Problem Identification & Formulation – Research Question – Investigation Question – Measurement Issues – Hypothesis – Qualities of a good Hypothesis –Null Hypothesis & Alternative Hypothesis. Hypothesis Testing – Logic & Importance.

#### **Unit II : Research Design:**

Concept and Importance in Research – Features of a good research design – Exploratory Research Design – concept, types and uses, Descriptive Research Designs – concept, types and uses. Experimental Design: Concept of Independent & Dependent variables. Qualitative and Quantitative Research: Qualitative research – Quantitative research – Concept of measurement, causality, generalization, replication. Merging the two approaches.

#### **Unit III : Measurement:**

Concept of measurement– what is measured? Problems in measurement in research – Validity and Reliability. Levels of measurement – Nominal, Ordinal, Interval, Ratio. Sampling: Concepts of Statistical Population, Sample, Sampling Frame, Sampling Error, Sample Size, Non Response. Characteristics of a good sample. Probability Sample – Simple Random Sample, Systematic Sample, Stratified Random Sample & Multi-stage sampling. Determining size of the sample – Practical considerations in sampling and sample size.

#### **Unit IV : Data Analysis:**

Data Preparation – Univariate analysis (frequency tables, bar charts, pie charts, percentages), Bivariate analysis – Cross tabulations and Chi-square test including testing hypothesis of association. Interpretation of Data and Paper Writing – Layout of a Research Paper, Journals in Computer Science, Impact factor of Journals, When and where to publish ? Ethical issues related to publishing, Plagiarism and Self-Plagiarism. 9. Use of Encyclopedias, Research Guides, Handbook etc., Academic Databases for Computer Science Discipline.

## **Unit V: Use of tools / techniques for Research:**

methods to search required information effectively, Reference Management Software like Zotero/Mendeley, Software for paper formatting like LaTeX/MS Office, Software for detection of Plagiarism

### **Suggested Books :**

7. Business Research Methods – Donald Cooper & Pamela Schindler, TMGH, 9th edition
8. Business Research Methods – Alan Bryman & Emma Bell, Oxford University Press.
9. Research Methodology – C.R.Kothari 4. Select references from the Internet

**Course Code: GP-301**

**Credit Units: 02**

**Pre-requisite:** Basic information of English Language

**Course Outcome:**

- Effective communication: The ability to exchange ideas and information in a way that builds trust and respect
- Critical and analytical thinking: The ability to explore issues and ideas before forming a conclusion
- Integrative thinking: The ability to synthesize knowledge across different domains and perspectives
- Preparing students to be engaged citizens: Preparing students to participate in political culture and thrive in a rapidly evolving world

**Details of the Course:-**

General language proficiency is the ability to read, write, listen, and speak in real-life situations. To test this, a test is usually developed for each skill with questions that are designed to imitate real life.

A syllabus is a guide to a course that includes course policies, rules, regulations, required texts, and a schedule of assignments and seminar.

**Examination Scheme:**

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

## **SEMESTER III**

### **Enterprenuership Development and Business Communication III**

**Course Code: GP-301a**

**Credit Units: 02**

**Pre-requisite:** Basic information of Enterprenuership Development

#### **Course Outcome:**

- To familiarize the students, and make them understand with key concepts and processes in entrepreneurship and business communication.
- To provide context to the processes in the form of differences between small and large firms, and the economic environment.
- To introduce key debates around entrepreneurship and small businesses.
- To impart knowledge on different extension methods and approaches used for transfer of agricultural technology.
- To impart skills required for entrepreneurship development among the students for self-employment.

#### **Details of the Course:-**

##### **Unit-I**

Concept of Entrepreneur, Entrepreneurship Development, Characteristics of entrepreneurs; SWOT Analysis & achievement motivation, Government policy, and programs & institutions for entrepreneurship development.

##### **Unit-II**

Impact of economic reforms on Agribusiness/Agri-enterprises, Entrepreneurial Development Process.

##### **Unit-III**

Business Leadership Skills; developing organizational skills (controlling, supervising, problem-solving, monitoring & evaluation).

##### **Unit-IV**

Developing Managerial skills, Business Leadership Skills ( Communication, direction, and motivation skills), Problem-solving skills

##### **Unit-V**

Supply chain management & Total quality management, Project Planning Formulation & report preparation; Financing of enterprise, Opportunities for agri-entrepreneurship & rural enterprise.

#### **Examination Scheme:**

<b>Components</b>	<b>Internal Assessment</b>			<b>External Evaluation</b>
	<b>Attendance</b>	<b>Class Test</b>	<b>Assignment/ Project/Seminar/Quiz</b>	
<b>Weightage (%)</b>	10	20	10	60

## **SEMESTER III**

### **Human Values and Moral Ethics III**

**Course Code: GP-301b**

**Credit Units: 02**

#### **Course Outcome:**

- Understanding life's purpose: Students become aware of their life's mission, vision, and goals.
- Developing virtues: Students learn to cultivate virtues and avoid vices.
- Understanding ethical personalities: Students learn to understand the metaphors of ethical personalities from various domains.
- Developing a positive outlook: Students develop a personality that allows them to view life in a positive way.
- Building strong relationships:

#### **Unit I : Morals, values, and ethics:**

This unit may cover topics such as integrity, work ethic, service learning, civic virtue, respect for others, living peacefully, caring, sharing, honesty, courage, valuing time, cooperation, commitment, empathy, self-confidence, character, and spirituality

#### **Unit II : Engineering ethics:**

This unit may cover topics such as the senses of engineering ethics, moral issues, types of inquiry, moral dilemmas, moral autonomy, models of professional roles, engineering as experimentation, research ethics, codes of ethics, industrial standards, and a balanced outlook on law

#### **Unit III : Engineering ethics:**

This unit may cover topics such as the senses of engineering ethics, moral issues, types of inquiry, moral dilemmas, moral autonomy, models of professional roles, engineering as experimentation, research ethics, codes of ethics, industrial standards, and a balanced outlook on law

#### **Unit IV :Peer pressure, alcoholism, and drug abuse:**

This unit may cover topics such as ethical values, causes, impact, laws, prevention, and the ill effects of smoking

#### **Unit V : Global issues:**

This unit may cover global issues  
Indian and global case studies: This unit may cover Indian and global case studies

## **SEMESTER III**

### **Life Management III**

**Course Code: GP-301c**

**Credit Units: 02**

- Goal setting: How to set SMART goals that are specific, measurable, achievable, realistic, and have a time frame.
  - Prioritization: How to prioritize tasks and effectively manage time.
  - Stress management: How to manage stress and improve work-life balance.
  - Organization: How to organize work and use organization tools.
- Delegation: How to delegate tasks and as

### SEMESTER III

### Microbial Genetics Lab

**Course Code: MMB-351**

**Credit Units: 02**

**Pre-requisite:** Basic information of Microbial Genetics.

**Course Outcome:**

After completion of the course the students will be able to

- Learn about principle and working of laboratory instruments.
- Acquire a comprehensive knowledge on techniques followed in study of genetic mutation.
- Become familiar with technical requirements, concepts and general procedures in molecular biology and implement the knowledge in research work.
- Learn and implement different strategies to isolate genomic and plasmid DNA from cells.
- Learn the methods of DNA transformation, transduction and conjugation for future recombinant techniques.

**Details of the Course:-**

Note: A college must offer 70% of the below listed experiments. The remaining 30% experiments may be modified by college according to facilities available.

S. NO.	CONTENTS	CONTACT HOURS
1	Inactivation of microorganisms by different mutagens.	3
2	Production, isolation and characterization of mutants.	3
3	Determination of mutation rate.	3
4	Isolation, characterization and curing of plasmids.	3
5	Preparation of competent cells.	3
6	Transformation of <i>E.coli</i> using plasmid DNA.	3
7	Demonstration of genetic recombination in bacteria by conjugation.	3
8	To isolate total RNA and mRNA from bacteria.	3
9	To isolate and produce UV induced auxotrophic mutants by replica plating method.	3

**Suggested Books:**

## SEMESTER III

### Medical Microbiology Lab

**Course Code: MMB-352**

**Credit Units: 02**

**Pre-requisite:** Basic information of Medical Microbiology.

#### **Course Outcome:**

Upon successful completion of this course the student will be able to:

- This course provides learning opportunities in the basic principles of medical microbiology and infectious disease.
- The course provides the conceptual basis for understanding pathogenic microorganisms and the mechanisms by which they cause disease in the human body.
- It also provides opportunities to develop informatics and diagnostic skills, including the use and interpretation of laboratory tests in the diagnosis of infectious diseases.
- To understand the importance of pathogenic bacteria in human disease with respect to infections of the respiratory tract, gastrointestinal tract, urinary tract, skin and soft tissue.

#### **Details of the Course:-**

S. No.	Contents	Contact Hours
1	Preparation and sterilization of different culture media (e.g. Blood agar, chocolate agar, nutrient agar, nutrient broth, McConkey agar).	3
2	To obtain pure cultures from the given microbial culture by streak plating and spread' plating techniques.	3
3	To carry out different Gram staining of the given bacterial culture.	3
4	To demonstrate motility in the given bacterial culture using the Hanging Drop method.	6
5	To carry out Zeihl-Nelson staining to detect acid fast bacteria in the given sputum sample.	3
6	To determine the antibiotic sensitivity profile of the given microbial culture using Kirby-Bauer method.	6
7	To carry out the following biochemical tests: Catalase test, Urease test, Indole test, Methyl red test, Voges-Prauskauer test, Citrate test, Lysine iron agar, Triple sugar iron, Sugar fermentation tests (glucose, maltose, sucrose).	6
8	To prepare temporary mounts from cultures/clinical specimens and observe permanent slides of the following: <i>Rhizopus, Mucor, Aspergillus fumigates, Aspergillus flavus, Candida albicans, Blastomyces dermatidis, Penicillium marneffeii, Nocardia, Histoplasma capsulatum</i>	3

## SEMESTER III

### Bioinformatics Lab

**Course Code: MMB-353**

**Credit Units: 02**

**Pre-requisite:** Basic Knowledge of computer application.

**Course Outcome:**

- Students will be able to understand basics of internet and computers along with information on various databases.
- Students will be able to understand application of bioinformatics in biotechnology.
- Students will be able to understand sequence alignment and various algorithms for it.
- Students will be able to understand and interpret sequence annotation and its retrieval.
- The information about various biologically important databases will be made available to students.

**Details of the Course:-**

**Note:** A college must offer 70% of the below listed experiments. The remaining 30% experiments may be modified by college according to facilities available.

S. NO.	CONTENTS	CONTACT HOURS
1	Introduction to various databases of proteins, nucleic acids. Primary, secondary and composite databases.	3
2	BLAST, FASTA, DOT PLOT.	3
3	MSA using various free tools.	3
4	Phylogenetic predictions.	3
5	Prediction of structure of proteins and nucleic acids.	3
6	ORF prediction and its validation.	3
7	Primer designing.	3
8	Restriction mapping.	3
9	Epitope prediction using various online tools.	3
10	Data mining tool and its practical applications in a case study.	3

<b>Weightage (%)</b>	10	20	10	60

## **SEMESTER IV**

### **Project/Dissertation**

**Course Code: MMB-401**

**Credit Units: 16**

#### **Course Contents:**

- Six Months of Fourth Semester of the M.Sc. Curriculum is devoted to project/dissertation.
- Students, with the help of their mentor and faculty colleagues will identify a lab in India & abroad for the research work.
- The student should stay for a minimum prescribed Semester period at the place of work.
- Students not staying for the prescribed period will be marked absent as per the University Rules.
- At the end of their project the students shall submit the dissertation as per the Guidelines prescribed below.

#### **The Aims of the Project**

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity, having an educational value at a level commensurate with the award a M.Sc. Degree.

#### **Objectives**

- To provide the students an opportunity to demonstrate the ability to devise, select and use a range of methodologies appropriate to the chosen topic of research.
- To allow students to show the application of skills of data collection, critical analysis and concept synthesis necessary for formation of defensible conclusions and/or recommendations.
- To allow students the opportunity to demonstrate ability to draw appropriate conclusions argued from the evidence presented. [Should the research produce negative or inconclusive results, the conclusions should be critically examined to ascertain the reasons].
- To provide a forum to demonstrate the skills of structuring and present a balanced informed, complete, clear and concise written argument.

#### **Dissertation Guidelines**

##### **The Dissertation Topic**

It is important to distinguish here between „dissertation topic“ and „dissertation title“. The topic is the specific area that you wish to investigate. The title may not be decided until the dissertation has been written so as to reflect its content properly.

Few restrictions are placed on the choice of the topic. Normally the topic is expected to be:

- Relevant to Microbiology;
- related to one or more of the subjects or areas of study within the core program and specialisation stream;
- clearly focused so as to facilitate an in-depth approach, subject to the availability of adequate sources of information and to the knowledge of students;
- Value and interest to the students and their personal and professional development.

### **Dissertation format**

All students must follow the following rules in submitting their dissertation.

- Front page should provide title, name of the student, name of degree and the date of submission.
- Second page should contain the certificate received from the organization/University from where the student has completed his/her project work.
- The next page should be the table of contents giving page references for each chapter and section.
- The next page should be the table of graphs, figures and tables giving legends and page numbers.
- Next to follow should be following in the sequence given below:
  - Abbreviations used (if any)
  - Introduction
  - State-of-Art
  - Material & Methods
  - Results
  - Discussion
  - Summary (approximately 500 words)
  - Conclusion
  - Future Prospects
- References: After this concluding chapter, students should give a list of all the references they have used. These should be cross - references with the text. For articles from journals, the following details are required e.g.

Schlöter M, Assmus B and Hartmann A (1995) the use of immunological methods to detect and identify bacteria in the environment. *Biotech Adv* 13: 75-90

For books, the following details are required

Bahera BK and Varma A (2003) Green Energy from Waste Biomass, Capital Book Company, New Delhi, India

For book chapter

Mukherji KG, Mandeep and Varma A (1998) Mycorrhizosphere microorganisms: screening and evaluation. (Ed) Varma A. In: Mycorrhiza Manual. Springer-Verlag, Germany, pp 85-97

- Finally, you should give any appendices. These should only include relevant statistical data or material that cannot be fitted into the above categories.
- List of Publications (if any) by the students should be attached in the end.

### **Guidelines for the assessment of the dissertation**

While evaluating the dissertation, faculty guide will consider the following aspects:

1. Has the student made a clear statement of the objective or objective(s).
2. If there is more than one objective, do these constitute parts of a whole?
3. Has the student developed an appropriate analytical framework for addressing the problem at hand.
4. Is this based on up-to-date developments in the topic area?
5. Has the student collected information / data suitable to the frameworks?
6. Are the materials & methods employed by the student to analyse the data / information appropriate and relevant?
7. Has the student succeeded in drawing conclusion form the analysis?
8. Do the conclusions relate well to the objectives of the project?

### **Examination Scheme:**

<b>Components</b>	<b>Theme of Project</b>	<b>Quality of Project</b>
<b>Weightage (%)</b>	<b>30</b>	<b>70</b>

## **PEOs: Program Educational Objectives POs: Program Outcomes PSOs: Program Specific Outcomes**

**Name of the Department:** Department of Microbiology

**Name of the Program:** B.Sc. Microbiology

**Duration of the degree:** 3 Years

Microbiology programme endeavors to instill in students the skills to identify individual microbial species, use aseptic techniques to grow them in pure culture, safely handle and examine them by microbiological methods. The knowledge of microbiology will enable the students to improve the quality of human lives in relation to environment, fighting disease and to exploit microbes in the production of food. Microbiology plays a key role in genetic engineering and other modern biotechnologies such as antibiotic production and the exploitation of new sources of food and energy. The regimens for this program are specifically designed to allow students to fulfill below program educational objectives:

### **Program Educational Objectives (PEOs)**

**PEO 1:** The graduates will learn the importance of microorganisms in environment, brewing, food processing and preservation, pharmaceuticals and biotechnology industries.

**PEO 2:** The graduates will be provided with understanding of healthcare systems especially in pathological, immunological and environmental monitoring laboratories.

**PEO 3:** The graduates will demonstrate the skills necessary to understand and apply scientific concepts and reasoning, including the analysis and interpretation of various types of data.

### **Program Specific Outcomes (PSOs)**

#### **Students who graduate with a Bachelor of Science in Microbiology will**

**PSO 1:** Acquire knowledge on fundamentals of Microbiology.

**PSO 2:** Understand details of bacterial, fungal, algal and viral morphology and physiology.

**PSO 3:** Competently be able to cultivate and characterize bacterial and fungal forms.

**PSO 4:** Grasp the fundamental concepts of immunity and the contribution of organs and cells in the development of immune response.

**PSO 5:** Gain insight into the various aspects of microbial genetics.

**PSO 6:** Be proficient on cloning vectors and rDNA technology.

**PSO 7:** Assimilate technical skills on microbial genetics and molecular biology.

**PSO 8:** Realize the application oriented aspects of Microbiology.

**PSO 9:** Understand the concepts and development of microbial diseases in animals & plants.

**PSO 10:** Realize the principles of prevention and treatment of microbial diseases.

## **Program Outcomes Objectives (POOs)**

**Upon completion of B.Sc. Microbiology programme, the students will be able to:**

**POO 1:** demonstrate advanced knowledge and understand the central facts and concepts of microbiology.

**POO 2:** acquire knowledge and understanding of organism biology and genetics, evolution, molecular biology and basic biological chemistry.

**POO 3:** instill the intellectual skills to analyze and solve biology-related problem, formulate and test hypothesis using experimental design.

**POO 4:** demonstrate an understanding of professional ethics in science and of the principles that can guide ethical decision-making in biological controversies.

**POO 5:** explore the scientific literature effectively and use computational tools.

**POO 6:** communicate ideas and principles effectively through oral presentations, computer based tools and written reports.

**POO 7:** manage resources, time and work independently as well as in multi-disciplinary team towards a common goal/outcome.

GP-601	General Proficiency-VI	GP	0	0	1	1
	<b>TOTAL</b>					<b>25</b>

#### **Project/Dissertation**

**Note:** Students must submit their project report in June /July and the same would be evaluated for 6 credit units, which would be included in the Sixth Semester marks.

#### **Examination Scheme:**

<b>Components</b>	<b>Attendance</b>	<b>Class Test</b>	<b>Assignment/ Project/Seminar/Quiz</b>	<b>EE</b>
<b>Weightage (%)</b>	10	20	10	60

## **SEMESTER I**

### **Cell Biology**

**Course Code: BMB-101**

**Credit Units: 04**

**Pre-requisite:** Basic information of Cell Biology

**Course Outcome:**

- Basic chemical composition of living matter.
- Structural characteristics of prokaryotic and eukaryotic cells.
- Taxonomy and characteristics of the major kingdoms.
- Mechanics of membrane transport.
- Basic concepts of bioenergetics, photosynthesis, and cellular respiration.
- Mechanics of cellular reproduction.
- Mendelian genetics and genetic change.
- Nucleic acids and basic concepts of protein synthesis and gene regulation.

**Details of the Course:-**

**UNIT I: Cell:**

Introduction and classification of organisms by cell structure, cytosol, Compartmentalization of eukaryotic cells, cell fractionation Cell Membrane and Permeability: Chemical components of biological membranes, organization and Fluid Mosaic Model

**UNIT II: Cell Membrane and Permeability:**

Chemical components of biological membranes, organization and Fluid Mosaic Model, membrane as a dynamic entity, cell recognition and membrane transport. Sex-limited and sex-influenced inheritance, Transposons. Membrane Vacuolar system, cytoskeleton and cell motility: Structure and function of microtubules, Microfilaments, Intermediate filaments

**UNIT III: Endoplasmic reticulum:**

Endoplasmic reticulum: Structure, function including role in protein segregation.  
Golgi complex: Structure, biogenesis and functions including role in protein secretion.  
Lysosomes: Vacuoles and micro bodies: Structure and functions Ribosomes: Structures and function including role in protein synthesis.

**UNIT IV: Mitochondria:**

Structure and function, Genomes, biogenesis. Chloroplasts: Structure and function, genomes, biogenesis. Nucleus: Structure and function, chromosomes and their structure. Extracellular Matrix: Composition, molecules that mediate cell adhesion

**UNIT V: Membrane receptors:**

For extra cellular matrix, macromolecules, regulation of receptor expression and function. Signal transduction. Cancer: Carcinogenesis, agents promoting carcinogenesis, characteristics and molecular basis of cancer.

**Suggested Books:**

S. No.	Name of Authors/Books/Publishers	Year of Publication/Reprint
<b>Reference Books</b>		
1.	Molecular Biology of cell, 4 <sup>th</sup> ed. Alberts, Bruce ( <i>et.al</i> ) (2002) Garland Science Publishing, New York.	2002
2.	Cell Biology- Smith and Wood by Chapman and Hall. Cell Biology: Organelle structure and function, Sadava, D E. (2004) Panima pub., New Delhi. Cell and Molecular Biology, 8 <sup>th</sup> ed. Robertis, Edp De and Robertis Emf De (2002) Lippincott Williams and Wilkins Pvt. Ltd., (International Student Edition) Philadelphia.	2004, 2002

**Examination Scheme:**

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

## **SEMESTER I**

### **Introductory Biology**

**Course Code: BMB-101a**

**Credit Units: 04**

#### **Course Objectives:**

- To introduce students to the fundamental concepts of biology.
- To provide an understanding of the structure and function of cells and organisms.
- To explore the principles of genetics, evolution, ecology, and diversity of life.
- To develop an appreciation for the role of biology in everyday life and its applications in health, medicine, and environmental science.

#### **Unit 1: Introduction to Biology and the Scientific Method**

- Definition and scope of Biology
- Branches of Biology: Molecular Biology, Genetics, Ecology, Evolution, and Physiology
- The scientific method: Observations, Hypothesis, Experimentation, Data analysis, and Conclusion
- Basic laboratory techniques and safety measures

#### **Unit 2: Cell Biology**

- Structure of cells: Prokaryotic vs. Eukaryotic
- Functions of cellular components (e.g., nucleus, mitochondria, ribosomes, endoplasmic reticulum, Golgi apparatus)
- The Plasma Membrane: Structure and function
- Cellular processes: Diffusion, osmosis, active transport
- Cell division: Mitosis and Meiosis

#### **Unit 3: Biochemistry and Biomolecules**

- Atoms and molecules: Elements, compounds, and chemical bonds
- Water and its properties
- Major biological molecules: Carbohydrates, proteins, lipids, nucleic acids
- Enzyme structure and function
- Metabolism: Cellular respiration and photosynthesis

#### **Unit 4: Genetics**

- Mendelian genetics: Laws of inheritance, dominant and recessive traits
- DNA structure and function
- Gene expression: Transcription and translation
- Genetic variation: Mutations and genetic recombination
- Principles of heredity and modern genetics

## Unit 5: Evolution and Natural Selection

- The theory of evolution: Charles Darwin's contribution
- Mechanisms of evolution: Natural selection, genetic drift, gene flow, mutation
- Evidence for evolution: Fossils, comparative anatomy, molecular biology
- Speciation and adaptation

### Suggested Books:

S. No.	Name of Authors/Books/Publishers	Year of Publication/Reprint
<b>Reference Books</b>		
1.	Molecular Biology of cell, 4 <sup>th</sup> ed. Alberts, Bruce (et.al) (2002) Garland Science Publishing, New York.	2002
2.	Cell Biology- Smith and Wood by Chapman and Hall. Cell Biology: Organelle structure and function, Sadava, D E. (2004) Panima pub., New Delhi. Cell and Molecular Biology, 8 <sup>th</sup> ed. Robertis, Edp De and Robertis Emf De (2002) Lippincott Williams and Wilkins Pvt. Ltd., (International Student Edition) Philadelphia.	2004, 2002

### Examination Scheme:

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

# Fundamentals of Biology

Course Code: BMB-101b

Credit Units: 04

## Course Objectives:

- To provide students with a basic understanding of biological principles.
- To explore the structure and function of living organisms at the molecular, cellular, and systemic levels.
- To introduce fundamental concepts in genetics, evolution, ecology, and human biology.
- To foster scientific inquiry and an appreciation for the relevance of biology in daily life, health, and the environment.

## Unit 1: Introduction to Biology and the Scientific Method

- Overview of biology and its branches (molecular biology, genetics, ecology, physiology, etc.)
- The role of biology in understanding life and solving global challenges.
- The scientific method: Observation, hypothesis formation, experimentation, and data analysis.
- Laboratory safety and basic laboratory techniques.

## Unit 2: Basic Biochemistry

- Elements of life: Atoms, molecules, and chemical bonds.
- Water properties and importance in biological systems.
- Macromolecules: Carbohydrates, proteins, lipids, and nucleic acids.
- Enzymes: Structure, function, and their role in metabolism.

## Unit 3: Cell Structure and Function

- The cell theory: All living organisms are made up of cells.
- Prokaryotic vs. Eukaryotic cells.
- Organelles and their functions: Nucleus, mitochondria, ribosomes, endoplasmic reticulum, Golgi apparatus.
- The plasma membrane: Structure and function.
- Cellular transport: Diffusion, osmosis, active transport.

## Unit 4: Cell Division and Genetics

- Mitosis: Stages of cell division, significance, and regulation.
- Meiosis: Differences between meiosis and mitosis, genetic diversity.
- Basics of inheritance: Mendel's Laws, dominant and recessive traits.
- DNA structure and function: The double helix, replication, and transcription.
- Gene expression: Transcription and translation processes.

## Unit 5: Evolutionary Biology

- The theory of evolution by natural selection (Charles Darwin).
- Evidence supporting evolution: Fossil records, comparative anatomy, molecular biology.
- Adaptation and survival in changing environments.
- The concept of speciation and evolutionary processes.

### Examination Scheme:

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

## SEMESTER I

### Inorganic & Physical Chemistry

**Course Code: BMB-102**

**Credit Units: 04**

**Pre-requisite:** Basic information of Chemistry

#### **Course Outcome:**

- Understand periodic properties and its application in the characterization of chemical compounds
- Understand the various properties of materials depending upon bond formation.
- Utilize the concept of hardness in the purification of water for industrial and domestic purpose
- Distinguish the rate laws and application to different chemical reaction mechanism
- Learn and apply the concepts of analytical chemistry for sample analysis by chemical methods
- Learn the basic concepts of Chemistry and its application in different fields

#### **Details of the Course:-**

##### **UNIT I: Periodic Properties:**

Position of elements in the periodic table, effective nuclear charge, atomic and ionic radii, ionization energy, electron affinity and electronegativity definition, methods of determination, trends in periodic table and applications in predicting and explaining the chemical behavior.

##### **UNIT II: Atomic and Molecular Structure:**

VSPER theory and its application for structure of  $\text{NH}_3$ ,  $\text{NH}_4^+$ ,  $\text{H}_2\text{O}$ ,  $\text{H}_3\text{O}^+$ ,  $\text{SO}_2$  and  $\text{XeF}_4$   
Molecular Orbital Theory, Formation of homo and heteronuclear diatomic molecules  
Hydrogen Bonding and its application  
Metallic Bonding (Band theory); role of doping  
Coordination compounds: Introduction, Werner's coordination theory, naming of compounds.

##### **UNIT III: Water Chemistry:**

Hardness of water and its measurement, Softening of water by L-S process, Zeolite process and Reverse osmosis process, Ion Exchange process, Calgon Process, Numerical problems based on L-S Process, Zeolite Process and hardness of water.

**UNIT IV: Chemical Kinetics:**

Ionic reactions and molecular reactions, Molecularity and Order of reactions, Integrated equations of 1st, 2nd and zero order reactions, Activation Energy and Activated complexes, numerical problems based upon them.

**UNIT V: Analytical Chemistry:**

Qualitative and Quantitative Chemistry, Volumetric and Gravimetric Analysis; Principles of Volumetric Analysis; Concept of pH, buffer, Henderson equation, Concept of strength and concentration of solution; Normality, Molarity, Molality and interconversion of strength Titration-Principles and Classification: Redox, Acid-Base, Complexometric, Redox and Precipitation, Oxidation Number and calculation of oxidation number in compounds.

**Suggested Books:**

S. No.	Name of Authors/Books/Publishers	Year of Publication/Reprint
	<b>Text Books</b>	
1.	University Chemistry, B.H.Mahan	1987
2.	Chemistry, Principles and Application, M.J. Sienko and R.A. Plane	1980
	<b>Reference Books</b>	
1.	Inorganic Chemistry, J.D.Lee	2008
2.	Fundamentals of Analytical Chemistry, Skoog and West	2013
3.	Physical Chemistry, Atkins	2009

**Examination Scheme:**

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

## **SEMESTER I**

### **Computer Fundamentals**

**Course Code: BMB-103**

**Credit Units: 02**

**Pre-requisite:** Basic knowledge of Computer application

#### **Course Outcome:**

A student who successfully fulfills the course requirements will be able to

- be able to define and appropriately use information technology terms;
- be able to identify computer hardware components and describe their function;
- be able to describe the essential elements of the computer's architecture and discuss how this architecture functions;
- be able to describe the characteristics and representations of data, and interpret and compare data in different representations;
- be able to identify and describe telecommunication components;
- be able to describe the characteristics of operating systems and compare different operating systems;
- be able to use a hypertext markup language to produce basic Web documents;
- be able to discuss the general trends in technologies including examples of leading edge developments;
- be able to compare the roles of different sectors of the information technology.

#### **Details of the course: -**

##### **Unit I: Computer Basics:**

Introduction, Characteristics of a Computer, Criteria for Using Computers, History of Computers, Generations of Computer, Classification of Computers, Applications of Computer, Basic Components of PC, Computer Architecture.

##### **Unit II: Number Systems:**

Introduction, Classification of Number System, Types of Number System, Conversions from One Base to Another, Conversion using Shortcut Method.

### Unit III: Hardware and Software:

Introduction, Computer Memory, Secondary Memory, Computer Peripherals, Output Devices, Software requirements.

Windows XP: Introduction, Features, Comparison between Professional and Home edition, Windows XP installation, Activating Windows XP, Security features of Windows XP, Accessing User Accounts, and Getting Help.

### Unit IV: MS Word:

Introduction, Windows 2007 Interface, Customizing the Word Application, Document Views, Basic Formatting in MS Word 2007, Advanced Formatting, Navigating through a Word Document, Performing a Mail Merge, A Quick Look at Macros, Printing Documents, Print Preview.

Excel 2007: Introduction, Workbook, Worksheet, Formatting in excel, Advanced formatting in Excel, Working with formulas, Printing worksheets.

MS PowerPoint: Introduction, Creating a Presentation, Basic Formatting in PowerPoint, Advanced Formatting, Using Templates, Inserting charts, Inserting tables, Printing presentations.

### Unit V: Security and Networking:

Introduction, Simple File Sharing, Internet Information Services, Peer to Peer Networking

### Suggested Books:

S. No.	Name of Authors/Books/Publishers	Year of Publication/Reprint
<b>Text Books</b>		
1	Norton, Peter, "Introduction to Computers", McGraw-Hill.	2005
2	Rajaraman, V., "Fundamentals of Computers", PHI.	2005
3	PK SINHA "Computer Fundamentals", BPB	Fourth edition
4	Yashwant Kanetker, "Let us C",BPB.	2005

### Examination Scheme:

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

## **SEMESTER I**

### **Ecology and Environment Management**

**Course Code: BMB-104**

**Credit Units: 04**

**Pre-requisite:** Basic knowledge of Environmental science

#### **Course Outcome:**

- Students will be able to understand the importance of environment.
- Be able to explain the development of ecosystem, concept of biodiversity and energy and nutrient pathway.
- Students will be able to understand ecological sustainability, ecological efficiencies, homeostasis and limiting factors.
- Students will gain new insights about different remediation procedures.
- Students will be able to use critical thinking skills related to hazardous wastes, pesticides, metals, radiations etc. and its impact on health.
- Students will be able to apply the knowledge of scientific methods to solve environmental problems.

#### **Details of the course:**

##### **UNIT-I:**

Our Environment: Geological consideration of Atmosphere, Hydrosphere, Lithosphere. Basic concepts of Ecology: Development of Ecosystem, major divisions of ecology, Auto ecology of species, population structure and dynamics.

##### **UNIT II:**

Structure and function of ecosystem. Strata of an ecosystem. Energy transfer in an Ecosystem. Food chain, food web, Energy budget, Production & decomposition in a system. Ecological efficiencies.

##### **UNIT III:**

Trophic structure & ecological pyramids, Bio-geochemical cycles (N, C, and P cycles). Cybernetics & Homeostasis, Environmental monitoring and impact assessment.

##### **UNIT-IV:**

Radiation and chemical toxicology: Radiation ecology, chemical toxicants, ecotoxicology. Detection of Environmental pollutant. Indicators & detection systems.

## UNIT-V:

Environmental biotechnologies, Biotechnologies in protection and preservation of environment- case studies. Bioremediation, Waste disposal.

### Suggested Books:

1. P.D. Sharma. (2011). Ecology and Environment. 11th edition.
2. Rastogi Publication. Chapman, J.L., Reiss, M.J. 1999. Ecology: Principles and applications (2<sup>nd</sup> edition) Cambridge, University Press.
3. Divan Rosencraz, Environmental laws and policies in India, Oxford Publication.
4. Ghosh, S.K., Singh, R. 2003. Social forestry and forest management. Global Vision Publishing House.
5. Joseph, B., Environmental studies, Tata Mc Graw Hill.

### Examination Scheme:

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

## **SEMESTER I**

### **Professional Communication**

**Course Code: PC-101**

**Credit Units: 02**

**Pre-requisite:** Basic information of English Language & Communication

#### **Course Outcome:**

- Sharpen grammatical skills of the students, to facilitate easy choice of available options.
- Construct the vocabulary of the students to assist them acquire plethora of knowledge of foreign as well as indigenous languages.
- Demonstrating advanced relationship building skills through written communication.
- Exhibit competent writing that is reasonably proficient in correct grammar and sentence structure skills.
- Develop an understanding of effective nonverbal expressions, etiquette and interpersonal skills to instill confidence in students.
- Improve awareness regarding the factors at play when communicating with audience of diverse backgrounds in the global business environment.

#### **Details of the Course:-**

##### **Unit I: Functional Grammar:**

Parts of speech, Tenses, Voice.

##### **Unit II: Basic Vocabulary Building:**

List of commonly used conversational words. Indianism: Exposure to common words in Indian English and with natives of English. Pronunciation of some common words.

##### **Unit-III: Written communication:**

Application and Business letter, Memorandum & Report.

##### **Unit-IV: Analytical Skills:**

Para jumbles, Analogy

## Unit V: Basic Presentation Skills

Role plays based on body language, Role plays based on dining, telephone and social etiquette.

### Suggested Books:

S.No.	Name of Authors/Books/Publishers	Year of Publication/Reprint
	<b>Text Books/ Reference Books</b>	
1.	Michael Swan” Practice English Usage”, Oxford University press 3rd Edition	2006

Weightage (%)	10	20	10	60

## **SEMESTER I**

### **Personality Development**

**Course Code: PC-101a**

**Credit Units: 02**

#### **Course Objectives:-**

The **Course Objectives** for a **Personality Development program** are designed to focus on the specific skills and attributes that students will develop throughout the course. These objectives guide students toward becoming well-rounded individuals, enhancing their personal, professional, and social capabilities. Below are key course objectives for a Personality Development program:

#### **Unit 1: Introduction to Personality Development**

- **Definition of Personality**
  - Nature vs. Nurture in Personality Development
  - Key factors influencing personality: Genetics, Environment, Experience
- **Importance of Personality in Life**
  - How personality affects personal and professional life
  - Building self-confidence and self-esteem
  - Role of first impressions

#### **Unit 2: Self-Awareness and Self-Improvement**

- **Understanding Self-Awareness**
  - Self-assessment tools (e.g., SWOT Analysis)
  - Identifying strengths and weaknesses
- **Personal Reflection**
  - Journaling exercises for introspection
  - Identifying personal values and goals
- **Setting Personal Development Goals**
  - SMART Goals (Specific, Measurable, Achievable, Relevant, Time-bound)
  - Action plan and progress tracking

#### **Unit 3: Communication Skills**

- **Verbal Communication**
  - Art of speaking clearly and effectively
  - Expanding vocabulary and improving pronunciation
  - Public speaking and addressing an audience
  - Developing persuasive communication skills
- **Non-Verbal Communication**
  - Importance of body language, posture, gestures, and facial expressions
  - Eye contact and its significance

- Developing emotional intelligence through non-verbal cues
- **Active Listening**
  - Techniques for effective listening
  - Overcoming barriers to listening
  - Empathy in communication

#### **Unit 4: Building Self-Confidence and Self-Esteem**

- **Confidence vs. Arrogance**
  - Understanding the difference
  - Exercises to boost self-confidence (positive affirmations, body language)
- **Handling Criticism and Rejection**
  - Developing resilience and emotional strength
  - Managing failure and learning from mistakes
- **Public Speaking and Presentation Skills**
  - Overcoming the fear of public speaking
  - Structuring effective presentations
  - Engaging the audience through storytelling

#### **Unit 5: Emotional Intelligence**

- **Understanding Emotional Intelligence (EQ)**
  - The five components of EQ: Self-awareness, Self-regulation, Motivation, Empathy, Social skills
- **Managing Emotions**
  - Techniques for emotional regulation (e.g., mindfulness, stress management)
  - Overcoming negative emotions (anger, anxiety, frustration)
- **Empathy and Social Skills**
  - Building empathy for better relationships
  - Understanding and responding to the emotions of others

#### **Unit 6: Interpersonal Skills and Relationships**

- **Building Positive Relationships**
  - The importance of trust and respect in relationships
  - Effective conflict resolution techniques
  - The art of networking and making connections
- **Teamwork and Collaboration**
  - Working effectively in teams
  - Understanding different personalities and adapting
  - Leadership vs. followership
- **Etiquette and Manners**
  - Basic manners and social etiquette
  - Professional etiquette for workplace and business settings
  - Dining etiquette and cultural sensitivity

**Examination Scheme:**

Components	Internal Assessment			External Evaluation
	Attendance	Viva-Voce	Practical Record	
Weightage (%)	10	20	10	60

## SEMESTER I

### Personal Grooming

Course Code: PC-101b

Credit Units: 02

- **Objective:** Students will develop the necessary soft skills for career success, including networking, personal branding, interview techniques, and the ability to handle workplace challenges. They will also learn how to balance professional ambitions with personal fulfillment.
- **Outcome:** Graduates will be **career-ready**, equipped with the skills and confidence needed to succeed in their chosen professions, achieve career advancement, and maintain a fulfilling life balance.

#### Unit 1: Introduction to Personal Grooming

- Definition of Personal Grooming and its Importance
- Self-Image and Confidence
- Building a Grooming Mindset: How Grooming Affects Perception
- Psychological Aspects of Grooming: How Grooming Impacts Social and Professional Interactions
- The Role of Personal Grooming in Career Success

#### Practical Activities:

- Self-assessment exercises: Evaluate current grooming habits.
- Reflection: How grooming influences personal and professional life.

#### Unit 2: Personal Hygiene and Self-Care

- Basic Hygiene: Skincare, Haircare, Nailcare

- Oral Hygiene and Breath Care
- The Importance of Regular Baths and Clean Clothing
- Choosing the Right Skincare Products for Different Skin Types
- The Role of Sleep, Exercise, and Nutrition in Grooming

**Practical Activities:**

- Personal hygiene routine practice
- Demonstration of proper skincare, hair care, and nail care routines
- Discussing and practicing good sleep habits and nutrition for skin health

**Unit 3: Dress Code and Personal Styling**

- Dress Code: Understanding Different Occasions (Casual, Business Casual, Formal)
- Dressing for Your Body Type: Clothing Styles that Suit Different Figures
- Color Theory: Understanding the Right Colors for You
- Choosing the Right Fabrics and Accessories
- The Importance of Fit: Tailoring and Alterations
- Professional Dressing: How to Dress for Interviews, Office, and Business Meetings
- Casual Grooming: Dressing for Social and Informal Events

**Practical Activities:**

- Wardrobe assessment and organizing clothing
- Creating and evaluating outfits for different occasions
- Personal styling sessions: Understanding how to mix and match
- Makeup and grooming for different occasions

**Unit 4: Haircare and Hairstyles**

- Haircare Basics: Types of Hair and the Right Products
- Understanding Haircuts and Hairstyles for Different Face Shapes
- Hair Coloring, Conditioning, and Styling Techniques
- The Role of Hair in Personal Grooming: Professional vs Casual Styles
- Daily Hair Care Routine: How to Maintain Healthy Hair

**Practical Activities:**

- Hair consultation and analysis (types of hair, suitable hairstyles)
- Demonstration of quick, easy, and professional hairstyles
- Self-care tips for healthy hair

**Unit 5: Grooming for Men and Women**

- Gender-Specific Grooming: Grooming Essentials for Men vs. Women
- Men’s Grooming: Skincare, Haircare, and Facial Hair Grooming
- Women’s Grooming: Skincare, Makeup, and Haircare
- Nail Care: Manicure and Pedicure Basics
- Choosing Perfumes and Fragrances

### **Practical Activities:**

- Hands-on workshops: Manicure, pedicure, and facial grooming for both men and women
- Grooming demonstrations for different gender-specific needs
- Makeup basics for women: Everyday look vs. Professional look

## **Unit 6: Body Language, Posture, and Communication**

- The Role of Body Language in Grooming
- Posture: How to Stand, Walk, and Sit with Confidence
- Gestures, Eye Contact, and Facial Expressions
- Verbal and Non-Verbal Communication: Voice Modulation and Listening Skills
  - How to Improve First Impressions through Body Language and Communication

### **Practical Activities:**

- Body language exercises: Posture correction and confidence-building exercises
- Practice verbal communication and listening skills
- Role-playing: Professional and casual conversations, first impressions

## **Unit 7: Professional Etiquette and Social Manners**

- Introduction to Professional Etiquette
- Workplace Behavior: Punctuality, Respect, and Responsibility
- How to Greet People: Handshakes, Bowing, and Other Gestures
- Dining Etiquette: Business Lunches and Formal Events
- Meeting Etiquette: Greetings, Small Talk, and Networking
- Etiquette for Digital Communication (Emails, Video Calls, Social Media)
- Handling Criticism and Compliments Gracefully

## **Recommended Textbooks and Reading Material**

1. **“Research Ethics: A Philosophical Guide to the Responsible Conduct of Research”** by Gary Comstock
  - A comprehensive introduction to the ethical principles and practices in research.
2. **“The Ethics of Research with Human Subjects”** by Thomas A. Schwandt
  - Focuses on the ethical issues in human research, with practical examples.
3. **“Ethical Issues in Research”** by William P. L. M. Ritchie
  - Covers a wide range of ethical dilemmas across different research domains.
4. **The Belmont Report: Ethical Principles and Guidelines for the Protection of Human Subjects of**

**Research (1979)**

- A foundational document outlining ethical guidelines for human subject research.

5. **“Scientific Integrity”** by Frances M. H. Wang

- A guide to understanding research integrity, misconduct, and ethical decision-making.

6. **Examination Scheme:**

7.

Components	Internal Assessment			External Evaluation
	Attendance	Viva-Voce	Practical Record	
Weightage (%)	10	20	10	60

**SEMESTER I**

**Cell Biology Lab**

**Course Code: BMB-151**

**Credit Units: 02**

**Pre-requisite:** Basic information of Cell Biology

**Course Outcome:**

- Students will learn about the varieties of plants and their diversity.
- Students will gain a comprehensive knowledge on categories of plants and apply the same in identification of monocots and dicots
- Students will become familiar with plant cell anatomy.
- Students will be able to learn about the functioning of plant cell and understand their importance in plant life.
- Students will be able to implement different strategies to test the present of storage food material in plant parts.
- Students will be able to understand the methods of solute and solvent uptake in plant cells and their role in life processes.
- Students will be able to analyze the mechanism of transpiration by different plants.
- Students will be able to learn the mechanism underlying seed growth and development.

**Details of the Course:-**

S. No.	Contents	Contact Hours
1	Study the effect of temperature and organic solvents on semi permeable membrane.	2
2	Demonstration of dialysis.	2
3	Study of plasmolysis and de-plasmolysis.	2
4	Cell fractionation and determination of enzyme activity in organelles using sprouted seed or any other suitable source.	2
5	Study of structure of any Prokaryotic and Eukaryotic cell Microtomy: Fixation, block making, section cutting, double staining of animal tissues like liver, oesophagus, stomach, pancreas, intestine, kidney, ovary, testes	2
6	Cell division in onion root tip/ insect gonads.	2
7	Preparation of Nuclear, Mitochondrial & cytoplasmic fractions.	2

#### Examination Scheme:

Components	Internal Assessment			External Evaluation
	Attendance	Viva-Voce	Practical Record	
Weightage (%)	10	20	10	60

## SEMESTER I

### Inorganic & Physical Chemistry Lab

**Course Code: BMB-152**

**Credit Units: 02**

**Pre-requisite:** Basic information of Chemistry

#### Course Outcome:

- Understand the volumetric analysis
- Analyze the water quality parameter.
- Determine viscosity, surface tension and their applications.
- Estimate the constituents in ores and bleaching powder sample.

#### Details of the Course:-

S. No.	Contents	Contact Hrs.
1	To determine the alkalinity of the given water sample containing carbonate ( $\text{CO}_3^{2-}$ ) ions and bicarbonate ( $\text{HCO}_3^-$ ) ions by titrating it against standard HCl solution [N/10] using phenolphthalein and methyl orange as indicators.	2
2	To determine the alkalinity of the given water sample containing carbonate ( $\text{CO}_3^{2-}$ ) ions and hydroxide ( $\text{OH}^-$ ) ions by titrating it against standard HCl solution [N/10] using phenolphthalein and methyl orange as indicators.	2
3	To determine the chloride ion ( $\text{Cl}^-$ ) content in the given water sample by Argentometric method (Mohr's method) using N/50 $\text{AgNO}_3$ as a standard solution and potassium chromate ( $\text{K}_2\text{CrO}_4$ ) as an internal indicator.	2
4	To determine the temporary and permanent hardness of given water sample by titrating it against standard solution of M/100 Ethylene Diamine Tetra acetic Acid (EDTA) using Eriochrome black-T (EBT) as an internal indicator.	2
5	To determine the coefficient of viscosity of the given sample solution by Ostwald's viscometer (Viscosity of water = 0.0101 Poise).	2
6	To determine the ferrous ion ( $\text{Fe}^{++}$ ) content in given sample solution of Mohr's salt ( $\text{FeSO}_4 \cdot (\text{NH}_4)_2\text{SO}_4 \cdot 6\text{H}_2\text{O}$ ) by titrating it against standard N/30 potassium dichromate ( $\text{K}_2\text{Cr}_2\text{O}_7$ ) solution by using potassium ferricyanide $\text{K}_3[\text{Fe}(\text{CN})_6]$ as an external indicator.	2
7	To determine the surface tension of the given sample solution by drop number method.	2

8	To determine the percentage of available chlorine in the given sample of 1 gram bleaching powder by titrating it against standard solution of N/25 sodium thiosulphate ( $\text{Na}_2\text{S}_2\text{O}_3$ ) using starch ( $\text{C}_6\text{H}_{10}\text{O}_5$ ) <sub>n</sub> as an internal indicator.	2
9	To determine the equivalent weight of iron by chemical displacement method using standard solution of N/25 sodium thiosulphate ( $\text{Na}_2\text{S}_2\text{O}_3$ ) and starch ( $\text{C}_6\text{H}_{10}\text{O}_5$ ) <sub>n</sub> as an internal indicator. (The equivalent weight of copper is 63.5).	2
10	To determine the Copper ( $\text{Cu}^{++}$ ) ion content in the given sample of copper ore (blue vitriol) by titrating it against standard N/30 sodium thiosulphate solution using KI and starch as indicator by Iodometric titration.	2

## SEMESTER I

### Computer Fundamentals Lab

Course Code: BMB-153

Credit Units: 02

**Pre-requisite:** Basic knowledge of Computer application

**Course Outcome:**

- Students will learn to execute internal and external commands.
- Students will also be able to understand basic computer applications practically.

**Details of the Course:-**

S. No.	Contents	Contact Hours
1	Execute "Internal & External Commands" in MS-DOS.	2
2	Create any 3 ".txt" files in MS-DOS and Copy the contents of two files in one single file.	2
3	Create the "directory structure" in MS-DOS.	2
4	In MS-DOS, Change the dos prompt: With your name, current date, current time, change the prompt to its original path.	2
5	Create one MS-word file having name "INTRODUCTION" and apply "center alignment", Make the heading bold, Italic and underlined and do apply font style of heading as —ALGERIAN   and size —24   by including fields like: Name, Permanent Address, Current Address, Educational Qualification, Hobbies, and Aim etc. Insert table for "educational Qualification".	2
6	Create one MS-Word File for drawing a flow chart to calculate "Simple Interest", using shapes.	2
7	Create a table in MS-Excel having name BCA having fields: S.No, Student Name, sub1_marks, sub2_marks, sub3_marks, sub4_marks. Calculate the "sum" and "percentage" of all the students. Also draw "pie chart" for showing the student percentage.	2
8	Create one MS-excel for a "Automobile Garage" by having fields like "year", "Sale", "Car Name". Draw a "column chart" for year and Sale.	2
9	Create "Attendance letter" for class MCA and send this letter at the address of all the MCA students using "Mail Merge" option.	2
10	Create a Power Point presentation with the main title "INTERNET ". Also add the following topics like: HISTORY OF THE INTERNET, INTERNET TERMS, and ADAVANTAGES OF THE INTERNET in Slides.	2

**Suggested Books:**

	<b>Attendance</b>	<b>Viva-Voce</b>	<b>Practical Record</b>	
<b>Weightage (%)</b>	10	20	10	60

## **SEMESTER I**

### **Ethics of Research**

**Course Code: SM-101a**

**Credit Units: 02**

#### **Course Outcomes (COs):**

By the end of the **Ethics of Research** course, students will be able to:

1. Understand the core ethical principles that govern research practices.
2. Identify and resolve ethical issues in research scenarios.
3. Apply ethical guidelines for informed consent and participant privacy in human research.
4. Make ethical decisions based on ethical frameworks and critical analysis.
5. Evaluate and ensure ethical treatment of animal subjects in research.
6. Recognize and prevent research misconduct, including plagiarism, falsification, and fabrication.
7. Promote ethical collaboration in international and cross-cultural research settings.
8. Conduct research with integrity and accountability, maintaining ethical standards.
9. Address emerging ethical issues in new areas of research, such as AI and genetic research.
10. Navigate ethical review processes, ensuring compliance with institutional and regulatory guidelines.

#### **Details of the course:**

##### **Unit 1: Introduction to Research Ethics**

- Definition of Research Ethics and its importance
- Key ethical principles in research: Honesty, Integrity, Transparency, and Accountability
- Historical background of research ethics (e.g., Nuremberg Code, Declaration of Helsinki, Belmont Report)
- Ethical challenges in contemporary research
- The role of ethical review boards (IRBs, Ethics Committees)
- Overview of the ethical guidelines and frameworks across disciplines

##### **Unit 2: Ethical Guidelines for Human Research**

- The concept of informed consent: purpose, process, and challenges
- Privacy, confidentiality, and data protection in human research
- Vulnerable populations in research: Children, elderly, prisoners, and those with mental disabilities
- Ethical issues in surveys, interviews, and experiments with human participants
- Risks and benefits in human research: Minimizing harm
- Ethical considerations in clinical trials and medical research

##### **Unit 3: Ethical Guidelines for Animal Research**

- Ethical considerations in animal research
- The 3Rs principle (Replacement, Reduction, Refinement) in animal research
- Animal welfare and humane treatment in experimental research

- Legal and institutional regulations regarding animal research
- Ethical alternatives to animal experimentation
- Case studies of ethical concerns in animal research

#### **Unit 4: Research Integrity and Misconduct**

- Definitions of research misconduct: Fabrication, Falsification, and Plagiarism (FFP)
- The consequences of research misconduct on society, science, and individuals
- Whistleblowing and the role of research institutions in preventing misconduct
- Procedures for investigating allegations of misconduct
- The impact of publication ethics: Peer review, authorship issues, and conflicts of interest
- Strategies for promoting research integrity and good practices in research
- Case studies of misconduct in research and lessons learned

#### **Unit 5: Ethical Decision-Making in Research**

- Ethical decision-making models in research
- Balancing ethical principles in research practice
- Addressing dilemmas in qualitative vs. quantitative research
- Ethical challenges in interdisciplinary research
- Ethical challenges in emerging research fields (e.g., AI, genetic engineering, climate change)
- Conflict of interest in research: Definition, disclosure, and management

#### **Unit 6: Global Research Ethics and Cultural Sensitivity**

- Ethical challenges in cross-cultural research
- Ethics in international research collaborations
- Ethics of conducting research in developing countries
- Ethical concerns in research involving indigenous populations
- Global guidelines and conventions (e.g., CIOMS, UNESCO guidelines)
- Ethical issues in the publication of international research findings

#### **Examination Scheme**

<b>Components</b>	<b>Internal Assessment</b>			<b>External Evaluation</b>
	<b>Attendance</b>	<b>Class Test</b>	<b>Assignment/Project/Seminar/Quiz</b>	
<b>Weightage (%)</b>	10	20	10	60

## General Proficiency-I

**Course Code: GP-101**

**Credit Units: 01**

**Pre-requisite:** Basic information of English Language

### **Course Outcome:**

- Effective communication: The ability to exchange ideas and information in a way that builds trust and respect
- Critical and analytical thinking: The ability to explore issues and ideas before forming a conclusion
- Integrative thinking: The ability to synthesize knowledge across different domains and perspectives
- Preparing students to be engaged citizens: Preparing students to participate in political culture and thrive in a rapidly evolving world

### **Details of the Course:-**

General language proficiency is the ability to read, write, listen, and speak in real-life situations. To test this, a test is usually developed for each skill with questions that are designed to imitate real life.

A syllabus is a guide to a course that includes course policies, rules, regulations, required texts, and a schedule of assignments and seminar.

### **Examination Scheme:**

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

## SEMESTER I

### Physical Education & Yoga

Course Code: GP-101a

Credit Units: 01

#### Course Outcomes (COs):

By the end of the **Physical Education & Yoga** course, students will be able to:

1. **Understand and apply** core concepts in physical education and fitness.
2. **Perform and teach** a wide range of **yoga asanas** and pranayama techniques for physical and mental well-being.
3. **Design and implement** fitness programs for individuals and groups.
4. **Assess physical fitness** and guide others in improving strength, flexibility, endurance, and cardiovascular health.
5. Use **yoga and physical activity** to promote **mental well-being**, stress relief, and emotional balance.
6. Demonstrate knowledge of **sports injury prevention** and provide **first aid**.
7. Use **yoga therapeutically** to address specific health conditions.
8. Teach and lead others in **yoga classes** and **fitness sessions**.
9. Foster a **holistic approach to health**, combining physical activity, nutrition, and mental wellness.
10. Commit to a **lifetime of learning** and professional development in the fields of **physical education, yoga**, and **health & wellness**.

#### 1. Unit I: Fundamentals of Physical Education

- Introduction to Physical Education
- History and Development of Physical Education
- Importance of Physical Fitness and Health
- Concepts of Physical Education, Sports, and Wellness
- Role of Physical Education in Personal Development

#### 2. Unit II: Basics of Yoga & Meditation

- **Module 1:** Introduction to Yoga and its History
- **Module 2:** Yoga Philosophy (Yoga Sutras of Patanjali)
- **Module 3:** The Eight Limbs of Yoga (Ashtanga Yoga)
- **Module 4:** Basic Asanas (Postures) and their Benefits
- **Module 5:** Introduction to Pranayama (Breathing Techniques)
- **Module 6:** The Role of Meditation in Yoga and Mental Health

#### 3. Elective/Optional Paper I: Sports and Recreation

- **Module 1:** Understanding the Importance of Sports in Physical Education
- **Module 2:** Organizing Sports Events and Competitions
- **Module 3:** Sports Psychology: Motivation and Performance
- **Module 4:** Nutrition and Hydration in Sports
- **Module 5:** Injury Prevention and First Aid in Sports

#### Practical Component:

- Practical Sessions on Organizing Sports Events

- Basic Training Techniques for Sports (e.g., Sprinting, Long Jump)

### Unit III: Advanced Physical Fitness

- **Module 1:** Advanced Training Methods (Strength, Endurance, Flexibility)
- **Module 2:** Designing a Fitness Program
- **Module 3:** The Science of Body Composition and Weight Management
- **Module 4:** Cardio and Aerobic Training Techniques
- **Module 5:** Monitoring and Assessing Fitness Progress

#### Practical Component:

- Practical Application of Fitness Assessment Tools
- Designing and Implementing a Fitness Routine (Based on Personal Goals)

### Unit IV: Advanced Yoga Practices

- **Module 1:** Deep Dive into Asanas: Advanced Postures
- **Module 2:** Therapeutic Applications of Yoga for Health
- **Module 3:** Pranayama and Breath Control Techniques (Advanced)

### Unit V: Sports Medicine and Injury Prevention

- **Module 1:** Common Sports Injuries and their Prevention
- **Module 2:** Anatomy and Physiology for Sports Medicine
- **Module 3:** Rehabilitation and Recovery in Sports
- **Module 4:** Basics of Massage Therapy for Sports Recovery
- **Module 5:** Using Technology and Equipment in Injury Prevention

#### Examination Scheme:

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

## **SEMESTER I**

### **Health & Nutrition**

**Course Code: GP-101b**

**Credit Units: 02**

#### **Course Objectives:**

- CO-1.** Understand the Fundamental Concepts of Nutrition
- CO-2.** Identify Nutrient Functions and Sources
- CO-3.** Examine Digestive Process and Nutrient Absorption
- CO-4.** Evaluate Impact on Chronic Diseases

#### **Unit 1: Introduction to Health and Nutrition**

Define health and nutrition.

Understand the importance of nutrition in maintaining overall health and preventing diseases.

Introduce basic nutritional principles and food groups.

What is health? Physical, mental, and social health.

The relationship between diet and health.

Nutrients: macronutrients vs. micronutrients

Nutrition guidelines and the role of public health organizations (e.g., WHO, USDA).

#### **Unit 2: Macronutrients: Carbohydrates, Proteins, and Fats**

Understand the role of each macronutrient in the body.

Identify food sources for carbohydrates, proteins, and fats.

Learn about the metabolism and energy production from macronutrients.

##### **Key Topics:**

Carbohydrates: Types (simple vs. complex), function, glycemic index, and food sources.

Proteins: Amino acids, essential vs. non-essential proteins, protein needs for various life stages.

Fats: Saturated, unsaturated, and trans fats; essential fatty acids, cholesterol, and healthy fat choices.

##### **Assessment:**

Create a food diary and identify the macronutrient composition of the foods you eat for a week.

Multiple-choice quiz on macronutrients.

#### **Unit 3: Micronutrients: Vitamins and Minerals**

Understand the function of vitamins and minerals in maintaining health.

Learn about the signs and symptoms of deficiencies and toxicities.

Identify major food sources of essential vitamins and minerals.

Vitamins: Fat-soluble (A, D, E, K) vs. water-soluble (B-complex, C), their functions, deficiencies, and toxicity. Minerals: Major minerals (calcium, iron, magnesium) vs. trace minerals (zinc, iodine, copper). Antioxidants and their role in disease prevention.

## Unit 4: The Digestive System and Nutrient Absorption

Understand how the digestive system processes food and absorbs nutrients.

Learn about enzymes, digestion, and the role of gut microbiota.

Discuss common digestive disorders and their nutritional implications.

Anatomy of the digestive system: Mouth, stomach, small intestine, large intestine.

Enzymes and hormones in digestion.

The role of the gut microbiota in health and disease.

Digestive disorders: IBS, celiac disease, food intolerances, etc.

### Examination Scheme:

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

## **SEMESTER II**

### **Organic & Analytical Chemistry**

**Course Code: BMB-201**

**Credit Units: 04**

**Pre-requisite:** Basic information of Organic Chemistry

#### **Course Outcome:**

After completion of the course students will be able to:

- Understand the basic concepts of different purification techniques of organic compound.
- Explain the mechanism of organic reactions.
- Apply basic concepts of organic chemistry in determining the types of organic reactions.
- Categories various types of polymer and their uses.
- Importance of spectroscopy in organic chemistry, biotechnology and engineering applications.
- Predict the importance of organic reactions in daily life.

#### **Details of the Course:-**

##### **UNIT I: Purification of Organic Compounds:**

Crystallization, Sublimation, Distillation, Fractional Distillation, Distillation under reduced pressure, Steam distillation, Extraction with solvent, Principle and applications of chromatography in organic chemistry, High Performance Liquid Chromatography – Principle and applications.

##### **UNIT II: Bonding in Organic Compounds:**

Nature of covalent bond and its orbital representation, Hybridization, bond energy, polarity of bond & dipole moment of molecules, inductive effect, hydrogen bond, conjugation, resonance.

Homolytic & heterolytic fission of bonds, electrophiles & nucleophiles, Reaction intermediates: carbocation, carbanion and free radicals – stability, geometry, hybridization & generation.

##### **UNIT III: Mechanistic Organic Chemistry:**

Resonance and Aromaticity in aromatic compounds. Addition reactions, Substitution reactions, Elimination reactions & Rearrangement reactions in organic chemistry, Mesomerism and Orientation in aromatic substitution reactions.

**UNIT IV: Polymers:**

Polymerization, degree of polymerization, functionality of monomer, Classification of polymers on the basis of tacticity, mode of formation, structure of monomer unit, Mechanism of addition polymerization, Preparation, Properties and uses of Kevlar & PMMA, Plastics: definition, preparation, classification and applications, Fibers – Preparation, properties and uses of Nylon- 6,6 Nylon and Dacron, Conducting polymers: Polyacetylene, Polyaniline, Mechanism of Conduction, doping; Applications of Conducting polymers. Bio-degradable Polymers.

**UNIT V: Advanced Analytical Chemistry:**

General theory of spectroscopy. Principle of UV-VIS, IR, NMR, and Mass spectroscopy. Applications of spectroscopic techniques in structure elucidation of organic compounds.

**Suggested Books:**

S. No.	Name of Authors/Books/Publishers	Year of Publication/Reprint
<b>Text Books</b>		
1.	University Chemistry, B.H.Mahan	1987
2.	Chemistry, Principles and Application, M.J. Sienko and R.A. Plane	1980
<b>Reference Books</b>		
1.	Physical Chemistry, P.W. Atkins	2009
2.	Organic Chemistry, I.L.Final (Vol-1, Vol-2)	2002
3.	Fundamentals of Molecular Spectroscopy, C.N. Banwell	1994

**Examination Scheme:**

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

## **SEMESTER II**

### **Observational Chemistry**

**Course Code: BMB-201a**

**Credit Units: 04**

Pre-requisite: Basic information of Organic Chemistry

#### **Course Outcomes**

**CO-1** Develop Proficiency in Laboratory Techniques

**CO-2** Enhance Observational and Analytical Skills

**CO-3** Understand and Identify Chemical Reactions

**CO-4** Investigate the Physical Properties of Matter

**CO-5** Conduct Qualitative Analysis of Inorganic Compounds

#### **Unit 1: Introduction to Observational Chemistry and Laboratory Safety**

Introduction to basic principles of observational chemistry, the importance of laboratory safety, and the role of qualitative and quantitative analysis in understanding chemical processes.

#### **Unit 2: Physical Properties of Matter**

Exploration of the physical properties of matter that can be observed and measured without changing the chemical identity of substances.

- State of matter (solid, liquid, gas) and phase transitions
- Color, texture, density, melting and boiling points
- Solubility and miscibility tests
- Viscosity, surface tension, and refractive index

#### **Unit 3: Chemical Reactions and Observations**

Focus on understanding different types of chemical reactions and observing the changes that occur during these processes.

- Indicators of chemical reactions (color change, gas evolution, precipitate formation, heat change)
- Types of reactions: synthesis, decomposition, single replacement, double replacement, combustion, redox
- Acid-base reactions, precipitation reactions, oxidation-reduction reactions
- Energy changes during reactions (exothermic and endothermic reactions)

#### **Unit 4: Qualitative Analysis of Inorganic Compounds**

Observing the chemical properties of common inorganic compounds, especially metal salts, through qualitative analysis techniques.

- Flame tests for metal ions (e.g., sodium, potassium, calcium, copper)
- Identification of cations and anions in unknown samples
- Precipitation reactions and solubility rules
- Use of reagents to test for specific ions (e.g., silver nitrate for chloride ions)

### **Unit 5: Gas Laws and Observations**

Investigating the behavior of gases and performing experiments to observe how gases respond to changes in temperature, pressure, and volume.

- Boyle's Law, Charles's Law, Avogadro's Law, Ideal Gas Law
- Observing the behavior of gases under various conditions (e.g., pressure, temperature)
- Diffusion and effusion of gases
- Real vs. ideal gases

#### **Examination Scheme:**

<b>Components</b>	<b>Internal Assessment</b>			<b>External Evaluation</b>
	<b>Attendance</b>	<b>Class Test</b>	<b>Assignment/ Project/Seminar/Quiz</b>	
<b>Weightage (%)</b>	10	20	10	60

## **SEMESTER II**

### **Basic & Applied Chemistry**

**Course Code: BMB-201b**

**Credit Units: 04**

#### **Course Objectives:**

**CO-1** Develop a solid understanding of core chemical concepts such as atomic structure, chemical bonding, and thermodynamics.

**CO-2** Gain hands-on experience in applying chemical principles through laboratory techniques and experiments.

**CO-3** Analyze and interpret various chemical reactions and predict outcomes based on fundamental principles.

**CO-4** Solve quantitative problems using stoichiometry, including calculations involving moles, concentrations, and reaction yields.

**CO-5** Understand the behavior and properties of different states of matter and their transitions under varying conditions.

#### **Unit 1: Introduction to Chemistry and Matter**

Basic Concepts:

Definition of Chemistry, Branches of Chemistry (Physical, Organic, Inorganic, Analytical, Biochemistry).

Types of Matter: Elements, Compounds, Mixtures.

Classification of Matter: Homogeneous and Heterogeneous.

Chemical vs Physical Properties and Changes.

Measurements and Units (SI units, dimensional analysis).

Matter and Its Properties:

States of Matter: Solid, Liquid, Gas, and Plasma.

Properties of Solids, Liquids, and Gases.

Atomic and Molecular Theory of Matter.

#### **Unit 2: Atomic Structure and Periodicity**

Atomic Structure:

Structure of the Atom: Subatomic particles (protons, neutrons, electrons).

Atomic Number, Mass Number, Isotopes, Isobars.

Bohr's Model and Quantum Mechanical Model of the Atom.

Electron Configuration and Aufbau Principle.  
 Atomic Orbitals and Quantum Numbers.  
 Periodic Table and Periodicity:  
 Mendeleev's Periodic Table and Modern Periodic Law.  
 Trends in the Periodic Table: Atomic size, Ionization energy, Electron affinity, Electronegativity.  
 Periodic Properties and Their Applications.

### **Unit 3: Chemical Bonding and Molecular Structure**

Types of Chemical Bonds:  
 Ionic Bonding: Formation of ionic compounds, properties.  
 Covalent Bonding: Electron sharing, Lewis structures, polar vs nonpolar covalent bonds.  
 Metallic Bonding: Properties of metals.  
 Intermolecular Forces: Hydrogen bonding, van der Waals forces.  
 Molecular Geometry:  
 VSEPR Theory (Valence Shell Electron Pair Repulsion Theory).  
 Hybridization and Bonding Orbitals.  
 Molecular Polarity.

### **Unit 4: Stoichiometry and Chemical Reactions Stoichiometry:**

Mole Concept, Molar Mass, Avogadro's Number.  
 Balancing Chemical Equations.  
 Limiting Reactant, Excess Reactant, Theoretical and Percent Yield.  
 Types of Chemical Reactions:  
 Synthesis, Decomposition, Single and Double Displacement.  
 Combustion Reactions.  
 Redox Reactions: Oxidation, Reduction, and Balancing Redox Equations.  
 Acid-Base Reactions: Bronsted-Lowry Theory, Lewis Acid-Base Concept.

### **Unit 5: Thermodynamics and Kinetics**

Thermodynamics:  
 Laws of Thermodynamics.  
 Heat, Work, and Internal Energy.  
 Enthalpy, Entropy, and Free Energy.  
 Thermochemical Calculations and Hess's Law.  
 Chemical Kinetics:  
 Rate of Chemical Reactions.  
 Rate Laws, Reaction Order, and Rate Constants.  
 Activation Energy and Arrhenius Equation.  
 Factors Affecting Reaction Rates: Temperature, Concentration, Catalysts.

### **Examination Scheme:**

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	

<b>Weightage (%)</b>	10	20	10	60
----------------------	----	----	----	----

## **SEMESTER II**

### **Elements of Biochemistry**

**Course Code: BMB-202**

**Credit Units: 04**

**Pre-requisite:** Basic understanding of biomolecules and concepts of general chemistry

#### **Course Outcome:**

- Students will be able to define biomolecules and buffers.
- Students will understand the structure and functions of biomolecules.
- Students will be able to classify and explain the role of various biomolecules in human body.
- Students will be able to analyze the causes of diseases on biochemical basis.
- Students will be able to understand various biochemical process and cell metabolism.

#### **Details of the**

##### **Course:- Unit I:**

A historical prospective, Amino acids & Proteins: Structure & Function. Structure and properties of Amino acids, Types of proteins and their classification, Forces stabilizing protein structure and shape. Different Level of structural organization of proteins, Protein Purification. Denaturation and renaturation of proteins. Fibrous and globular proteins.

##### **Unit II:**

Nucleic acids: Structure and functions: Physical & chemical properties of Nucleic acids, Nucleosides & Nucleotides, purines & pyrimidines,. Biologically important nucleotides,

Double helical model of DNA structure and forces responsible for A, B & Z – DNA, denaturation and renaturation of DNA.

Carbohydrates: Structure, Function and properties of Monosaccharides, Disaccharides and Polysaccharides. Homo & Hetero Polysaccharides, Mucopolysaccharides, Bacterial cell wall polysaccharides, Glycoprotein's and their biological functions.

### Unit III:

Lipids: Structure and functions –Classification, nomenclature and properties of fatty acids, essential fatty acids. Phospholipids, sphingolipids, glycolipids, cerebrosides, gangliosides, Prostaglandins, Cholesterol.

### Unit IV:

Enzymes: Nomenclature and classification of Enzymes, Holoenzyme, apoenzyme, Cofactors, coenzyme, prosthetic groups, metalloenzymes, monomeric & oligomeric enzymes, activation energy and transition state, enzyme activity, specific activity, common features of active sites, enzyme specificity: types & theories, Biocatalysts from extreme thermophilic and hyperthermophilic archaea and bacteria. Role of:  $\text{NAD}^+$ ,  $\text{NADP}^+$ , FMN/FAD, coenzymes A, Thiamine pyrophosphate, Pyridoxal phosphate, lipoic-acid, Biotin vitamin B12, Tetrahydrofolate and metallic ions

### Unit V:

Carbohydrates Metabolism: Reactions, energetics and regulation. Glycolysis: Fate of pyruvate under aerobic and anaerobic conditions. Pentose phosphate pathway and its significance, Gluconeogenesis, Glycogenolysis and glycogen synthesis. TCA cycle, Electron Transport Chain, Oxidative phosphorylation.  $\beta$ -oxidation of fatty acids.

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

## SEMESTER II

### Fundamentals of Biochemistry

Course Code: BMB-202a

Credit Units: 04

#### Course Objectives:

- Introduce students to the core chemical principles that govern biochemical processes.
- Study the structure and biological roles of proteins, lipids, nucleic acids, and carbohydrates.
- Understand key metabolic pathways (e.g., glycolysis, citric acid cycle) and their regulation and energy transfer.
- Explore enzyme mechanisms, kinetics, and regulation, including coenzyme and cofactor roles.
- Explain DNA replication, transcription, and translation as part of the central dogma of molecular biology.

#### Unit 1: Introduction to Biochemistry and Biomolecules

Overview of Biochemistry: Definition, scope, and importance of biochemistry in biology and medicine, Water and pH: Properties of water, pH, buffers, and their biological significance.

Biomolecules: Classification and structure of biomolecules (carbohydrates, proteins, lipids, nucleic acids), Basic Chemical Principles: Atomic structure, chemical bonds, and

4.	<b>UNIT-4</b>	
	<ul style="list-style-type: none"> <li>• Food preservation methods.</li> <li>• Radappertization, radicidation, and radurization of foods.</li> <li>• Legal status of food irradiation, effect of irradiation on food constituents.</li> </ul>	12
5.	<b>UNIT-5</b>	
	<ul style="list-style-type: none"> <li>• Storage stability food preservation with low temperature, high temperature and drying.</li> <li>• Indicator and food-borne pathogens. Rheology of food production.</li> </ul>	6

## **SEMESTER III**

### **Bacteriology & Virology**

**Course Code: BMB-302**

**Credit Units: 04**

**Pre-requisite:** Basic information of Bacteriology and Virology.

#### **Course Outcome:**

After completion of the course the students should be able to

- Describe the cell organization of bacteria i.e. morphology, ultrastructure and organelles present in bacterial cells.
- Apply the knowledge of bacteriological techniques.
- Describe the nutritional and physical requirements for bacterial growth.
- Describe the principles involved in killing bacteria, and make recommendations on use of physical and chemical methods used to control microbial growth.
- Describe the dynamics of the growth of a bacterial population and how this growth can be measured.
- Describe bacterial taxonomy and classification.
- Differentiate the nature of viruses.
- Understand classification of viruses.
- Learn the methods of laboratory diagnosis of viruses using different techniques.
- Learn about different plant and animal viruses.

#### **Details of the Course:-**

##### **Unit – I: Cell Organization:**

Cell size, shape and arrangement, glycocalyx, capsule, flagella, endoflagella, fimbriae and pili.

Cell-wall: Composition and detailed structure of Gram-positive and Gram-negative cell walls, Archaeobacterial cell wall, Gram and acid fast staining mechanisms, lipopolysaccharide (LPS), sphaeroplasts, protoplasts, and L-forms. Effect of antibiotics and enzymes on the cell wall.

Cell Membrane: Structure, function and chemical composition of bacterial and archaeal cell membranes.

Cytoplasm: Ribosomes, mesosomes, inclusion bodies, nucleoid, chromosome and plasmids

Endospore: Structure, formation, stages of sporulation.

##### **Unit – II: Bacterial growth and control:**

Culture media: Components of media, Synthetic or defined media, Complex media, enriched media, selective media, differential media, enrichment culture media Pure culture isolation: Streaking, serial dilution and plating methods, cultivation, maintenance and stocking of pure cultures, cultivation of anaerobic bacteria Growth: Binary fission, phases of growth.

### Unit – III: Bacterial Systematics and Taxonomy:

Taxonomy, nomenclature, systematics, types of classifications

Morphology, ecological significance and economic importance of the following groups:

Archaea: methanogens, thermophiles and halophiles

Eubacteria: Gram negative and Gram positive

Gram negative:

Non-proteobacteria– Deinococcus, Chlamydiae, Spirochetes

Alpha proteobacteria- Rickettsia, Rhizobium, Agrobacterium

Gamma proteobacteria –Escherichia, Shigella, Pseudomonas

Gram positive: Low G+C: Mycoplasma, Bacillus, Clostridium, Staphylococcus High G+C:

Streptomyces, Frankia

### Unit – IV: Nature, Properties and Classification of Viruses:

Properties of viruses; general nature and important features Subviral particles; viroids, prions and their importance Isolation and cultivation of viruses.

Morphological characters: Capsid symmetry and different shapes of viruses with examples Viral multiplication in the Cell: Lytic and lysogenic cycle Description of important viruses: salient features of the viruses infecting different hosts - Bacteriophages (T4 & Lambda); Plant (TMV & Cauliflower Mosaic Virus), Human (HIV & Hepatitis viruses).

### Unit – V: Role of Viruses in Disease and its prevention:

Viruses as pathogens: Role of viruses in causing diseases Prevention and control of viruses: Viral vaccines, interferons and antiviral compounds.

## **SEMESTER III**

### **Global Ecology**

**Course Code: BMB-302a**

**Credit Units: 04**

**Pre-requisite:** Basic knowledge of Environmental science

#### **Course Outcomes (CO):**

Upon successful completion of the **Global Ecology** course, students will be able to:

1. **CO1:** Understand and explain fundamental ecological principles, processes, and interactions in the context of global environmental systems.
2. **CO2:** Analyze the impact of human activities on the environment and global ecosystems.
3. **CO3:** Evaluate the causes and consequences of global environmental challenges, including climate change, biodiversity loss, and pollution.
4. **CO4:** Develop and propose sustainable solutions and conservation strategies to address global ecological issues.
5. **CO5:** Use scientific tools and methods, such as GIS, fieldwork, and ecological modeling, to study global ecological problems.

#### **Detail of the course:-**

##### **Unit 1: Introduction to Ecology and Global Environmental Systems**

- **Introduction to Ecology**
  - Definition and scope of ecology
  - Levels of ecological organization (individual, population, community, ecosystem, biome, biosphere)
- **Basic Ecological Processes**
  - Energy flow in ecosystems: producers, consumers, and decomposers
  - Biogeochemical cycles: carbon, nitrogen, phosphorus, and water cycles
  - Ecosystem functioning and biodiversity
- **Human-Ecosystem Interactions**
  - Human influence on natural systems
  - Ecological footprint and sustainability concepts

##### **Unit 2: Earth's Biomes and Global Ecosystems**

- **Biomes of the World**
  - Characteristics of major terrestrial biomes: tropical rainforests, deserts, temperate forests, tundra, and grasslands
  - Aquatic ecosystems: freshwater and marine ecosystems (lakes, rivers, coral reefs, oceans)
- **Ecosystem Services**

- Ecosystem functions and services: provisioning, regulating, cultural, and supporting
- The importance of biodiversity and healthy ecosystems in global environmental stability

### **Unit 3: Biodiversity, Conservation, and Global Sustainability**

- **Types of Biodiversity**
  - Genetic, species, and ecosystem diversity
  - Hotspots of biodiversity and endemism
- **Threats to Biodiversity**
  - Habitat destruction, fragmentation, and degradation
  - Invasive species, over-exploitation, climate change, and pollution
- **Conservation Strategies**
  - Protected areas and wildlife corridors
  - Restoration ecology and biodiversity hotspots
  - Sustainable development and the role of international agreements (CBD, CITES, etc.)

### **Unit 4: Climate Change and Global Environmental Challenges**

- **Climate Change Science**
  - The greenhouse effect and the role of greenhouse gases
  - Evidence and impacts of climate change (temperature rise, melting glaciers, sea-level rise)
  - Climate change models and future projections
- **Global Warming and Climate Change Effects**
  - Effects on weather patterns, ecosystems, and biodiversity
  - Impacts on human societies, agriculture, and water resources
- **Mitigation and Adaptation Strategies**
  - Carbon sequestration, renewable energy, and geoengineering
  - Adaptation strategies in vulnerable regions

### **Unit 5: Pollution and Environmental Degradation**

- **Types of Pollution**
  - Air, water, soil, noise, and plastic pollution
  - Point-source vs. non-point-source pollution
- **Pollution's Impact on Global Ecosystems**
  - Eutrophication, acid rain, and ocean acidification
  - Plastic pollution and microplastics in oceans
  - Toxic chemicals and their ecological and health impacts
- **Waste Management and Pollution Control**
  - Recycling, waste-to-energy technologies, and zero-waste initiatives
  - International policies on pollution control (e.g., Paris Agreement, Basel Convention)

### **Unit 6: Global Conservation and Environmental Policy**

- **International Environmental Agreements**
  - The role of the United Nations, Kyoto Protocol, Paris Agreement
  - Global environmental treaties and their effectiveness
- **Environmental Ethics and Justice**

- Ethical dilemmas in conservation and environmental protection
- Environmental justice: inequality and access to environmental resources
- **Policy Tools for Environmental Management**
  - Ecological restoration, sustainable resource management, and conservation laws
  - Role of NGOs and international organizations in global environmental governance

### **Unit 7: Sustainable Development and Global Ecology**

- **Sustainability Concepts**
  - Definitions and principles of sustainability (environmental, economic, social sustainability)
  - The role of ecological footprint and carbon footprint in sustainability assessments
- **Sustainable Agriculture and Forestry**
  - Agroecology, organic farming, sustainable land-use practices
  - Forest conservation and sustainable forestry management
- **Urban Sustainability**
  - Green cities, sustainable architecture, and urban ecology
  - Sustainable transportation and waste management systems

### **Unit 8: Emerging Global Ecological Issues and Future Directions**

- **Emerging Environmental Issues**
  - Ocean acidification, biodiversity loss, and the sixth mass extinction
  - Genetic engineering and synthetic biology in environmental conservation
- **Global Environmental Challenges in the 21st Century**
  - Population growth, resource depletion, and environmental equity
- **The Role of Technology in Global Ecology**
  - Role of biotechnology, renewable energy, and environmental monitoring technologies
  - Citizen science, big data, and artificial intelligence in ecological research

### **Suggested Books:**

1. "Essentials of Ecology" by G. Tyler Miller & Scott Spoolman
2. "Global Ecology: Understanding Global Environmental Change" by H. R. S. U.
3. "Introduction to Environmental Studies" by Andrew Friedland and Rick Relyea

### **Examination Scheme:**

<b>Components</b>	<b>Internal Assessment</b>			<b>External Evaluation</b>
	<b>Attendance</b>	<b>Class Test</b>	<b>Assignment/ Project/Seminar/Quiz</b>	
<b>Weightage (%)</b>	10	20	10	60

## **SEMESTER III**

### **Mycology & Phycology**

**Course Code: BMB-303**

**Credit Units: 04**

**Pre-requisite:** Basic information of Fungus and Algae

#### **Course Outcome:**

After the successful completion of this course

- Students should be able to know about various groups of fungi and algae.
- As most of the fungi are seen through naked eyes, students will be able to recognize them.
- Students will also have an idea about the pros and cons of fungi and algae.
- Students should be able to know about economic importance of fungi and algae.

#### **Details of the Course:-**

##### **Unit I:**

History of Mycology, Classification of fungi, Morphology, microscopy and structure of fungi

##### **Unit II: General Overview Phylums:-**

Chytridiomycota (The chytrids), Zygomycota (The conjugated fungi), Ascomycota (The sac fungi), Basidiomycota (The club fungi), Deutromycota (The imperfecti fungi).

##### **Unit III:**

Symbiotic association of fungi, Nutrition requirements

##### **Unit IV:**

Parasexual Cycles, Alcoholic fermentation, Fungus like organisms, Rusts and Smuts, Fungal disease of plants and humans

##### **Unit V:**

Classification and application of algae: General classification, Life cycle, thallus organisation and occurrence – (i) Chlorophyceae (ii) Charophyceae (iii) Diatoms (iv) Xanthophyceae (v) Phaeophyceae (vi) Rhodophyceae: (vii) Cyanobacteria

Lichens, Economic importance of algae with examples in agriculture, environment, industry and food.

**Suggested Books:**

<b>Weightage (%)</b>	10	20	10	60

## **SEMESTER III**

### **Public Health and Pandemics**

**Course Code: BMB-303a**

**Credit Units: 04**

**Pre-requisite:** Basic understanding of diseases and their pathogenesis

#### **Course Outcome:**

Students will be able to learn and understand the concepts of how human system works in altered and diseased stage under the influence of various internal and external stimuli.

#### **Details of the**

#### **Course:-Unit I:**

##### **Introduction:**

History of pathology, basic definitions and familiarization with the common terms used in pathology, techniques used in pathology.

##### **Cellular Adaptations, Cell Injury and Cell Death:**

Causes and mechanisms of cell injury: reversible and irreversible injury, Cellular responses: Hyperplasia, Hypertrophy, Atrophy, Metaplasia, Necrosis, Apoptosis, subcellular and intracellular response, (with suitable examples of diseases), Cellular ageing.

##### **Unit II: Role of Inflammation in diseases (with suitable examples):**

General features of acute and chronic inflammation: Vascular changes, cellular events, termination of acute inflammatory response. Cells and molecular mediators of inflammation, morphological effects and outcome of acute inflammation. Systemic effects of chronic inflammation, granulomatous inflammation.

##### **Unit III: Tissue Renewal And Repair, Healing And Fibrosis:**

Mechanism of tissue regeneration, role of ECM, repair by healing, scar formation and fibrosis, cutaneous wound healing, tissue remodelling in liver (mechanism of fibrosis and cirrhosis).

##### **Unit IV: Hemodynamic Pathology:**

Edema, hyperaemia, congestion, haemorrhage, haemostasis and thrombosis, Embolism,

Infarction and shock and hypertension, **Nutritional diseases:** Protein energy malnutrition, deficiency diseases of vitamins and minerals, nutritional excess and imbalances. Role and effect of metals (Zinc Iron and Calcium) and their deficiency diseases.

**Unit V: Cell proliferation: Cancer:**

Definitions, nomenclature, characteristics of benign and malignant neoplasms, grading and staging of cancer, biology of tumor growth, mechanism of tumor invasion and metastasis, carcinogens and cancer, concept of oncogenes, tumor suppressor genes, DNA repair genes and cancer stem cells.

**Pathophysiology diseases:**

**A. Aetiology and Pathophysiology of:** Diabetes, Arteriosclerosis, Myocardial infarction, restrictive and obstructive respiratory diseases (COPD), Parkinson, Schizophrenia, Silicosis

**B. Infectious Diseases:** Pathogenesis of diseases and overview of modes of infections, prevention and control with suitable examples like Typhoid, Dengue

## SEMESTER III

### Biofertilizers and Biopesticide

Course Code: BMB-304

Credit Units: 02

**Pre-requisite:** Basic information of Biofertilizers and Biopesticide

#### Course Outcome:

After completion of the course the students should be able to

- Learn the basic concept of microbial interactions.
- Understand the role of microbes as Biofertilizers.
- Learn basic understanding of role of microbes as bioinsecticides.

#### Details of the Course:-

##### UNIT-I: Biofertilizers:

General account of the microbes used as biofertilizers for various crop plants and their advantages over chemical fertilizers.

Symbiotic N<sub>2</sub> fixers: Rhizobium - Isolation, characteristics, types, inoculum production and field application, legume/pulses plants; Frankia- Isolation, characteristics, non-leguminous crop symbiosis. Cyanobacteria, Azolla- Isolation, characterization, mass multiplication, Role in rice cultivation, Crop response, field application.

##### UNIT-II: Non - Symbiotic Nitrogen Fixers:

Free living *Azospirillum*, *Azotobacter*- free isolation, characteristics, mass inoculums, production and field application.

##### UNIT-III: Phosphate Solubilizers:

Phosphate solubilizing microbes (bacteria and fungi) - Isolation, characterization, mass inoculum production, field application.

##### UNIT-IV: Mycorrhizal Biofertilizers:

Importance of mycorrhizal inoculum, types of mycorrhizae and associated plants, Mass inoculums production of Ectomycorrhizae and VAM, field applications of Ectomycorrhizae and VAM.

##### UNIT-V: Bioinsecticides:

General account of microbes used as bioinsecticides and their advantages over synthetic pesticides, *Bacillus thuringiensis*, production, Field applications, Viruses – cultivation and field applications (Baculovirus).

<b>Weightage (%)</b>	10	20	10	60

## **SEMESTER III**

### **Biomathematics and Biostatistics**

**Course Code: BMB-305**

**Credit Units: 04**

**Pre-requisite:** Basic knowledge of Bio Mathematics and Bio Statistics

#### **Course Outcome:**

- Students will understand the use of mathematics and the significance of their application.
- Students will be able to understand the concept of Biostatistics.
- Understand the concept of Calculus.
- Explain the application of probability for Bio Students.
- Students will be able to understand sampling theory.
- Students will be able to learn Basic concept of Algebra.

#### **Details of the Course:-**

##### **UNIT-I: Introduction of Bio statistics:**

Introductory Statistics, Measure of central tendency: Mean Mode, Median. Measure of Dispersion: Standard Deviation, Variance, Moments, Skewness and Kurtosis.

##### **UNIT-II: Probability:**

Basic probability and laws. Random variable, variable (Discrete and Continuous), Probability density function and probability mass function. Distribution Binomial, Poisson and normal (without proof).

##### **UNIT-III: Statistical methods:**

Sampling parameters Difference between sample and Population parametric and nonparametric statistics, Chi-square test.

##### **UNIT-IV: Basic concepts of Algebra (Linear and quadratic):**

Progression: arithmetic progression, geometric progression and harmonic progression (with application in practicals).

##### **UNIT-V: Calculus:**

Basic concepts of differentiation and Integration, Coordinate 2D, straight line, properties of straight line, area of a triangle.

**Suggested Books:**

## SEMESTER III

### Elementary Mathematics

Course Code: BMB-305a

Credit Units: 04

**Pre-requisite:** Basic information of Mathematics and Biostatistics

#### Course Outcome:

A student who successfully fulfills the course requirements will be able to

- define and appropriately use information technology terms;
- identify computer hardware components and describe their function;
- describe the essential elements of the computer's architecture and discuss how this architecture functions;
- describe the characteristics and representations of data, and interpret and compare data in different representations;
- identify and describe telecommunication components;
- describe the characteristics of operating systems and compare different operating systems;
- use a hypertext markup language to produce basic Web documents;
- discuss the general trends in technologies including examples of leading edge developments;
- Compare the roles of different sectors of the information technology.

#### Details of the course:

### Microbial Genetics Lab

Course Code: BMB-351

Credit Units: 02

**Pre-requisite:** Basic information of Microbial Genetics Lab

**Course Outcome:**

After completion of the course the students will be able to

- Learn about principle and working of laboratory instruments.
- Acquire a comprehensive knowledge on techniques followed in study of genetic mutation.
- Become familiar with technical requirements, concepts and general procedures in molecular biology and implement the knowledge in research work.
- Learn and implement different strategies to isolate genomic and plasmid DNA from cells.
- Learn the methods of DNA transformation, transduction and conjugation for future recombinant techniques.

**Details of the Course:-**

S. No.	Contents	Contact Hours
1	Preparation of Master and Replica Plates.	3
2	Study the effect of chemical (HNO <sub>2</sub> ) and physical (UV) mutagens on bacterial cells.	3
3	Study survival curve of bacteria after exposure to ultraviolet (UV) light.	3
4	Isolation of Plasmid DNA from <i>E.coli</i> .	3
5	Study different conformations of plasmid DNA through Agarose gel electrophoresis.	3
6	Demonstration of Bacterial Conjugation.	3
7	Demonstration of bacterial transformation and transduction.	3
8	Demonstration of AMES test.	3
9	Isolation of genomic DNA from bacteria.	3
10	To isolate naturally occurring mutants from soil.	3

Weightage (%)	10	20	10	60

## SEMESTER III

### Bacteriology & Virology Lab

**Course Code: BMB-352**

**Credit Units: 02**

**Pre-requisite:** Basic information of Bacteriology and Virology

#### **Course Outcome:**

After completion of the course the students will be able

- To learn good laboratory practices.
- To learn the principle and working of microbiology instruments and equipment in accordance with current laboratory safety protocol.
- To utilize the microbial flora for various applications.
- To learn microbiology laboratory techniques.

#### **Details of the Laboratory Course:-**

**Note:** A college must offer 70% of the below listed experiments. The remaining 30% experiments may be modified by college according to facilities available.

<b>S. No.</b>	<b>Contents</b>	<b>Contact Hours</b>
1.	Preparation of different media: Complex media-Nutrient agar, McConkey agar, EMB agar.	2
2.	Simple staining, Negative staining, Gram's staining, Capsule staining, Endospore staining	5
3.	Isolation of pure cultures of bacteria by streaking method.	2
4.	Preservation of bacterial cultures by various techniques.	2
5.	Estimation of CFU count by spread plate method/pour plate method.	2
6.	Motility by hanging drop method.	2
7.	Isolation of coliphages from sewage water sample.	2
8.	One step growth curve for determination of virus titre.	2
9.	Immunological assays for virus detection.	2
10.	Cultivation and morphological identification of animal cell lines.	2

**Suggested Books:**

S. No.	Name of Authors/Books/Publishers	Year of Publication/Reprint
<b>Text Books</b>		
1.	Experiments in Microbiology, Plant Pathology and Biotechnology. 4th Edition. Aneja, K.R. (2003). New Age International Publishers, New Delhi. 5th ed.	2017
<b>References</b>		
1.	Microbiology: A Laboratory Manual. Benjamin Cummings. 10 <sup>th</sup> edition. Cappuccino J. and Sherman N. (2013)	2013
2.	Laboratory exercises in Microbiology by Harley Prescott. 7 <sup>th</sup> edition, McGraw-Hill Higher Education.	2008
3.	Benson's Microbiology Application, laboratory Manual Concise version (2016) McGraw Hill Publisher- 14 <sup>th</sup> ed	2016
4.	Applied Microbiology laboratory Manual (2016) Kendall Hunt Publisher- 5 <sup>th</sup> Edition, Frances Duncan	2016

**Examination Scheme:**

Components	Internal Assessment			External Evaluation
	Attendance	Viva-Voce	Practical Record	
Weightage (%)	10	20	10	60

## SEMESTER III

### Mycology & Phycology Lab

Course Code: BMB-353

Credit Units: 02

**Pre-requisite:** Basic information of Fungus and Algae

**Course Outcome:**

After the successful completion of this course

- Students will be able to isolate fungi from soil.
- Students will be able to learn about the cultivation and preservation of fungi and algae.
- Students will be able to recognize the microscopic structure of fungi.
- Students will be able to recognize the microscopic structure of algae.

**Details of the Course:-**

S. No.	Contents	Contact Hours
1	To study cultivation and preservation of fungus under laboratory conditions.	2
2	Field trip to nearby forest area of Shobhit University and sample collection.	2
3	Isolation of fungi from fungal infected fruits or bread.	2
4	Isolation of fungi from soil.	2
5	To study morphology, microscopy of isolated fungi.	2
6	Various enzyme production by fungi (plate assay).	2
7	Effect of pH and temperature on fungus.	2
8	Study of the following genera through temporary and permanent slides: <i>Volvox</i> , and <i>Nostoc</i> .	2
9	Study of the following genera through temporary and permanent slides: <i>Coleochaete</i> , <i>Vaucheria</i> , <i>Ectocarpus</i> , <i>Polysiphonia</i> .	2

**Suggested Books:**

<b>S. No.</b>	<b>Name of Authors/Books/Publishers</b>	<b>Year of Publication/Reprint</b>
<b>Reference Books</b>		
1.	Introduction to Fungi 3 <sup>rd</sup> Edition. John Webster and Roland W.S. Weber (2007). Cambridge.	2007
2.	Alexopoulos C.J, Mims C.W. and Blackwell M.I 1996. Introductory Mycology. John Wiley and Sons Inc.	1996
3.	Kumar HD. (1990). Introductory Phycology. 2nd edition. Affiliated East Western Press.	1990
4.	Microbiology 5 <sup>th</sup> Edition. Prescott, L. M.; Harley, J.P. and Klein, D.A. (2003) McGraw Hill, USA.	2003

**Examination Scheme:**

<b>Components</b>	<b>Internal Assessment</b>			<b>External Evaluation</b>
	<b>Attendance</b>	<b>Viva-Voce</b>	<b>Practical Record</b>	
<b>Weightage (%)</b>	10	20	10	60

## General Proficiency-III

**Course Code: GP-301**

**Credit Units: 01**

**Pre-requisite:** Basic information of English Language

### **Course Outcome:**

- Effective communication: The ability to exchange ideas and information in a way that builds trust and respect
- Critical and analytical thinking: The ability to explore issues and ideas before forming a conclusion
- Integrative thinking: The ability to synthesize knowledge across different domains and perspectives
- Preparing students to be engaged citizens: Preparing students to participate in political culture and thrive in a rapidly evolving world

### **Details of the Course:-**

General language proficiency is the ability to read, write, listen, and speak in real-life situations. To test this, a test is usually developed for each skill with questions that are designed to imitate real life.

A syllabus is a guide to a course that includes course policies, rules, regulations, required texts, and a schedule of assignments and seminar.

### **Examination Scheme:**

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

## Psychology

**Course Code: GP-301 a**

**Credit Units: 01**

**Pre-requisite:** Basic information of Psychology

Course Outcome:

- Define and explain core concepts in psychology, including behavior, mental processes, sensation, perception, and learning.
- Apply theories from different areas of psychology (cognitive, behavioral, humanistic, etc.) to real-world problems.

### Details of the Course:-

Psychology is the scientific study of behavior and mental processes. The course syllabus typically covers various branches of psychology, including biological, cognitive, developmental, social, clinical, and abnormal psychology. It explores human behavior in different contexts, using both theoretical and empirical approaches.

### Examination Scheme:

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

## Sociology

Course Code: GP-301b

Credit Units: 01

**Pre-requisite: Basic information of Sociology**

Course Outcome:

- Understand Sociological Concepts
- Conduct Sociological Research
- Analyze Social Institutions

### Details of the Course:-

Sociology is the scientific study of society, human behavior, social relationships, and the structures that shape individuals' lives. The sociology course typically covers topics ranging from social institutions (family, education, religion) to issues like class, race, gender, and global inequalities. It involves understanding social processes, patterns of behavior, and the impact of social forces on individuals and groups.

### Examination Scheme:

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

## **SEMESTER IV**

### **Molecular Biology**

**Course Code: BMB-401**

**Credit Units: 04**

**Pre-requisite:** Basic information of Cell Biology

#### **Course Outcome:**

- Students will gain an understanding of molecular biology of nucleus and its effect of functioning of an organism.
- Students will understand the concepts of DNA, RNA and will develop an insight into the mechanism of DNA replication in the cell.
- Students will learn about the physiochemical reasons of damage of DNA and their effect on body functioning and will be able to analyze the in vivo mechanism of repair of DNA

damage and recombination processes.

- Students will develop an understanding of formation of RNA, different mechanisms in prokaryotes and eukaryotes and processing of final transcriptional products.
- Students will be able to understand the process of protein formation and its control.
- Students will be able to analyze the mechanisms of gene expression and its regulation.

#### **Details of the Course:-**

##### **UNIT-I: Structure of nucleotides and nucleic acids:**

Structures and types of DNA and RNA, packaging of genetic material in prokaryote and eukaryotes

##### **UNIT-II: DNA replication:**

Replication of DNA in prokaryotes and eukaryotes: Semiconservative nature of DNA replication, Bi-directional replication, Replication enzymes

##### **UNIT-III: DNA damage, repair and homologous recombination**

DNA damage and repair: causes and types of DNA damage, mechanism of DNA repair: Photoreactivation, base excision repair, nucleotide excision repair, mismatch repair, Nonhomologous end joining. Homologous recombination: models and mechanism.

#### UNIT-IV: Transcription and RNA processing:

Transcription in prokaryotes: Prokaryotic RNA polymerase, role of sigma factor, promoter, Initiation, elongation and termination of RNA chains

Transcription in eukaryotes: Eukaryotic RNA polymerases, transcription factors, promoters, enhancers, mechanism of transcription initiation, promoter clearance and elongation RNA splicing and processing: processing of pre-mRNA: 5' cap formation, polyadenylation, splicing, rRNA and tRNA splicing.

#### UNIT-V: Regulation of gene expression and translation

Regulation of gene expression in prokaryotes: Operon concept (inducible and repressible system), Genetic code and its characteristics, Prokaryotic and eukaryotic translation: ribosome structure and assembly, Charging of tRNA, aminoacyl tRNA synthetases, Mechanism of initiation, elongation and termination of polypeptides, Fidelity of translation, Inhibitors of translation. Posttranslational modifications of proteins.

#### Suggested Books:

	<b>Text Books</b>	
1.	Genes IX, Lewin, Benjamin, Jones and Bartlett.	2008
	<b>Reference Books</b>	
1.	Molecular Biology of the Gene, James D Watson et. al., (5 <sup>th</sup> Edition,) Pearson	2009

#### Examination Scheme:

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

## SEMESTER IV

### Economic Biology

Course Code: BMB-401a

Credit Units: 04

**Pre-requisite:** Basic information of Economic Biology

#### Course Outcome:

- Students will gain an understanding of molecular biology of nucleus and its effect of functioning of an organism.
- Students will understand the concepts of DNA, RNA and will develop an insight into the mechanism of DNA replication in the cell.
- Students will learn about the physiochemical reasons of damage of DNA and their effect on body functioning and will be able to analyze the in vivo mechanism of repair of DNA damage and recombination processes.
- Students will develop an understanding of formation of RNA, different mechanisms in prokaryotes and eukaryotes and processing of final transcriptional products.
- Students will be able to understand the process of protein formation and its control.
- Students will be able to analyze the mechanisms of gene expression and its regulation.

**Pre-requisite:** In-depth knowledge of Molecular Biology

#### Details of the Course:-

##### Unit I: Introduction and scope of RDT:

Recombinant DNA, Milestones in genetic engineering, Biosafety and Bioethics, Overview of Scope and Applications of Recombinant DNA Technology. Isolation of nucleic acid (plasmid, DNA and RNA), quantification and its purity.

##### Unit II: Tools and strategies of molecular cloning:

Enzymes in Recombinant DNA Technology and its applications: Nucleases, Restriction endonucleases, DNA Polymerases, Terminal transferase, Reverse transcriptase, Kinase and Phosphatase, DNA ligases (T4 DNA ligase and *E.coli* DNA ligase).

Structure and strategies of cloning and screening of vectors based upon: Plasmids, Cosmids, Phages, Artificial Chromosomes (BAC and YAC), and hybrid vectors, shuttle vectors, plant vectors (*Agrobacterium* and virus based), expression vectors.

##### Unit III: Gene Cloning and Expression:

Cloning and screening strategies (including directional cloning): Cutting and joining

vector and insert DNA, transformation of recombinant DNA in host, methods for screening of Transformants. Introduction to gene expression (Prokaryotic and eukaryotic expression). Synthesis of cDNA, Construction of cDNA library and genomic DNA library.

#### **Unit IV: Methods in RDT:**

DNA, RNA and Protein analysis: Agarose gel electrophoresis, SDS-PAGE, Gel Shift Assay. Blotting techniques: Southern-, Northern- and Western blotting, probe labeling and hybridization; Polymerase Chain Reaction: Principle, methodology and application; variants of PCR. Molecular markers and their applications; DNA microarray analysis; Chromosome walking; Site directed mutagenesis.

#### **Unit V: Application of RDT:**

Transgenic Technology: Types approaches and application (Plant and Animals); Gene therapy: Principles, strategies and ethics of human gene therapy; DNA Fingerprinting and application of DNA technology in forensics and parental disputes; Products of recombinant DNA technology: human therapeutic- insulin, hGH, recombinant vaccines.

#### **Suggested Books:**

<b>S. No.</b>	<b>Name of Authors/Books/Publishers</b>	<b>Year of Publication/Reprint</b>
<b>Text Books</b>		
1.	Gene Cloning and DNA Analysis, An Introduction, T. A. Brown (7 <sup>th</sup> edition), Wiley-Blackwell	2015
2.	Recombinant DNA: Genes and Genomes - A Short Course, James D. Watson , Richard M. Meyers, Amy A. Caudy, Jan A. Witkowski, (3rd Edition), W.H. Freeman	2007
<b>Reference Books</b>

<b>Components</b>	<b>Attendance</b>	<b>Class Test</b>	<b>Assignment/ Project/Seminar/Quiz</b>	<b>External Evaluation</b>
<b>Weightage (%)</b>	10	20	10	60

## **SEMESTER IV**

### **Gender Studies**

**Course Code: BMB-401b**

**Credit Units: 04**

**Pre-requisite:** Basic information of Gender equality

#### **Course Outcome**

**CO-1**To familiarize the students with the terminologies related to Gender studies.

**CO-2**To elaborate the concept of patriarchy and its impact on women

**CO-3**To introduce students to the discipline of Women's Studies and Gender Studies and its perspectives.

**CO-4**To trace the evolution of Gender Studies from Women's Studies. Learning outcomes

**CO-5**Familiarity with fundamental concepts related to field of women and gender studies.

#### **Unit I**

Introduction: Gender Studies - Origin and growth; need for Gender Studies – objectives, nature and scope of Gender Studies. Establishment of Centre for Women's Studies under UGC guidelines 14H

#### **Unit II**

Basic Concepts: Meaning and definition: gender, sex, difference between gender and sex, gender equality, gender empowerment, gender roles, gender gap. Patriarchy and Matriarchy: Meaning and definition. Gender discrimination- meaning, forms and areas, Need for Gender Sensitization. Bio-social perspective of gender, gender socialization, gender stereotyping, gender bias 16H Page 5 of 34

#### **Unit III**

Multidisciplinary Nature of Gender Studies Multi-disciplinarity of gender studies, relationship with mainstream social sciences (Economics, Sociology, History, Literature, Anthropology, Psychology and Political Science) 14 H

#### **Unit IV**

Women's Studies and Gender Studies A paradigm shift: from Women's Studies to Gender Studies. Relevance of women/gender studies in Indian context 6 H

#### **Unit V**

Future of Gender Studies Gender studies as a profession- employment opportunities, constraints, emerging needs Role of UGC in promoting the women's and gender studies, future of gender studies

## SEMESTER IV

### International Business in Dairy Science

Course Code: BMB-401c

Credit Units: 04

**Pre-requisite:** Basic knowledge of food microbiology.

#### Course Outcome:

**CO-1:** Students will be able to know about the microorganisms important in food microbiology.

**CO-2:** Students would know about the factors influencing microbial growth in food.

**CO-3:** Students will understand various food borne diseases.

**CO-4:** Students will also have knowledge of microbiology of milk.

**CO-4:** Students will understand microorganisms as source of food.

#### Details of the Course:

Sl. No.	Contents	Contact Hours
1.	<b>UNIT-1</b> Microorganisms important in food microbiology: molds, yeast and bacteria – general characteristics, classification and importance. Principles of food preservation, preservation by use of high temperature, low temperature, drying and dessication. Chemical preservatives and additives. Preservation by radiation.	4
2.	<b>UNIT-2</b> Factors influencing microbial growth in food: Extrinsic and intrinsic factors. Microbial spoilage of food. Chemical changes caused by the microorganisms during spoilage. Spoilage of fish, meat, poultry, eggs, fruits and vegetables. Detection of spoilage and characterization.	10
3.	<b>UNIT-3</b> Classification of food borne diseases. Food borne infections: Brucella, Bacillus cereus, Clostridium perfringens, Yersinia enterocolitica and Escherichia, Salmonella spp. Food intoxication: Staphylococcal intoxication, Clostridial poisoning (Clostridium Botulinum). Food adulteration and prevailing food standards in India.	9
4.	<b>UNIT-4</b> Microbiology of Milk: Sources of microorganisms in milk and types of microorganisms in milk. Microbiological examination of milk (standard plate count, direct microscopic count, reductase, and phosphatase test). Dehydration and pasteurization of milk. Dairy products from microorganisms: Butter, yoghurt and cheese.	12

5.	<b>UNIT-5</b> Microorganisms as source of food: Single Cell Protein (SCP). Mushrooms and food value of mushrooms. Food conversions: Lactic acid conversions, soyabean conversions and Bakery. Microbiological estimation of food: Sample collection, preparation and analysis techniques.	6
----	--	---

## SEMESTER IV

### Immunology

**Course Code: BMB-402**

**Credit Units: 04**

**Pre-requisite:** Basic information of microbiology, infection, immunity.

**Course Outcome:**

- Students will be able to define and explain the fundamental principles of modern immunology.
- Students will be able to *classify* antibodies on the basis of their structures and functions.
- Students will be able to *understand* related immunological techniques and *apply* them in medical laboratory profession.
- Students will *acquire* knowledge about processing and presentation of antigens by different methods.
- Student will be able to understand cell mediated immune response.
- Students will be able to value role of immune system in different diseases.
- Students will be able to *apply* their knowledge to healthy and disease contexts.

**Details of the Course:-**

**UNIT – I: Introduction:**

History: Concept of Innate and Adaptive immunity; Structure, Functions and Properties of: Immune Cells; and (Primary and secondary Lymphoid organs). Active and Passive Immunity.

**UNIT – II: Antigens and Antibodies:**

Antigen, Immunogen, Factors contributing immunogenicity, Epitopes, Haptens; Adjuvants

Structure, Types, Functions and Properties of antibodies; Antigenic determinants on antibodies (Isotypic, allotypic, idiotypic); Monoclonal and Chimeric antibodies, Hybridoma Technique. Principles of Precipitation, Agglutination, Immunodiffusion, Immunoelectrophoresis, ELISA, RIA, Immunofluorescence, Immunoelectron microscopy, Complement fixation test.

**UNIT – III: Major Histocompatibility Complex and Complement System:**

Organization of MHC locus (Mice & Human); Structure and Functions of MHC I & II molecules; Antigen processing and presentation (Cytosolic and Endocytic pathways). Components of the Complement system; Activation pathways (Classical, Alternative and Lectin pathways).

#### **UNIT – IV: Generation of Immune Response:**

Primary and Secondary Immune Response; Generation of Humoral Immune Response (Plasma and Memory cells); Generation of Cell Mediated Immune Response, T-cell receptor, T-cell maturation, activation and differentiation.

#### **UNIT – V: Immunological Disorders, Tumor Immunity and vaccines:**

Autoimmunity and Autoimmune diseases, Hypersensitivity- Type I Hypersensitivity, Type II Hypersensitivity, Type III Hypersensitivity, Type IV Hypersensitivity; Types of tumors, tumor Antigens, causes and therapy for cancers, Vaccine.

#### **Suggested Books:**

## SEMESTER IV

### Anthropology

**Course Code: BMB-402a**

**Credit Units: 04**

**Pre-requisite:** Basic information of insects.

**Course Outcome:**

- After completion of the course the students will be able to
- Understand the microbial growth in different physiological conditions.
- Learn the phenomenon of nutrient utilization of microbes.
- Comprehend the concept of microbial respiration and their metabolism.

**UNIT-1 Social anthropology:**

history and subject matter; Relationship of social and cultural anthropology with sociology, psychology, history, economics and political science.

**UNIT-2 Concepts of Society;**

Pre-requisite of Human society Individual and Society; Group and its types; Community; Association and Institution Status and Role ;

**Unit -3 Social fact;**

Social Action; Social Structure , Function and Social Organisation ; Structural - Functionalism ; Social System ; Social Conflict

**Unit -4 Techniques and methods:**

Field work/ Ethnography and Survey Research Comparative and Historical Methods

**References:**

	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

## **SEMESTER IV**

### **Neurobiology**

**Course Code: BMB-402b**

**Credit Units: 04**

#### **Course Outcome**

- Gain a strong foundation in the fundamental principles of neurobiology, including the physiology of neurons, synaptic transmission, and cellular mechanisms.
- Understand the molecular basis of neural signaling, including ion channels, receptors, and neurotransmitter systems.
- Identify and describe the key structures of the central and peripheral nervous systems (e.g., brain regions, spinal cord, sensory and motor pathways).
- Understand how neural circuits and networks contribute to sensory processing, motor control, and higher cognitive functions.

#### **UNIT I Neural induction**

Overview of early embryology +details of hydra, C. elegans (indentation), Drosophila (delamination), frog, zebrafish, chick and humans (invagination), 'Organiser' of differentiation- Spemann and Mangold experiments, Keller sandwich, Molecular nature of neural inducer- Noggin, chordin, follistatin, activin, BMP4-WNT signalling- important for formation of neural plate, Neuroblast induction-acheate scute, lateral inhibition and details – notch delta signalling pathway- important for formation of neuroblasts.

#### **UNIT II Polarity and Segmentation**

Overview of polarity and brain architecture, rhombomeres  
AP-Axis in Drosophila-Bicoid and nanos, homeobox genes, ANT-C and BX-C in flies, effect of homeobox genes on hindbrain development in mammals, Upstream control of hox genes, transformers-RA, WNT-b-catenin, FGF  
Mesencephalon/metencephalon boundary organiser-WNT1, ENGRAILED1, FGF8, Forebrain development in mammals-pax genes, DV-axis polarity-sonic hedgehog(shh) induces the ventralisation (floorplate), Dorsal neural tube development- again WNT/BMP and shh signaling, Patterning the cerebral cortex-pax6, emx2, fgf8 and fgf18

#### **UNIT III Genesis and Migration**

Methods to visualise lineage and timing of a neurons birth-thymidine, BrdU, retroviral GFP, thymidine dating  
Molecular control of neuron number-intrinsic proteins and also mitogens like FGF, IGF, What separates neurons from glia, Cerebral and cerebellar cortex formation  
Molecular control of migration of neurons, adult neurogenesis

#### **UNIT IV Determination and differentiation**

Determination-various transcription factors involved (intracellular factors), Asymmetric cell division – eg NB, GMC, neuron – (numb and prospero) and drosophila eye, Local environmental factors- eg Drosophila eye imaginal disc (MF) and chick-quail transplant studies, Histogenesis-loss of competence Eg layers of the cortex by transplantation studies and retina by heterochronic experiments  
Neuronal differentiation form neural stem cell, embryonic stem cell and induced pluripotent cell-basic principle and methodology

#### **UNIT V Axon growth and guidance**

Overview of growth cone and axonal pathfinding. Initial study, Guidance cues for growth cone – Netrin, Semaphorin and Ephrins, Substrates for growth of developing axon – Role of cell adhesion molecule, in growth cone guidance, Mechanism of axon guidance- guidance cues and the control of cytoskeletal dynamic, localized translational of growth cone guidance, changing response to guidance cues, Axon regeneration

Weightage (%)	10	20	10	60

## SEMESTER IV

### Nanotechnology

Course Code: BMB-402c

Credit Units: 04

#### Course outcomes

- Understand nanoscale materials: Learn about the unique properties of materials at the nanoscale
- Manipulate nanomaterials: Master techniques for synthesizing and manipulating nanomaterials
- Develop innovative applications: Create new devices and applications for various sectors

#### Unit I

**Background to Nanoscience:** Definition of Nano, Scientific revolution-Atomic Structure and atomic size, emergence and challenges of nanoscience and nanotechnology, carbon age-new form of carbon (CNT to Graphene), influence of nano over micro/macro, size effects and crystals, large surface to volume ratio, surface effects on the properties.

#### Unit II

**Types of nanostructure and properties of nanomaterials:** One dimensional, Two dimensional and Three dimensional nanostructured materials, Quantum Dots shell structures, metal oxides, semiconductors, composites, mechanical-physical-chemical properties.

#### Unit III

**Application of Nanomaterial:** Ferroelectric materials, coating, molecular electronics and nanoelectronics, biological and environmental, membrane based application, polymer based application.

#### Unit IV

**Surface Nanoscience:** Introduction to surface active agents. Theory and applications. Types of surfactants. Classification, synthesis of surfactant - Shape, size and structure of surfactants. Micelle, Emulsions, Microemulsions & Gels. Kraft temperature, surfactant geometry and packing.

#### Unit V

**Colloidal Nanoscience:** Introduction to colloidal material, surface properties, origin of colloidal particles, preparation & characterization of colloidal particles. Applications of super hydrophilic hydrophobic surfaces, self-cleaning surfaces. Surface viscosity.

<b>Weightage (%)</b>	10	20	10	60

## SEMESTER V

### Medicinal Microbiology

Course Code: BMB-501a

Credit Units: 04

**Pre-requisite:** Basic information of Medical Microbiology

**Course Outcome:**

Upon successful completion of this course the student will be able to:

**CO1:** Explain the morphology, physiology, and genetics of medically significant microorganisms (bacteria, viruses, fungi, and parasites).

**CO2:** Describe the mechanisms of microbial pathogenesis, including host-pathogen interactions and immune responses to infections.

**CO3:** Demonstrate knowledge of infectious diseases caused by various pathogens, their clinical manifestations, and methods of prevention.

**Course Details:- Unit 1: Introduction to Microbiology**

- History and scope of microbiology.
- Classification and taxonomy of microorganisms.
- Morphology and structure of bacteria, viruses, fungi, and parasites.
- Sterilization, disinfection, and biosafety practices in microbiology labs.

---

**Unit 2: Bacterial Pathogenesis**

- Bacterial growth, metabolism, and genetics.
- Mechanisms of pathogenicity: adhesion, invasion, toxins.
- Host-microbe interactions: immune evasion and immune responses.
- Important bacterial pathogens (e.g., *Escherichia coli*, *Staphylococcus aureus*, *Mycobacterium tuberculosis*).

---

**Unit 3: Virology**

- Structure and classification of viruses.
- Viral replication and pathogenesis.
- Laboratory diagnosis of viral infections.
- Key viruses (e.g., influenza, HIV, hepatitis viruses, coronaviruses).
- Vaccines and antiviral drugs.

---

**Unit 4: Medical Mycology**

- Fungal classification and structure.
- Pathogenic fungi and fungal diseases (e.g., *Candida*, *Aspergillus*, *Cryptococcus*).
- Laboratory diagnosis of fungal infections.
- Antifungal agents and resistance mechanisms.

## Unit 5: Parasitology

- Classification and life cycles of medically important parasites.
- Protozoan infections (e.g., malaria, amoebiasis).
- Helminthic infections (e.g., schistosomiasis, tapeworms).
- Laboratory diagnosis and control of parasitic diseases.

### Suggested Books:

- **"Medical Microbiology" by Patrick R. Murray, Ken S. Rosenthal, and Michael A. Pfaller**
  - A comprehensive book covering the microbiology of pathogens, host defenses, and infectious diseases.
  - Focus: Clinical and diagnostic aspects with detailed illustrations.
- **"Sherris Medical Microbiology" by Kenneth J. Ryan and C. George Ray**
  - Offers a clinical approach to microbiology, highlighting mechanisms of disease.
  - Focus: Core concepts, concise explanations, and integrated case studies.
- **"Fields Virology" by David M. Knipe and Peter M. Howley**
  - The definitive text on virology, covering structure, replication, and clinical aspects of viruses.
  - Focus: Research-oriented, ideal for advanced studies.
- **"Medical Mycology" by D. R. Arora**
  - Covers fungal pathogens and associated diseases in detail.
  - Focus: Clinical and diagnostic perspectives on mycology.
- **"Parasitology: A Conceptual Approach" by Eric S. Loker and Bruce V. Hofkin**
  - Modern insights into parasitic organisms, their biology, and diseases.

### Examination Scheme:

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

## **SEMESTER V**

### **Recombinant DNA Technology**

**Course Code: BMB-502**

**Credit Units: 04**

**Pre-requisite:** In-depth knowledge of Molecular Biology

#### **Course Outcome:**

- The student will be familiar with the historical background and important milestones, biosafety and bioethics in genetic engineering.
- The student will be acquainted with tools of RDT like enzymes, vectors and hosts.
- The student will be acquainted with technical knowhow of gene cloning and expression and factors for optimizing the heterologous gene expression.
- The student will be acquainted with the techniques required for gainful applications of genetic engineering.
- The student will be able to apply RDT in different domains of life science, medical, agriculture, forensic and allied fields for the welfare of living beings.

#### **Details of the Course:-**

##### **Unit I: Introduction and scope of RDT:**

Recombinant DNA, Milestones in genetic engineering, Biosafety and Bioethics, Overview of Scope and Applications of Recombinant DNA Technology. Isolation of nucleic acid (plasmid, DNA and RNA), quantification and its purity.

##### **Unit II: Tools and strategies of molecular cloning:**

Enzymes in Recombinant DNA Technology and its applications: Nucleases, Restriction endonucleases, DNA Polymerases, Terminal transferase, Reverse transcriptase, Kinase and Phosphatase, DNA ligases (T4 DNA ligase and *E.coli* DNA ligase).

Structure and strategies of cloning and screening of vectors based upon: Plasmids, Cosmids, Phages, Artificial Chromosomes (BAC and YAC), and hybrid vectors, shuttle vectors, plant vectors (*Agrobacterium* and virus based), expression vectors.

##### **Unit III: Gene Cloning and Expression:**

Cloning and screening strategies (including directional cloning): Cutting and joining vector and insert DNA, transformation of recombinant DNA in host, methods for screening of Transformants. Introduction to gene expression (Prokaryotic and eukaryotic

expression).Synthesis of cDNA, Construction of cDNA library and genomic DNA library.

**Unit IV: Methods in RDT:**

DNA, RNA and Protein analysis: Agarose gel electrophoresis, SDS-PAGE, Gel Shift Assay. Blotting techniques: Southern-, Northern- and Western blotting, probe labeling and hybridization; Polymerase Chain Reaction: Principle, methodology and application; variants of PCR. Molecular markers and their applications; DNA microarray analysis; Chromosome walking; Site directed mutagenesis.

**Unit V: Application of RDT:**

Transgenic Technology: Types approaches and application (Plant and Animals); Gene therapy: Principles, strategies and ethics of human gene therapy; DNA Fingerprinting and application of DNA technology in forensics and parental disputes; Products of recombinant DNA technology: human therapeutic- insulin, hGH, recombinant vaccines.

	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

## SEMESTER V

### Microbial Technology

Course Code: BMB-502a

Credit Units: 04

**Pre-requisite:** In-depth knowledge of Molecular Biology

#### Course Outcome:

The student will be familiar with the historical background and important milestones,

**CO1:** Explain the role of microorganisms in industrial, environmental, agricultural, and healthcare applications.

**CO2:** Describe the principles and techniques of microbial biotechnology, including fermentation, genetic engineering, and bioinformatics.

**CO3:** Analyze the applications of microbial enzymes, biofuels, biopolymers, and other bioproducts in various industries

.Details of the Course:-

#### Unit 1: Introduction to Microbial Technology

- Historical milestones in microbial biotechnology.
- Role of microorganisms in industry, healthcare, and environment.
- Types of microbes used in technology: bacteria, fungi, viruses, and algae.
- Basic tools and techniques in microbial technology (e.g., sterilization, culture methods).

#### Unit 2: Industrial Microbiology

- Fermentation technology: principles, types (submerged and solid-state), and scale-up.
- Industrially important microbes: *Saccharomyces cerevisiae*, *Aspergillus*, *Lactobacillus*.
- Production of primary metabolites (e.g., ethanol, organic acids) and secondary metabolites (e.g., antibiotics, vitamins).
- Bioreactors: design, operation, and process optimization.
- Downstream processing and product recovery.

#### Unit 3: Microbial Enzymes and Applications

- Types of microbial enzymes: amylases, proteases, lipases, cellulases.
- Enzyme production and immobilization techniques.
- Applications in food, pharmaceutical, and biofuel industries.
- Advancements in enzyme technology: directed evolution and recombinant enzymes.

#### Unit 4: Microbial Genetics and Genomics

- Genetic engineering in microbes: tools (plasmids, CRISPR, cloning vectors).
- Recombinant DNA technology and its applications.
- Microbial genomics: sequencing, annotation, and functional studies.

- Synthetic biology and metabolic engineering of microbes for desired products.

### **Unit 5: Environmental Microbial Technology**

- Role of microbes in waste management: biodegradation and bioremediation.
- Microbial treatment of wastewater and solid waste.
- Microbial biofertilizers and biopesticides in sustainable agriculture.
- Role of algae in biofuel production and carbon sequestration.

### **Suggested Books:**

- "Microbial Biotechnology: Fundamentals of Applied Microbiology" by Alexander N. Glazer and Hiroshi Nikaido
- "Industrial Microbiology and Biotechnology" by Michael J. Waites, Neil L. Morgan, and John S. Rockley
- "Manual of Industrial Microbiology and Biotechnology" by Richard H. Baltz, Julian E. Davies, and Arnold L. Demain
- "Principles of Gene Manipulation and Genomics" by Sandy B. Primrose and Richard Twyman
- "Molecular Biotechnology: Principles and Applications of Recombinant DNA" by Bernard R. Glick, Jack J. Pasternak, and Cheryl L. Patten

### **Examination Scheme:**

<b>Components</b>	<b>Internal Assessment</b>			<b>External Evaluation</b>
	<b>Attendance</b>	<b>Class Test</b>	<b>Assignment/ Project/Seminar/Quiz</b>	
<b>Weightage (%)</b>	10	20	10	60

## **SEMESTER V**

### **Bio-Analytical Tools**

**Course Code: BMB-503**

**Credit Units: 04**

**Pre-requisite:** Basic understanding of molecular biology, Physics and chemistry

#### **Course Outcome:**

- Students will learn about the different bio-analytical techniques.
- Students will be able to use critical thinking skills to trouble shoot problems as they occur and determine possible causes.
- Students will be able to apply the knowledge of bio analytical techniques to the most commonly performed laboratory practices.

#### **Course Details:-**

##### **Unit I:**

Simple microscopy, phase contrast microscopy, dark field microscopy, florescence and electron microscopy (TEM and SEM).

##### **Unit II:**

Principle and law of absorption, fluorimetry, colorimetry, spectrophotometry (UV/visible).

##### **Unit III:**

Basic principle of Centrifugation, Speed based types of centrifugation, cell fractionation techniques, isolation of sub- cellular organelles and particles.

##### **Unit IV:**

Introduction to the principle of chromatography. Paper chromatography, thin layer chromatography, column chromatography: silica and gel filtration, affinity and ion exchange chromatography, gas chromatography, HPLC.

##### **Unit V:**

Introduction to electrophoresis. Starch-gel, polyacrylamide gel (native and SDS-PAGE), Agarose-gel electrophoresis, pulse field gel electrophoresis, immuno- electrophoresis, isoelectric focusing, Western blotting. Introduction to Biosensors and Nanotechnology and their applications.

**Suggested Books:**

	<b>Attendance</b>	<b>Class Test</b>	<b>Assignment/ Project/Seminar/Quiz</b>	
<b>Weightage (%)</b>	10	20	10	60

## SEMESTER V

### Bio-Analytical Tools

Course Code: BMB-503a

Credit Units: 04

**Pre-requisite:** Basic understanding of molecular biology, Physics and chemistry

**Course Outcome:**

**CO1:** Explain the principles and working mechanisms of instruments used in microbiological research and diagnostics.

**CO2:** Describe the role of advanced technologies such as microscopy, spectroscopy, chromatography, and electrophoresis in microbial studies.

**CO3:** Understand the applications of molecular and biophysical tools in the analysis and characterization of microorganisms.

**CO4:** Develop proficiency in the operation, calibration, and maintenance of microbiological instruments.

**CO5:** Perform experiments involving techniques such as PCR, chromatography, flow cytometry, and mass spectrometry for microbial analysis.

**Course Details:- Unit 1: Introduction to Instrumentation in Microbiology**

- Overview of the role of instrumentation in microbiology.
- Basics of measurement and calibration.
- Good laboratory practices (GLP) and biosafety in handling instruments.
- Maintenance and troubleshooting of laboratory equipment.

---

**Unit 2: Microscopy Techniques**

- **Optical Microscopy:** Bright-field, dark-field, phase-contrast, and fluorescence microscopy.
- **Electron Microscopy:** Transmission Electron Microscopy (TEM) and Scanning Electron Microscopy (SEM).
- **Confocal Laser Scanning Microscopy:** Principles and applications in microbial imaging.
- Sample preparation techniques for microscopy.

---

**Unit 3: Spectroscopy and Colorimetry**

- **UV-Visible Spectroscopy:** Principles, instrumentation, and applications in microbial growth analysis and enzyme kinetics.
- **Fluorescence Spectroscopy:** Applications in detecting microbial metabolites.
- **Infrared (IR) Spectroscopy:** Identification of microbial cell components.
- **Colorimetry:** Principles and use in biochemical assays.

---

**Unit 4: Chromatography Techniques**

- Principles and types of chromatography.

- **Thin-Layer Chromatography (TLC):** Separation of microbial metabolites.
- **Gas Chromatography (GC):** Analysis of volatile compounds.
- **High-Performance Liquid Chromatography (HPLC):** Quantitative analysis of antibiotics and other metabolites.
- Applications of chromatography in microbial product purification.

---

### **Unit 5: Electrophoresis Techniques**

- Principles of electrophoresis and gel matrix preparation.
- **Agarose Gel Electrophoresis:** DNA/RNA analysis.
- **Polyacrylamide Gel Electrophoresis (PAGE):** Protein profiling and molecular weight determination.
- **Isoelectric Focusing:** Applications in protein separation.
- **Pulse Field Gel Electrophoresis (PFGE):** Microbial genome analysis.

### **Suggested Books:**

1. "Principles of Instrumental Analysis" by Douglas A. Skoog, F. James Holler, and Stanley R. Crouch
2. "Instrumental Methods of Analysis" by Willard, Merritt, Dean, and Settle
3. "Biophysical Chemistry: Principles and Techniques" by Avinash Upadhyay, Kakoli Upadhyay, and Nirmal Nath
4. "Fundamentals of Light Microscopy and Electronic Imaging" by Douglas B. Murphy and Michael W. Davidson
5. "Electron Microscopy: Methods and Protocols" edited by John Kuo

## **SEMESTER V**

### **Food and Dairy Microbiology**

**Course Code: BMB-504**

**Credit Units: 04**

**Pre-requisite:** Basic understanding of Food and Dairy Microbiology

**Course Outcome:** After completion of the course the students will be able to

- Learn and understand the microbial spoilage of food.
- Understand the principles and methods of food preservation.
- Understand the fermented foods and food borne diseases.

#### **Details of the Course:-**

##### **Unit I: Foods as a substrate for microorganisms:**

Intrinsic and extrinsic factors that affect growth and survival of microbes in foods, natural flora and source of contamination of foods in general.

##### **Unit II: Microbial spoilage of various foods:**

Principles, Spoilage of vegetables, fruits, meat, eggs, milk and butter, bread, canned Foods.

##### **Unit III: Principles and methods of food preservation:**

Principles, physical methods of food preservation: temperature (low, high, canning, drying), irradiation, hydrostatic pressure, high voltage pulse, microwave processing and aseptic packaging, chemical methods of food preservation: salt, sugar, organic acids, SO<sub>2</sub>, nitrite and nitrates, ethylene oxide, antibiotics and bacteriocins.

##### **Unit IV: Fermented foods:**

Dairy starter cultures fermented dairy products: yogurt, acidophilus milk, koumiss, kefir, dahi and cheese, other fermented foods: dosa, sauerkraut, soy sauce and tempeh, Probiotics: Health benefits, types of microorganisms used, probiotic foods available in market.

##### **Unit V: Food borne diseases:**

Food intoxications: Staphylococcus aureus, Clostridium botulinum and mycotoxins; Food infections: Bacillus cereus, Vibrio parahaemolyticus, Escherichia coli, Salmonellosis, Shigellosis, Yersinia enterocolitica, Listeria monocytogenes and Campylobacter jejuni.

**Suggested Books:**

<b>S. No.</b>	<b>Name of Authors/Books/Publishers</b>	<b>Year of Publication/Reprint</b>
<b>Text Books</b>		
1.	Adams MR and Moss MO. (1995). Food Microbiology. 4 <sup>th</sup> edition, New Age International (P) Limited Publishers, New Delhi, India.	1995
2.	Banwart JM. (1987). Basic Food Microbiology. 1st edition. CBS Publishers and Distributors, Delhi, India.	1987
<b>Reference Books</b>

2.	Dillion VM and Board RG. (1996). Natural Antimicrobial Systems and Food Preservation. CAB International, Wallingford, Oxon.	1996

**Examination Scheme:**

<b>Components</b>	<b>Internal Assessment</b>			<b>External Evaluation</b>
	<b>Attendance</b>	<b>Class Test</b>	<b>Assignment/Project/Seminar/Quiz</b>	
<b>Weightage (%)</b>	10	20	10	60

## SEMESTER V

### Paleontology

Course Code: BMB-504

Credit Units: 04

Pre-requisite: **Basic understanding of Paleontology**

**Course Outcome:** After completion of the course the students will be able to

**CO1:** Demonstrate an understanding of the fundamental principles and concepts of paleontology, including fossil formation, fossilization processes, and the history of life on Earth.

**CO2:** Describe the major events in the history of life, including the evolution and extinction of organisms, using evidence from the fossil record.

**CO3:** Understand and explain the role of paleontology in reconstructing past climates, ecosystems, and evolutionary processes.

#### Details of the Course:-

#### Unit 1: Introduction to Paleontology

- **Overview of Paleontology:** Definition, scope, and significance in understanding Earth's history.
- **History of Paleontology:** Key milestones in the development of paleontological science.
- **Branches of Paleontology:** Invertebrate paleontology, vertebrate paleontology, paleobotany, micropaleontology, and ichnology.
- **Fossils:** Types of fossils (body fossils, trace fossils, chemical fossils), fossilization process, and taphonomy.
- **Dating of Fossils:** Relative dating vs. absolute dating, principles of stratigraphy, and radiometric dating methods.

---

#### Unit 2: Principles of Stratigraphy

- **Stratigraphy and Paleontology:** Introduction to stratigraphy and its significance in paleontology.
- **Principles of Stratigraphy:** Law of superposition, law of original horizontality, law of lateral continuity, and biostratigraphy.
- **Sequence Stratigraphy:** Concepts and methods used to interpret fossil sequences.
- **Stratigraphic Correlation:** Techniques for correlating rock layers across regions using fossils.
- **Lithostratigraphy vs. Biostratigraphy:** Differences and uses of lithology and fossil content for stratigraphic correlation.

---

#### Unit 3: Fossilization and Fossil Preservation

- **Modes of Fossilization:** Permineralization, casting, molding, carbonization, and amber preservation.
  - **Taphonomy:** Study of how organisms decay, become fossilized, and are preserved.
  - **Biases in the Fossil Record:** Preservation potential, environmental factors, and geological processes affecting fossilization.
  - **Microfossils:** Types and significance of microfossils in paleoenvironmental reconstruction.
  - **Exceptional Fossils:** Lagerstätten and the preservation of soft tissues.
-

## Unit 4: Paleobotany

- **Early Plants and Evolution:** Origin and early evolution of plants.
- **Plant Fossils:** Types of plant fossils (wood, leaves, spores, and pollen).
- **Plant Fossilization:** Processes involved in the fossilization of plants and examples of famous plant fossils.
- **Paleoclimate Reconstruction:** Using plant fossils to reconstruct past climates.
- **Mesozoic and Cenozoic Plant Evolution:** Key developments in plant evolution during the Mesozoic and Cenozoic eras.

---

## Unit 5: Invertebrate Paleontology

- **Introduction to Invertebrates:** Classification and major groups (sponges, cnidarians, mollusks, arthropods, echinoderms, etc.).
- **Fossilization of Invertebrates:** Preservation of shells, exoskeletons, and soft-bodied organisms.
- **Key Invertebrate Fossils:** Trilobites, brachiopods, ammonites, gastropods, and bivalves.
- **Biostratigraphy and Invertebrates:** Using invertebrate fossils for stratigraphic dating and correlation.
- **Ecology of Invertebrate Fossils:** Paleoecology of ancient invertebrates and their environments.

### Suggested Books:

- "Principles of Paleontology" by David M. Raup and Steven M. Stanley
- "Paleontology: A Brief History of Life" by Kent C. Condie
- "In the Blink of an Eye: How Vision Sparked the Big Bang of Evolution" by Andrew Parker
- "Stratigraphy and Sedimentation" by Donald R. Prothero
  
- "Principles of Stratigraphy" by W. S. MacLeod
- "Geologic Time: Scale and Correlation" edited by D. H. Tarling

## SEMESTER V

### Medical Microbiology Lab

**Course Code: BMB-551**

**Credit Units: 02**

**Pre-requisite:** Basic information of Medical Microbiology Lab

#### **Course Outcome:**

Upon successful completion of this course the student will be able to:

- This course provides learning opportunities in the basic principles of medical microbiology and infectious disease.
- It covers mechanisms of infectious disease transmission, principles of aseptic practice, and the role of the human body's normal microflora.
- The course provides the conceptual basis for understanding pathogenic microorganisms and the mechanisms by which they cause disease in the human body.
- It also provides opportunities to develop informatics and diagnostic skills, including the use and interpretation of laboratory tests in the diagnosis of infectious diseases.
- To understand the importance of pathogenic bacteria in human disease with respect to infections of the respiratory tract, gastrointestinal tract, urinary tract, skin and soft tissue.
- Helps to understand the use of lab animals in medical field.
- Recall the relationship of this infection to symptoms, relapse and the accompanying pathology.
- Explain the methods of microorganisms control, e.g. chemotherapy & vaccines. Solve problems in the context of this understanding.

#### **Details of the Course:-**

Sl. No.	Contents	Contact Hours
1	Study of composition and use of important differential media for identification of bacteria: EMBAgar, McConkey agar, Mannitol salt agar, Deoxycholate citrate agar, TCBS	3
2	Study of bacterial flora of skin by swab method	3
3	Perform antibacterial sensitivity by Kirby-Bauer method	3
4	Identification of human blood groups.	3
5	To perform Total Leukocyte Count of the given blood sample.	3
6	To perform Differential Leukocyte Count of the given blood sample.	3
7	To separate serum from the blood sample (demonstration).	3
8	To perform immunodiffusion by Ouchterlony method.	3

**Suggested Books:**

S.No.	Name of Authors/Books/Publishers	Year of Publication/Reprint
<b>Text Books</b>		
1.	Ananthanarayan R. and Paniker C.K.J. Textbook of Microbiology. 8th edition, University Press Publication	2009

Components	Internal Assessment			External Evaluation
	Attendance	Viva-Voce	Practical Record	
Weightage (%)	10	20	10	60

## SEMESTER V

### Recombinant DNA Technology Lab

Course Code: BMB-552

Credit Units: 02

**Pre-requisite:** Basic experience of molecular biology techniques

#### Course Outcome:

- Students will be able to isolate and analyze DNA/plasmid DNA and protein.
- Students will be able to digest and ligate the DNA molecules.
- Students will be able to design primers and amplification of DNA by PCR.
- Students will be able to learn the techniques of cloning gene in plasmid vectors.
- Students will be able to screen the positive transformants with the gene cloned through reporter based assays.

#### Details of the Course:-

S. No.	Contents	Contact Hours
1	Isolation of Vector/plasmid DNA	3
2	Quantification of Nucleic acid and determination of its purity	3
3	Isolation of protein	3
4	Restriction digestion of DNA and its analysis by AGE	6
5	Ligation of DNA molecules	3
6	Primer designing	3
7	Polymerase chain reaction	6
8	Preparation of competent cells	3
9	Transformation in bacteria and reporter gene assay	3

**Suggested Books:**

<b>S. No.</b>	<b>Name of Authors/Books/Publishers</b>	<b>Year of Publication/Reprint</b>
<b>Text Books</b>

## SEMESTER V

### Bio-Analytical Tools Lab

**Course Code: BMB-553**

**Credit Units: 02**

**Pre-requisite:** Basic knowledge of immunology and molecular biology

#### Course Outcome:

- Students will gain new insights about different bioanalytical procedures.
- Students will be able to use critical thinking to develop skill to trouble shoot the problems as they occur and to determine the possible causes.
- Students will be able to apply the knowledge of basic practical to the most commonly performed applications in the bioanalysis.

#### Details of the Course:-

S. No.	Contents	Contact Hours
1	Native gel electrophoresis of proteins	3
2	SDS-polyacrylamide slab gel electrophoresis of proteins under reducing conditions	3
3	Preparation of the sub-cellular fractions of rat liver cells	3
4	Preparation of protoplasts from leaves	6
5	Separation of amino acids by paper chromatography	3
6	To identify lipids in a given sample by TLC	3
7	To verify the validity of Beer's law and determine the molar extinction coefficient of NADH	6

**Suggested Books:**

## SEMESTER V

### Food and Dairy Microbiology Lab

**Course Code: BMB-554**

**Credit Units: 02**

**Pre-requisite:** Basic understanding of Food and Dairy Microbiology

**Course Outcome:** After completion of the course the students will be able to

- Gain knowledge about fermentation techniques used in food and dairy industry.
- Understand the role of microorganisms in fermentation.
- Gain skills to control fermentation process.
- Learn the microbiology of different types of fermented food products.

**Details of the Course:-**

S. No.	Contents	Contact Hours
1	Bacterial counts of food samples.	2
2	Quantitative analysis of milk by standard plate count method.	2
3	Isolation and counting of fecal bacteria in water.	2
4	Test of quality of milk by methylene blue dye reduction test.	2
5	Detection of mastitis through milk test.	2
6	Isolation of bacteria and fungi from spoiled food.	2
7	Microbial populations in fruit juices, soft drinks and ice-cream.	2
8	Isolation of microorganisms from curd.	2
9	Isolation of lipolytic organisms from butter.	2
10	Visit to microbiology based food industry and observe the unit operation procedures.	2

**Suggested Books:**

<b>S. No.</b>	<b>Name of Authors/Books/Publishers</b>	<b>Year of Publication/Reprint</b>

## General Proficiency-V

**Course Code: GP-501**

**Credit Units: 01**

**Pre-requisite:** Basic information of English Language

### **Course Outcome:**

- Effective communication: The ability to exchange ideas and information in a way that builds trust and respect
- Critical and analytical thinking: The ability to explore issues and ideas before forming a conclusion
- Integrative thinking: The ability to synthesize knowledge across different domains and perspectives
- Preparing students to be engaged citizens: Preparing students to participate in political culture and thrive in a rapidly evolving world

### **Details of the Course:-**

General language proficiency is the ability to read, write, listen, and speak in real-life situations. To test this, a test is usually developed for each skill with questions that are designed to imitate real life.

A syllabus is a guide to a course that includes course policies, rules, regulations, required texts, and a schedule of assignments and seminar.

### **Examination Scheme:**

<b>Components</b>	<b>Internal Assessment</b>			<b>External Evaluation</b>
	<b>Attendance</b>	<b>Class Test</b>	<b>Assignment/ Project/Seminar/Quiz</b>	
<b>Weightage (%)</b>	10	20	10	60

## **SEMESTER VI**

### **Microbiological Analysis of Air and Water**

**Course Code: BMB-601**

**Credit Units: 04**

**Pre-requisite:** Basic information of air and water microbiology.

**Course Outcome:**

- Students will become familiar with aeromicrobiology.
- Students will be able to learn the collection of air sample and its analysis.
- Students will be familiarized with the water microbiology and control measures.
- Students will be able to explain the microbiological analysis of water.

**Details of the Course:-**

**Unit I: Aeromicrobiology:**

Bioaerosols, Air borne microorganisms (bacteria, Viruses, fungi, each from every category) and their impact on human health, and environment, significance in food and pharma industries and operation theatres, allergens.

**Unit II: Air Sample Collection and Analysis:**

Bioaerosol sampling, air samplers, methods of analysis, CFU, culture media for bacteria and fungi, Identification characteristics.

**Unit III: Control Measures:**

Fate of bioaerosols, inactivation mechanisms – UV light, HEPA filters, desiccation, Incineration.

**Unit IV: Water Microbiology:**

Water borne pathogens, water borne diseases.

**Unit V: Microbiological Analysis of Water:**

Sample Collection, Methods to detect portability of water samples: (a) standard qualitative procedure: presumptive/MPN tests, confirmed and completed tests for fecal coliforms (b) Membrane filter technique. Control measures by precipitation, chemical disinfection, filtration.

## SEMESTER VI

### Hospital Management

Course Code: BMB-601a

Credit Units: 04

**Pre-requisite:** Basic information of Hospital management

#### Course Outcome:

**CO1:** Demonstrate a comprehensive understanding of the healthcare system, hospital operations, and the role of hospital management in the delivery of quality healthcare services.

**CO2:** Understand key concepts in healthcare management such as hospital organization, patient care management, healthcare policies, and legal and ethical aspects of hospital administration.

**CO3:** Explain the various functional areas of hospital management, including finance, human resources, marketing, information systems, and logistics, and how they contribute to the overall effectiveness of the institution.

**CO4:** Apply analytical tools and management techniques to solve operational, financial, and strategic issues in hospital management.

**CO5:** Use healthcare data to analyze hospital performance, improve decision-making, and develop strategies to optimize hospital operations and patient care services.

#### Details of the Course:-

##### Unit 1: Introduction to Healthcare and Hospital Management

- **Healthcare System Overview:** Structure, components, and functions of healthcare systems.
- **Introduction to Hospital Management:** Importance and challenges in managing hospitals.
- **Types of Healthcare Organizations:** Public vs private hospitals, general vs specialized hospitals.
- **Hospital Organization Structure:** Key departments, staff roles, and inter-departmental collaboration.
- **Healthcare Delivery Models:** Models of healthcare delivery (e.g., primary, secondary, and tertiary care).

##### Unit 2: Hospital Administration and Organizational Structure

- **Management Functions:** Planning, organizing, staffing, leading, and controlling in hospital settings.
- **Hospital Organizational Structure:** Hierarchy, governance, and administration of healthcare facilities.
- **Leadership in Healthcare:** Leadership theories, leadership styles, and their application in healthcare.
- **Human Resource Management in Hospitals:** Recruitment, training, performance management, and workforce planning in healthcare organizations.
- **Role of Hospital Administrator:** Responsibilities, skills, and competencies of a hospital manager.

##### Unit 3: Financial Management in Hospitals

- **Healthcare Financial Management:** Principles of hospital finance, budgeting, and financial reporting.
- **Revenue Management:** Billing, coding, and insurance reimbursements in hospitals.
- **Cost Management and Control:** Cost structures, cost-benefit analysis, and cost control in hospital settings.
- **Financial Planning and Forecasting:** Budgeting, cash flow management, and financial decision-making.

- **Healthcare Insurance Systems:** Overview of public and private insurance models, claims processing, and reimbursement.

---

#### **Unit 4: Hospital Operations Management**

- **Hospital Operations and Logistics:** Managing hospital resources, procurement, and supply chain management.
- **Patient Flow and Bed Management:** Techniques to manage patient intake, bed occupancy, and discharge planning.
- **Quality Assurance and Improvement:** Implementing and maintaining quality standards in patient care.
- **Hospital Information Systems (HIS):** Role of information systems in managing hospital data, Electronic Health Records (EHR), and telemedicine.
- **Facility Management:** Maintenance of hospital infrastructure, safety protocols, and disaster preparedness.

---

#### **Unit 5: Patient Care and Service Delivery**

- **Patient-Centered Care:** Concepts and practices of patient care, focusing on patient satisfaction and experience.
- **Medical and Nursing Services Management:** Coordination of medical, nursing, and allied health services in hospitals.
- **Clinical Pathways and Protocols:** Standardization of treatment processes and clinical guidelines.
- **Patient Safety and Risk Management:** Identifying and mitigating risks, ensuring patient safety.
- **Healthcare Marketing and Public Relations:** Strategies for patient retention, hospital branding, and reputation management.

#### **Suggested Books:**

- **"Hospital Administration and Management" by S. L. Goel & Rajeev Kumar**
- **"Hospital and Health Services Administration: Principles and Practices" by S. A. Begum**
- **"Principles of Hospital Administration and Planning" by B.M. Sakharkar**
  
- **"Healthcare Systems: A Global Perspective" by C. R. K. Rao**
- **"Introduction to Health Care Management" by Sharon B. Buchbinder & Nancy H. Shanks**
- **"Health Care USA: Understanding Its Organization and Delivery" by Harry A. Sultz & Kristina M. Young**

## SEMESTER VI

### Soil and Water Microbiology

**Course Code: BMB-601b**

**Credit Units: 04**

**Pre-requisite:** Basic information of Hospital management

#### Course Outcome:

**CO1:** Demonstrate a comprehensive understanding of the types of microorganisms (bacteria, fungi, protozoa, algae, viruses) present in soil and water ecosystems.

**CO2:** Identify the different microbial communities in diverse soil and water environments and their role in ecosystem functioning.

**CO3:** Explain the fundamental microbial processes involved in nutrient cycling in soil and water (e.g., nitrogen fixation, carbon cycling, phosphorus solubilization).

**CO4:** Analyze the role of microorganisms in the biogeochemical cycles (nitrogen, carbon, sulfur, phosphorus) in soil and water ecosystems.

#### Details of the Course:-

##### Unit 1: Introduction to Soil and Water Microbiology

- **Overview of Microbiology:** Basics of microbiology, types of microorganisms (bacteria, fungi, viruses, protozoa, algae).
- **Soil and Water Ecosystems:** Basic concepts of soil and water ecosystems, significance of microorganisms in these environments.
- **Environmental Microbiology:** Role of microorganisms in the environment, biogeochemical cycles, and environmental sustainability.
- **Soil and Water Interactions:** Interaction between soil microorganisms and water bodies, influence on soil structure, water retention, and quality.

---

##### Unit 2: Soil Microbiology

- **Soil Composition:** Understanding soil as an ecosystem—minerals, organic matter, and soil texture.
- **Soil Microbial Communities:** Types of microorganisms in soil (bacteria, fungi, actinomycetes), and their distribution in different soil environments.
- **Microbial Activities in Soil:** Microbial processes involved in nutrient cycling—nitrogen fixation, carbon cycling, phosphorus solubilization, sulfur oxidation.
- **Soil Enzyme Activity:** Role of enzymes in soil, degradation of organic matter, and nutrient transformation.
- **Microbial Ecology of Soil:** Soil microbial diversity, environmental factors affecting microbial communities (temperature, moisture, pH, oxygen levels).

---

##### Unit 3: Water Microbiology

- **Water Microorganisms:** Microbial communities in freshwater and marine ecosystems—bacteria, protozoa, and algae.
- **Microbial Ecology of Aquatic Environments:** Distribution and role of microorganisms in rivers, lakes, ponds, and oceans.
- **Water Quality and Contamination:** Microbial indicators of water quality (e.g., coliforms), waterborne diseases, and sources of contamination (e.g., sewage, industrial waste).

- **Microbial Pathogens in Water:** Pathogenic microorganisms in water—bacteria (e.g., E. coli), viruses, protozoa, and their impact on human health.
- **Water Treatment and Purification:** Biological treatment methods, microbial bioremediation of polluted water, role of microorganisms in wastewater treatment.

#### Unit 4: Microbial Biogeochemical Cycles

- **Nitrogen Cycle:** Role of microorganisms in nitrogen fixation, nitrification, denitrification, and ammonia oxidation.
- **Carbon Cycle:** Microbial degradation of organic matter, respiration, methane production, and carbon dioxide release.
- **Sulfur Cycle:** Role of sulfur-reducing and sulfur-oxidizing bacteria in sulfur cycling.
- **Phosphorus Cycle:** Microbial role in phosphorus solubilization and mobilization in soil and water.
- **Iron, Manganese, and Other Nutrient Cycles:** Microbial interactions with other elements in the environment.

#### Unit 5: Soil and Water Pollution and Bioremediation

- **Pollutants in Soil and Water:** Types of pollutants (organic, inorganic, heavy metals) and their impact on soil and water ecosystems.
- **Microbial Degradation of Pollutants:** Role of microorganisms in breaking down pollutants, bioremediation techniques, and enhancing microbial activity for cleanup.
- **Bioremediation in Soil:** In situ and ex situ bioremediation methods, applications in agriculture and environmental management.
- **Bioremediation in Water:** Microbial treatment of wastewater, oil spills, and other water pollutants.
- **Heavy Metal Contamination:** Impact of heavy metals (e.g., lead, arsenic) on microbial communities and strategies for removal using microbial processes.

##### Suggested Books:

- Gerard J. Tortora, Berdell R. Funke, Christine L. Case
- Joanne Willey, Linda Sherwood, Christopher J. Woolverton
- Marjorie Kelly Cowan, Kathleen Park Talaro

##### Examination Scheme:

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

## **SEMESTER VI**

### **Marine Microbiology**

**Course Code: BMB-602**

**Credit Units: 04**

**Pre-requisite:** In-depth knowledge of marine microbiology.

#### **Course Outcome:**

- The student will be able to understand marine environment.
- The student will be able to know the methods of marine microbiology.
- The student will be able to know role of microbes in ocean processes.
- The students will be able to know recent trends in marine microbiology.

#### **Details of the Course:-**

##### **UNIT I: Marine Environment:**

World's oceans & Seas, Physio – Chemical properties of marine water, marine microbial habitat: water column, sediments, coastal ecosystems, mangroves salt marshes. Bio-films & Microbial mats. Microbial life at surface of living & nonliving systems and microbial interactions. Quorum sensing in marine microbes and significance. Metabolic diversity and importance of microbial communities, Photo trophy & primary productivity.

##### **UNIT II: Methods in Marine Microbiology:**

Sampling methods of different habitat of oceans and screening by CLSM & FCM. Importance of Culturable & non-Cultural microorganisms. Molecular tools to study marine diversity. Limitations of analysis of nucleic acid directly from marine environment.

##### **UNIT III: Role of Microbes in ocean processes:**

Bioenergetics, Carbon & Nitrogen cycling in ocean, Photosynthesis and Primary productivity. Eutrophication of coastal areas. Microbial loop in ocean food web. Microbial processes and climate change. Bio – fouling & bio – deterioration, indicator organisms and pollution control. Symbiosis of microalgae with animals: Chemoautotrophic prokaryotes with animals. Symbionts of sponges, mixotrophy in protists. Metabolic consortia and mutualism between prokaryotes.

##### **UNIT IV: Marine Microbes:**

Bacterial and viral disease of fresh water, seawater, aqua culture: fish, bivalve mollusks, Crustaceans, corals. Diagnosis methods. Control of diseases. Biodegradation and Bioremediation of marine pollutants (oil, Organic comp. etc.).

## UNIT V: Recent trends in Marine Microbiology:

Recently identified microorganisms of marine ecosystem, their applications in present and future industries.

### Suggested Books:

S. No.	Name of Authors/Books/Publishers	Year of Publication/Reprint
<b>Text Books</b>		
1.	Munn, C. 2011. Marine Microbiology: Ecology and Applications. GS Publications. PP- 648.	2011
2	Sekwon Kim. 2013. Marine Microbiology: Bioactive compounds and Biotechnological applications. Wiley VCH.	2013
<b>Reference Books</b>		
1.	Paul, J. 2001. Marine Microbiology. Academic Press. PP-666.	2001

### Examination Scheme:

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

## SEMESTER VI

### Vetinary Sciences

Course Code: BMB-602a

Credit Units: 04

**Pre-requisite:** In-depth knowledge of Vetinary science

The student will be able to understand marine environment.

- Understand the anatomy, physiology, and pathology of animals and the role of the veterinarian in maintaining animal health
- Develop skills in diagnosing and treating common and complex diseases in animals, using appropriate diagnostic and therapeutic methods.
- Gain proficiency in performing routine and emergency surgeries, managing post-operative care, and applying advanced surgical techniques..

#### Details of the Course:-

- **Unit 1: Introduction to Veterinary Science**
  - Overview of veterinary science and animal health care
  - Veterinary profession and its importance
  - Veterinary ethics and laws
- **Unit 2: Anatomy and Physiology**
  - Animal cell structure and functions
  - Organ systems: Digestive, respiratory, circulatory, and reproductive systems
  - Comparative anatomy in domestic animals
- **Unit 3: Animal Husbandry and Management**
  - Livestock farming: Cattle, sheep, goats, and poultry
  - Animal breeding and genetics
  - Animal nutrition and feeding systems
- **Unit 4: Microbiology and Immunology**
  - Microbial flora in animals
  - Animal pathogens (bacteria, fungi, viruses)
  - Immune system response and vaccination

#### Suggested Books:

- Textbook of Veterinary Internal Medicine"
- Veterinary Surgery: Small Animal"
- Veterinary Microbiology and Microbial Disease"

#### Examination Scheme:

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

## **SEMESTER VI**

### **Biodiversity**

**Course Code: BMB-602b**

**Credit Units: 04**

**Pre-requisite:** In-depth knowledge of biodiversity

The student will be able to understand biodiversity

- Demonstrate an understanding of the different levels and types of biodiversity (species, genetic, and ecosystem diversity).
- Analyze biodiversity using various methods and indices, including species richness, evenness, and diversity indices.
- Critically assess the impact of human activities on biodiversity, including habitat destruction, climate change, and overexploitation.

**Details of the Course:-**

#### **Unit 1: Concept and Importance of Biodiversity**

- Definition of biodiversity: species, genetic, and ecosystem diversity
- Importance of biodiversity for ecosystem stability and human well-being
- Biodiversity at global, regional, and local levels

#### **Unit 2: Levels of Biodiversity**

- Species diversity, genetic diversity, and ecosystem diversity
- Measuring biodiversity (species richness, evenness, and diversity indices)
- Methods of biodiversity assessment and monitoring

#### **Unit 3: Evolution and Origin of Biodiversity**

- Theories of evolution (Darwinism, Neo-Darwinism)
- Speciation and the process of adaptive radiation
- Origin of biodiversity in different ecological zones

#### **•Unit 4: Biogeography and Distribution of Biodiversity**

- Global patterns of biodiversity (latitudinal gradients, endemism)
- Major biomes of the world (tropical forests, deserts, grasslands, etc.)
- Human impact on the distribution of biodiversity

**Suggested Books:**

- "Biodiversity"
- **"Conservation Biology: Evolution in Action"**
- **"Biodiversity and Conservation"**

**Examination Scheme:**

<b>Components</b>	<b>Internal Assessment</b>			<b>External Evaluation</b>
	<b>Attendance</b>	<b>Class Test</b>	<b>Assignment/ Project/Seminar/Quiz</b>	
<b>Weightage (%)</b>	10	20	10	60

## **SEMESTER VI**

### **Bioinformatics**

**Course Code: BMB-603**

**Credit Units: 04**

**Pre-requisite:** Basic knowledge of computer application

#### **Course Outcome:**

- Students will be able to understand basics of internet and computers along with information on various databases.
- Students will be able to understand application of bioinformatics in biotechnology.
- Students will be able to understand sequence alignment and various algorithms for it.
- Students will be able to understand and interpret sequence annotation and its retrieval.
- The information about various biologically important databases will be made available to students.

#### **Details of the Course:-**

##### **UNIT – I:**

History of Bioinformatics, Basics of Internet and Computers, Various databases, Bioinformatics and its role in central dogma of molecular biology.

##### **UNIT – II:**

The notion of Homology, Sequence Information Sources, EMBL, GenBank, Entrez, Unigene, Understanding the structure of each source and using it on the web.

##### **UNIT – III:**

Various Sequences tools, Pairwise Alignments, Introducing to BLAST, using it on the web, Interpreting results, Multiple Sequence Alignment, Phylogenetic Analysis.

##### **UNIT – IV:**

Searching Databases, SRS, Entrez, Sequence Similarity Searches-BLAST, FASTA, Data Submission, Genome Annotation, Pattern and repeat finding, Gene identification tools.

##### **UNIT – V:**

Protein Information Sources, PDB, SWISSPROT, TREMBL, Understanding the structure of each source and using it on the web. Introduction of Data Generating Techniques and Bioinformatics problem posed by them-Restriction Digestion, Chromatograms, Blots, PCR, Microarrays, Mass Spectrometry.

**Suggested Books:**

S. No.	Name of Authors/Books/Publishers	Year of Publication/Reprint
<b>Text/Reference Books</b>		
1.	Bioinformatics: Principles and Applications. Ghosh Z. and Bibekanand M., Oxford University Press, 2008.	2015
2.	Genome analysis and bioinformatics: a practical approach. T.R. Sharma, I.K. International Publishing House Pvt. Ltd., 2009.	2009

4.	Discovering Genomics, Proteomics and Bioinformatics, Campbell A. M., Heyer L. J., II Edition. Benjamin Cummings, 2006.	2006
5.	Bioinformatics: A practical guide to analysis of genes and proteins, Andreas D. Baxevanis, Wiley Student edition,	2006
6.	Bioinformatics, Sequence and genome analysis by David W. Mount, Second Edition, CSHL Press, 2004	2004

**Examination Scheme:**

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

## **SEMESTER VI**

### **Developmental biology and embryology**

**Course Code: BMB-603a**

**Credit Units: 04**

**Pre-requisite:** Basic knowledge of Developmental biology and embryology

Course Outcome:

- Describe the key events in the development of organisms, from fertilization to adulthood, including cellular division, differentiation, and morphogenesis..
- Understand the molecular and genetic basis of development, including gene expression regulation, transcription factors, signaling pathways, and the role of master regulators in cell differentiation.
- Explain the processes of fertilization, cleavage, gastrulation, and neurulation, and their importance in shaping the embryonic body plan.

#### **Details of the Course:-**

##### **Unit 1: Introduction to Developmental Biology**

- Basic concepts of developmental biology
- Historical background and importance of model organisms (e.g., Drosophila, Xenopus, mouse, chick)
- Overview of developmental stages (zygote to adult)

##### **Unit 2: Fertilization**

- Process of fertilization in animals and plants
- Molecular events during fertilization
- Mechanisms of sperm-egg interaction and activation

##### **Unit 3: Early Embryonic Development**

- Cleavage and formation of the blastula
- Development of the germ layers (ectoderm, mesoderm, endoderm)
- Patterning of the embryo and axis formation (e.g., anterior-posterior, dorsal-ventral)

##### **Unit 4: The Role of Genes in Development**

- Gene expression regulation in early development
- Transcription factors and signaling pathways
- Master regulators in development (e.g., Hox genes, morphogens)

**Suggested Books:**

- Developmental Biology"
- "Molecular Biology of the Cell"
- Embryology: A Color Atlas"

**Examination Scheme:**

<b>Components</b>	<b>Internal Assessment</b>			<b>External Evaluation</b>
	<b>Attendance</b>	<b>Class Test</b>	<b>Assignment/ Project/Seminar/Quiz</b>	
<b>Weightage (%)</b>	10	20	10	60

## **SEMESTER VI**

### **Population biology**

**Course Code: BMB-603b**

**Credit Units: 04**

**Pre-requisite:** Basic knowledge of Population biology

Course Outcome:

- Describe and analyze different population growth models (exponential and logistic) and their applicability in real-world scenarios.
- Apply Hardy-Weinberg equilibrium and understand the role of genetic drift, migration, mutation, and natural selection in shaping population genetics.
- Examine the interactions between species (competition, predation, mutualism) and understand their impact on population size and distribution.

### **Details of the Course:-**

#### **Unit 1: Introduction to Population Biology**

- Definition and scope of population biology
- Basic concepts: population, population density, dispersion, and growth
- Historical development of population biology

#### **Unit 2: Population Growth and Regulation**

- Exponential and logistic growth models
- Carrying capacity and density-dependent vs. density-independent factors
- Factors influencing population regulation (food, predation, disease, competition)

#### **Unit 3: Life History Strategies**

- Life history theory: r-strategists vs. K-strategists
- Reproductive strategies and their impact on population dynamics
- Age structure, generation time, and reproductive investment

#### **Unit 4: Population Genetics**

- Hardy-Weinberg equilibrium
- Gene flow, genetic drift, mutation, and selection
- Evolutionary forces shaping population genetic structure

#### **Suggested Books:**

- "Population Ecology: A Unified Study of Animals and Plants"
- "Introduction to Population Ecology"
- "Principles of Population Genetics"

**Examination Scheme:**

<b>Components</b>	<b>Internal Assessment</b>			<b>External Evaluation</b>
	<b>Attendance</b>	<b>Class Test</b>	<b>Assignment/ Project/Seminar/Quiz</b>	
<b>Weightage (%)</b>	10	20	10	60

## SEMESTER VI

### Microbiological Analysis of Air and Water Lab

**Course Code: BMB-651**

**Credit Units: 02**

**Pre-requisite:** Basic information of air and water microbiology.

**Course Outcome:**

- Students will become familiar with aeromicrobiology.
- Students will be able to learn the collection of air sample and its analysis.
- Students will be familiarized with the water microbiology and control measures.
- Students will be able to explain the microbiological analysis of water.

**Details of the Course:-**

Note: A college must offer 70% of the below listed experiments. The remaining 30% experiments may be modified by college according to facilities available.

S. NO.	CONTENTS	CONTACT HOURS
1	Introduction to the Basic Microbiology Laboratory Practices and Equipments.	2
2	Analysis of air and water - pH, moisture content, water holding capacity, percolation, capillary action.	2
3	Isolation of microbes (bacteria & fungi) from contaminated water.	2
4	Isolation and enumeration of bacteria from air.	2
5	Assessment of microbiological quality of water.	2
6	Determination of BOD of waste water sample.	2
7	Assessment of microbiological quality of air.	2
8	Determination of COD of waste water sample.	2

**Suggested Books:**

<b>S. No.</b>	<b>Name of Authors/Books/Publishers</b>	<b>Year of Publication/Reprint</b>
<b>Text Books</b>

## SEMESTER VI

### Marine Microbiology Lab

Course Code: BMB-652

Credit Units: 02

**Pre-requisite:** Basic information of Marine Microbiology

**Course Outcome:**

- The student will acquire practical skills of marine environment.
- The student will be able to know the methods of marine microbiology.
- The student will be able to know role of microbes in ocean processes.
- The students will be able to know recent trends in marine microbiology.

**Details of the Course:-**

S. No.	Contents	Contact Hours
1	Isolation and identification of microbes from mangroves, coastal waters and sediments with special emphasis on sample collection methodology, collection trips in boats/ trawlers.	2
2	Assessment of salt requirement of marine isolates from different ecosystem.	2
3	Analysis of physico-chemical parameters.	2
4	Study of biofilm microorganisms.	2
5	Hydrolytic enzyme profiling of the marine bacterial isolates.	2
6	Nitrification and denitrification by the marine bacterial isolates.	2

**Suggested Books:**

S. No.	Name of Authors/Books/Publishers	Year of Publication/Reprint
<b>Text Books</b>		
1.	Hunter-Cevera, J., Karl, D. and Buckley, M., Marine Microbial Diversity: the key to Earth's habitability, American Academy of Microbiology.	2005
2.	Munn, C. Marine Microbiology: ecology and applications, Garland Science, Taylor and Francis group, N.Y.	2018

	<b>Attendance</b>	<b>Viva-Voce</b>	<b>Practical Record</b>	
<b>Weightage (%)</b>	10	20	10	60

## SEMESTER VI

### Bioinformatics Lab

**Course Code: BMB-653**

**Credit Units: 02**

**Pre-requisite:** Basic knowledge of computer application

**Course Outcome:**

- Students will be able to understand basics of internet and computers along with information on various databases.
- Students will be able to understand application of bioinformatics in biotechnology.
- Students will be able to understand sequence alignment and various algorithms for it.
- Students will be able to understand and interpret sequence annotation and its retrieval.
- The information about various biologically important databases will be made available to students.

**Details of the Course:-**

**Note:** A college must offer 70% of the below listed experiments. The remaining 30% experiments may be modified by college according to facilities available.

S. NO.	CONTENTS	CONTACT HOURS
1	Introduction to various databases of proteins, nucleic acids. Primary, secondary and composite databases.	3
2	BLAST, FASTA, DOT PLOT	3
3	MSA using various free tools.	3
4	Phylognetic predictions.	3
5	Prediction of structure of proteins and nucleic acids	3
6	ORF prediction and its validation	3
7	Primer designing	3
8	Restriction mapping	3
9	Epitope prediction using various online tools	3
10	Data mining tool and its practical applications in a case study	3

## **SEMESTER VI**

### **Project/Dissertation**

**Course Code: BMB-604**

**Credit Units: 6**

#### **Course Contents:**

- Forty five days of Sixth Semester of the B.Sc. Curriculum is devoted to major project/field work.
- Students, with the help of their mentor and faculty colleagues will identify a lab in India & abroad for the research work.
- The student should stay for a minimum prescribed Semester period at the place of work.
- Students not staying for the prescribed period will be marked absent as per the University Rules.
- At the end of their project the students shall submit the dissertation as per the Guidelines prescribed below.

#### **The Aims of the Project**

The aim of the project is to provide the students with an opportunity to further their intellectual and personal development in the chosen field by undertaking a significant practical unit of activity, having an educational value at a level commensurate with the award a B.Sc. Degree.

#### **Objectives**

- To provide the students an opportunity to demonstrate the ability to devise, select and use a range of methodologies appropriate to the chosen topic of research.
- To allow students to show the application of skills of data collection, critical analysis and concept synthesis necessary for formation of defensible conclusions and/or recommendations.
- To allow students the opportunity to demonstrate ability to draw appropriate conclusions argued from the evidence presented. [Should the research produce negative or inconclusive results, the conclusions should be critically examined to ascertain the reasons].
- To provide a forum to demonstrate the skills of structuring and present a balanced informed complete, clear and concise written argument.

## **Dissertation Guidelines**

### **The Dissertation Topic**

It is important to distinguish here between „dissertation topic“ and „dissertation title“. The topic is the specific area that you wish to investigate. The title may not be decided until the dissertation has been written so as to reflect its content properly.

Few restrictions are placed on the choice of the topic. Normally the topic is expected to be:

- Relevant to Microbiology;
- related to one or more of the subjects or areas of study within the core program and specialisation stream;
- clearly focused so as to facilitate an in-depth approach, subject to the availability of adequate sources of information and to the knowledge of students;
- Value and interest to the students and their personal and professional development.

### **Dissertation format**

All students must follow the following rules in submitting their dissertation.

- Front page should provide title, name of the student, name of degree and the date of submission.
- Second page should contain the certificate received from the organization/University from where the student has completed his/her project work.
- The next page should be the table of contents giving page references for each chapter and section.
- The next page should be the table of graphs, figures and tables giving legends and page numbers.
- Next to follow should be following in the sequence given below:
  - Abbreviations used (if any)
  - Introduction
  - State-of-Art
  - Material & Methods
  - Results
  - Discussion
  - Summary (approximately 500 words)
  - Conclusion

- Future Prospects

- References: After this concluding chapter, students should give a list of all the references they have used. These should be cross - references with the text. For articles from journals, the following details are required e.g.

Schloter M, Assmus B and Hartmann A (1995) the use of immunological methods to detect and identify bacteria in the environment. *Biotech Adv* 13: 75-90

For books, the following details are required

Bahera BK and Varma A (2003) *Green Energy from Waste Biomass*, Capital Book Company, New Delhi, India

For book chapter

Mukherji KG, Mandeep and Varma A (1998) Mycorrhizosphere microorganisms: screening and evaluation. (Ed) Varma A. In: *Mycorrhiza Manual*. Springer-Verlag, Germany, pp 85-97

- Finally, you should give any appendices. These should only include relevant statistical data or material that cannot be fitted into the above categories.

- List of Publications (if any) by the students should be attached in the end.

### **Guidelines for the assessment of the dissertation**

While evaluating the dissertation, faculty guide will consider the following aspects:

1. Has the student made a clear statement of the objective or objective(s).
2. If there is more than one objective, do these constitute parts of a whole?
3. Has the student developed an appropriate analytical framework for addressing the problem at hand.
4. Is this based on up-to-date developments in the topic area?
5. Has the student collected information / data suitable to the frameworks?
6. Are the materials & methods employed by the student to analyse the data / information appropriate and relevant?
7. Has the student succeeded in drawing conclusion form the analysis?
8. Do the conclusions relate well to the objectives of the project?

### **Examination Scheme:**

<b>Components</b>	<b>Theme of Project</b>	<b>Quality of Project</b>
<b>Weightage (%)</b>	<b>30</b>	<b>70</b>

## General Proficiency-VI

**Course Code: GP-601**

**Credit Units: 01**

**Pre-requisite:** Basic information of English Language

### **Course Outcome:**

- Effective communication: The ability to exchange ideas and information in a way that builds trust and respect
- Critical and analytical thinking: The ability to explore issues and ideas before forming a conclusion
- Integrative thinking: The ability to synthesize knowledge across different domains and perspectives
- Preparing students to be engaged citizens: Preparing students to participate in political culture and thrive in a rapidly evolving world

### **Details of the Course:-**

General language proficiency is the ability to read, write, listen, and speak in real-life situations. To test this, a test is usually developed for each skill with questions that are designed to imitate real life.

A syllabus is a guide to a course that includes course policies, rules, regulations, required texts, and a schedule of assignments and seminar.

### **Examination Scheme:**

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/ Project/Seminar/Quiz	
Weightage (%)	10	20	10	60

## **Shobhit University, Gangoh**

**Master of Science in Microbiology (M.Sc.) Two Year Programme  
Semester Pattern  
(w.e.f. session 2017-18)**

**(Scheme & syllabus from 2017-2019)**

## **PEOs: Program Educational Objectives POs: Program Outcomes PSOs: Program Specific**

**OutcomesName of the Department:** Department of Microbiology

**Name of the Program:** M.Sc. Microbiology

**Duration of the degree:** 2 Years

M. Sc. (Microbiology) course combines the concepts of biology and chemistry to understand living things and their relationship with the ecosystem. The course covers the study of microorganisms and their effect on human life. M.Sc. in Microbiology is an advanced course that helps students understand the microbes such as virus, bacteria, fungi, algae etc. at a deeper level. Students also learn the role of these microorganism in waste management and the production of fermented foods. Throughout M.Sc. Microbiology course, students study the detailed microbiology topics and interdisciplinary subjects.

M.Sc. Microbiology has a significant role in pharmaceuticals, agriculture, brewery and manufacturing of commercial products. The practical, research-based project and laboratory work throughout the M.Sc. Microbiology helps candidates excel at the workplace with required skills and knowledge.

### **Program Educational Objectives (PEOs)**

**PEO 1:** The objective of the Master's Program in Microbiology is to equip the students to gain bimolecular knowledge and analytical skills at an advanced level.

**PEO 2:** The program emphasizes to apply knowledge acquired about prokaryotic and eukaryotic cellular processes, interaction of microorganisms among themselves, with physical and chemical agents and higher order organisms in environment and biological systems to various conditions.

**PEO 3:** The laboratory training in addition to theory is included so that the students will acquire the skills to qualify for a broad range of positions in research, industry, consultancy, education and public administration, or for further education in a doctoral program.

**PEO 4:** Students will be able to address broad range of fields including biopolymer chemistry, marine biochemistry, environmental biotechnology, food science, microbiology, microbial genetics, molecular biology and systems biology.

### **Program Outcomes (POs)**

**The Masters in Microbiology Program will address the increasing need for skilled scientific manpower with an understanding of research ethics involving microorganisms to contribute to application, advancement and impartment of knowledge in the field of microbiology and molecular biology globally. The laboratory training will empower them to prepare for careers in broad range fields. The M.Sc. Microbiology student will have:**

### **Program Specific Outcomes (PSOs)**

**PSO 1:** Acquires and demonstrates competency in laboratory safety. Develops routine and specialized microbiological laboratory skills applicable to research, hospitals and industries.

**PSO 2:** Applies statistical and bioinformatics tools for interpretation of biological data and gains expertise in Computational Biology.

**PSO 3:** Acquires knowledge of structural and enzymatic properties of microbes and fermentation engineering, to develop human / environment friendly products or processes.

**PSO 4:** Gets familiarized with principles and techniques of various basic and analytical instruments used in laboratories.

**PSO 5:** Recognizes the importance of IPR and Patenting. Gain Entrepreneurial skills to initiate Startup.

**PSO 6:** Gets trained in bimolecular mechanisms involved in life processes, health and diseases.

**PSO 7:** Gains proficiency in related disciplines such as Molecular Biology, Pharmaceutical Sciences, Nanobiotechnology and Immunology.

**PSO 8:** Explores the life forms at cellular, molecular and nano levels. Understands amazing properties of microbial world and appreciates the beauty of microbial life forms.

**PSO 9:** Assesses the role of microbes in improving soil quality and agricultural output through sustainable microbiological applications.

**PSO 10:** Work as Health care professionals in the fields of laboratory management, hospital and community services, in development & preparation of Study material for visually challenged.

### **Programme Outcome Objectives (POO's)**

**POO 1** Demonstrate a comprehensive understanding of core business concepts, theories, and practices across various disciplines, including finance, marketing, management, and operations.

**POO 2** Apply critical thinking and analytical skills to solve complex business problems and make informed decisions based on quantitative and qualitative data.

**POO 3** Exhibit effective verbal and written communication skills, enabling clear presentation of ideas and persuasive arguments in diverse business contexts.

**POO 4** Work effectively in teams, demonstrating leadership, interpersonal skills, and the ability to manage group dynamics to achieve common goals.

**POO 5** Understand and apply ethical principles and social responsibility in business decision-making, recognizing the impact of business actions on society and the environment.

**POO 6** Analyze and appreciate the impact of globalization on business practices and strategies, and demonstrate cultural awareness in diverse business environments.

**POO 7** Utilize modern technology and information systems to enhance business operations, including data analysis tools and management software.

**POO 8** Foster an entrepreneurial mindset by identifying opportunities, assessing risks, and developing innovative solutions to create value in the marketplace.

**POO 9** Commit to ongoing personal and professional development, recognizing the importance of staying current with industry trends and advancements.

**POO 10** Develop and implement effective business strategies that align with organizational goals and respond to market dynamics.

# Course Components of Academic Programme

## M.Sc. (Microbiology)

Minimum Duration: 4 Semesters (2 Years)

Maximum Duration: 6 Semesters (3 Years)

Total Number of Credits: 93 Credits

Course Components		Credits
<b>1</b>	<b><u>Compulsory Course</u></b>	
.		
I.	Foundation Course (FC)	00
II.	Core Course (CC)	61
<b>2</b>	<b><u>Elective Course</u></b>

**Dissertation**

**Note:** Students must submit their dissertation report immediately on return from summer vacation in June /July and the same would be evaluated for 16 credit units, which would be included in the Fourth Semester marks.

**Examination Scheme:**

Components	Internal Assessment			External Evaluation
	Attendance	Class Test	Assignment/ Project/Seminar/ Quiz	
<b>Weightage (%)</b>	10	20	10	60

## SEMESTER I

# BIOCHEMISTRY

**Course Code: CMBE-501**

**Credit Units: 03**

**Pre-requisite:** Basic knowledge of Biochemistry

### **Course Outcome:**

- Understanding chemical properties
- Learning how the chemical properties of molecules determine how they interact and react with each other
- Understanding chemical reactions
- Learning about different types of chemical reactions and how living organisms use them
- Understanding metabolism
- Learning about human biotransformations (metabolism) and how they influence disease and toxic states
- Laboratory skills
- Learning how to use basic laboratory skills and apparatus to obtain reproducible data from biochemical experiments

### **Details of the Course:-**

#### **UNIT I: Thermodynamic principles:**

First law of thermodynamics, isothermal process, entropy, second law of thermodynamics, reversible and irreversible process, free energy, chemical potential, Gibbs free energy, redox potential. Interaction in biological system: Role of water and weak interaction– hydrogen bonds, electrostatic bonds, hydrophobic interactions, Van-der Waals forces, buffers and pH scale.

**UNIT II: Carbohydrates:** Basic structure and function, properties of monosaccharides, disaccharides and polysaccharides, isomerism, mutarotation and functions.

**Lipids:** Fatty acids, glycerol, phospholipids, sphingolipids, sterols, lipoproteins, prostaglandins.

**Amino acids, peptides and proteins:** Common structural features, classification by R group, non-protein amino acids, essential amino acids, Zwitter ion structures, isoelectric point, acid-base properties, pKa, primary, secondary, tertiary and quaternary structures of proteins, Ramachandran plot. **Nucleic acids:** Nitrogenous bases, nucleosides, nucleotides, structural polymorphism of DNA (A, B and Z-DNA) and RNA, biological functions of nucleotides.

#### **UNIT III: Metabolism-I**

**Carbohydrate metabolism:** Glycolysis, TCA cycle, Glyoxylate cycle, pentose phosphate pathway, gluconeogenesis, glycogenolysis and glycogenesis, feedback regulation of metabolic pathways.

**Mitochondrial ETS and oxidative phosphorylation:** Inhibitors and uncouplers of phosphorylation, anaerobic pathway and substrate level phosphorylation,

**Chloroplastic ETS and photophosphorylation:** Pigment centres, light harvesting complexes.

#### UNIT IV: Metabolism-II

**Lipids:** Fatty acid biosynthesis, acetyl CoA carboxylase, fatty acid synthase, desaturase and elongase, fatty acid oxidation. Biosynthesis and degradation of amino acids. Biosynthesis and degradation of purines and pyrimidines, nucleosides and nucleotides, salvage pathway.

#### UNIT V: Enzymes:

General characteristics, classification and catalytic power of enzymes, activation energy, steady state enzyme kinetics, Michaelis-Menton equation, vitamins, coenzymes and metal cofactors, enzyme inhibition, activation of enzymes, multienzyme complexes.

## **SEMESTER I**

# **CELL & DEVELOPMENTAL BIOLOGY**

**Course Code: CMBE-501a**

**Credit Units: 03**

**Pre-requisite:** Basic information of Cell & Developmental Biology

### **Course Outcome:**

- Students will acquire knowledge about basics of cell biology.
- Students will learn about how various functions of organelles and their working.
- Students will gain an insight into microscopic structures and chemical components of various regions of cells.
- Students will attain a comprehensive knowledge of functioning of cell and synchronization of activities of various organelles.
- Students will be able to learn about various signaling mechanism involved in a cell which ultimately leads to a visible physiological response.
- Students will be able to understand the architectural components involved in making cells rigid and how cells are connected to each other.
- Students will learn about molecular events involved in cell cycle.
- Students will apply the information gained in understanding the issues and conditions encountered if things go wrong with cell cycle and how our understanding of cell signaling generate drug targets.

### **Details of the Course:-**

#### **UNIT I: Introduction to prokaryotes, eukaryotes & cell theory**

Introduction to microscopy Plasma Membrane: structure – organization, lipid bilayer, proteins & glycol conjugates, liposomes, functions – ionic transport, types of transport (symport, antiport, active & passive), and channel proteins. Intracellular compartmentalization: structure, organization and functions of nucleus, mitochondria, lysosome, Golgi body chloroplast, peroxisome, endoplasmic reticulum (rough and smooth)

#### **UNIT II: Vesicular traffic in the secretory and endocytic pathway:**

Transport from endoplasmic reticulum through the golgi network to lysosome, endocytosis, exocytosis, molecular mechanisms of vesicular transport and the maintenance of compartments diversity.

#### **UNIT III: Cell signaling: general mechanistic principles:**

Types of signaling, GPCR, RTK with examples, Calcium Signaling, Mechanism of Chemotaxis, signal transduction and vision Significance of vesicular trafficking and cell signaling Cell motility and shape: structure and functions, microfilaments microtubules and intermediate filament.

#### **UNIT IV: Integrating cell into tissue:**

Cell-cell adhesion and communication, cell matrix adhesion, extra cellular matrix: collagen & non-collagen

components. Cell cycle, molecular events and regulation.

Cell division: general strategy and regulation, molecular mechanism of mitosis and meiosis. Regulation of cell cycle Role of cyclins / cdks in the initiation of replication.

#### **UNIT V: Cancer-Biology:**

Types of cancer, onset of cancer, proto-oncogenes and tumor suppresser genes, oncogenic mutations affecting cell proliferation, cell cycle and genome stability. Programmed cell death & unprogrammed cell death. Expression patterns of proteins & enzymes during cell proliferation Molecular signaling of cancer Aetiology of Cancer.

#### **UNIT VI: Introduction to Developmental Biology**

History and Basic Concepts, Basics of model systems: Vertebrate Model Systems, Invertebrate and Plant Model Systems, basic patterning and development plan of model Plan, initial division pattern, and evolution and development biology

#### **Suggested Books:**

#### **Examination Scheme:**

<b>Components</b>	<b>Internal Assessment</b>			<b>External Evaluation</b>
	<b>Attendance</b>	<b>Class Test</b>	<b>Assignment/ Project/Seminar/Quiz</b>	
<b>Weightage (%)</b>	10	20	10	60

## **SEMESTER I**

### **BACTERIOLOGY**

**Course Code: CMBE-503**

**Credit Units: 03**

**Pre-requisite:** Basic information of Bacteriology

#### **Course Outcome:**

- Identifying and differentiating structures
- Learning to recognize, identify, and differentiate the internal and external structures of microbial cells
- Understanding functions
- Learning to explain the function of structures in bacterial and fungal cells that are important for causing disease
- Understanding bacteriology's role

#### **Unit I : Basics in Biochemistry:**

Brief history and scope of microbiology, Classification of micro-organisms, culture techniques, methods of isolation and identification of microbes. Staining of microbes: simple, special and differential staining.

#### **Unit II : Microorganisms– Bacteria:**

Morphology and structure of bacteria. Structural organization of bacterial cell wall, gram positive and gram negative bacteria, archaebacteria, actinobacteria. Nutritional requirement and growth curve, autotrophic and heterotrophic bacteria, batch and continuous cultures of microbes, pure cultures, growth inhibitory substances, physical and chemical methods of microbial control. Microbial genetics, transformation, conjugation, transduction in bacteria.

#### **Unit III : Microorganisms- Fungi:**

Characteristic feature, morphology, structure, nutrition, metabolism and reproduction of economically important fungi. Mycotoxins

#### **Unit IV Microorganisms- Viruses:**

Ultrastructure, multiplication of viruses, Isolation, cultivation of viruses, Bacterial viruses, animal viruses, plant viruses, Viroids, prions.

#### **Unit V Medical Microbiology:**

Diseases caused by bacteria, mycoplasma, fungi, virus and their symptoms. Biotechnological methods to deal with diseases caused by microorganisms.

## Unit VI: Biotechnological applications of microorganisms:

Classification of microbial products Equipments and accessories for industrial processes- fermenters, scaling-up of processes, downstream processing of products. Microbiological processes for production of organic acid, solvents, antibiotics, enzymes, exo- and endo-polysaccharides. Beverage fermentation- beer, wine, liquor fermentation. Microbiology of milk, dairy and food, preservation of food, food additives and supplements. Genetic engineering of microbes for industrial uses. Microorganisms for bioremediation, sewage treatment, biofertilizers, biopesticides, biofuels, biogas, bioenergy, microbial leaching of ores.

## SEMESTER I

### PANDEMICS

**Course Code: CMBE-503a**

**Credit Units: 03**

**Pre-requisite:** Basic information of Animal kingdom system

#### **Course Outcome:**

- Students will be able to *define* and explain the fundamental principles of digestion.
- Students will be able to *understand* comparative circulation system, nervous system, endocrine system and excretory system.
- Students will *acquire* knowledge about the function of different types of organs in different animal kingdom.

#### **Details of the Course:-**

##### **UNIT – I: Digestion and Respiration:**

Comparative aspects of Digestion in invertebrate and vertebrate (general account), human: Mechanism of digestion and absorption of carbohydrates, Proteins, Lipids and Nucleic acids. Composition of bile, saliva, pancreatic, gastric and intestinal juice.

Comparative aspects of Respiration in invertebrate and vertebrate (general account), human: Exchange of gases, Transport of O<sub>2</sub> and CO<sub>2</sub>, Oxygen dissociation curve, Chloride shift.

##### **UNIT – II: Circulation:**

Comparative aspects of Circulation in invertebrate and vertebrate (general account), Human: Composition of blood, Plasma proteins & their role, blood cells, Haematopoiesis, Mechanism of coagulation of blood.

Mechanism of working of heart: Cardiac output, cardiac cycle, Origin & conduction of heartbeat.

##### **UNIT – III: Muscle physiology and osmoregulation:**

Structure of cardiac, smooth & skeletal muscle, threshold stimulus, All or None rule, single muscle twitch, muscle tone, isotonic and isometric contraction, Physical, chemical & electrical events of mechanism of muscle contraction. Excretion: modes of excretion, Ornithine cycle, Mechanism of urine formation.

##### **UNIT – IV: Nervous System:**

Mechanism of generation & propagation of nerve impulse, structure of synapse, synaptic conduction, salutatory conduction, Neurotransmitters.

##### **UNIT – V: Endocrine System:**

Mechanism of action of hormones (insulin and steroids). Different endocrine glands – Hypothalamus, pituitary, pineal, thymus, thyroid, parathyroid and adrenals, hypo & hyper-secretions.

### **SOIL MICROBIOLOGY**

**Course Code: CMBE-503b**

**Credit Units: 03**

**Pre-requisite:** Basic information of Animal kingdom system

#### **Course Outcome:**

- Students will be able to *define* and explain the fundamental principles of digestion.
- Students will be able to *understand* comparative circulation system, nervous system, endocrine system and excretory system.
- Students will *acquire* knowledge about the function of different types of organs in different animal kingdom.

#### **UNIT 1: Growth and reproduction in bacteria:**

Asexual reproduction methods, bacterial population logarithmic representation, growth phases, generation time calculation, and specific growth rate

#### **UNIT II: Microbes in human health and environment:**

Important human diseases and their causative agents, immunity, primary and secondary immune response, antigens, antibodies, and vaccines

#### **UNIT III: Environmental microbiology**

Microbial interactions such as mutualism, commensalism, and parasitism

#### **UNIT IV: Application of microorganisms**

Bio-pesticides, bio-fertilizers, biodegradation, bio-deterioration, and bioremediation

#### **UNIT V: Soil as a habitat for microorganisms**

Microorganisms in soil and their significance: bacteria, fungi, algae, protozoa, rhizosphere and rhizoplane. Biogeochemical cycles: C, N and role of microorganisms.

## **SEMESTER I**

### **PLANT VIROLOGY**

**Course Code: CMBE-505a**

**Credit Units: 03**

**Pre-requisite:** Basic information of Plant Virology.

#### **Course Outcome:**

After completion of the course the students should be able to

- Describe the cell organization of bacteria i.e. morphology, ultrastructure and organelles present in bacterial cells.
- Apply the knowledge of bacteriological techniques.
- Describe the nutritional and physical requirements for bacterial growth.
- Describe the principals involved in killing bacteria, and make recommendations on use of physical and chemical methods used to control microbial growth.
- Describe the dynamics of the growth of a bacterial population and how this growth can be measured.
- Describe bacterial taxonomy and classification.
- Differentiate the nature of viruses.
- Understand classification of viruses.
- Learn the methods of laboratory diagnosis of viruses using different techniques.
- Learn about different plant and animal viruses.

#### **Details of the Course:-**

##### **Unit – I: Cell Organization:**

Cell size, shape and arrangement, glycocalyx, capsule, flagella, endoflagella, fimbriae and pili. Cell-wall: Composition and detailed structure of Gram-positive and Gram-negative cell walls, Archaeobacterial cell wall, Gram and acid fast staining mechanisms, lipopolysaccharide (LPS), sphaeroplasts, protoplasts, and L-forms. Effect of antibiotics and enzymes on the cell wall.

Cell Membrane: Structure, function and chemical composition of bacterial and archaeal cell membranes. Cytoplasm: Ribosomes, mesosomes, inclusion bodies, nucleoid, chromosome and plasmids Endospore: Structure, formation, stages of sporulation.

##### **Unit – II: Bacterial growth and control:**

Culture media: Components of media, Synthetic or defined media, Complex media, enriched media, selective media, differential media, enrichment culture media Pure culture isolation: Streaking, serial dilution and plating methods, cultivation, maintenance and stocking of pure cultures, cultivation of anaerobic bacteria Growth: Binary fission, phases of growth.

##### **Unit – III: Bacterial Systematics and Taxonomy:**

Taxonomy, nomenclature, systematics, types of classifications

Morphology, ecological significance and economic importance of the following groups: Archaea:

methanogens, thermophiles and halophiles

Eubacteria: Gram negative and Gram positive Gram negative:

Non-proteobacteria– Deinococcus, Chlamydiae, Spirochetes Alpha proteobacteria- Rickettsia, Rhizobium, Agrobacterium Gamma proteobacteria –Escherichia, Shigella, Pseudomonas

Gram positive: Low G+C: Mycoplasma, Bacillus, Clostridium, Staphylococcus High G+C:

Streptomyces, Frankia

#### **Unit – IV: Nature, Properties and Classification of Viruses:**

Properties of viruses; general nature and important features Subviral particles; viroids, prions and their importance Isolation and cultivation of viruses.

Morphological characters: Capsid symmetry and different shapes of viruses with examples Viral multiplication in the Cell: Lytic and lysogenic cycle Description of important viruses: salient features of the viruses infecting different hosts - Bacteriophages (T4 & Lambda); Plant (TMV & Cauliflower Mosaic Virus), Human (HIV & Hepatitis viruses).

#### **Unit – V: Role of Viruses in Disease and its prevention:**

Viruses as pathogens: Role of viruses in causing diseases Prevention and control of viruses: Viral vaccines, interferons and antiviral compounds.

#### **Suggested Books:**

## **SEMESTER I**

### **MYCOLOGY & PHYCOLOGY**

**Course Code: CMBE-507**

**Credit Units: 03**

**Pre-requisite:** Basic information of Fungus and Algae

#### **Course Outcome:**

After the successful completion of this course

- Students should be able to know about various groups of fungi and algae.
- As most of the fungi are seen through naked eyes, students will be able to recognize them.
- Students will also have an idea about the pros and cons of fungi and algae.
- Students should be able to know about economic importance of fungi and algae.

#### **Details of the Course:- Unit I:**

History of Mycology, Classification of fungi, Morphology, microscopy and structure of fungi

#### **Unit II: General Overview Phylums:-**

Chytridiomycota (The chytrids), Zygomycota (The conjugated fungi), Ascomycota (The sac fungi), Basidiomycota (The club fungi), Deutromycota (The imperfecti fungi).

#### **Unit III:**

Symbiotic association of fungi, Nutrition requirements

#### **Unit IV:**

Parasexual Cycles, Alcoholic fermentation, Fungus like organisms, Rusts and Smuts, Fungal disease of plants and humans

#### **Unit V:**

Classification and application of algae: General classification, Life cycle, thallus organisation and occurrence – (i) Chlorophyceae (ii) Charophyceae (iii) Diatoms (iv) Xanthophyceae (v) Phaeophyceae (vi) Rhodophyceae: (vii) Cyanobacteria

Lichens, Economic importance of algae with examples in agriculture, environment, industry and food.

## SEMESTER I

### MEDICINAL CHEMISTRY

**Course Code: CMBE-507a**

**Credit Units: 03**

**Pre-requisite:** Basic information of chemistry and drug development

#### Course Outcome:

After the successful completion of this course

- Students will be able to explain the relationship between structure and biological activity of various drug molecules.
- Students will be able to understand the most of various classes of drug molecules.

#### Details of the Course:-

##### Unit I: General Introduction and Drug target classification

Definition and scope of drug design.

Proteins as drug targets: Receptors – receptor role, ion channels, membrane bound enzyme activation, agonist and antagonists, concept of inverseagonist, desensitization and sensitization of receptors, affinity, efficacy and potency. Enzymes – Enzyme inhibitors (competitive, non-competitive, suicide inhibitors), medicinal use of enzyme inhibitors. Nucleic acids as drug targets: Classes of drugs that interact with DNA: DNA intercalators and DNA alkylators.

##### Unit II: Physicochemical principles of drug action

Partition coefficient, drug dissolution, acid base properties, surface activity, bioavailability, stereochemical aspects of drug action.

##### Unit III: Drug receptor interactions
